Your committee will hear fully about Central Valley from well-informed interests which oppose repeal, and the National Farmers Union does not intend to cover the same ground. There are aspects of the drive for repeal there, however, which need to be set down in this chronicle of the attempt that broke out in Colorado in 1938 to destroy the family farm in the West.

On the California repealer, as on the Colorado and Nevada bills before it, there had been no public hearings when it reached the House floor, practically without warning.

The repealer was in form of a rider, introduced as a committee amendment after the committee hearings on the rivers and harbors bill to which it was attached were completed. The maneuver succeeded. It was slipped through on March 22, 1944, in a few minutes.

On the contrary, after hearings before a subcommittee of the Senate Commerce Committee, the rider was killed by the committee, and the Senate refused to allow the bill to pass. Senate opposition was so determined that the entire rivers and harbors bill was dragged down with it.

One other aspect of the tactics in the House deserves mention. The Chairman of the House Committee of the Whole overruled a point of order that the repeal amendment was out of order, a rider that "modifies the fundamental reclamation laws." The man who was in the chair to give that ruling was not the Speaker of the House; it was none other than the California member who helped put the Colorado-Big Thompson repeal through the House in 1938.

It is too late to use surprise as a tactic in California Central Valley any more. But it is not too late to try it in the San Luis Valley of Colorado and the Valley Gravity project in Texas. S. 912 attempts exactly this.

According to a Washington dispatch dated March 18, 1947, Senator DOWNEY, of California, was quoted indirectly as saying that "discussions of the Colorado and Texas project exemptions would be 'simpler' than those on the California one * * * because there was little controversy on them." If there is "little controversy" the reason is that people have not been informed of what they face. The National Farmers Union knows that, contrary to the Senator's impressions, there is plenty of controversy on the Colorado and Texas projects, and on any others where repeal may be proposed. It is the people of the Nation, not just those of a locality, who lose by repeal, and it is the people of the Nation who are entitled to be fully and completely informed when it is proposed to tear down the land laws they have so laboriously built up over the generations.

The sad truth is that within Texas the tactic of surprise and concealment may be as successful now as it evidently was in California until 1944 when the Elliott rider went through the House. What looks like a conspiracy of silence has blanketed Texas so that even Texans who otherwise are well informed do not know that the water limitation applies as a protection to the Valley Gravity project. Witness the following omission of any reference to the law from the pen of a Texan writing in the New Republic on April 7, 1947:

"So the Federal Government is preparing to spend $70,000,000 on a huge gravity irrigation system, and a still larger amount on a series of storage dams in the Rio Grande River. All this will not only guarantee the Valley's water supply, but will make possible a 50-percent increase in the irrigated area of the Valley. And already Valley promoters are beginning to eye people up in Illinois and Ohio and Nebraska, getting ready for the next land boom."

At least, the author has warned the people up in Illinois and Ohio and Nebraska that it is they who are going to pay the costs of permitting repeal to pass; they are going to pay it in the speculative prices the 160-acre water limitation is intended to protect them from. But the thing significant to an understanding of the tactics of the repealers is the fact that the Texan author, writing in a national magazine engaged in fighting against repeal in California and elsewhere, could honestly not know that the protections of the reclamation law apply to a Bureau of Reclamation project in his State, and not know what those protections are.

If there is no controversy in Texas over repeal, it must be because the people there who will be damaged by it have been victims of the same tactic of silence that enveloped the people of California until they were shocked into action by the passage of the 1944 Elliott rider through the House.

The story of how the 160-acre water limitation has been put to sleep in people's minds in one part of the country after another needs to be ferreted out and told, so that the people's interests can never be so stealthily threatened again.

In the light of this studied silence, of which Texas furnished but the latest example, the National Farmers Union demands that Congress postpone any action whatever on the Colorado and Texas projects until the Bureau of Reclamation shall have made and distributed widely the results of studies of the water limitation on those projects, studies which shall be as thorough and detailed as those which the Bureau has had made in California's Central Valley.

Two more aspects of this battle to save the family farm, to defeat monopoly of land and water, and to prevent speculation in the benefits from public appropriations, require description here.

First, is the sleight-of-hand used to confuse the people and so to prevent them from seeing or acting in their own interest. We face that tactic in the Missouri Valley, but the clearest statement we have seen of its movements is one that described what was going to happen in California's Central Valley before most of it happened. Telling of the entry of the National Farmers Union into the battle against repeal, the magazine Business Week laid out in detail in its issue of May 13, 1947 the tactics which the repealers would employ. The blue-print prescribed four tactics: (1) Direct repeal; (2) use of the Army; (3) use of the State of California; (4) use of deep-well pumps at the expense of the small farmers and the public. Here is the text of the Business Week description:

"If the big landowners in the Valley lose out in this particular fight [for direct repeal], they have several other proposals to accomplish their end. One of them is a House bill which would authorize the Army to add irrigation and power development to its present navigation and flood-control powers. The legislation also would call for construction of a series of irrigation and power projects throughout the country, especially in Central Valley. This would circumvent the 160-acre rule, since the Army is not bound by that restriction.

"Another proposal, said to have originated among the big landowners of Fresno County, is for the State of California to take over the Central Valley project, paying the entire bill. This, too, would sidestep the 160-acre limitation. Still other landowners are sinking wells around their holdings in order to be prepared to pump irrigation water from the raised water table, thus getting a free ride on the Central Valley project."

This blueprint has been and is being followed in detail. Although printed in a national journal in 1944, these very tactics still serve to confuse Congress and to defeat the people.

The National Farmers Union submits this statement of the tactics of the repealers in the hope that their complete and utter defeat will be easier when their tactics are thoroughly exposed and understood.

In this great fight to defeat land monopoly once more, the issues should always be kept clear, not confused. Every project where repeal or modification is proposed should first be studied thoroughly. There should be no conspiracies of silence, no alliances of big landholders with hidden interests, no sleight-of-hand or surprise tactics, no pitting of agency against agency to divide and destroy, no use of projects to log-roll, no threats by private beneficiaries of public reclamation that unless the heart is torn out of the law for their own special benefit, they themselves will wreck its enforcement, defy the Congress and the people of the United States, and pull down the pillars of America's historic land policy.

When we face tampering with our national land laws the issues ought to be kept perfectly simple and clear.

Flood Control at Moravia, N. Y.

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. ROONEY. Mr. Speaker, under leave heretofore granted me by the House, I include herein the following statement made by the senior Senator from New York, Hon. ROBERT F. WAGNER, with regard to an appropriation for a flood-control project at Moravia, N. Y., as well as a newspaper article from the Syracuse Herald Journal of May 22, 1947, describing the flood which inundated Moravia, N. Y., last month.

Senator WAGNER'S statement reads as follows:

While the authorization of a flood-control project in Moravia, N. Y., became law on December 22, 1944, as yet no appropriation has been made. The project would only cost $262,000 and the State has already appropriated its participating share. The engineers are ready to begin work. All that is necessary is the Federal appropriation. This matter has been called to the attention of the Corps of Engineers and the House Appropriations Committee, but as yet no appropriation has been made for it.

On May 22 I received the following telegram describing one of the worst floods in Moravia's history:

"Moravia stricken by one of the worst floods in its history. Railroad tracks are covered for several feet and the water has reached Main Street. All highways closed to traffic. Fire and police department evacuating people from western part of village to higher ground. Lehigh Valley station and adjacent properties flooded to several feet. Property and business losses mounting to thousands of dollars. Appropriation for flood-control program of United States Army engineers desperately needed. Your help deeply appreciated.

"F. HELEN MACLEAN,
"Chairman, Cayuga County Flood Control Committee."

It is a good example of the "pound-foolish, penny-wise" philosophy that seems to underlie the thinking of the majority in this Congress. The damage the flood inflicted is estimated at $250,000, or approximately what the project would have cost to construct. I hope the House Committee on Appropriations will promptly approve the appropriation requested for this purpose.

[From the Syracuse Herald Journal of May 22, 1947]

CLOUDBURST INUNDATES MORAVIA—SYRACUSE HIT—STORM CELLARS FLOODED BY DELUGE

A heavy overnight downpour flooded Syracuse with one of its heaviest May rains and caused thousands of dollars of damage in a cloudburst at Moravia.

Airline schedules were disrupted and street intersections were flooded in Syracuse by the heavy rain.

At Moravia the rain which lasted 7 hours drove Moravia residents from their homes at 1 a. m. today, inundated streets and cut off highway communications. The damage was estimated today at approximately $250,000.

Police and firemen worked all night at Moravia with volunteers carrying persons in inundated sections of the village to homes or higher ground. Ambulances, trucks, and cars were commandered as water poured from cellars and in some instances was 5 feet over street levels. The torrent ran through the Lehigh Valley station and swept into business places.

Residents described it as a veritable nightmare. As firemen and police roused residents in the lower parts of the village and waters rose in almost an instant to various depths.

The floodwaters were receding this morning although 1 foot remained on route 38 from Auburn.

The fire department had pumpers at work pumping water from Moravia cellars all the morning.

The western part of Moravia was not affected. At 1 a. m. there was no water in cellars in the eastern part but within an hour water was pouring from cellar windows and rose to floor levels as Mill Creek and Dry Creek, converging in the village, overflowed.

Water rose so rapidly that railroad tracks were covered. West Cayuga and Aurora Streets were inundated to a depth of 5 and 6 feet. Pouring through the Lehigh station at the foot of Central Street, the flood caused heavy damage to Whaat Bros. grain tanks, to Hewitt Bros., and to the G. L. F. plant.

Police and firemen stood in water above their hip boots. Dry Creek overflowed into South Main Street, covering it with water and Mill Creek became a lake in East Main Street.

All through the morning volunteers, firemen, and police carried the elderly, the sick, and others from their homes.

Volunteers worked to save cars from garages where water had risen to the car seats. Dr. Paul M. Parker called for help to get out his car and firemen extricated Wallace Rodees' and Mayor Glen Eaton's cars. Neighbors joined in helping where help was needed.

Thousands of dollars of damage was done to oil burners and other equipment in cellars of many homes. No estimate of the loss could be given today.

All roads into Moravia were cut off excepting the Gulf Road. Tons of earth were washed down onto the Dresserville Road, which was also reported washed out near the Jencks farm.

Sheriff Willard R. Wilcox has all roads posted at Auburn and all traffic is detoured from Moravia highways.

This is the second serious flood this spring. The first was the Saturday preceding Easter. Efforts were under way today to clear highways.

The heavy downpour that lashed Syracuse during the night added almost an inch and a half of rain to the May total. The heaviest part of the month's rain has fallen this week, the weather man said. There has been precipitation every day but five in May.

The storm that began about 8:50 p. m. Wednesday disrupted air-line schedules, causing cancellation of some flights in and out of Syracuse Municipal Airport.

Throughout the city, catch basins were clogged by the thick streams of water and many intersections were flooded. More than a foot of water was reported at Hiawatha and State fair boulevards. At many other points cars drove through water up over their running boards.

The rain was accompanied by a sharp drop in temperatures after the warm mugginess of Wednesday afternoon. The coolness is due to extend throughout today, although the sunshine was bright. By Friday things will be warmer, the Weather Bureau predicted, with a threat of colder weather and perhaps more rain not before Friday night.

Wake Up, America

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Herald Tribune of Friday, June 20, 1947:

SAYS RUSSIA HAS 20–1 EDGE

MIAMI, June 19.—Lt. Gen. J. Lawton Collins said today that Russian soldiers outnumber those of the United States Army 20 to 1.

In addition, he declared, the Russians have over 10,000 airplanes, and we cannot man 4,000 aircraft today.

General Collins said that in case of trouble in Europe the United States forces there are so small that they could easily be overrun.

He estimated that Russia is capable of putting 200 divisions in the field, have them in the field right now, compared with 10 divisions in the whole United States Army. He said "Russia's satellites in Europe could provide another 100 divisions.

"I simply cite these as examples of the fact that we are terribly weak today," the War Department information chief said in a speech before a convention of the Reserve Officers' Association.

Proposed Amendment of Clayton Act

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Saturday, June 21 (legislative day of Monday, April 21), 1947

Mr. O'MAHONEY. Mr. President, within the last few days Mr. Ed Wimmer, vice president of the National Federation of Small Business, and editor of Forward America, delivered a radio address over Stations WSAI, Cincinnati, Ohio; WHIO, Dayton, Ohio; WJJD, Chicago, Ill.; and KSMO, San Mateo, Calif., on the pending bill to amend the Clayton antitrust law to prevent the continued growth of monopolistic mergers. Companion bills have been introduced in both Houses. The House measure, presented by Representative KEFAUVER, has been favorably

reported by the House Committee on the Judiciary by Representative GWYNNE, of Iowa. The companion bill, which I introduced in the Senate, is pending before the Senate Committee on the Judiciary.

I ask unanimous consent that Mr. Wimmer's radio talk be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For the past several weeks, ladies and gentlemen, I have been doing some talking about one of the most controversial and hard-fought legislative acts ever to receive the consideration of the United States Congress. This act, known as the O'Mahoney-Kefauver bill, which is a bill to amend sections 7 and 11 of the Clayton Act, would, if passed by the House and Senate, have more far-reaching and beneficial effects upon the lives of the American people than any other legislation now up for consideration by this Congress. I realize that such a statement covers a lot of ground, considering the revolutionary aspects of proposed labor laws, aid to foreign nations, atomic power controls, universal military training, etc., but what good would it do us to solve any of these problems if we do not solve the problem of saving our democratic way of life?

Let us look at a few of the facts.

In 1914, the Senate and House of Representatives of the United States of America assembled in Congress and approved legislation known as the Clayton Act, which was an act supplementing existing antitrust laws, and designed to halt the merging of competing corporations. The intent of Congress at that time was to discourage monopoly by stopping corporations from getting control of other corporations, especially their competitors. In those early years of monopolistic trends in our country, the biggest corporations were buying up the stocks of their competitors, both large and small, and liberal-minded men of that day realized that if the trend in this direction was not halted, there would be a danger that a few gigantic corporations would get complete control over the economic and political life of the Nation. The result of this kind of thinking was the passage of the Clayton Act, and section 7 of this act specifically declared that no corporation engaged in commerce could acquire, directly or indirectly, the stock or other share capital of any other corporation, where the effect of such acquisition might lessen competition or restrain trade, or tend to create a monopoly.

The Federal Trade Commission, created about that time, was given jurisdiction over provisions in the Clayton Act, and it was provided by Congress that the Federal Trade Commission pass judgment on all important mergers to determine if such mergers substantially lessened competition. The Commission was given the power, also, in this legislation to order the divesture of stocks whenever it was shown that any merger had lessened competition.

LOOPHOLE FOR MONOPOLY

Within a few years after the passage of the Clayton Act, however, the lawyers of the bigger corporations discovered a loophole which permitted the corporations to bypass the purposes of the legislation by acquiring the assets instead of the stocks of another corporation, and, following this discovery, there was born an era of monopolistic mergers that has resulted in conditions which threaten the freedom of every man, woman, and child in this country, as well as the hopes of freedom-loving people in all parts of the world. I say this because monopolistic trends in this Nation have now reached such proportions that if they are not stopped we shall pass into some kind of corporate fascism for a period of time, after which will probably come early changes delivering us straight into the arms of socialism or communism.

This thought was brought out by the Temporary National Economic Committee in 1941, when it reported to the President and to Congress that it was quite conceivable that even though we obtained a military victory over the aggressors, we would find ourselves, in the end, under the domination of an economic authority equally destructive of democracy as were our military enemies.

Emphasizing this fact 5 years later, the Senate Small Business Committee reported, in 1946, among other things, that the 45 largest transportation companies were now in control of 92 percent of all the transportation facilities in the United States, the country's 20 largest banks held 27 percent of the total loans and investments of all banks, 17 of the largest life-insurance companies accounted for over 81 percent of all the assets of all life-insurance companies, 200 nonfinancial corporations now owned 55 percent of all the assets of all the nonfinancial corporations in the United States.

DEVASTATING CONCENTRATION

I could give you figures piled upon figures to show the economic devastation that has taken place in this country because we have allowed this concentration to take place. One big chain grocery system has gotten control of 14 percent of the retail food business, 20 percent of the retail coffee business, and has grown equally powerful in other directions. I could also show how many opportunities have been killed, how many communities have been robbed of their independence and self-determination by another chain that has brought ruin to independent factories, mills, and innumerable other business all over America. I could prove to you that such concentration as this caused the 1929 crash, the depression that followed, the closing of 15,000 banks, and many other disastrous things, but I want to spend the balance of my time discussing this O'Mahoney-Kefauver bill which is now resting in congressional committee.

Something must be done to prevent any further merging of competing corporations. Even the topmost spokesmen in big industry, men such as John J. McGraw, Alfred P. Sloan, Owen D. Young, and many others, who have actually helped to put these mergers together, admit this, and in some cases are advocating it, but every attempt to accomplish this end over a period of some 25 years, has gone down to defeat.

A few weeks ago I gave extensive testimony before the House Judiciary Committee in support of the O'Mahoney-Kefauver bill, which the committee unanimously reported out. In my testimony I told the members of the committee that in my opinion we had now reached a stage in our economic life where any more delay in stopping monopoly on all fronts, would place us in the position in which the MacArthur Commission, which is attempting to break up the Japanese monopolies, now finds itself.

You may know that some five families in Japan had gotten control over the entire economic resources of the Japanese people prior to the outbreak of war, and since the end of the war, the United States Government, operating through MacArthur and his staff, has attempted to untangle these Japanese financial and industrial empires, but without apparent success. The reason for this is that the Japanese combines had grown to a point where the sole responsibility for the conduct of social, economic, and political affairs was in the hands of a small group of giants who had ground out all important individual enterprise on every hand. The result was that in Japan there was no middle class—no responsible citizenry to take over or to operate the enterprises which our Government is trying to redistribute.

We are fast approaching this situation in the United States, and a serious recession or a depression, if you wish, would nullify our chance to unwind similar gigantic combines, because if depression should befall us to any great extent, there would be no market for the stocks of the decentralized companies, the only alternative probably being socialization of the banks and major industries, which would be the beginning of the end of our entire free enterprise system.

RESTORE INDEPENDENT ENTERPRISE

Mr. Henry Luce, publisher of Life, Time, and Fortune magazines, brought this out very clearly several years ago when he stated in Fortune magazine, and I quote: "Business can now unwind at a profit, just as it wound up at a profit, and if neither business nor government make a move in this direction, if bigness is to remain the standard concept of the economy, then the American businessman, the American politician, and in short, all American citizens, must prepare themselves for a different order of things, in which the powers of the government are not limited, in which the right to risk and profit is not clear, and in which the making, the selling, and even the buying of the products of the biggest show on earth are all mysteriously directed from abroad."

In my opinion, the O'Mahoney-Kefauver bill—H. R. 3736—will plug the loopholes in the Clayton Act, at least to some degree, and will slow down at least the enterprise-killing and freedom-killing merger business long enough for Congress to study and to pass legislation along the lines of the Public Utility Holding Company Act, so that all unlawful mergers effected since 1914 can, as Mr. Luce says, "be unwound."

If we Americans are to carry a State and Federal tax burden of some $40,000,000,000 annually for many years to come, keep 60,000,000 or more people employed, care for our aged, meet our foreign obligations, care for our veterans, clear our slums, and do the many other things which we talk about doing, then we will have to maintain a national income of not less than $170,000,000,000, and we will never be able to do this unless we restore independent operation of our farms, businesses, and professions, wherever practical and possible.

Restoration of independent enterprise would give millions of our youth a chance to become important in their communities, give hope to our aged, guarantee economic opportunity to hundreds of thousands of returned war veterans, keep the professions free, protect and expand legitimate big business, make more millionaires and fewer billionaires, stop the trend to monopoly in the field of labor, and give local control over local affairs to local citizens.

This, and much more, is at stake in the passage of H. R. 3736 and similar legislation. Senator O'MAHONEY says it is H. R. 3736 or socialization of all big industry. Congressman KEFAUVER says it is H. R. 3736 or the loss of all our freedoms. Scores of prominent leaders in all walks of life have agreed with both Senator O'MAHONEY and Congressman KEFAUVER in their views.

The National Federation of Small Business conducted a Nation-wide referendum on this legislation, and 96 percent of the members voting approved H. R. 3736. Mr. C. Wilson Harder, president of the federation, urges that we do not forget the "roaring twenties" when business tycoons ran wild with their mergers, and had to be bailed out by the Government, thus being saved from communism. Mr. Harder now poses the question: "Where would we get the money to bail them out again?"

Think it over, friends, and, believe me, thinking time is running out on us.

Until next week, thank you for being with us, and, may I again repeat, good luck and good thinking to all of you.

Address by Hon. Robert A. Taft, of Ohio, on Veto of Labor Relations Act

EXTENSION OF REMARKS
OF
HON. JOSEPH H. BALL
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Saturday, June 21 (legislative day of Monday, April 21), 1947

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by the Senator of Ohio [Mr. TAFT] on the veto of the pending measure. The address was delivered last night at 10:45 over the Mutual and Columbia networks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The President's message vetoing the labor bill is a complete misrepresentation, both of the general character of the bill and of most of its detailed provisions. Remember that this bill was considered in detail by both Houses of Congress for 5 months. Every provision was worked over and debated, first in the committees, several times on the floor of the Senate, and then in conference. Now the President attempts, in 10 days, including the 3 or 4 days spent in Canada, to put his judgment of the meaning and effect of a hundred detailed provisions over that of a great majority of those who have carefully drafted and analyzed these provisions. It is not surprising, therefore, that the President's veto message shows that he knows practically nothing about the bill.

The President ignores the opinion and studied conclusion of the Democrats in the House of Representatives who voted 106 to 71 this afternoon to override his veto. On the contrary, the President has apparently adopted in large part the prejudiced arguments of the union labor leaders, who from the beginning have opposed any legislation whatever and refused to cooperate with Congress or make any constructive suggestions. The President's message follows in many details the analysis of the bill prepared by Lee Pressman, general counsel of the CIO, inserted in the CONGRESSIONAL RECORD on June 3 by Congressman MARCANTONIO, and another memorandum inserted in the CONGRESSIONAL RECORD of June 6 by Senator MURRAY. President Truman wholly ignores the detailed answers to these arguments and misrepresentations which I presented on the floor of the United States Senate.

Following the lead of labor union leaders, the President does not find a single good provision in the entire bill. He ignores every abuse by labor unions which fill the record of evidence before the committees. While he gives lip service to the idea of labor reform by saying that he heartily condemns abuses on the part of unions and employers, he nowhere recognizes the existence of any specific abuse. He wants a commission to study a matter carefully studied for months by committees of Congress with the best expert advice. This is the standard device of those who wish to delay and defeat action. He assumes that every power given to the labor union leaders is for the benefit of the members of labor unions—and utterly ignores the fact that these members and their wives and families are the real sufferers from unjustified strikes and arbitrary closed-shop agreements. No workman is deprived of any fundamental right as the President stated this evening. Only the arbitrary power of the labor bosses are curbed.

If there is one subject upon which every unprejudiced person is agreed, it is that unions must be made responsible for their acts, that collective bargaining cannot continue to be an important factor in our labor relations unless both parties are bound by their contracts. The President criticizes every provision designed to make unions responsible. He criticizes the requirement that they file financial and other reports with the Department of Labor. Corporations have long been required to file reports, both with State and local authorities. Why not unions?

He attacks the provisions that unions may be sued for breach of collective-bargaining agreements—on the ground that they should not be bothered with having to defend lawsuits regardless of what they do. He says they might be harassed by an employer. Everybody else in the United States is subject to harassment by lawsuits. Why not unions? In any event, the purpose of this provision is to induce them to live up to their contracts, and if they do, few suits will ever be filed.

Perhaps the most extraordinary provision of the message is the President's attack on the section permitting an injunction against a Nation-wide strike affecting the national health and safety. It was through such a procedure that he secured an injuction against John L. Lewis last fall. Last year when faced by a Nation-wide strike, it was the President himself who recommended Government seizure and the drafting of all the strikers into the United States Army. Because Congress now gives him a carefully drafted authority to delay such a strike, to attempt mediation and finally to conduct a strike vote when other remedies have been exhausted, he says the procedure will do more harm than good. He prefers to let the Smith-Connally Act expire on June 30 without any protection whatever for the people against Nation-wide strikes.

The only new thing in the message is the claim that this bill provides for too much Government intervention in our economic life and imposes Government control over free collective bargaining. The bill in no way interferes with the rights of the parties to agree on wages, hours, and working conditions, and in no way limits the right to strike if they fail to agree, except in the case of a Nation-wide strike for a period of 80 days until an election can be held. There might be something in the argument if the Government had not already intervened in all collective bargaining on the side of labor. Every collective-bargaining contract has been subject to the terms of the Wagner Act, the Norris-LaGuardia Act, the Clayton Act, the Fair Labor Standards Act, the Walsh-Healey Act, and the intervention of Government conciliators. All this bill does is to say that when the Government does intervene, it shall be as an impartial public servant, and not in every case as an advocate of the labor union. The administration of the Wagner Act by the National Labor Relations Board, and the court decisions regarding it, made it so one-sided as to produce a general public demand that the law operate both ways. That is the purpose of the new bill.

The only new limitations or collective bargaining relate to the closed and union shops and the welfare funds. Closed and union shops have developed to such an extent as to make it almost impossible for men to get a job unless they join the union, and impossible to hold a job if they offend the labor-union leaders. Our regulation of welfare funds requires only that every employee have a legal and enforceable right in the funds, so that it is not in the arbitrary discretion of the labor-union leaders to give or not to give. These huge funds should, of course, be subject to Government regulations just the way insurance companies are subject to Government regulations to be certain they remain sound and unimpaired.

I can, in a brief time, deal with only a few of the direct misrepresentations of the details of the bill.

The President says that a union will be liable if any of its members engaged in an unauthorized wildcat strike. This is simply not so.

The President says the bill would force unions to strike if they wish to have a jurisdictional d'spute settled by the National Labor Relations Board. This is not so. All the union has to do is to file a petition under the representation section. How could this provision increase strikes when it is not effective at all until there is already a jurisdictional strike or secondary boycott in effect? Here are two union abuses which every witness recognized as abuses. Yet the President criticizes the provisions making them illegal and subjecting them to correction by the National Labor Relations Board or the courts. The President talks against them, but he doesn't want anything to be done about them.

In various places the President asserts that the bill requires election after election, and the number of them has been multiplied. He completely ignores the fact that the bill limits elections by specifically permitting only one a year, both with reference to representation and union shop. The only elections we added to those required by existing law are those to find out whether the men really want a union shop. The President objects to an employer having the right to ask for an election when someone claims to be a representative of his men. Surely, an employer ought to have the right to find out whether the union leader really has organized his men, or hasn't.

The President says that the provisions regarding the arbitration of grievance disputes are transferred to the courts, to be determined by lawsuits. He repeated this statement on the radio. It is not so. Arbitration provisions are entirely legal and remain effective under our law. As long as either party abides by the arbitration decisions he, of course, is not subject to suit.

The President says an employer can discharge a man on the pretext of a slight infraction, even though his real motive is to discriminate against the employee for union activity. This is not so. The Board decides under the new law, as under the former law, whether the man was really discharged for union activity or for good cause.

The President says the law would expose unions to suits for acts of violence, wildcat strikes, and other actions, none of which were authorized or ratified by them. This is not so. We have simply provided that unions are subject to the same general laws or agency as any other corporation or citizen in determining their liability for the acts of the agents.

The President attacks the provision giving freedom of speech to employers. The need for such a provision was the one thing admitted even by labor union leaders. The Bill simply provides that views, argument, or opinion shall not be evidence of an unfair labor practice unless they contain in themselves a threat of coercion or a promise of benefit. Without these provisions there would be no freedom of speech on the part of employers any more than there has been for the last 10 years.

The President criticizes the provision that State laws prohibiting union shops are to remain in effect. He does not tell you that this is the provision of the Wagner Act, which has never undertaken to authorize closed-shop agreements if the State law prohibits them.

It is astonishing to find the President objecting to the section which attempts to prevent Communists from being officers of labor unions. We have merely required that every officer of a labor union seeking certification must file an affidavit that he is not a member of the Communist Party and does not favor the forceable overthrow of the Government. This is the same affidavit required to be filed by Federal employees.

This does not hold up the certification of a union. But any Communist who makes a false affidavit can be sent to jail. The President says "the mere refusal by a single individual to sign the required affidavit would prevent an entire national labor union from being certified for purposes of collective bargaining." Why should an individual officer refused to sign if he is not a Communist, and why shouldn't every labor union make Communists ineligible for election as officers? The President's statement simply echoes the argument made by Lee Pressman in his June 3 memorandum, ignoring the fact that a union could take immediate steps to remove itself of any Communist officials.

There is hardly a sentence in the President's message which is not open to direct challenge, and there are many others besides those I have cited which misrepresent the meaning of the new bill. The committees of Congress who wrote this bill had no anti-union prejudice. They have tried to restore equality in collective bargaining, and correct only those abuses against employers, union members and third parties which were clearly shown to exist by bona fide evidence. The campaign carried on against the bill by the labor unions has been a complete tissue of falsification, to support the contention of the last 10 years that unions are above criticism and above the law, that there must be no legislation on the pain of political execution. It is discouraging to find the President of the United States yielding to their pressure, adopting their arguments and blocking the effort of the great majority of the people's representatives including a large majority of the Democratic Party to secure a reasonable reform.

Nazi Revival in Many Lands Seen—A Survey Lists German Officials

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Mallory Browne, which appeared in the New York Times of June 15, 1947:

NAZI REVIVAL IN MANY LANDS SEEN—A SURVEY LISTS GERMAN OFFICIALS

(By Mallory Browne)

LONDON, June 14.—Detailed charges that nazism and fascism, "supported by considerable means and by steadily growing influences," are "openly starting to rise again," not only in Germany and Italy but in many countries, are made in a report published today by the International Committee for the Study of European Questions.

In a document that has been submitted to all the Allied governments the committee lists by name a number of Nazis still holding key posts in both the United States and British zones of Germany.

It accuses the Swiss, Swedish, South African, and Argentine Governments of laxity in dealing with Nazi assets and organizations in their own countries.

It alleges that underground groups of the Fascist Party exist in nearly the whole of Italy, actively engaged in organizing the escape of former Axis collaborators and that "this network has the support of a number of convents directly depending on Rome."

The International Committee for the Study of European Questions includes a number of prominent Europeans. Among its British members are Lord Vansittart, Lord Brabazon, and Viscount Elibank, as well as two labor MP's, Capt. Raymond Blackburn and Seymour Cocks. Edouard Herriot, former French Premier, heads the list of French members.

Today's report is to be followed in a few weeks by a document on communism. The committee declares that a "world-wide struggle between communism and anticommunism is taking place today" and that in face of this dangerous development "the United Nations appears powerless."

Recalling the round-up of Nazis in Germany that followed its most recent previous report, the committee repeats its charges that Nazis hold key jobs in the allied zones.

"In spite of official denials," the report says, "Nationalist elements are still holding key positions in very many of the official departments dealing with the economic situation." In the United States zone it gives the following as "only a few examples among many others":

In the Ministry of Agriculture of Bavaria Hans Muller, formerly a member of the Nazi Party and of the famous Freikorps, is in charge of the central office; Dyonis Schmidt, former member of the Nazi Party, is in charge of the establishment office; Herr Schaefer, former ministerial councilor, is in charge of the price-control office; Hans Fischer, former member of the Nazi Party and legal adviser of the Nazi Labor Front, is in charge of the leather-control office; Helmut Bauer, former member of the Nazi Party, is in charge of the department of mineral oils.

RUHR IS HELD HOTBED

The same state of affairs exists in the British zone and "on a wide scale in the coal and metallurgical administration of the Ruhr," the report continues, and it names the following as occupying influential posts on the North German Coal Control:

Herr Dehnen, member of the Nazi Party and the SS; Herr Klip, former member of the Nazi Party in charge of the secretariat; Dr. Wiedemann, former Nazi, in charge of the economy and the technique of heating; Herr Schaeffer, former Nazi, in charge of the dispatching of coal; Herr Nedelmanh, former Nazi and SS member, in charge of transport.

The report includes a letter from a German in the American zone alleging that he was arrested with eighty-seven companions in 1940 and that all except himself were murdered. He says that the "judge who gave the order to arrest us and to have us taken to prison where all my comrades were executed has now, with, apparently, the approval of the American military authorities, become head of the Department of Justice of our state of Wuerttemberg-Baden."

The report charges that "large numbers of dangerous Nazi agents retain their freedom of action in Switzerland and still retain property and important assets."

In Sweden, the report says, Nazi organizations have resumed their activities and sent Nazi propaganda material to other countries. Regarding Argentina, the report says that in spite of the efforts of the United States, the political line there remains unchanged. It claims that the four chief agents of Nazi Germany, Ludwig Freude, Ricardo Staudt, Fritz Mandl and Heinrich Doerge, who acted as advisers to the government of Buenos Aires during the war, are still its advisers today.

Speaking of the reorganization in secret of the Fascist party in Italy, the report says that the most important centers are in Milan. It complains that on April 28, the anniversary of the death of Benito Mussolini, high masses were celebrated in memory of Mussolini in many important towns.

ARGENTINE EXODUS BELITTLED

LONDON, June 14.—The report of the International Committee for the Study of European Questions said:

"There are today in Argentina 90,000 Germans who took part in Nazi activities during the war. Sixty thousand of them were members of the German Workers' Front, and 20,000 belonged to Nazi sporting and cultural associations. These personalities remain closely united today.

"Two Nazi benevolent societies and a German religious center have become active elements of the Nazi reorganization in the Argentine. They are the German Beneficent Society and the German Woman's Beneficent Society. They meet at reunions of the German Evangelical Church, which has congregations in all parts of Argentina, and which, through northern provinces, is spreading its influence in Brazil."

The report added that the 60 German concerns the Perón Government recently agreed to liquidate "scarcely represented one-sixth of the German firms.

"At the same time the Argentine Minister of Foreign Affairs announced that 13 Axis agents had been deported he confessed that 34 others had escaped. This is the third time in a year that at least 50 percent of the Nazi agents due for expulsion have escaped."

The committee's report said that in south Africa four leading Nazi organizations "have tens of thousands of members and continually carry out military exercises in uniform." The groups were listed as the Ossevabrangwag, which was said to be striving to set up a National Socialist State in South Africa; the Broderbond, which has a secret army, and two auxiliary societies known as the Gray Shirts and Black Shirts.

Norway Plans for Tourists This Summer

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. HAGEN. Mr. Speaker, in 1945 I traveled extensively in Norway. At that time I felt that it would be several years before Norway would be in a position to again act as host to the many thousands of tourists who come to see that beautiful land of fjords, mountains, and valleys.

I did not take into account, however, the fact that the Norwegian people have the capacity for setting an objective and accomplishing their aims in the shortest possible time. I have just received information to the effect that the efforts of the Norwegians have been so successful that they plan to entertain an eighth of a million travelers this summer. No doubt more Americans and others will visit Norway next year.

You will be interested in the following article which appeared in the Foreign Commerce Weekly on May 10, entitled "Norway Plans to Welcome 125,000 Foreign Travelers This Summer":

Two years after the liberation, Norway is hard at work rebuilding housing and travel facilities which made this peaceful and hospitable corner of Europe favorite among American vacationers," says the Royal Norwegian Information Service. War damage to hotels since the invasion in 1940 has meant the loss of nearly 2,000 accomodations, but state and private initiative are replacing these losses with excellent buildings and equipment. It is estimated that a total of 16 new hotels with places for 1,100 guests will be completed during 1947 and that by the following year tourist housing should reach

1939 levels. Recovery has been swift and the quality of service high. Food is no longer a problem, and the visitor will find both variety and quantity in keeping with the best national tradition, say the Norwegians.

The only severe restrictions on travel will be found in northern Norway where the Nazis leveled a 60,000-square-mile area. With reconstruction in those areas largely dependent on coastal transport, Norway's greatly reduced coastal fleet is hard pressed to keep abreast of local traffic, and coastal transport from Trondheim northward will not be sufficient to meet prewar tourist demands. A host of coastal vessels are now under construction, however, and the familiar North Cape and fjord excursions are expected to be resumed next year. In the meantime fjord transport is being maintained on a reduced schedule, and in certain of the southern and central fjord districts improved service is planned for the summer months. Northern Norway, however, is not yet prepared to welcome visitors.

More than 1,000 miles of new highways have been built in Norway since 1940, and careful maintenance and improvement of roads through some of the country's most scenic areas are calculated to please the visiting motorist. The new road to northern Norway has opened a vast new scenic wonderland which should be available to the visitor "before too long." At present, a shortage of accommodations along this route plus the heavy reconstruction traffic advise against a motor trip to northern Norway this year. Though gasoline is still rationed, the visiting motorist is assured a sufficient supply.

The National Travel Association of Norway, in looking beyond the reconstruction years, has planned a broad expansion program centering about a 5-year rebuilding plan. At the present time plans for more than 100 new hotels have been forwarded for approval, and special attention is being paid to the needs of the middle-class traveler. A special organization has been set up to improve the taste and quality of the many carved, woven, and painted handicraft items which visitors have found appealing. Henceforth, all items of this type which have met the group's rigid standards will be stamped with a special mark of approval.

Rail service, hard hit by the occupation, has been bolstered by the addition of several new streamlined trains on the Oslo-Bergen, Oslo-Trondheim, and the Oslo-Gothenberg lines. It is interesting to note that the completion of these Norway-built carriers—ordered before the war—was successfully delayed until after the German capitulation in 1945.

During the summer months of 1947 (May-August) 125,000 foreign travelers are expected to visit Norway, filling available visitor's accommodations. Though this figure is still 35,000 below 1939, Norwegians believe, says the Information Service, that the gracious and courteous host should offer only his best. "Second-best is never worthy of the guest."

Why Processed Foods Should Be Used in Foreign Relief Program

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1947

Mr. LARCADE. Mr. Speaker, under previous authority to extend my remarks in the Appendix of the RECORD, I wish to submit an article by Mr. Allen Walker, of the National Canners Association, Washington, D. C., as follows:

FOREIGN RELIEF PROGRAM—TRI-STATE PACKERS ASSOCIATION COMMITTEE MEETING, JUNE 5, 1947

MEMORANDUM OF POINTS BROUGHT OUT DURING DISCUSSIONS AT MEETING OF FOREIGN PROGRAM COMMITTEE OF TRI-STATE PACKERS ASSOCIATION, AT THE LORD BALTIMORE HOTEL, BALTIMORE, THURSDAY, JUNE 5, 1947

Allen Walker, director of International Trade Service of NCA, was present by request to furnish information regarding the status of the Government's food relief program.

When called upon for a statement as to the Government's projected program, Mr. Walker summarized reports which already had appeared in NCA's Information Letter and International Trade Letter, filling in details in answer to specific questions.

When asked what was NCA's policy on the subject, Mr. Walker referred to the record of the May directors' meeting of NCA and the Information Letter's extensive report thereon. He made it clear that he was there as the result of the request made of Mr. Campbell by Mr. Skinner for his (Walker's) attendance, and was ready to furnish whatever data was within his province to supply embracing foreign-relief program information. He thought these limitations should be understood.

As the result of discussions which followed, the following points were evolved for citation to members of the Tri-State Packers Association and to other trade organizations who were seeking to collaborate in the projected program.

All present agreed with Mr. Mairs' statement that the committee should seek to furnish some kind of specific response to the request made by Col. Stanley Andrews, of USDA, in charge of the Informational Supply program, when their (Tri-State's) previous delegation waited upon him in Washington. That request, as they all knew, was for a specific plan whereby processed foods could be included in the foreign food relief undertaking, so that USDA, when the growers' accumulated problems for 1947 "descended upon the neck of the Department," would possess justifiable ammunition for presentation to the proper Washington sources as a means of getting the United States Government's active endorsement of the proposals to be submitted.

In the meantime, it was agreed, all interested parties should join forces to descend upon Congress in a body to make the legislators cognizant of all the factors involved.

The following were the high spots of the discussion:

1. Obviously futility of past and present relief diet in European famine areas demonstrated by acknowledged fact that, in spite of our costly food-relief program over past two years, people are still undernourished and physically unfit to do the laborious field work essential to preparing to feed themselves.

2. That while desperate measures may have been necessary for a time to furnish available food (grain cereals) which might "keep 'em alive longest at least cost," such bare subsistence diet must be regarded as meeting emergencies, but as a protracted program admittedly is mere expediency and calculated to put no end to the tax on American citizens nor limit the constant drain on American resources.

3. That it is not even common sense to keep on draining the American economy of commodities (food grains) which are not now in short supply, and whose continued purchase at high prices only aggravates the present price inflation, while neglecting the procurement of many farm commodities now in surplus, and whose steady price decline is a matter of daily record. That such policy is calculated to react on the approaching packing season and precipitate a severe depression for most fruit and vegetable growers in the United States.

4. That there is no sense in the contention of some United States Government departments that "they can only respond to the demands of recipient European governments as to their primary needs (allegedly grain cereals)," because it has been proven,

(a) That such foods as flour, raw meats, wheat, etc., which have to be cooked with fuel which the European housewives have to buy by the pound (when they can get it) are no more economical than certain ready-to-eat processed foods, plus the fact that when not balanced by other foods they are totally inadequate to nourish the recipients.

(b) That a combination diet, embracing a broader list of commodities (including processed foods) would be far more nutritious and health-assuring; would relieve the monotony of the present civilian diet and stimulate their morale. That numerous processed foods, at current prices, when balanced with grain staples in a combination diet, comply with the formulae of established procurement agencies; namely, maximum nutritional and caloric values at minimum cost.

(c) That it is not beyond the realm of probability that communistic-dominated governments in central Europe do not want to see the diet of their starving people improved along lines calculated to restore their physical strength and enable them to get in shape to feed themselves since they, the Communists, believe that continued lack of proper food is the surest breeder of discontent and economic chaos, upon which all communistic propaganda thrives.

5. That if it be true, as proclaimed by the State Department, that the projected $350,000,000 foreign-relief program is inadequate to do more than purchase a proportion of the grain cereals demanded by the European governments—short-sighted as these demands may be. If it be true that it will take $5,000,000,000 a year for five more years to insure Europe's economic recovery, without which our entire war indebtedness—exceeding $250,000,000,000—will have been wasted, not to speak of the American blood spilled in the process. Then why not begin appropriating right now a part of the $5,000,000,000 which we shall need for the projected 1948 program instead of risking total European economic collapse in the interim and the consequent dragging of the rest of the world down into the abyss?

6. That such additional moneys, if voted now, would enable the United States Government to broaden the diet of the needy peoples abroad; would serve to restore their physical strength to the point of getting them in shape to feed themselves; would put Europe back on its economic feet and establish future markets for United States goods in the quickest possible time.

7. That otherwise, according to the authorities best able to weigh the facts, there will be no definitive termination to the job of feeding the hungry peoples overseas; we shall have wasted our gigantic war efforts entirely; we shall witness no early European recovery and we shall risk world-wide economic disaster.

8. That all Government, industrial, agricultural, and labor economists agree upon one fundamental; namely, that only maximum United States economic productivity will sustain maximum economic employment and maximum national income; that maximum productivity means expanded markets to take care of it; that foreign markets are largely closed to us now because of the shortage of dollar purchasing power; that the United States Government's subsidization of foreign food relief offers no substitute for the loss of these essential food export markets so long as they continue to be supplied with an unwisely limited group of commodities which neither serve a constructive, comprehensive purpose nor take off the domestic market the very items that are in

long supply and available at the lowest market price since prewar days.

ALLEN WALKER.

NOTE.—It seems to me not inappropriate to sound one note of caution here by reminding all concerned that all trade groups in the canning industry and individual canners who are pressing the Government on this subject, while perfectly justified in pleading for the inclusion of processed foods in the relief program on stated grounds so long as Congress has already appropriated the money; also, that they are further justified in asking for the precipitation of any future program ($25,000,000,000) provided the Government is intent upon effectuating such a program anyway. But it should be remembered that practically all American industry (including canning) has constantly urged the Government not to favor subsidies of any kind; and not to favor any particular branch of the economy by voting special appropriations in response to group pressure.

A. W.

The Veto of the Labor Bill

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1947

Mr. REED of New York. Mr. Speaker, the veto message of President Truman disapproving the labor bill is an invitation to revolution. Its incitement to law resistance is a dangerous departure from the theory and practice intended by those who framed the Federal Constitution. President Truman in his veto message of the labor bill appeals to the passions and prejudices of men instead of to their reason. Is such a diatribe likely to lead to law observance or is it an open encouragement to resistance and violence on the part of those who do not wish to be restrained by the law of the land?

I am inserting under leave to extend an editorial which appeared in the Evening Star under date of June 21, 1947:

A POLITICAL VETO

Thre is nothing in the President's veto of the Taft-Hartley labor bill which counteracts the impression that his disapproval rests primarily on political considerations.

On Tuesday Mr. Truman said that he had not yet read the bill as finally passed and that his mind was still open. Two days later he had made up his mind against the bill and was drafting a 6,000-word veto message which consisted for the most part of sweeping and unsupported generalities. Congress spent months working on this measure. But the President found in it not a single provision worthy of commendation. He simply denounced it from beginning to end.

It is not feasible here to review either the bill or the veto message point by point. But there is one point which serves to illustrate the character of the bulk of Mr. Truman's statement.

He denounced as being ineffective and discriminatory the section aimed at major strikes which imperil the national health and safety. It is true that this section does not prohibit and would not necessarily prevent such strikes. In its essentials, however, it provides for a board of inquiry to investigate and report publicly on the facts of the dispute; it empowers the Attorney General to obtain an injunction which would postpone such a strike for a maximum of 80 days, and it authorizes a secret vote by the workers as to whether they wish to accept the employer's last offer of terms.

If this verdict were in the negative, the strike could be called. The President condemns this as ineffective, although the only effective alternative would be compulsory arbitration, which he also opposes.

In this connection, it is interesting to turn back to a "fact-finding" proposal which the President himself made some 2 years ago, and which he discussed in January of 1946 in a radio address.

With respect to strikes vitally affecting the national public interest, the President asked authority for a Government commission to step in, ascertain all the facts and report them to the people. Meanwhile, he wanted Congress to impose by law a 30-day "cooling-off" period in which the workers could not strike. And he was confident that the force of public opinion, once the public knew the facts, could assert itself in "a practical way."

Now there is no important difference between that proposal, desired by the President 2 years ago, and the provision in the Taft-Hartley bill, for which he has not a single good word to say. Yet in 1946 he chided the legislators for not giving him what he wanted. "I had hoped," he said, "that the Congress either would follow my recommendations or 'would at least propose a solution of its own.' It has done neither."

The quotes within the above quotation have been supplied for emphasis. But the President was even more emphatic later on in that speech when, referring to his labor plan and other legislative proposals, he declared: "If the measures which I have recommended to accomplish these ends do not meet the approval of the Congress, it is my fervent wish—and I am sure that it is the wish of my fellow citizens—that the Congress formulate measures of its own to carry out the desired objectives. That is definitely the responsibility of the Congress. What the American people want is action."

When Congress acted, however, what did the President do? When the legislators passed the Case labor bill, shortly before last year's elections, he vetoed it. Now that the Taft-Hartley bill has been passed, and with a Presidential political campaign beginning to take form, he vetoes that. And this in the face of the fact that the people, through their Representatives in the House, have expressed repeatedly for 9 years their desire for new labor legislation—only to be thwarted time and again by an administration-controlled Senate Labor Committee or a Presidential veto.

The strength of this sentiment for a change is shown by the crushing House vote to override this latest veto—331 to 83. On this issue the President could not even muster a majority of his own party, the Democratic vote being 106 to override and only 71 to sustain the veto.

These are facts and figures which argue persuasively that the President is catering to pressure groups and ignoring the wishes of the people of the country. The people want a new deal in labor legislation. There is real need for a revision of the labor laws. The Senate should see to it that the change is made by joining with the House in overriding this political veto.

Navy Department Appropriation Bill

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. THOMAS of Texas. Mr. Speaker, through inadvertence, the following opening remarks I made during the general debate on the Navy appropriation bill a few days ago were omitted:

Mr. THOMAS of Texas. Mr. Chairman, the committee spent some 6 or 7 weeks hearing witnesses and generally considering this bill. No time was lost on partisanship. As a matter of fact, your committee takes great pride in the harmony that prevails in the committee. The gentleman from Vermont, my distinguished friend [Mr. PLUMLEY], is an outstanding chairman. He certainly has done a remarkable job and we are all most grateful to him. And, I would like to pay my respects to the gentleman from Missouri [Mr. PLOESER] and the gentleman from Indiana [Mr. JOHNSON], and certainly not the least, even though he is the newest member on the committee, the gentleman from Kansas [Mr. SCRIVNER]. The gentleman from Kansas did wheel-horse work, and I venture to say that if you watch his progress throughout his career here, it will be outstanding.

To correct that omission, so that my views may be of record, request is made to insert those comments at the proper place in the permanent RECORD.

Veterans' Hospitals

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit an article entitled "Where Are the Veterans' Hospitals?" which appears in the July 1947 issue of the American Legion magazine. This article points up the need for making use of the surplus Army and Navy hospitals. A subcommittee of the House Committee on Veterans' Affairs has examined the Schick General Hospital at Clinton, Iowa. I am inclined to believe that the recommendation of this committee would be favorable. If other similar hospitals were examined I believe that we would find that they could be used to relieve the congestion which exists due to inadequate facilities to take care of the wounded of World War II and those veterans of World War I who also require medical attention. I urge all Members of the House of Representatives to read this article:

WHERE ARE THE VETERANS' HOSPITALS?

(By Charles Hurd and Robert B. Pitkin)

Unless you are a veteran who has applied for hospital care you may not know that your country is woefully short of veterans' hospitals. There are thousands and thousands of former service men and women who may be entitled by law to medical care, to whom the promise of the law is not much more than a scrap of parchment offering paper hospitals.

Compared to the need there are so few veterans' hospitals in operation today that some of the manpower of the Veterans' Administration is being devoted, not to admitting eligible veteran patients to hospitals, but to selecting between them so as to determine which shall get in and which shall not.

The taxpayers are paying scores of paper workers to decide which eligible veterans will not be let into these hospitals.

In communities all over the land doctors daily examine veterans and receive modest fees from the VA to help determine medically the need for hospitalization.

Out in a few cities of the land there are a few foundations and holes in the ground where veterans' hospitals authorized in 1944 may some day stand.

In Iowa and California and a few more States there are some surplus Army and Navy hospitals standing empty and boarded up.

All the above is part of a picture of our Veterans' Administration hospital program, so hopelessly behind today that it will be more years than anyone can accurately figure before a veteran can be admitted to a veterans' hospital simply because he needs hospitalization and is eligible under the law. By that unknown date many of today's eligibles will be well—or dead.

The story of the hospital program for veterans is a discouraging story of 5 years wasted that should have been 15 years well spent. Only in the past few months has the program begun to function as it should have years ago. Now, too late to turn back the lost years, Surg. Gen. Paul R. Hawley, of the Veterans' Administration, with the assistance of the Army Corps of Engineers and the American Institute of Architects, is trying to make up some of the time that is gone forever. In that job he and his subordinates are working closely with the rehabilitation division of the American Legion—but they are running a race the best part of which was lost before it began.

The story is this:

Long before World War II the Legion asked that new hospital construction for veterans be started. In May 1940 the President approved a 10-year construction program which had as its goal 100,000 beds by 1948.

The Legion estimated, on the basis of the old ratio of 1 bed per 40 veterans that over 250,000 beds would be needed by 1948. The Administration shortly thereafter published its estimate of eventually needing 300,000 beds for eligible veterans by 1975.

Congress acted in 1943 and 1944 when it authorized money for 74 new veterans' hospitals. It also passed a law in 1943 giving World War II veterans the privilege of hospitalization for nonservice-connected disabilities if unable to pay for same, on the fair theory that a man who offered his life for his country should never languish in illness in peacetime for reasons of private want.

That action in 1943 caught the VA flat-footed. General Hines, the then VA Administrator, had apparently assumed that, as in the case of World War I veterans, World War II veterans would wait 5 years after the war for the right of hospitalization where the disability was not service-connected.

As you will see, act of Congress or no act of Congress, that's about how it's working out anyway.

But the real joker was in waiting until 1944 to authorize an enlarged hospital-construction program. In spite of fine paper priorities, the prosecution of the war came first. It had to. Men and materials were not available for other purposes. If war comes again next year or a hundred years from now, the present mess will repeat itself—unless the public, and through it the Congress, comes to realize that planning for veterans' care is part of any peacetime national-defense program.

By March of this year, 3 years after Congress allocated funds for the construction of 74 new hospitals, 68 sites had been chosen, specific planning was under way for about 59, contracts had been awarded for only eight and actual construction had started on only two or three of these. None of them is completed today.

Almost 2 years after war's end the Veterans' Administration is struggling along with (a) the hospitals built for World War I veterans and still largely occupied by them, and (b) such military hospitals as could be converted to VA use.

Several fine Army hospitals are standing empty, boarded up. They were offered to the VA but could not be used because the Army built them too far from any population center to staff them with doctors and nurses. These hospitals were fine for an Army, which could draft or commission medical staffs and order them whither it would. But they are in some instances not adequate for an administration which must use civilian doctors. Medical men say it is like drilling a well in a rock to build a big hospital where there are no doctors.

One of the locked-up Army hospitals is at Clinton, Iowa, in an area where veterans recently went begging for care because the Chicago VA hospitals were packed to the rafters and couldn't take them. The VA had to turn down use of the Clinton hospital because the nearest community with a medical center is Iowa City, too far from Clinton for Iowa City doctors to commute, or leave their practices.

The VA is planning a new hospital at Iowa City, and at Clinton the big Army hospital stands empty and unused, a shining ghost of the recent war. Meanwhile the VA has arranged that urgent cases in the Clinton area may go to other VA hospitals more distant than Chicago, for care.

And what is the story of the 74 hospitals authorized in 1944? Why are none finished and few being built today?

Construction is a matter of plans and materials and workmen and time—1944 was too late. There is no better comparison between authorization and having hospitals than the official record of the new 400-bed veterans' hospital at Providence, R. I., one of the first started under the postwar program.

Providence was approved September 12, 1944. The site was selected April 19, 1945. Architects' plans were completed June 13, 1946. The bid for construction was let September 10, 1946, and ground was broken the same month. The hospital is scheduled for completion in April 1948. That's 3 years and 7 months after authorization and 3 years after VE-day, when prospective patients began coming home in large numbers. Any delays caused by strikes, material shortages, or other causes will postpone the opening date, which is, after all, just a paper date.

Will there be further delays? Maybe. Workmen are scarce, particularly where commercial construction at bonus rates competes with hospital building, and that is virtually everywhere. Costs multiply and original plans need upward revision. The new NP hospital south of Peekskill, N. Y., on which ground was recently broken, will cost nearly three times as much as originally planned in 1944. Over eight million dollars then, twenty-two-million-odd now.

One contractor in Wisconsin undertook a major alteration job, bidding on the assumption he could put 100 bricklayers to work on a veterans' hospital. After he started, not more than eight bricklayers reported on any one day. His penalties for delay in the contract exceeded the amount of profit he could make.

Instances like that make contractors unwilling to bid on veterans' hospitals in the new program. The uncertainty of their ability to complete the job causes them to shy away. Contracts are being rewritten to remove penalties for delays beyond the control of the contractor—but the whole building situation adds to the dreamy quality of our present paper dates for completion of our 74 new hospitals. Today's estimate is that most of the new beds will be ready in 3 to 5 years (that's 5 to 7 years after VJ-day). But even that estimate is more ambitious than realistic the way things are going. It is doubtful if more than half the 300,000 hospital beds General Hines foresaw in 1943 as eventually necessary will be ready in 1950 or 1951. There's not much you can do about that fact now except write a row of exclamation points after it. It is certainly up to the VA and the Congress to make sure no further ground is lost.

What do all these figures, dates, estimates and shortages mean in terms of people?

Nobody knows how many men and women are going totally without the care they need.

Or how many are being crowded into State hospitals by States which don't care to wait any longer for promised Federal facilities.

Or how many are being held in Army and Navy hospitals without discharge, awaiting available Veterans' Administration hospitalization.

Or how many are going to the free clinics and wards of municipal and private hospitals.

There will never be a census of them all, and the VA is far too busy with an avalanche of more urgent paper work to attempt a count.

However, in a single day recently 13,000 men and women—all veterans to whom promises have been made in the law—visited the single regional office of the VA in New York City. They all came with problems troubling them, with questions to ask, or desperately needing help—and many were seeking hospitalization for disabilities or ailments. They didn't all get it—not even those who were clearly qualified, clearly in need.

Today it is utterly impossible for the VA to make so much as a gesture toward accommodating the non-service-connected veteran patients, patients who need hospitalization and are unable to pay for it.

Instead, when this year began, the VA was straining under a policy which stated first and foremost that no service-connected case would be turned away at the hospital doors. The intentions were very laudable.

It was a paper policy, and was not actually being realized, but was being pushed as far as facilities, and the abilities of the present VA staff, could push it.

The VA admitted, in January, that in spite of this policy there were a few instances of service-connected patients not hospitalized. In fact, Surgeon General Hawley cracked down hard in February in one or two instances where VA hospitals had, apparently knowingly, turned away service-connected patients.

But the VA's few instances were not accurate national figures. Out in the field the few loomed much larger. Some Legion department medical advisors said that within their own States there were more nonhospitalized cases of certain clear-cut service-connected ailments than the VA statistics admitted for those particular ailments in the entire Nation. One Legion doctor was sure this held for service-connected tuberculosis in his State. From another State the top Legion medical advisor reported that State hospitals were taking tubercular patients straight out of the Army. The State was unwilling, in the absence of VA facilities, to let tubercular patients go home to infect their families, he said. And the State did this despite overcrowding and understaffing in its own hospitals. However, in most of the States even these crowded facilities are not available. They do not have sufficient beds or staffs to take care of their urgent civilian problems.

It was further reported that crowded and understaffed conditions in VA hospitals had been causing tubercular patients to leave before they were entirely well. In one such instance a disgruntled tubercular veteran left the hospital and moved in with his sister and her children. Subsequently one of the children developed tubercular meningitis and died.

The VA was happily able to report in February that recently improved conditions were rapidly cutting down the number of such voluntary withdrawals from tubercular convalescence. This may be ascribed to recent legislation advocated by the American Legion.

At further variance with the small VA figures for nonhospitalized-service-connected

patients was the experience of Legion rehabilitation officials in Washington, who took a sampling of applicants for VA hospitalization from one area in North Carolina on which no action had yet been taken. The sampling revealed a high percentage of prima facie service-connected cases not hospitalized. These are cases which by their very nature are service-connected, about which there can be no argument. They vary from such things as gunshot wounds received in service to, in the case of Pacific and other tropical veterans, malaria. There was no reason to assume the sampling was not representative of the Nation.

The VA does not conceal its records. The discrepancy between its figures and the evidence of the private doctors exists because the VA figures are incomplete. The doctors meet patients who feel it is useless to apply for veterans' aids, or who started to apply but quit because of the red tape. They meet more who still have their applications pending, and many more whom the VA has turned down as not service-connected—without convincing the doctors. None of these patients are in the VA tabulation of a small number of service-connected cases not hospitalized last January.

The VA will move heaven and earth to give immediate care to a veteran once it is established to the VA's satisfaction that his complaint is service-connected.

Its reviewing boards toil mightily to get through the blizzard of applications, and steps are taken occasionally to cut some of the red tape vets must go through.

When all is said and done, the present clear-cut service-connected cases are more than enough to jam the beds presently available, and they are not all asking for hospitalization. Meanwhile the Legion doctors believe that a fat percentage of the men and women who will be turned away this year because they are adjudged not to be service-connected cases will eventually prove to suffer, in truth, from afflictions rising out of military service. Yet for them it wouldn't make much difference today if they won their argument.

Veterans in either the service-connected or nonservice-connected category are entitled to hospitalization when in need of it. The distinction between them as applied most generally to veterans today is an administrative one, made in an effort to parcel out inadequate facilities to the most deserving of an army of men and women, all of whom are eligible, but as to whom a priority specified by law must be observed. Lack of facilities is at the heart of the trouble.

It would be great sport to pin the entire blame for the situation on the Veterans' Administration, for it is charged with all the responsibility and looks like a handsome target. The events that led up to the present mess spell delay and delay and more delay. The VA has certainly made its mistakes, it ravels and snarls its own red tape. But it has also been caught in a web of shortages of material and labor, has met its share of bureaucratic bungling from the outside, and has been required to do too much with too little time.

Did you raise your eyebrows on learning that of 74 hospitals authorized in 1944 none is finished? From the point of need, this is shocking. But very little is to be accomplished by making the VA the entire scapegoat, or the veterans organizations, or the Congress, or the prewar administrations.

When all the cards are face up on the table, gentle reader, the villain of the piece is nobody but us, meaning We, the People. You can recount all the mistakes, all the pitfalls, all the blunders, all the political gambits and inept officials, and while they make a pretty list, they do not explain the shocking shortage of veterans' hospitals.

It was too late, in 1944, to plan for the care of veterans of the recent war. Then our manpower and materials were needed for the prosecution of the war, and no matter what priorities were written on paper, no matter who ran the VA or how, those 74 hospitals would not materialize in a hurry.

The time to plan veterans' hospitals is when we are at peace, as part of the national defense program that always recognizes the possibility of war.

It might have been political suicide for any Congressman to urge construction of 74 veterans hospitals in 1938. Amid cries of warmonger, a frightened, shocked public would have voted him out of office. We who make up that public are responsible for today's shortages of veterans' hospitals.

The Truman Tax

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 20, 1947

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Cleveland News of June 18, entitled "The Truman Tax":

THE TRUMAN TAX

Party whips cracked in the House of Representatives to bring enough Democrats back into line to uphold President Truman's tax-reduction veto.

The Democrats evidently figured they couldn't afford to leave their next year's Presidential candidate all alone out on that limb, whether they enjoyed his company or not.

Mr. Truman was intent on being the first American President to forbid a majority of Congress to cut taxes; it seems an odd way to win friends and influence voters. Of course, it's easier to milk the taxpayer than to enforce economy in government—so long as the taxpayer can be fooled. Looks as if Mr. Truman elected to take one more chance at it.

We don't think the taxpayer is going to be fooled. Millions of workers are denied the raise in take-home pay a July 1 reduction would have put in their envelopes. They'll remember who is responsible.

Just to keep memory fresh we have an idea for a weekly reminder. We suggest all those millions of workers keep track of the difference between the withholding tax as might have been and what they actually pay. The difference to be known as the Truman tax.

He's the man who levied it. He sure ought to have credit for it.

Foreign Relief

EXTENSION OF REMARKS

OF

HON. ROBERT J. TWYMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit the following editorial by Mr. John S. Knight, which appeared in the Chicago Daily News on Saturday, June 21, 1947; it well represents the growing feeling of the people of the United States:

FIT CHARITY TO RESOURCES LEST WE FALL WITH EUROPE

When an individual contributes to the support of the needy, whether they be less fortunate relatives or a deserving charity, his gift normally bears some relation to the state of his own finances.

The balance sheet of his assets and liabilities determines what portion of his income he feels can be used for helping others without jeopardizing the security of his own family.

Thus, a sense of prudence and self-preservation guides his thinking because he realizes that mismanagement of his financial affairs will in time not only reduce his own standard of living but directly affect his ability to assist the indigent.

A comparison can be made in the relationship between nations. The sole difference is that the United States is the only country with the money and the resources to help rehabilitate the war-stricken areas. Therefore the hungry and impoverished peoples of the earth look to the United States for salvation.

If we agree that they should be helped, and I hold strongly to that view, the question remains: To what degree can we afford to help them?

For a nation, like an individual, ultimately finds that its capacity to pay can be exhausted. If we ever permit ourselves to fall into that dilemma, the United States will wind up in the hands of a communistic receiver.

BILLIONS GET US NOTHING

The record of our generosity to date shows that billions have been poured into China without achieving economic stability in that unhappy country; money and credits extended to Russia's satellites have been used for further expansion of Soviet power, and one-half of the British loan of three and three-quarter billions has already been exhausted.

At the time Congress supported the Truman doctrine by appropriating $400,000,000 for Greece and Turkey, the Daily News opposed the loan on the theory that it was unrealistic to believe that we can stop communism with dollars.

The soundness of that view was demonstrated recently when Russia took over Hungary without firing a shot, and, as one Soviet leader said, "before the United States could rub its eyes."

We predicted, also, that if the Truman doctrine were carried out to its logical conclusion wherever communism was on the march, the cost to the United States within the next few years would run from seventeen to twenty billions of dollars.

The accuracy of that prediction is now supported in the recommendation of Secretary of State Marshall that a new program calling for gifts or loans of $5,000,000,000 a year is necessary for world rehabilitation.

The Secretary tells us that "in many countries, confidence in the local currency has been severely shaken." What he did not tell us is that, with the exception of England, these countries have made little effort to live within their means; that they have tried to escape their financial obligations by printing money; that, because of their political and ideological vagaries, it is doubtful whether they will ever mend their ways.

It is true that Secretary Marshall is striving for a joint program, but here again, what course shall we pursue if Russia decides it is not to her advantage to participate? Do we go it alone—and foot the entire bill?

MOTIVES DISTORTED

How is Europe reacting to our latest venture in world paternalism?

In France, the newspaper Franc-Tireur explains that the motivating force behind the Marshall plan is fear of a business depression.

This newspaper reasons that overproduction of goods is forcing us to look to world markets.

The Communists in France, according to George Weller of the Chicago Daily News foreign service, have decided not to shoot Santa Claus so long as thousands of superfluous functionaries can be carried on the pay roll. The Communists in Italy have decided that they want plenty of any money that is being handed out.

In England, where our funds are being poured into a hopelessly inefficient economy, Graham Hutton of the British information service says frankly, "Everyone knows Britain is living on the American and Canadian dollar loans, and that those dollars are fast running out, like sand out of the hourglass."

Mr. Hutton urges the British to face the truth that they cannot afford what they would like to buy, that the Nation must get to work with the utmost efficiency, and that precious human beings must not be wasted in the confusion of hopeless red tape caused by tying up more of Britain's working population in government offices than in any other nation in the world.

From his vantage point in Paris, George Weller writes that "no Communist and indeed few Europeans of any political flavor can understand why the United States, plagued by strikes and housing and tax troubles, is willing to throw any further moneys into Europe without asking anything in return."

A rapidly growing number of Americans are today beginning to ask themselves the very same question.

ESSENTIAL PRECAUTIONS

Four steps suggest themselves as essential if the American people are to support further aid to Europe:

1. We should first follow Herbert Hoover's recommendation that all governmental agencies having anything to do with foreign relief, international finance, and exports be coordinated. This step would eliminate much of the present interdepartmental conflict and confusion.

2. Our capacity to extend aid must be carefully surveyed so that we do not bankrupt ourselves while endeavoring to aid others.

3. We should create a bipartisan committee to plan and supervise the administration of an overseas economic program. In other words, we should have something to say about the way our money is spent.

This suggestion stems from the British experience, where 52 percent of the American loan has been exhausted without any of us having the faintest idea where the money has gone. In fact, no break-down is available from the British.

In other words, simply pouring out American funds to pump oxygen into dying economic systems is neither good charity nor good business on our part.

4. If we are actually frank enough to admit that the ultimate purpose of the Truman and Marshall doctrines is to stop Russia's expansion, why can't we see the folly of being economically interventionist and militarily isolationist?

As an example, we have spent between three and four billion dollars in China for economic relief and political prestige, but the coastal bases, fixed garrisons and airports remain in Soviet hands.

The same experiment, conceded to be a colossal failure in China, is about to be repeated in Greece and Turkey.

Why can't we see, as George Weller says so succinctly, that creditable as both the Truman and Marshall plans may be, the hard core of military reality is missing? Both plans are soft at the center because they make America responsible for Europe but ignore the very security they aim to achieve.

BEWARE OF BLANK CHECK

I believe that Mr. Truman, who says this is not the time to reduce taxes, will find his new $24,000,000,000-aid-to-Europe program meeting tremendous opposition in Congress. Certainly the people who pay the bills are entitled to know just how, where, and why the money is to be spent before they place their approval on a single cent of such a staggering appropriation of funds.

Our hearts go out to the less fortunate peoples of other lands but experiences of the immediate past give little hope that these additional gifts will be used effectively for their own best interests.

We should never agree to let the Government sign our names to another blank check without knowing all the facts and having our eyes wide open.

JOHN S. KNIGHT.

Shipment of Oil and Gasoline to Russia

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. SPRINGER. Mr. Speaker, while we are considering many important problems in the Congress, many of which will immediately concern the people generally, I desire to present for the consideration of the House the problem which we now face respecting our gasoline and oil. It has just been discovered that those in charge of our agencies of Government have become quite generous in shipping our meager supply of oil and gasoline to Russia. This is probably being done under the so-called good-neighbor policy, of which we have heard much during the 14 years last past.

This present program reminds us of the days before we were attacked by Japan—when we were sending gasoline, oil, iron, steel, and steel scrap to our recent enemy, Japan, under the same so-called good-neighbor policy. We recall that the shipments so made to Japan so depleted our own stock pile of those commodities that when Japan attacked us, and the war was in progress, our Government called upon our people, and our children, to collect steel, iron, tin, aluminum, and other essential materials in order that we might successfully prosecute the war. Of course, after Japan attacked us, she used that gasoline and oil to prosecute the war against us, and she used that same iron and steel to mold into bullets and shells which they shot back at us. Doubtless, many of our boys were shot and killed in the late war by that same material which we supplied to them under the so-called good-neighbor policy.

Mr. Speaker, the Treasury Procurement Division has just reported that Russia has on hand, today, a reserve supply and stock of oil and gasoline, ready for immediate use, of 150,000,000 barrels, and she has and is producing oil and gasoline in large quantities. Yet, in our own country, we have but a limited supply, and we rank fourth among the nations of the world in our supply; we have on hand, and ready for use, but 50,000,000 barrels of that highly essential commodity. Therefore, Russia has three times the supply of these commodities that we have—yet, our Government, by and through the agencies set up and now in operation, controlled by the President, continue to ship both oil and gasoline to Russia at the rate of approximately 1,000,000 barrels each month. Russia is requesting these shipments, and her requests are largely in excess of those made during the recent war—and our agencies of Government continue to ship her that which she requests regardless of our shortage in this country.

May I further advise the people that the heads of our Military Establishment have advised, and they have warned us, that our supply of gasoline and oil is only sufficient for normal peacetime military operations. In fact, they state that many of the normal operations have been materially reduced, or discontinued in part, because of this very limited supply of these commodities in our country. These statements verify the fact that a shortage exists, and they state that shortage will continue, and these commodities will remain critical, until we are able to secure oil and gasoline from Persia.

Mr. Speaker, many of the Government officials here who have been and are now participating in this policy of shipping oil and gasoline to Russia, in the face of our very short supply, warn us that within the next 30 days it may become necessary to again ration oil and gasoline in the United States. At the very time that warning was given, those same Government officials were approving, or had approved, a shipment of 50,000 barrels of oil, from Los Angeles, Calif., in a Russian tanker—to Russia; they had also approved other shipments, because two other Russian tankers were in process of loading, each to carry a like amount of gasoline and oil to Russia, and 10 other Russian tankers are now awaiting to be loaded, with a like or similar amount of these scarce commodities. Of course, this policy is depleting our supply, and sending to Russia, which nation has plenty of gasoline and oil, that supply which we need so badly. My own concern is this: Why send large quantities of oil and gasoline to Russia? She has plenty of these commodities. And why reduce our own supply to the point where rationing may be necessary in the future? These questions can be answered only by those in control—those who are now engaged in carrying out the so-called good-neighbor policy. Let them answer these questions to the satisfaction of the people, if they can.

Mr. Speaker, many of us are wondering if this is a part of the planned-scarcity program, which has been followed for a long period of time. If it is—then it is time for those in charge to awaken and change that policy. The precedent of the action of Japan prior to World War II should be ample warning to them. It is my hope that these high-powered and so-called experts now handling these commodities, and many other commodities, will not continue to give away our essential commodities, thereby impoverishing our own people, and making

it necessary to go back to the day of rationing all because they have failed to estimate the situation.

A Realistic Foreign Policy

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article written by me entitled "A Realistic Foreign Policy." This appeared in the Manchester Evening Leader, Thursday, June 19, 1947, and in the New Hampshire Morning Union, Friday, June 20, 1947. Both papers are published in Manchester, N. H. The article follows:

A REALISTIC FOREIGN POLICY

THE UNITED STATES—THE LEADING WORLD POWER

The world today is exceedingly small because of the revolution in communication and transportation. There are no longer any far-away places on this earth. The interests of the United States are global. Isolationism is dead. The war through which we have just passed and the peace we are trying to establish are parts of the same globe-encircling upheaval gripping the troubled nations of this planet.

This Republic cannot stand apart from the onrushing stream of world affairs. Just as we have taken the leading role in two great wars during the past three decades, so we must take our position as the foremost leader in the current struggle to win the peace. For this purpose destiny has brought this nation into existence. We must rise to the present occasion, assume responsibility for leadership, and be determined that we will not fail in establishing a permanent peace. If we fail in this undertaking, we fail not only ourselves but the entire human race.

THE UNITED STATES AND RUSSIA

On April 10, 1947, I said on the floor of the House of Representatives that the heart of the present debate on the foreign policy of the United States, frankly speaking, is to be found in the relations between the United States and Soviet Russia. The current critical world situation has resulted from an unwillingness on the part of Communist-controlled Russia to live up to agreements solemnly made plus a desire on the part of Moscow to take advantage of the postwar world dislocation for the express purpose of achieving a world dominated by communism. The world crisis will be resolved when the United States comes to grips with the realities of the situation and makes a determined stand against Soviet aggression and the advance of communism.

RUSSIAN FOREIGN POLICY

There are two basic principles in the foreign policy of the Soviet Union. The first is expansion by the acquisition of territory and the second is to spread communism whenever and wherever possible. The recent action in Hungary is the latest example of the determination of Russia to spread her totalitarian communistic regime. We have protested against the action in Hungary and Bulgaria. Secretary Marshall is becoming more outspoken in the face of the advance of communism. Under Secretary of State Dean Acheson, speaking at Wesleyan University in Middletown, Conn., on Sunday, June 15, 1947, used strong language in reference to the Soviet Union. Said Acheson, "Unhappily the whole force of recovery and the international pursuit of happiness has suffered deeply by the failure to attain or maintain great power unity. This has come about by the Soviet Union's pursuit of policies diametrically opposed to the very premises of international accord and recovery."

I further stated on the floor of the House on April 10 that in my opinion Mr. Stalin and his associates will not stop their program of aggressive expansion and of spreading communism until the United States takes a firm stand. I believe that this is the time for a show-down. This is the time to make the position of the United States absolutely clear.

THE TRUMAN DOCTRINE

The Congress by a heavy vote passed and the President signed a bill to extend $400,000,000 in aid to Greece and Turkey. Thus the Truman doctrine, which I hope will become the American doctrine, has been approved by the Congress. This action is significant because it indicates that we intend to take a firm stand in international affairs. It marks the stiffening of the foreign policy of the United States. It is the first show of realism by our Government since the end of the Second World War.

A REALISTIC FOREIGN POLICY

The great debate on the foreign policy of the United States has just begun. There is considerable talk in Washington about the possibility of a special session of Congress to be called sometime in the fall for the purpose of considering matters of foreign policy exclusively. Secretary of State Marshall has already formed a board of planners within the Department of State to make recommendations in foreign affairs. Congress in the future will be required to render many decisions on international questions. I believe that we should formulate immediately a firm, realistic and resolute foreign policy.

On May 23, in speaking to the Women's Republican Club of New Hampshire in Concord, I suggested that a platform on foreign policy should include the following planks—

PLATFORM ON FOREIGN POLICY

First. The United States should dedicate itself to maintain its position of leadership for world peace. This opportunity has been given to us by destiny. The Republic has come into being for the express purpose of laying the foundations for a permanent and a lasting peace. Every American heart should be dedicated to the achievement of this objective.

Second. Congress should make a thorough study of international relations and investigate the Department of State and the foreign service. Such procedure would give the representatives of the people a greater voice in the determination of policy. In November 1945 I introduced a bill for the purpose of conducting such a study and investigation. The Secretary of State evidently feels that a committee on policy formation is essential since he has created one within the Department itself.

Third. The United States must continue leadership in the UN. The defects of this organization, chief of which is the veto, must be removed.

Fourth. We must exert pressure to bring about the honoring of solemn agreements, such as Yalta, Potsdam, the Atlantic Charter, and the Charter of the United Nations. Only recently we sent sharp notes to Bulgaria and Hungary. The President has taken a firm stand against what is happening in the Balkans. This pressure must be continued until the march of aggression and totalitarianism is halted. In connection with this I believe that recognition should be withdrawn from all of the Soviet-dominated governments.

Fifth. Diplomatic appeasement of the Soviet Union in which we have been indulging since the end of the war must cease. Diplomatic appeasement failed in the 1930's. It will fail in the 1940's.

Sixth. Economic assistance to rehabilitate the economies of countries resisting the spread of communism must be extended by the United States. Secretary Marshall speaking at Harvard stated that the purpose of our foreign policy "should be the revival of a working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist."

No man knows what it is going to cost to stabilize the world. Recent estimates have run as high as $24,000,000,000. I have often stated that if it requires twenty-five billions to stabilize the economies of the world and to win the peace it will be far cheaper than fighting another war. It will be money invested for the security of our country.

In connection with extending aid, we should follow an important principle, namely, the principle of helping the nations who receive assistance to help themselves. As soon as they are self-supporting and we have successfully halted the sinister spread of communism, our aid can cease.

Seventh. This country should inform the world that we intend to stop aggression directed at certain strategic positions such as the approaches to the Atlantic, the Dardanelles, the islands of the Pacific, Iceland, Gibraltar, the Persian Gulf area, etc. Our interests circle the globe and when there is encroachment on strategic areas, the integrity of which is necessary to our security, we must be ready to offer immediate, continued and unrelenting resistance.

Eighth. Most important of all planks in a realistic program on foreign policy is the maintenance of adequate preparedness on the sea, on the land and in the air. Atomic supremacy and air supremacy by the United States must be achieved at all costs. All the money necessary to keep us the strongest Nation in the world should be appropriated. Only by so doing will we win the peace. A strong United States is the greatest guarantee for a decent society in the future.

THE AMERICAN DOCTRINE

The Truman doctrine must be implemented in every way possible. It must become the American doctrine. I believe the 8 planks on foreign policy which I have outlined should be adopted at once by both parties as a platform on foreign policy. A weak foreign policy, an unrealistic foreign policy, a foreign policy of appeasement will lead to war and to death. A strong policy, a resolute foreign policy, a firm foreign policy will lead to a peaceful world, a world in which nations can live without fear of aggression, slavery, and ultimate annihilation.

The Maritime Commission

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. TABER. Mr. Speaker, supplementing my remarks on the floor today with respect to the Maritime Commission, I am including below a letter dated June 9, 1947, from the Chairman of the United States Maritime Commission to me, and my reply thereto, dated June 17, 1947; and a letter dated June 20, 1947, from the Comptroller General to me.

These letters set forth the pertinent facts with respect to the effort of the

Maritime Commission to avoid reducing their pay roll to the amount authorized by the appropriation act by making transfers between their accounts which the Comptroller General has held to be illegal.

The letters follow:

UNITED STATES MARITIME COMMISSION,
Washington, June 9, 1947.

Hon. JOHN TABER,
Chairman of the Committee on Appropriations,
House of Representatives.

DEAR CONGRESSMAN TABER: This letter is in reply to an inquiry made orally by Mr. Harvey, clerk of the Committee on Appropriations, to Mr. Kirsch, budget officer of the Commission, concerning the ability of the Maritime Commission to absorb the cut of $90,000 made by the Congress from the Commission's request for an increase of $1,890,000 in the administrative limitation of the construction fund to provide for increased costs brought about as a result of the Federal Employees' Pay Act of 1946. Mr. Harvey also inquired how the Commission was able to absorb the apparent deficit of $331,522 referred to in my statement before the Subcommittee on Deficiencies on April 14, 1947.

Shortly before I appeared before the Subcommittee on Deficiencies, the Commission had requested the Bureau of the Budget to support a request for increase in the administrative limitation in the amount of $331,522. This request had been denied by the Bureau of the Budget only a few days before I testified, and at that time specific plans had not been developed to prevent this apparent deficiency. Immediately thereafter, however, a program designed further to reduce expenditures and to bring the administrative accounting records up to date was instituted. The provisions of this program are as follows:

1. At the time the request was contemplated for an increase in the administrative limitation to cover an apparent deficit of $331,522, pay rolls had not been reviewed to a point where the Commission was able to determine that certain charges had been erroneously made against the administrative limitation. The review of pay rolls has been expedited, and it has been determined that charges, aggregating more than $200,000, resulting from salaries to personnel engaged in the checking of materials on ships going into or coming out of lay-up, were erroneously allocated to the administrative limitation; whereas they should have been charged to the limitation for reserve fleet operations. It has further been determined that another $100,000 has been charged in error to the administrative limitation, about $90,000 of which should have been made against warehouse operations and $10,000 against the funds for the maintenance of inactive shipyards. Steps are being taken to have these expenditures correctly charged.

2. The posting of all credits to the administrative limitation account is being expedited. Often credits to various accounts are not made until after the close of the fiscal year, but in view of a possible shortage of funds we are currently posting all credits so as to have the administrative limitation account properly reflect the amount of cash available. These credits consist of reimbursements from other agencies, canceled pay checks, and adjustments of employee accounts. For example, so far this fiscal year credits amounting to approximately $70,000 have been made as a result of canceled checks. A substantial portion of these credits would not ordinarily be reflected in our books until after the close of the fiscal year.

3. All promotions, other than those required by law, which would cause increased expenses to the administrative limitation have been forbidden.

4. All new appointments or transfers of employees paid from other limitations or funds to positions paid from the administrative limitation have been forbidden.

5. All overtime except in cases of unusual emergency has been forbidden.

6. All advance of sick leave has been forbidden.

7. All advance of annual leave has been forbidden.

8. The rate of separations has been increased. The following table compares the actual number of employees on duty as of various dates as compared with the number estimated to be on duty as shown in an exhibit presented to the Subcommittee on Deficiences on April 14, 1947:

U. S. Maritime Commission administrative limitation—Construction fund

Date	Number of employees on active duty	Number of employees estimated on Apr. 14, 1947, to be on duty
Apr. 4, 1947	3,048	3,050
Apr. 18, 1947	2,982	3,000
May 2, 1947	2,961	3,000
May 16, 1947	2,926	2,950
May 30, 1947	2,894	2,950

The total of 2,894 employees on duty May 30, 1947, compares with a total of 6,081 on duty July 12, 1946. This represents a reduction of 51 percent.

As a result of this program, the Commission is in a position to stay within the approved limitation.

If you have any further questions regarding this matter, the Commission will be glad to supply the answers.

Sincerely yours,

W. W. SMITH,
Chairman.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON APPROPRIATIONS,
Washington, June 17, 1947.

Admiral W. W. SMITH,
Chairman, United States Maritime Commission, Washington, D. C.

DEAR ADMIRAL SMITH: Due to conflict of schedules, it has not been possible for us to hold the hearing on the proposed adjustments to avoid the deficiency which was in prospect in your administrative expense limitation at the time you appeared before the deficiency subcommittee on April 14, 1947, and due to the shortness of time I am writing this letter in reply to your letter of June 9 in lieu of a hearing.

On April 14 you advised the committee that if your request for $1,890,000 was granted, you would still be confronted with a further deficiency of $331,522 which it would be necessary to absorb in the remaining months of the year in order to stay within your limitation. The Congress imposed a reduction of $90,000 in the deficiency request, leaving a gross deficiency of $421,522 to be absorbed.

You stated on April 14 (p. 126 of the hearings on the second deficiency bill), in response to a question by Congressman SHEPPARD as to how you expected to absorb this deficiency:

"We have several solutions under consideration. The most drastic one, of course, would be staggered furlough of everyone in the staff, possibly a week's compulsory leave without pay.

"Then we are making a study also of which employees' salaries are properly chargeable to War Shipping Administration funds. We know that there are some, but we would not make that shift without the approval of the Comptroller General."

I have before me a copy of the letter of the Comptroller General, dated April 29, 1947, replying to your letter of April 14, 1947, in which he refused to permit the adjustment in accounts to which you apparently alluded in the hearings. When requested by this office to report just what adjustments were made to absorb the deficiency you sent your letter of June 9 and I am forced to say that it is not responsive to our request. The numbered paragraphs in your letter set forth a number of broad general statements as to methods to be used by your Commission in absorbing this deficiency. For example, you point out that there are:

"Charges aggregating more than $200,000 resulting from salaries to personnel engaged in the checking of materials on ships going into or coming out of lay-up, were erroneously allocated to the administrative limitation; whereas they should have been charged to the limitation for reserve fleet operations."

In view of the fact that the Comptroller General had rejected your first proposal to make an adjustment to meet the deficiency one naturally assumes that the second proposition is not as meritorious as the first or you would have offered it to the Comptroller General in the first place. You failed in your lettter to give details of this adjustment in accounts and dealt with it in only broad general terms and to that extent your report is not responsive to our inquiry. I am informed by the General Accounting Office that your request for this adjustment, submitted on a series of Forms 1097, proposes to charge personnel which have all the year been charged to the administrative expense limitation to other limitations, where funds are plentiful, from July 1, 1946. It is pertinent to inquire why your accounting system and budget management processes are of such a nature that you did not discover this until May. Had you informed your deficiency subcommittee, on April 14, that adjustments of this nature were possible in all likelihood the deficiency granted would have been less than the $1,800,000 that was approved.

Your letter refers to the posting of credits to the limitation account. The statement with respect thereto can be looked upon only as an admission that your accounting practices are slipshod.

You state in the last sentence of your letter:

"As a result of this program the Commission is in a position to stay within the approved limitation."

The fact remains, however, that in order to stay within the approved limitation you must get the approval of the Comptroller General of the various adjustments to which you refer. I have conferred with representatives of the General Accounting Office whose responsibility it is to develop the information necessary to a decision by the Comptroller General on your Form 1097 dated June 6, 1947, proposing to make adjustment between limitations in the amount of $233,133.14, which, if granted, will serve to absorb a little better than half of the known deficiency. The General Accounting Office tells me that it will require considerable research into the basic records before they can make a decision on this request and it is now just 13 days until the end of the fiscal year. If the decision were rendered adversely today, you would be in a very difficult situation and each hour that goes by before a final decision by the Comptroller General will make it that much worse. I have requested the Comptroller General, and am supplying him with a copy of this letter, to make an exhaustive examination in order to be sure that your proposed adjustments are absolutely legal. Inasmuch as you do not present this request until the last month of the fiscal year and then only after you have discovered that you cannot stay within the limitation and have already made one attempt to get approval by the Comptroller General of an adjustment which would have cleared your accounts, no other course of action is in accord with sound business practice.

While it may be be said that the penal provisions of the Antideficiency Act are not applicable to this situation, since this is a limitation and not a separate appropriation,

your moral responsibilities are exactly the same as if it were a separate appropriation.

You have no doubt observed the statements on pages 26 and 27 of the report on the independent offices appropriation bill, 1948, about your budget presentation. The handling of this limitation in the fiscal year 1947 is exactly like the situation therein referred to. The only conclusion which I can draw is that if you were keeping your accounts in a proper manner this situation could not have occurred.

As Chairman of the Commission, the responsibility is yours not only to see that your expenditures for administrative expenses for fiscal year 1947 are within the limitations set by the law—and I do not see how you can avoid taking such steps as are necessary to insure that fact immediately rather than to await a problematical decision on adjustments in accounts which may not be available for some weeks to come due to the great amount of detailed work necessary on the part of the auditors—but also to take immediate steps to put your accounting and budget offices in shape to administer your affairs in the future so that you will not only know what your expenditures are currently but be able to present to the Congress your budgetary requirements in a clear, concise, and accurate manner.

Very sincerely yours,

JOHN TABER, *Chairman.*

COMPTROLLER GENERAL OF
THE UNITED STATES,
Washington, June 20, 1947.

Hon. JOHN TABER,
Chairman, Committee on Appropriations,
House of Representatives.

MY DEAR MR. CHAIRMAN: I have your letter of June 17, 1947, enclosing a copy of your letter of the same date to the Chairman, United States Maritime Commission, relative to an adjustment requested by the Commission of the General Accounting Office on standard Form 1097 dated June 6, 1947, involving a credit of $233,133.14 to the limitation for personal services and a charge of a like amount against the limitation for reserve fleet expense under the construction fund of the Commission.

As explained to you more fully when I visited your office today, accompanied by Messrs. E. L. Fisher, F. H. Weitzel, and E. W. Bell of this office, the General Accounting Office can find no legal basis for the proposed adjustment, and hence must disapprove it. The Chairman of the Maritime Commission has been so advised.

Sincerely yours,

LINDSAY WARREN,
Comptroller General of the United States.

United States Antitrustizing Japan's Zaibatsu

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith the following article by Mr. Ralph Donaldson, of the Cleveland Plain Dealer:

UNITED STATES ANTITRUSTIZING JAPAN'S ZAIBATSU

(Article 19)

The liquidation of the Zaibatsu is one of the most sensational developments in the financial world since the midget sat on J. P. Morgan's lap.

The Zaibatsu are the 10 wealthiest families in Japan who controlled most of its banking and industry through gigantic holding companies and interlocking directorates and whose activities contributed to the financing of the war and the production of war supplies. These are the Aikawa, Asano, Furukawa, Iwasaki, Mitsui, Makajima, Nomura, Okura, Sumitomo, and Yasuda families.

To dispose of their holdings the occupation authorities have established an antitrust and cartel section, which operates like the antitrust division of the Department of Justice, except that it doesn't have to go through the routine of getting court orders for what it does. This section issues its own orders.

Its purpose is to break up large corporate enterprises and to abolish monopolistic trade practices. It operates through the holding company liquidation commission, an agency of the Japanese government established at the suggestion of the occupation authorities to liquidate and distribute the Zaibatsu holdings.

The first official act of the holding company liquidation commission was to designate the Mitsui, Mitsubishi, Sumitomo, Yasuda and Fuji industrial holding companies for dissolution and to take physical possession of securities having a book value of 1,500,000,000 yen.

It has since designated for dissolution 40 additional holding companies and 20 of the larger Zaibatsu subsidiaries which operated in a dual capacity as both industrial and trading enterprises and holding companies.

Through these holding companies the liquidation commission controls 3,500 operating corporations. The securities of about 3,000 of these corporations are scheduled for liquidation, under a recently enacted Japanese law prohibiting stock ownership by the restricted companies and their subsidiaries and affiliates.

These securities eventually will be sold to Japanese individuals, with employees of the various companies having priority purchase rights. The ultimate aim is to develop an investing public and to establish widespread ownership of securities, as in the United States, rather than having them concentrated in a few hands.

Technically this is not confiscation. The original owners of the securities, the Zaibatsu families, will be compensated from the proceeds of the liquidation. They are to be given 10-year nonnegotiable bonds. This won't make them wealthy, however. About 85 percent of what they get will go to the government under the capital levy tax.

Actual sales of securities to the public will not begin until they have been appraised and fair prices established for them. In many cases this will involve reorganization of the companies involved, especially those which have sustained a total loss of their assets in Manchuria, Korea, China, and other places where Japanese exploitation ceased with the end of the war.

Moreover, it appears that currency stabilization which would establish some kind of value for the yen outside of Japan would be highly desirable to make the investments attractive.

Sales of the securities will be conducted by a securities coordinating liquidation committee, composed of representatives or various agencies of the Japanese Government.

WIDE DISTRIBUTION IS SOUGHT

Its purpose will be to coordinate sales so as to prevent the market from being flooded and to secure as wide a distribution as possible. A central registration bureau will be established so that ownership of the stocks can be supervised and regulated.

Meanwhile the income of all the Zaibatsu enterprises has been impounded. The members of these families are dependent for their living expenses on allowances granted to them by the liquidation holding company. These allowances will be deducted from their eventual compensation.

Some observers of the occupation were impatient in the early days because the heads of the Zaibatsu were not lopped off the day after General MacArthur landed in Japan. But when we get through with them, according to the program that has been worked out by SCAP, they won't have much left but their heads.

San Francisco's Cable Cars

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. GEARHART. Mr. Speaker, with all of San Francisco's natural and man-made marvels to boast of, features in abundance, of which it is rightfully very proud, its cable cars—the "ugly ducklings" of municipal transportation—are, strange to relate, the objects nearest and dearest to the hearts of the people of that famed metropolis.

As the cable cars constitute modern San Francisco's living link to its glorious yesteryears, I am sure that which Mr. Edwin Eaton, president of the Fresno Guarantee Building-Loan Association, wrote of them in his monthly letter should find its place in the CONGRESSIONAL RECORD—the ever-expanding repository of present-day happenings to which the historians of the present and the future will turn in their search for material as time moves on. His is, indeed, a stirring description of a day that is rapidly fading.

Mr. Speaker, Mr. Eaton's letter, to which I have just referred, is the following:

THE PRESIDENT'S MONTHLY LETTER

San Francisco's picturesque cable cars have been the subject of much recent controversy in the hilly city by the Golden Gate. Mayor Lapham and others in responsibility claim that the cars have outlived their usefulness, are a menace to life and limb, and are a positive liability to the city. They say the cars themselves are old and decrepit. The tracks are worn and bumpy and cannot be replaced. Experienced gripmen are old, and young men to replace them are not attracted to the hard physical requirements of the job. The cables break and cause interruption of service. The cable lines now operate at an increasing loss. Hazards to passengers and to traffic impose a great financial liability on the city.

On the other hand, sentimentally the cars play a big role in the hearts of San Franciscans and visitors. It is claimed that the cable cars are such a distinctive feature of San Francisco that they attract more than enough tourist trade to counteract their operating loss. The question is to be put to the voters as to whether or not the taxpayers shall foot the bill for the sake of the sentimental value.

Without attempting to take sides in the controversy, let me be reminiscent for a moment about San Francisco's cable cars as I knew them in boyhood days. While I, myself, was born in Fresno, my mother was born in San Francisco, which no doubt accounts for my early familiarity with "the

city," as we habitually referred to it. Father always took his vacation in July and we usually spent that month each year at a different California resort. Upon Father's return to Fresno on the 1st of August, Mother and the children would go to San Francisco to spend August and a week or more of September until Fresno schools opened. Thus it was that I spent a month or more each summer in San Francisco from babyhood to college days.

Most often we lived on or near Sutter Street and so used the Sutter Street cable car more than any other. Unlike the cable cars now operating in San Francisco, the Sutter Street cars were in two separable parts—a closed section with parallel seats facing each other and an open dummy with seats facing outward on each side and two seats facing forward and two rearward. The reason for the separate units was that the Sutter Street cable franchise went only as far as Sansome Street, where Sutter enters Market Street. From there to the Ferry Building horses pulled the enclosed section of the cable car the few remaining blocks to the ferry and back. The detached dummy would wait at Sansome Street for the first horse car to arrive from the ferry. As soon as the horses were detached, the dummy would be hooked on and started on its trip up Sutter Street, pulled by the underground cable. A grip in the dummy provided the means of connecting and disconnecting with the continuously moving cable. There was a song whose chorus started "Oh, the gripman gripped the grip upon the grip car."

Most picturesque of all San Francisco's cable cars were the Market Street cars whose eastern terminus was a turn table at the Ferry Building. Five different streets angling into Market Street contributed their brilliant hued cars to the colorful parade to the ferry. Alike in all other respects, these cars were painted different colors to designate the routes they traveled before entering Market Street. The Hayes Street cars were green, the McAllister Street cars were yellow, the Haight Street were maroon, the Valencia Street blue and the Castro Street cars cream. Standing at the ferry turn table, it was easy for a passenger wishing any of these 5 lines, to determine by the color when his car was arriving. Unfortunately the earthquake and fire of 1906 put an end to these picturesque cars. The Market Street lines were all electrified when service was restored.

San Francisco will never seem quite the same without cable cars. However, we sentimentalists who don't foot the bill had better step side and let San Francisco's taxpayers decide whether or not they wish to underwrite the loss necessary to continue this picturesque but uneconomical means of transportation.

Cordially yours,

EDWIN M. EATON,
President, Fresno Guarantee Building-Loan Association.

Let Us Pick a Chief of Police Qualified To Be Superintendent of the Metropolitan Police Department in the District of Columbia

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks, I wish to place in the CONGRESSIONAL RECORD three editorials that appeared in the local newspapers regarding the appointment of a new chief of police for the Nation's Capital.

These expressions of editorial opinion do not speak well in behalf of the candidacy of Inspector Barrett and it is obvious that these newspapers view the possible appointment of the present chief of detectives as head of the Police Department with skepticism and apprehension:

The clippings follow:

[From the Washington Daily News of June 21, 1947]

MR. YOUNG'S RESPONSIBILITY

The active career of an able and loyal public servant came to a virtual close yesterday when Maj. Harvey Callahan, Washington's chief of police, asked to be retired on grounds of physical disability.

The people of Washington owe Major Callahan an important debt of gratitude. It is to be hoped that Major Callahan, relieved of the strain of fighting to return to his job, will find his way back to health.

His request for retirement brings to public attention again the matter of his successor.

Ever since Major Callahan first became seriously ill it has been understood that Inspector Robert Barrett, chief of detectives, has been the personal candidate of Commissioner J. Russell Young.

A few weeks ago, the News expressed at some length a considered opinion, with reasons, that Inspector Barrett is not suited to be chief of police in the Nation's Capital.

Today, when the appointment of Major Callahan's successor is imminent, we repeat this opinion with equal emphasis and with equal hope that Commissioner Young will reconsider. The News believes that, in fairness to the people of Washington and in respect of his trust as Police Commissioner, he cannot do otherwise.

[From the Washington Sunday Star of June 22, 1947]

A NEW CHIEF OF POLICE

The man chosen to be superintendent of the Metropolitan Police Department of Washington should have a record on the force that is above reproach.

Inspector Robert J. Barrett, whose selection for this job seems to have been taken for granted in some quarters, has many qualities that make a good policeman. But he does not have that sort of record.

He has fought his way up from the ranks in spite of black marks on his record that would have barred other men from promotion. He is fearless and determined. He has a reputation of being a hard driver and of getting the maximum of work from his men. But some of the attributes that have brought him advancement, as an individual, might easily work to the disadvantage of the Department in a position that demands administrative ability, tact, and the power to command loyalty from his men and the confidence and respect of the community.

Inspector Barrett's appointment as chief of police would carry the implication that no other men in the Department were as well or better qualified for the job. That in itself would be an undeserved reflection on the caliber of the top-ranking officers in the police force.

[From the Washington Star of June 21, 1947]

POLICE CHIEF QUALIFICATIONS

It is regrettable that the failing health of Maj. Harvey G. Callahan will compel his retirement as superintendent of police. The Metropolitan Police Department will lose an able, faithful leader of the type who inspires efficiency in the ranks and confidence on the part of the community.

A number of possible nominees for this important law-enforcement post are mentioned in the speculation over Major Callahan's successor. Several outsiders are said to be among the candidates. Heading the list of police candidates is Detective Chief Robert J. Barrett, whose "paradoxical" record of commendations and of board and court trials was related in the Star yesterday.

The Star has no particular candidate to propose, but it has a suggestion or two to offer the Commissioners as to the type of officer who should be selected to head Washington's police force. First of all, the Star believes that the appointee should be chosen from within the ranks of the department. This is a highly specialized job that should not be permitted to become the property of patronage seekers. Politics and law enforcement do not mix successfully. Moreover, the task of policing the National Capital presents problems of jurisdiction and administration not found outside the seat of government. Familiarity with these peculiar problems is highly essential.

It is the Star's firm conviction, furthermore, that in choosing a man from within the the department the Commissioners should be guided not by their personal likes or dislikes, but solely by a determination to give the city the best police administration possible. To assure that kind of police service the department must continue to have leaders of the Callahan type whose records, training, temperament, and reputation are above reproach. There are such men in the department and one of them should be chosen. The vital thing is to give the Police Department a leader who will command the wholehearted respect and trust of his men and of the citizens he serves. Any doubt on this score should be resolved in favor of the public interest.

HOLC—Benevolent Mortgage Holder

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article entitled "HOLC—Benevolent Mortgage Holder," which appeared in the Sunday Star, Washington, D. C., on June 22, 1947:

HOLC—BENEVOLENT MORTGAGE HOLDER—FORECLOSURES ARE AT THE LOWEST MARK IN HISTORY—MANY THOUSANDS HAVE BEEN SAVED FROM EVICTION

(By Robert J. Lewis)

Home foreclosures today are at their lowest point in history. Yet only 13 years ago the Nation was in the depths of its worst mortgage loan panic, homes were being foreclosed at the rate of more than a thousand a day, and many home-financing institutions were facing ruin.

Largest single item of debt in the United States—aside from national, State and municipal indebtedness—was $19,242,000,000 in mortgages on city homes. And of that sum, the staggering amount of more than $4,000,000,000 was in default.

RESCUED HOME BUYERS

More than 800,000 families then in default on loans today owe retention of their homes directly to the operations of the Home Owners' Loan Corp., which recently reported it expects to clean up its vast home salvage job without a penny of cost to Uncle Sam.

This agency—which still is the world's largest mortgage holder—refinanced 1,017,821 homes in tens of thousands of communities in virtually every county in the Nation between 1933 and 1936.

At one point, it came to the rescue of defaulting home buyers at the rate of 3,000 a day. Throughout the country, it refinanced one out of every five of all owner-occupied city homes on which there was a mortgage. In one State, one of every two such homes was refinanced.

To carry out its huge rescue mission, HOLC invested $3,492,000,000, employed as many as 21,000 persons at one time, had 460 branch offices and spent as much $37,500,000 a year for administrative expenses.

COLLECTS BY MAIL

Today it still has 387,000 debtors in 16,000 cities and towns, yet its 460 branch offices have shrunk to 2—1 in Chicago and the other in New York—employees are down to fewer than 800, virtually all its collections are by mail, and the agency says it can squeeze by with only $3,723,000 for administrative expenses next year, all of which would be met from its own income.

John H. Fahey, Commissioner of the Federal Home Loan Bank Administration, has directed the home-salvage job almost from the beginning. He was a member of the Corporation's original board, became chairman a few months after HOLC started operations, and since February, 1942, has played a many-sided role as the over-all administrative head of the Federal Home Loan Bank System, the Federal Savings and Loan Insurance Corporation, and HOLC.

A former president of the United States Chamber of Commerce, Mr. Fahey started his career as a newspaper reporter, later becoming New England superintendent of the Associated Press, publisher of the Boston Traveler, New York Post, and other newspapers, and president of a shipbuilding firm.

During his years in the newspaper business, he was chairman of a national committee which revised the bylaws of the Associated Press, and served for a time as an AP vice president.

MOSTLY SQUARE SHOOTERS

To Mr. Fahey, courtly, keen-eyed, and firm-voiced at 74, HOLC operations prove at least one important thing:

"The great mass of our people are square shooters; and if you give them a decent chance, they will pay what they owe."

But back in 1933, as the depression deepened, more and more families found it impossible to continue to pay high interest rates then being charged (from 6 to 9 percent on first mortgages, mostly of short term, and as high as 14 percent on second mortgages).

Even when interest charges were met, many lending institutions refused to renew mortgages owing to their critical need of cash.

As a result, foreclosures skyrocketed. Total foreclosures for 1933—blackest year for home buyers—was 252,000. Millions of other homes were threatened. The Nation was traveling swiftly along the road to catastrophe.

Then Congress acted. In June 1933 it set up HOLC to help bail out lending institutions and save homes facing foreclosure. The Corporation was provided with a capital of $200,000,000 and authorized to issue up to $4,750,000,000 in bonds backed by Government guarantee.

Whatever the cost an alarmed Congress was ready to foot the bill. And at that time it was freely predicted Uncle Sam would be out of pocket by from a half billion to a billion dollars before the adventure ended.

SAVED MANY BANKS

In exchange for delinquent mortgages, HOLC pumped $2,750,000,000 into banks, savings and loan associations and insurance, finance, and mortgage companies. With the need for cash thus relieved, many of those institutions were saved from collapse. And most of them soon were able to ease off on foreclosures and grant better terms to other delinquent debtors.

Besides cash for lending institutions, HOLC paid out a total of $487,000,000 in borrowers' delinquent taxes to communities, spent $203,000,000 to repair and recondition 500,000 homes of borrowers, paid $18,000,000 in delinquent fire insurance.

In place of the home buyers' original short-term mortgages, HOLC gave new liberal terms—15-year mortgages at 5 percent interest (later reduced to 4½ percent) and as high as 80 percent of the appraised value of the property. It thus helped make standard the present "direct-reduction" mortgage, which is paid like rent.

But the job of saving homes wasn't easy. Recovery lagged and distress continued. In spite of a charter to be lenient with its new debtors, HOLC was obliged to foreclose on 198,000 homes whose owners could not, or would not pay. And as late as 1939, Congress extended the repayment period of about 255,000 other mortgages—then seriously in default—up to an additional 10 years.

ONLY FEW IN ARREARS

In the beginning, many home owners seemed to have the impression HOLC was a "relief" organization and that the loans needed no repayment. But in the last 7 or 8 years, accounts in arrears have steadily decreased. At present, 98 percent of remaining borrowers are current in their payments or less than 3 months in arrears.

By the end of 1946, the number of accounts had been reduced by 62 percent, and 82 percent of its $3,500,000,000 investment had been liquidated. More than two-fifths of those still owing money on their homes have mortgage balances of less than $1,000. Seventy percent have balances of less than $2,000.

Of the 198,000 homes foreclosed—chiefly between 1937 and 1940—all but 76 had been sold by April 30 this year. Still owed on the remaining 387,000 HOLC mortgages is a total of $636,000,000, of which $416,000,000 is on the original loans and $220,000,000 on the foreclosed houses which have been sold.

OPTIMISTIC ON LOSSES

HOLC at present figures its "book losses" on the entire operation at $58,319,000, but expects that by the time all mortgages are paid off this deficit will be more than wiped out.

Practically all book losses suffered by HOLC came as a result of sales of foreclosed houses. Such losses at one point amounted to about $337,724,000 on the capitalized value of the properties. The capitalized value, HOLC explains, includes the loan balances, unpaid interest, taxes, and the costs of foreclosing and reconditioning.

Had the agency held its properties, virtually all its book loss would have been avoided owing to present higher values, and a tidy profit could have been obtained. But as an emergency agency, the corporation's policy was to sell any houses it acquired as quickly as local markets could absorb them at fair prices, and without dumping or taking unjustifiable losses, officials explained. As it was, more than 80 percent of all foreclosed properties were sold before Pearl Harbor.

During the war, HOLC urged borrowers to pay off loans ahead of time while earnings were high. As a result, in 4 years nearly $200,000,000 in advance payments were made.

INVESTED IN SECURITIES

Besides making mortgage loans, HOLC invested $223,856,000 in securities of savings and loan associations after it was established. Of this total, all but $15,191,000 had been repaid by the end of 1946. From these investments the corporation received $44,255,000 in dividends.

In addition, HOLC invested $100,000,000 in capital stock of the Federal Savings and Loan Insurance Corporation, a Government agency created in 1934 to insure investors' accounts in savings and loan associations. On this investment, HOLC received $3,035,000 in dividends up to 1935. For the period since then, dividends of $34,500,000 have been allowed to accumulate in a special reserve fund of FSLIC.

At present $627,000,000 in unmatured HOLC bonds are outstanding (all held by the Treasury Department), on which HOLC pays only 1 percent interest. During 1946, bonds were retired at the rate of about $21,600,000 a month.

Rogers Fights On for Equality—Terminal Leave Legislation

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1947

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from Tiff, the Sunshine Special, of June 19, 1947, one of the leading local newspapers in Palm Beach County, Fla.:

ROGERS FIGHTS ON FOR EQUALITY

Tiff takes this occasion to commend Congressman DWIGHT L. ROGERS from our district, who still continues his fight for equality among all who served Uncle Sam in World War II. Although Congress has not backed him in his program to make veterans' terminal leave pay bonds negotiable, he wars on. If the enlisted men and women are madder'n wet hornets over the discrimination made against them by holding up the negotiability of their bonds for 5 years, while officers were permitted to cash in immediately, they have just cause for their ire.

Even though unsuccessful to date, Congressman ROGERS is making a determined battle for fairness. He has introduced another measure, H. R. 3521, in which he has tried to overcome every obstacle thrown at the measure. Again he proposes these bonds be made negotiable. If our Congress desires to go what is presumed the American-way in this vitally important matter that affects so many persons, it will follow Congressman ROGERS' lead. It would be wise for those in Congress to consider deeply how they perform on the bill. There are upwards of many millions who have their eyes on them. And, even if they are not particularly interested in the power of the polls, in sense of fair play, they should see that all get an even break.

Message to Moscow

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Item of June 9, 1947:

MESSAGE TO MOSCOW

Acceptance by both Great Britain and France of the principle of Secretary Mar-

shall's proposal for an economic federation of Europe presents some very significant aspects. For one thing, it marks the genesis of continental rather than national thinking in the quest for a solution of Europe's postwar difficulties. For another, it is virtually an admission that, in view of the harsh realities of the situation, Europe can't survive in the modern world as a patchwork of small, unrelated bits of territory, each bleeding its already anemic resources to maintain a costly but ineffective military establishment, and each shut off from the others physically by guarded boundaries, politically by petty nationalist jealousies, and economically by trade and tariff barriers.

Secretary Marshall's suggested economic federation will not suffice to unify Europe into a functioning continental entity. There have been no instances in the past where such a federation has been maintained successfully except as part of a political federation.

With the best will in the world, the London Economic Conference accomplished nothing tangible. The ITO at Geneva is today in a state of confusion over such matters as the demand for a wool subsidy of $130,000,000 a year in the United States. Our reciprocal trade pacts with other nations are constantly being subjected to the strains and stresses of the economic moment.

Under unforeseen dislocations, the urge of expediency is as potent a disruptive force in the matter of economic agreements as it is in the matter of disarmament pledges, none of which have ever proved workable. Was it not under a disarmament pledge that Japan prepared for Pearl Harbor? Was it not under cover of the Ribbentrop 10-year mutual assistance pact between Germany and Russia that the Nazis launched their effort to conquer the Soviet Union in June of 1941, just 22 months after the solemn 10-year agreement had been signed?

But the Marshall plan for an economic federation at least opens the way for the political federation of a United States of Europe which alone can make economic federation a functioning reality. To that degree, it is a notable step forward and is all to the good.

Even more heartening is the enthusiasm with which the plan has been accepted in principle by France and Britain. This is heavily underscored by their invitations to Russia, yesterday, to discuss the proposal. Possibly taking its tone from the stiffening attitude of the United States toward Soviet aggressivism, this invitation virtually gave the Kremlin until Monday to accept. As plainly as such matters could be stated in the inevitable double-talk of diplomacy, the word to Moscow was: "You can join us and the United States in this program if you wish. If not, we are going to effect it without you."

No word has yet come from Foreign Minister Molotov which would indicate how this was received by Russia's policy makers, the 14-man Politburo. But there seems to be no doubt about the growing impatience of the western democracies of Europe with the backing and filling that has marked Russia's policy on questions of global cooperation.

Federal Aid for Schools

EXTENSION OF REMARKS
OF
HON. PARKE M. BANTA
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. BANTA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

WAYNE COUNTY
DEPARTMENT OF PUBLIC SCHOOLS,
Greenville, Mo., June 10, 1947.

Representative PARKE BANTA,
House of Representatives,
Washington, D. C.

DEAR MR. BANTA: I wish to express my opposition to Federal aid for schools in any form whatsoever. Some school people are so anxious for any extra money that they are trying to kid themselves into believing that we can have Federal aid without Federal control, but, of course, any serious reflection, and even a superficial knowledge of history and of the ways of dictators, will confirm the belief of the more cautious that there can be no Federal aid without Federal control. It will make no difference how the law may be worded. Once the camel has got his nose in it is well known what always happens.

I hope no such legislation will be enacted by the Congress because of the danger of indoctrination and regimentation of the minds of the youth of our land.

Moreover there is no necessity for Federal aid for schools. The States can take care of it. And if the people of the several States cannot take care of their schools, how could they take care of this proposed added Federal expense and at the same time retire the colossal Federal debt and take care of the already excessive Federal expenses? Too many people seem to have the mistaken idea that Federal aid costs nobody anything. But this proposition of Federal aid for schools is not a matter of expediency, it is a matter of selling or refusing to sell our children's guaranty to the right of freedom of thought.

With kindest personal regards, I am,

Yours truly,

CHARLES M. RANDALL,
County Superintendent of Schools.

Truman Versus Truman

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of June 21, 1947:

TRUMAN VERSUS TRUMAN

The long and labored "explanation" of President Truman, telling why he vetoed the labor bill, isn't worth reading.

It's an extremely boresome piece of special pleading.

He had his mind set on vetoing the bill, and simply hid in a mountain of words the fact that he didn't want to explain why he was against it.

He could have put his case very briefly, thus:

"I need labor votes to be reelected; the labor bosses control labor votes; they are against this bill because it would liberate union workers from their grip; if I veto the bill, maybe they'll 'deliver' for me. Therefore, I'll veto it."

He didn't say that. Of course not!

Nevertheless, the best answer to the Truman labor bill veto message of 1947 are the words of the same President Truman, delivered on the radio almost exactly a year ago, heard by millions, reprinted at length in virtually every daily newspaper in the country, and fully meriting repetition today.

Truman's words of 1946 make a joke—though a very pathetic one—of the Truman veto message of 1947.

What is the purpose of new labor laws? Why are existing ones inadequate? Just what is the target of the proposed restrictions?

A year ago (May 25, 1946) President Truman defined the need for new labor regulations in the most graphic terms:

"What we are dealing with is not labor as a whole.

"We are dealing with a handful of men who have it within their power to cripple the entire economy of the Nation."

That put the matter in a nutshell. The purpose of the labor laws was to clip the wings of unruly and overbearing labor leaders.

Why was this necessary? Again the President described in most eloquent language the sort of labor crisis for which his veto once again lays down the White House welcome mat:

"For the past 2 days the Nation has been in the grip of a railroad strike which threatens to paralyze all our industrial, agricultural, commercial, and social life. * * *

"The disaster will spare no one. It will bear equally upon businessmen, workers, farmers, and upon every citizen of the United States."

What he had to say of the railroad strike was true of the whole series of Nation-wide and broad local strikes of that period—the type of strikes which the labor bill proposed to prevent. There was the steel and the motor strikes, the truck strike in New York City, the power strike in Pittsburgh, the longshoremen's strike in all American ports, and so many others it would be impossible to list them.

The President's veto of the Case bill last year, and his veto of the labor bill this, leaves conditions precisely where they were. Whenever labor leaders wish, these widespread and disastrous strikes can be resumed. The American people are again defenseless.

President Truman last year fully recognized the need for new labor laws. He definitely called upon Congress for both an emergency and a long-range program of labor-law changes. While he made suggestions for the short-term program, he made few if any for the permanent plan.

By every token of good faith, he promised to sign whatever labor plan Congress thought best met the emergency he described.

Yet twice he has protected that handful of labor bosses from regulation and restriction by Congress after himself pointing out the urgent need for such laws.

What he said, after identifying the persons responsible for the strike disasters as a handful of labor leaders, was as follows:

"I believe that the time has come to adopt a comprehensive labor policy which will tend to reduce the number of stoppages of work, and other acts which injure labor, capital, and the whole population."

In his veto message, President Truman insists he still thinks there should be changes in the labor laws, but says he is vetoing the present bill on the ground that it goes too far.

The recommendations which the President made for controlling labor, upon the occasion of the railroad strike a year ago, make this labored opinion of his today thoroughly ridiculous. He himself went infinitely further.

The law he slaughtered would have restricted labor activities in various minor fashions. It would have left labor itself free, with labor leadership forced into a more responsive position with regard to workers and the public.

Is this "punitive?" And how does it compare with what the President himself asked, a year ago?

"I request the Congress immediately to authorize the President to draft into the armed forces of the United States all workers who are on strike against their Government."

He also asked injunctive and mandatory powers against union leaders who incited strikes under certain conditions; power to deprive strikers in these conditions of their seniority rights; and power to prosecute criminally those who violated his proposed act.

Today, in a time of world crisis and national uncertainty, the President shows himself unwilling to accept any labor plan which he personally doesn't think is perfect—and to take all the time in the world to get it reenacted along the specifications he personally has in mind.

His veto means, of course, that there is almost certain to be no labor legislation whatsoever at this session of Congress—and very likely none until a new President comes into office.

This is a complete refusal to cooperate with Congress, or to permit Congress and the American people to have any ideas on the subject of labor laws which he does not personally accept.

Once again his words of a year ago are the most complete censure and indictment of his attitude in the veto.

Then his position was—and not the very direct promise or cooperation—as follows:

"The time for action has arrived. In that action you, the Congress of the United States, and I, the President of the United States, must work together—and we must work fast."

And for what purpose must they cooperate? Again he put it in words which make a sham and political fraud of his rambling explanations in his veto message:

"The action which I shall ask you to take—passage of temporary and permanent labor-law changes—are necessary for the preservation of our Government.

"That action also is necessary to save the great and mighty masses of working men and women from the dangerous effects of the ill-advised and misguided acts of some of their own leaders."

In the light of President Truman's remarks of 1946, what do you think of President Truman's remarks in 1947?

The Mundt Bill

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. DEVITT. Mr. Speaker, under leave to extend my remarks, I wish to state that I am in favor of the Mundt bill, H. R. 3342. An interesting and emphatic endorsement of one of its provisions came to me in a letter from the assistant director, agricultural extension, department of agriculture, University of Minnesota, St. Paul, Minn., which I herewith include in my extension of remarks:

UNIVERSITY OF MINNESOTA,
DEPARTMENT OF AGRICULTURE,
University Farm, St. Paul, June 16, 1947.

Hon. EDWARD J. DEVITT,
House of Representatives,
Washington, D. C.

DEAR SIR: Today I sent you a wire in which I urged that you support that phase of the Mundt bill covered in paragraph 201, which authorized exchange of students, teachers, and professors. We have had a number of these students here at University Farm, studying various phases of agriculture. They have been a hard-working, serious-minded group. Those we have had have been here particularly to study United States farming methods and extension work with farmers. Part of their stay has been in farm homes, and without exception the farm families have been impressed with the character and attitude of the students, and have thanked us for having made the contact possible for them. Several of the students have been particularly interested in the democratic process by which we set up issues and then resolve them finally by voting.

Last summer I spent 5 months in Central and South America. The trip was financed out of the State Department funds, but the request for my services and the itinerary were made out by the Department of Agriculture. The nature of my work on the trip was to consult with USDA workers in the countries visited and with representatives of the foreign governments relative to the establishment of extension work in agriculture in those countries. On the trip I came in contact with a number of young people who had been in the United States studying in various fields of agriculture, including soil conservation, irrigation, and general education and extension. With one exception I am certain that they got much knowledge, and particularly that they received a new vision of possibilities by their trips to the United States. The one exception I felt had probably obtained his appointment through political connections. In any case, I did not feel that he was using information gained, and that he had just had a pleasant trip to the United States. The young man who had studied soil conservation was leading a movement for conserving the soil in Costa Rica. An agricultural engineer who had studied irrigation in western United States was carrying the torch for improvements in irrigation, but more especially for improved educational opportunities and democracy for the people of Peru.

As for myself, the opportunity to visit Central and South America gave me a far better understanding of the difficulties which face these countries in developing truly representative government and really democratic regimes. My feeling most of the way was that I was in a different world rather than merely in different countries. The general poverty and the lack of educational and economic opportunity was very depressing. My feeling was that this situation could be changed, but it would have to be changed not through the benevolence of the United States but through the work and leadership of the people of the different countries. The contribution which the United States might make would be to give bright young men an opportunity to see democracy functioning in the United States and then return to their own countries to work toward a similar situation for their own people.

I feel that the program of exchange of persons being carried on by the State Department has been doing that very thing, and for that reason I came back feeling that I would be willing to see some of my income-tax money used for this work. I would add that I observed some other United States activities in these countries that I would not be willing to spend anything for, and that I felt that not only had money been wasted but that because of bad handling we had actually lost friendship and respect through the activity.

Should there be any opportunity for me to discuss this with you at a time when you are in St. Paul, I would be very pleased to do so.

Sincerely yours,

SKULI RUTFORD,
Assistant Director, Agricultural Extension.

Income-Tax Reduction

EXTENSION OF REMARKS
OF
HON. FADJO CRAVENS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. CRAVENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by C. F. Byrns from the Fort Smith Times-Record of June 18, 1947:

WELL, WE'D HAVE LIKED A TAX CUT—THE WISHES OF MICE AND MEN, ETC.

(By C. F. Byrns)

Personally, all of us are a bit disappointed that there will be no Federal income-tax reduction this year. But thinking beyond our own personal problems to the Nation's welfare, I believe most of us agree that the President's veto of the tax bill was sound and the House was justified in sustaining his action.

A cut of 20 percent in my own income tax would be most welcome. I can think of so many things I should like to do with that amount of money. But it often happens that the interest of the individual clashes with the interest of the group. This is that kind of a situation.

The Nation has a debt which will be hard to chin under the best of conditions. It is something in excess of $260,000,000,000 at this moment. If we are going to make any dent in it, now is the time to do it, while the national income is high.

It is said, of course, that politics dictated the President's veto. It may be said with equal justice that politics dictated the action of the Republican majority. All national affairs are necessarily influenced by politics. Our Government operates by the consent, if not the will, of the people. Interpreting and guiding that will is the essence of politics.

The Republicans, now in command of Congress, and the Democrats, now in command of the executive branch, are both looking at the 1948 elections. The Republicans naturally want credit for cutting taxes, since it would mean more votes from those who are influenced chiefly by the size of the immediate tax bill. The Democrats would like to cut taxes, too, but the President would like to initiate the effort rather than following the lead of the Republicans. Both recognize, I think, that there must be a reduction in the national debt now if ever there is to be one.

Looking at the matter selfishly as a citizen of the Southwest, my personal disappointment because there will be no tax cut this year is off-set by improved chances for Federal appropriations which we need in this area for public works. We have a lot of things going on in the Southwest which require Federal money. We have six flood-control dams under construction upstream from Fort Smith in the Arkansas basin. We have one on the Arkansas basin below us now almost complete, one at the narrows on the Little Missouri River, one at Bull Shoals on the White. Preliminary work is about to start on Blakely Mountain Dam on the Ouachita, and a considerable number of local flood protection jobs, some of which will require more appropriations to complete. We have congressional approval of the comprehensive plan on the Arkansas basin, which includes additional flood control, navigation, power, recreation, and other uses of the waters which will be most beneficial to this entire area. Our chances for carrying on all the present work and getting a start on the large program

ahead will be improved by failure of the tax-reduction bill.

Appropriations for agriculture, for forestry, for water studies by the geological survey, are all being cut. The chance of restoring all or part of the cuts which affect us down here will be better since it is definitely known there will be no tax cut this year.

We can't have everything. The welfare of the Nation probably will be served with no tax cut this year.

How To Have Peace With Russia

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Journal of June 18, 1947:

HOW TO HAVE PEACE WITH RUSSIA

The way to have peace with Soviet Russia, a former American Ambassador to the Red Fascist government warns the people of the United States, is to keep the Communist rulers of Russia convinced that they could not hope to conduct a successful war against America.

The rulers of Russia are presently convinced of this fact, says Mr. William C. Bullitt, for otherwise they would not hesitate to make war upon us without warning or excuse, and in all probability would have long since done so.

Speaking at the commencement program of Georgetown University, Mr. Bullitt said that the only reason we have peace with Russia now is that we have the only thing she respects—the power to defeat her.

Hence, if we desire and hope to keep peace with Russia, he urges, the only reliable method of achieving that purpose is to keep the Soviet Union constantly confronted by superior force.

"Stalin and his associates deliberately and consciously have chosen to declare themselves the enemies of all peoples that live in freedom," says Mr. Bullitt, against the background of his personal observation and study in Russia, with the advantage he then enjoyed of diplomatic access to the secrets and the truth about Russia.

"Day and night the war potential of the Soviet Union is being raised by a 5-year plan that emphasizes, not the production of consumer goods but the production of machines useful in war.

"At the moment they do not dare to make war against us or our friends, because they know that, for the moment, the United States is far stronger than the Soviet Union and all its satellites.

"But if ever they believe they are the stronger, they will attack."

Since the only things Russia respects are the things she fears, it is essential to our peace and security that we remain invincible in our exclusive possession of the factors of military superiority which she clearly recognizes as a power to frustrate and defeat her program of world conquest.

The factors of our present military superiority over Russia, says Mr. Bullitt, may be briefly named, the atomic bomb being one and our potentially vast air force being another.

These we must surely maintain in superior force, he earnestly advises.

To rely upon any other method of seeking amity with Russia, as he observes, would be to put our trust in the Russian record and policy of "total immorality in international relations," and to pit our honest hopes for peace against the evil intrigues of a government criminally capable of "using any and every means for the achievement of world conquest, including its pledged word given and broken, and war."

Of course, as long as the threat and menace of Red Fascist Russia thus hangs over the civilized world, "there can be no real peace on earth, but at best only an uneasy armistice of the sort we live under today," acknowledges Mr. Bullitt.

But that is infinitely better than its only alternative, which is, as Russia would have it, the sort of peace which would ensue when "all the peoples of the world have been conquered for communism," with the "total extinction of our Christian civilization" as its price.

Flood Control in the Des Moines River Valley

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. LECOMPTE. Mr. Speaker, the recent floods of the Des Moines River have during this month twice devastated the city of Ottumwa, Iowa, caused the loss of a number of lives, wrecked business houses and homes, and destroyed thousands of acres of growing crops on nearby farm land. All of this could have been prevented had there been proper flood protection on the Des Moines River. A survey was made a number of years ago and the Chief of Engineers recommended the construction of a dam at Red Rock on the Des Moines River and one at Madrid, Iowa. The citizens of Ottumwa are asking for an appropriation for the purpose of immediately starting work on the building of flood-protection dams, and under leave to extend my remarks in the CONGRESSIONAL RECORD I desire to include therein a resolution adopted by the City Council of Ottumwa showing the amount of flood damage that was done and urging that a substantial appropriation be made to complete the plans and start construction of the dams:

Whereas the Des Moines River Valley was subjected to severe flooding conditions during the period from June 6 to June 9, 1947, and a reoccurrence of such flooding conditions from June 14 to June 16, 1947, during which time the Des Moines River on two occasions reached a stage at Ottumwa, Iowa, in excess of 20 feet, which gage reading was higher than the record flood of 1903; and

Whereas as a direct result of said flooded condition the services from the municipal waterworks and the Iowa Southern Utilities electrical power plant were interrupted, leaving the city without lights or adequate public water supply, business properties were seriously injured and stocks of goods and merchandise wholly destroyed, transcontinental railroads washed out, and Federal highways in all directions from the city of Ottumwa, Iowa, closed to traffic, United States mails interrupted, and telephone and telegraph service greatly impaired; and

Whereas approximately 8,000 residents of the city of Ottumwa were made homeless and their homes and furniture seriously damaged and injured, and four known lives were lost; and

Whereas streets, sewers, sidewalks, and other public works of the city of Ottumwa were seriously damaged or wholly destroyed and terrific expense was incurred in protecting the citizenry of Ottumwa and their property; and

Whereas such injury and damage by flooding conditions could have been eliminated by adequate flood-protection dams in the Des Moines River watershed, thereby protecting not only the people of Ottumwa, Iowa, but all persons in the Des Moines Valley watershed and people in the lower reaches of the Mississippi River: Now, therefore, be it

Resolved by the City Council of Ottumwa, Iowa, That the Congress of the United States of America be urgently requested and petitioned to make substantial appropriations forthwith for the completion of plans for flood control in the Des Moines River Valley watershed for the immediate construction of dams for flood-control purposes only, in the vicinity of Red Rock, Iowa, and Madrid, Iowa, to the end that adequate flood-control facilities will be planned for and constructed by the United States of America; be it further

Resolved, That copies of this resolution be forwarded to Senators GEORGE E. WILSON and BOURKE B. HICKENLOOPER and Representatives KARL M. LECOMPTE, THOMAS E. MARTIN, and PAUL CUNNINGHAM, together with appropriate data showing flood damage which the city of Ottumwa and nearby communities have sustained by reason of flooded conditions heretofore mentioned.

Passed and adopted this 23d day of June A. D. 1947.

CITY OF OTTUMWA, IOWA,
HERMAN J. SCHAEFER,
Mayor.

Attest:

FRANK GIBBONS,
City Clerk.

Veterans' Housing

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. KENNEDY. Mr. Speaker, I am placing in the Appendix of the RECORD today a letter from Hon. John B. Atkinson, city manager of the city of Cambridge, Mass., which describes eloquently the difficulties that Cambridge is meeting in attempting to house its many veterans.

This letter emphasizes the pressing need for the passage of the Taft-Ellender-Wagner housing bill.

CITY OF CAMBRIDGE, MASS.,
EXECUTIVE DEPARTMENT,
June 20, 1947.

Congressman JOHN F. KENNEDY,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: In common with the thousands of veterans who are badly in need of homes, I read, with an unpleasant feeling, in the newspapers it is quite possible the Congress may adjourn without taking any action on the Taft-Ellender-Wagner housing bill.

Cambridge is but a small part, I realize, of your constituency, but the need for veterans' homes here is far greater than the city can even hope to provide.

During the past 5 years we have managed to reduce our debt from $11,000,000 to under $3,000,000, but we are now prepared to go into debt to the tune of over $3,000,000 in order to provide homes for our veterans.

Up to this time it was not possible to erect multiple-dwelling units, but with the passage of a bill by the Massachusetts Legislature, cities and towns are authorized to spend up to 2 percent of their valuation for housing, and we are willing to take this city, which within another 3 or 4 years would be completely debt free, and double our present debt in order to get housing for our veterans; yet with all this effort, we cannot hope, with the present cost of housing, to provide housing for more than 300 to 325 veterans' families, where we have a known shortage of housing for over 2,000 families.

We are completely dependent upon you as our Congressman to act for the city in this and we feel no selfish interests, which, as far as we can see, are completely motivated by the Committee on Banking and Currency, should be induced to stop the passage of this bill. The shortage of homes was undoubtedly produced by the war, and the fact that a great many of our young soldiers married perhaps a great deal earlier than they ordinarily would, plus the fact it has brought to Cambridge a large number of people outside the State who came here to work in the various war-production plants and decided to stay here. In addition to this, the fact that Harvard and MIT have practically doubled in size without producing more than 900 additional units to take care of almost 9,000 students, leaves a condition here in Cambridge that is a very unhealthy one from the local viewpoint.

I believe that you as a Congressman could more quickly gain the highest regard of our citizens if you could do something to push this along. I read with interest the day-to-day reports in the Congressional journal and all I can see is that a number of selfish persons are doing everything possible to prevent the passage of this bill, and it is apparently in their hands.

The situation here is really desperate, and I do hope that you will not consider this as the usual run of letters that come to you from constituents, but one in which I speak for the entire population of 115,000 citizens. If the city of Cambridge is willing to double its debt for this purpose, I do not feel it is too much to ask the Federal Government to carry on where it left off at the beginning of the war and provide housing for a situation which is critical.

Very truly yours,

JOHN B. ATKINSON,
City Manager.

GOP Promises Kept

EXTENSION OF REMARKS
OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of June 20, 1947:

GOP PROMISES KEPT

The Republican promises made in the congressional campaigns last year now have been largely carried out.

The GOP candidates promised to pass a tax-reduction bill. They did so—a bill which would have cut the taxes of the average American 20 percent, and those of lesser-paid citizens by 30 percent.

They promised to pass laws which would prevent any recurrence of the labor violence which marked the first year of postwar conditions under President Truman. The labor bill has been passed.

They promised to outlaw the portal-to-portal suits. This has been done, and the President, with a lot of sour comments on the subject, signed the measure.

They promised to slash heavily the spending programs of the Federal Government. The bulk of this has been accomplished. Under existing appropriation measures, savings have been effected which, added to surplus in sight, would easily have covered the tax cuts vetoed by the President—and left a balance to apply to the national debt.

The Republicans promised to unregiment the American people by doing away with the war-controls, to which the executive branch was clinging tenaciously. The worst of these have been wiped out—some by congressional action, others by the President himself before Congress could act.

Congress is part of a team, so far as the Government is concerned. It can do only so much. It can't run the whole show, disregarding the President, any more than the President himself can function as he wishes without heeding Congress.

When Congress passed these bills, with many other lesser ones which might be included, and laid them on the President's desk, then it had done its full part.

The Republicans have kept their faith with the American people. The laws it promised last year were enacted.

The fact that key bills were ruthlessly vetoed, for political motives, is not a matter over which the Republicans had any control, and for which they cannot be blamed.

At no time during the long discussion of these matters did President Truman offer any help or guidance to Congress. On the contrary, he muddied the water with a series of conflicting and misleading reports on financial matters, and encouraged his staff to unruly and high-handed resistance to congressional inquiries.

The Republican record of performance, its adherence to its campaign promises, is the silver lining to a situation otherwise dark.

The present crisis is bad. Once again our Government has been stymied. It has been brought closer than ever to a break-down. Presidential encroachment on Congress' authority has penetrated to its deepest extent.

Inflation has been restimulated by the President's tax veto. A nation already tax poor is being denied relief almost imperatively needed for proper recovery. The foreign situation grows steadily worse; we are blundering toward, if not actually into, a new World War III. The American people are rapidly losing the power of directing their own affairs. No one has cause for glee except the Communists.

But it is something to know that there is still one political party which believes in keeping its promises.

If there is a majority of citizens in this Nation who want to preserve the American system, who cling to constitutional freedom and fear the consequences of our present drift toward communism, then they now can know where to turn.

They now have proof that there is available to them a political party willing to stick by its word—willing to run the Nation on the basis of what's best for the whole country, not what policies will reap temporary vote support.

The Republican performance is in bright contrast with that of the New Deal. The Democratic record at Washington is one of false promises, of broken faith, of waste and extravagance, of trying to hide colossal blunders under still more colossal propaganda.

Fourteen years ago the New Deal started out with a President who had campaigned on a pledge to stop the deficits and cut Federal spending 25 percent. He had also got very indignant when his opponent had accused him of planning to inflate our currency by going off the gold standard.

Those three promises went out the window with his inauguration. So have all other promises which the New Deal has made from time to time—down to and including the promise of President Truman to permit Congress to exercise the lawmaking functions granted it by the Constitution.

The Republican Party can go into the crucial coming elections of next year with a clean record and a clear conscience.

On the first major assignment in the National Government given it by the American voters since 1932, it has come through with flying colors.

It kept the faith.

United States of Europe

EXTENSION OF REMARKS
OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of June 11, 1947:

SECRETARY MARSHALL SPEAKS UP

Secretary Marshall's letter to Senator VANDENBERG indorsing the principle of a United States of Europe is a distinct gain for a historic plan. Secretary Marshall favors the Fulbright-Thomas resolution with only the proviso that America is not attempting to impose anything on Europe.

America has no desire to impose anything, but it does have a definite and legitimate interest in promoting conditions under which the part of Europe still free, or potentially free, can further democracy. Therefore it becomes America not merely to go on record for a strong United States of Europe, but to give the plan strong political and economic support.

Passive encouragement is not enough for countries in which the Communists are the largest or one of the largest political parties. The anti-Communist coalitions need the articulate, substantial assistance of America and Britain.

A United States of Europe is the only plan which offers the democratic forces of Europe a program to offset the revolutionary drive of communism. European federation, with Germany divided into several states, is the only basis which will permit German industry to be revived without Germany becoming a threat to European and world peace. European union is the only plan which offers the Continent a large free-trade area, with the standard of living its people have a right to expect in an age of mass production.

But time is of the essence. It is an asset which Russia uses to the utmost. Although Secretary Marshall's pronouncement yesterday is encouraging, it comes nearly 3 months after the Fulbright-Thomas resolution was introduced.

Even now Senator VANDENBERG has no idea when he will report the resolution out of his Foreign Relations Committee. There is a great deal of important business ahead of it, he says.

Perhaps so, but we doubt if anything is more important than moving forward with a plan which offers the best hope of any plan yet proposed for blocking communism's advance and rehabilitating western Europe. Procrastination is the ally of the forces we are opposing.

Flood Control

EXTENSION OF REMARKS
OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1947

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of Arthur Bevan, Chief, Flood Control Survey, United States Forest Service, to Allegheny River Improvement Association Fiftieth Anniversary Convention, June 21, 1947:

We all remember the floods of March 1936 in the Northeast. Following these memorable floods which caused enormous losses, Congress passed the Omnibus Flood Control Act of 1936. Although Congress had previously recognized the flood problem in the Mississippi Delta region, it had given comparatively little attention to the situation elsewhere. Deeply concerned now with the Nation-wide extent of the losses and their magnitude, the Congress authorized a comprehensive national attack on the problem. In this it called upon both the engineers of the War Department and the technicians of the Department of Agriculture.

The act authorized and directed the Secretary of Agriculture to make preliminary examinations and surveys for run-off, waterflow retardation, and soil-erosion prevention. Department of Agriculture activities under this legislation began in 1937. They continued until June 1942, when work ceased because of the war, and were resumed in July 1946. Preliminary examinations were made on a number of watersheds in the northeastern region, including the Allegheny River. Several surveys were started and three were completed. Those in this region not finished are now in process of completion for submission to Congress. The Secretary has, among others, authorized a survey by the Department of Agriculture of the Allegheny River. However, funds have so far not been made available to carry out this survey.

The Department has assigned this flood-control work to the Soil Conservation Service and the Forest Service. Primary responsibility for the reports has been assigned according to the predominate land use in a watershed. The Forest Service has primary responsibility for the survey on the Allegheny watershed. However, both agencies participate in the work and collaborate on the findings.

The purpose of the Department of Agriculture is to develop a comprehensive program for flood control on a watershed. It is based primarily on a land-use-management program, and must consider all phases of land use and its effect on run-off and water conservation. Damages result from floodwater and sedimentation, and affect the entire economy of the watershed. It is, therefore, necessary to consider all types of land use and to evaluate flood and sediment damages on such widely separated uses as agricultural land, urban and industrial areas, transportation systems, including railroads and highways, power and water utilities, fish and wildlife, and recreation.

The soil in any watershed is a great reservoir, but like any reservoir it has its capacity, and when filled spill occurs; also, if the condition of the soil is such that water is unable to enter the ground at the rate it is falling, it must go somewhere and surface run-off occurs. Differing from man-made reservoirs, however, the condition, depth, and type of soil all govern the rate at which water will enter and be trapped in this reservoir. Vegetative cover is the control gate which determines the rate and amount of water entering the soil reservoir, and so cover conditions are of primary importance in these surveys. Forests under good management produce one of our best soil conditions, and maintain the land in a condition to receive maximum rainfall and release this water slowly to the streams and rivers, as pent-up water is released from a flood-control reservoir. The forest floor is protected by the crowns of trees at different heights and the mass of shrubs and ground plants below. The ground surface itself is a mat of dead leaves, twigs, and other plant remains.

Beneath this loose litter is a layer of partly decayed vegetation, and below that a mass of more or less completely rotted or organic matter. Underneath these organic layers is mineral soil, also occurring in layers. The top portion is considerably enriched with organic material and shot through with growing and decayed plant roots and the minute channels of innumerable earthworms, mites, insect larvae, bacteria, and fungi working constantly throughout the soil. All this biological activity keeps the soil porous and gives it a crumbly structure ideal for holding, storing, and filtering large amounts of water. Good forest soils, which absorb water quickly, can hold 50 percent or more of their total volume. The depth of the soil thus becomes a determining factor.

But do not be fooled. We may look across a valley and see what looks like a good forest cover, but close inspection will show that it is far from good. It may be pastured, and while the cover looks fine from a distance, actually the soil has been impacted by the cattle, the underbrush destroyed, and the humus, so valuable for flood control, largely destroyed. Such forest soils have lost their ability to absorb rainfall rapidly and the storage capacity is reduced, just as it is in a reservoir which is filling with silt. The stand may be young and the soil has not had a chance to recover from clear cutting or excessive cutting. Skid roads downhill have not healed and act as channels for quick concentration of run-off. Again the area may have been burned in the past, destroying the humus, and it may be years before the damage is repaired. All these things will have a serious effect on the rate of run-off and erosion. Have you ever walked in the forest and felt that the ground is soft and spongy? Such a forest is in good condition from a flood-control point of view. It is possible to walk into the woods blindfolded and make a good estimate of its condition, just from the way the ground feels underfoot.

We must not forget, however, that in addition to the forest lands there are agricultural lands. Land fitted for agriculture should be used for that purpose. These lands should be farmed under the best soil and water conservation practices. Such practices make a definite contribution to flood control and in addition pay cash dividends to the farmer in better crops and pastures, as well as maintaining the fertility of the soil for the general welfare of the watershed and the economy of the Nation. Good pasture, besides feeding more stock, will retain much more water than poor pasture. Strip cropping, contour plowing, diversion ditches, contour furrows, and all the other conservation practices recommended by the Soil Conservation Service make a substantial contribution to flood control. There is ample data to show that good land-use management will pay dividends through reductions in run-off.

In a land-management program for flood control, maximum benefits accrue from improvement of the soil both as to its capacity to retain moisture and the rate at which water can enter the ground.

There are many benefits from good watershed management in addition to those obtained for flood control. For example, we all like to fish and hunt. The condition of the land determines the very occurrence of fish and wildlife. The farm, the forest, the stream has its characteristic form of living creatures. The available food, cover, water, and many other environmental factors help to determine the kind and number of fish and wild animals. What man does to the land is the determining factor as to how good our hunting and fishing will be. We expect to produce fish and wildlife as a result of good watershed management. When land is used intensively in accord with its natural capacity, the pattern of the land takes a new shape, and to this pattern wildlife readily adapts itself.

Strip cropping, a recommended procedure in checking run-off and reducing soil erosion, will result in twice the number of ground-nesting birds to be found in a similar area planted solidly to meadow. In wooded areas we recommend fire protection, elimination of grazing, and selective cutting. Ungrazed woods are about twice as productive of wildlife as grazed woods. Reduction of sediment through flood-control practices on the land will provide better fishing. We could go on and enumerate the many other benefits which would accrue from good land use and water management, such as clean water for domestic and industrial use, more water during periods of low flow, recreation, etc.; but my time is running out.

How much of the land in the Allegheny watershed is in good condition? We only have to look around to see the land abuse that has taken place since early settlement. The damage which has been done in the past century and a half cannot be repaired overnight. That it can be repaired we know.

Many of you are familiar with the flood problem at Bradford, Pa., your nearby neighbors. Here is a problem to challenge flood-control technicians. The city has encroached on the flood plain of Tuna Creek until the river channel is only a large flume through the city. The watershed above Bradford has been terribly abused. Access roads to oil wells have been bulldozed straight uphill without any planning. Power lines, water mains, gas mains, excessive clearing of the land for drilling, all have and are being done without any consideration of run-off and water management. This watershed is still deteriorating and of Bradford the best that can be said is "the worst is yet to come." We are very doubtful that the situation can be completely solved. Much, however, can be done and the hazard materially reduced. Channel improvements and flood walls installed by the engineers will help. A land-use and watershed-management program would also help very materially. We are pretty certain that both will be necessary to a reasonably satisfactory solution to the problem. This is not a large area, but it contains most of the elements contributing to floods in the Allegheny watershed and is well worth an inspection by interested persons.

In the process of our flood-control surveys we are required to estimate the cost of any proposed program and evaluate the benefits which will accrue. The cost-benefit ratio must be better than a dollar of benefits for each dollar of costs. A plan of improvement proposed by the Department of Agriculture takes into account all possible flood-control practices necessary to accomplish maximum reductions in flood damage. Small reservoirs, dikes, channel improvements, and similar engineering structures are considered. However, as a comprehensive program, it must be integrated with the program of the United States Corps of Engineers and those of any other agencies which contribute to the control of floods.

As I have said before, the damage which has been done to the lands in our watersheds cannot be repaired immediately. It must be realized that maximum benefits from a land-use and watershed-management program are fully realized only after a long period of time. As usual, we have to pay the bill for our misdeeds. There will be substantial benefits, however, along the way. I

want to emphasize our belief that the best approach to flood control is a comprehensive, integrated program, including engineering structures and land-use practices, which will produce the most flood control for the least expenditure of funds.

As was so aptly expressed in the Secretary of Agriculture's report for 1943: "In order to achieve the greatest possible benefit in the shortest possible time, it is essential that the upstream and downstream phases of flood control be properly timed and coordinated, through the development of one over-all plan for each of the major flood-contributing watersheds."

Explosion at Wilmington, Calif.

EXTENSION OF REMARKS
OF
HON. CHARLES K. FLETCHER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. FLETCHER. Mr. Speaker, the explosion yesterday in the harbor at Wilmington, Calif., of the tanker *Markay* with 2,940,000 gallons of gasoline and other oils aboard further points up the absolute necessity of immediate action to stop all future shipments of gasoline, oil, and other potential war materials to Russia. The President, by Executive order, has the power to stop these exports but failed to do it even though it has been called to his attention by Members of Congress.

The explosion of the tanker *Markay* caused loss of life and damage estimated at more than $10,000,000. Mr. A. B. Kurz, vice president of the Keystone Shipping Co. of Philadelphia, informed me over the telephone this morning that the tanker *Markay* was headed for Portland, Oreg. I received no information that the gas and oil on the tanker *Markay* was for shipment to Russia, but the fact remains that many tankers have been loading on the west coast with our oil for the Russians. Worse than that, of the tankers, 12 are American tankers which were turned over to the Russians on lend-lease and the Maritime Commission has been trying to get them back without success.

When we consider that the Treasury Procurement Division reports that Russia today has a reserve of oil and gas ready for use of 150,000,000 barrels and that the United States ranks fourth among the nations of the world in oil reserves ready for use, having only 50,000,000 barrels—meaning that Russia has three times more than the United States—I think we should pause and consider whether we should continue shipping oil and gas to Russia at the rate of a million barrels per month.

Incidentally, Russia is requesting from us today more oil and gas than she requested during the war.

I have received many letters and wires from my California friends who cannot understand why the Government has warned that it probably will be necessary to again have gas rationing in parts of the United States this fall while we are still shipping approximately 1,000,000 barrels of gasoline a month to Russia.

I have assured my constituents that I intend to get to the bottom of this matter and do all I can to immediately stop shipments of gasoline and other potential war material to Russia.

The Political Parade

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Rothwell Brown from the New York Journal and American:

THE POLITICAL PARADE
(By George Rothwell Brown)

GENEVA, June 18.—Twenty-eight years ago even such experienced scholars and statesmen as Lloyd George and Clemenceau failed to understand that any commitments made by Wilson at Versailles would have to be ratified by the United States Senate.

There was still a vast unfamiliarity with the American system of Government on the part of foreign politicians as the International Trade Conferences began in Geneva.

It is now beginning to be realized that Congress still has great powers in determining tariff policies and that this Congress is controlled by a party in opposition to the Truman administration.

Australia thought, for example, when her delegates arrived here, that the executive branch of our Government was solely responsible for its commitments here in tariff concessions and in the broader field of a permanent international trade organization. This is strange, for in the case of Australia herself, every action taken by her representatives in Geneva must be confirmed by her Parliament.

Two incidents have created great disquietude among the foreign politicians and economists here, and in Paris and London it is perceived with dismay and doubt that the American Secretary of State has presented a stupenduous scheme for the grant of economic aid to Europe as a purely Executive action and that he did not, or the President did not, submit this "Plan Marshall" to Congress as a report on the state of the Union as the Executive is required to do by the Constitution.

In short, the Congress was by-passed on a matter involving astronomical appropriations and political commitments in Europe of a very grave character at the very moment when the Congress, in its action on the wool-import bill, was rejecting a major administration policy and, in effect, nullifying the purport of the President's Ottawa speech.

Here are implications that have naturally enough caused jitters and gooseflesh in Europe.

At this jittery moment Senator VANDENBERG, the Republican leader who has done most to underwrite the Truman foreign policy for his party, proposes a survey of American economic resources to determine the amount of American aid that the United States is capable rationally of extending.

This is realism with which European statesmen, in their dealings with Washington under the Roosevelt New Deal, have long been unfamiliar.

The condition in the "Plan Marshall" that before America can help Europe, Europe must first help herself, is in itself disquieting to responsible European politicians and, indeed, it seems utterly unrealistic and fantastic to imagine that the various countries of Europe, outside of serene and happy Switzerland and the Scandinavian nations, can create a harmonious "United States of Europe" when they cannot even create harmony of political factionalism within their own boundaries.

With Foreign Secretary Bevin in Paris for consultations upon the Marshall Plan, only the first step has been taken on a long road upon which Congress might at any moment flash a red light.

Geneva is suddenly becoming exceedingly Congress conscious, and it is high time it did.

Truman's Veto of Tax Bill

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, when President Truman vetoed the tax bill last week he abused that right under the constitutional process as it is generally understood. Only twice in the history of our country has a President vetoed a tax bill which was designed to reduce taxes—Franklin Roosevelt and Harry S. Truman. It will be recorded that both were prompted by political considerations.

Mr. Speaker, as part of my remarks I include an editorial by Mr. Mason Dobson, editor of the Beloit (Wis.) Evening News, which points out the responsibility of the President when he vetoed the tax bill. I commend it to the House Members:

President Truman took upon himself a great responsibility when he vetoed the tax reduction bill passed by both the House of Representatives and the Senate. He will take upon himself another great responsibility if he vetoes the labor bill adopted by both Houses of Congress.

It is the essence of representative government that the acts of the chosen representatives of the people should not be negated by the will of a single executive except under the most extraordinary circumstances. Yet Mr. Truman has undertaken to deny the expressed will of the people's representatives in the case of the tax reduction, and he probably will attempt to do so again in the case of the labor bill.

The extent to which Mr. Truman sets himself against the expressed wishes of the people's representatives is measured by the vote of the tax bill. In the House the vote was 220 to 99 in favor of the reduction. In the Senate it was 48 to 28.

This is a total vote in the Congress of 268 to 127—a preponderance of more than two to one—in favor of the bill which the President of the United States has just vetoed.

Surely a President of the United States needs to be supremely cocksure of himself to veto a measure having such a preponderance of support.

Perhaps the President is armed with this sort of cocksureness. But the 268 Representatives and Senators were quite as confident they were voting the will of their constituents in the best interests of the country.

At any rate, they were fulfilling their function as legislators in a democracy—and it is a serious matter to defeat their will by the executive act of a single executive functionary.

Basically, every veto is a denial of the right of an elected majority to express itself.

It ought to be resorted to only in the gravest crises, and then only with due regard to the violence which is done to the principle of representative government in a democracy.

You may search Mr. Turman's veto message in vain for any recognition of this.

The tax-reduction bill may have been good or it may have been bad. Like most bills, it probably was part good and part bad. Most things are.

But it was arrived at democratically by the elected representatives of all Americans and it is entitled to respect on that score. It should have the respect of the President above almost all others.

To deserve the summary dismissal which Mr. Truman gave it, the bill must be shown to be impossibly evil and dangerous. It is doubtful if it can be proved that bad.

That is why Mr. Truman has shouldered a heavy responsibility.

He has set up the principle that he personally, and not the Congress, knows best. He has negated the two-to-one majority act of the people's representatives.

Address of Hon. Kenneth B. Keating, of New York, at Monroe County Convention of the American Legion, Rochester, N. Y.

EXTENSION OF REMARKS
OF
HON. ROBERT TRIPP ROSS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. ROSS. Mr. Speaker, under leave to extend my remarks, I include the following address delivered by the Honorable KENNETH B. KEATING, on June 21, at the Monroe County convention of the American Legion held at Rochester, N. Y. I commend Mr. KEATING on this fine speech, and call to the attention of the Members of the House the very sound reasoning presented by him for the enactment of H. R. 246, to raise the ceilings on wages and allowances payable to veterans undergoing training on the job, and for the passage of legislation making it possible for veterans to convert immediately their terminal-leave bonds into cash.

County Commander Felerski, my comrades of the American Legion, I am very happy to be here today and grateful to you for the privilege you have accorded me to say a few words to you. Unless it is utterly impossible because of the requirements of my job—a more confining one, by the way, than I had ever imagined—there are two places where I never deny myself the opportunity of speaking in these critical, and I am afraid I shall have to say perilous, times. One is before veterans' organizations such as yours and the other is in the house of God. For that reason I am particularly honored to share this platform with a fearless man of God who for years has foreseen some of the things which are now taking place in this country under our very eyes and who has dared to speak out against them, always forcefully, always convincingly, always effectively. I refer, of course, to our good friend and past national chaplain of the American Legion, Father George Kettel.

I thought it might be more interesting than anything else to tell you a little about some of the legislation affecting veterans with which I have been most intimately concerned in Washington.

I am exceedingly proud to be a member of the American Legion and for that reason was particularly happy when I was selected by the national headquarters of your organization to be the sponsor of a bill prepared with the aid of the legislative representatives of the Legion to amend the Nationality Act of 1940. The purpose of this bill is to accord appropriate recognition to our brothers of foreign birth who served in the military or naval forces of our country in World War II, and to facilitate their efforts to become American citizens. It waives certain requirements of the naturalization law, such as declaration of intention, period of residence within the country, educational tests and fees for filing naturalization papers.

No one, I believe, will seriously challenge the contention that the men, few in number, who chose to identify themselves with the ideals and principles for which this Nation struggled, are entitled to special consideration in their efforts to become United States citizens.

Proper safeguards are provided in the bill in that affidavits of two credible citizens attesting to personal acquaintance with and the good moral character of the applicant and his attachment to the principles of the Constitution of the United States are required, together with convincing proof from military or naval forces of his honorable service. No dishonorably discharged soldier can qualify.

This is, in my opinion, a well-merited gesture of appreciation to our brothers of foreign origin who joined with us to crush the forces of tyranny and oppression.

I have been assured of an early hearing on this bill and believe it is likely to become law.

Another measure which I have introduced is designed to extend the time within which application for the benefits of the Mustering-Out Payment Act of 1944 may be made by veterans who were discharged from the armed forces before the effective date of that act. When the original act was passed it provided that an enlisted man must make application for his mustering-out pay within a 2-year period, or be forever barred. I was told of at least two instances here in this district, and of course there are probably thousands throughout the country, of enlisted men who at the time of their discharge were never fully informed about the pay which they had coming. They never learned of their rights until after 2 years had elapsed, and it was too late to take advantage of them.

This bill would extend the time to receive this pay, which Congress has already said they are entitled to get, for a 5-year instead of a 2-year period, or until February 1949. I am happy to say that just this week I have been advised by the clerk of the Committee on Armed Services that the Secretary of War and the Secretary of the Treasury will interpose no objection to the passage of this legislation.

Another bill which I think was the first one I offered has as its purpose the provision of a Gold Star lapel button to the wife and parent of one who gave his life in the service of his country in World War II. This bill has encountered a little difficulty and for that reason I want to tell you about it in the hope that those of you who feel that it merits support will communicate with the chairman of the Committee on Armed Services regarding it. It should be referred to as H. R. 1544.

The objection which has been raised by certain Government departments is that there are presently two other awards which sufficiently meet the situation. One is the Purple Heart and the other the service lapel button, which is available for purchase by the family of one who served in the armed forces. Of course the Purple Heart, as you know, is only awarded to the family of one who was killed by enemy action. It does not apply to those, oftentimes equally courageous, who may have succumbed to disease in the fever-infested jungles of Burma or New Guinea or who crashed to their death from the skies.

The service button, designed back in 1942, is the one familiar to so many of you, which is not awarded by the Government at all, but can be purchased in any store by anyone and the use of which has been, I am sure you will all agree, badly abused.

To those who sacrificed husband, son, or father on the altar of freedom a grateful Nation can never repay in dollars and cents the debt it owes. We can, however, and shall remain through the years, ever mindful of that obligation. To most of those who gave so much a continuing recognition of our indebtedness means more than any monetary considerations. If confirmation of this statement be necessary, ask any Gold Star Mother, no matter what her riches, to name the most precious item in her jewel box.

My bill directs the Secretary of War and the Secretary of the Navy by joint action to design this Gold Star lapel button to be awarded to the widow and each parent of one who gave his all.

I have told you in some detail about it in the hope that many of you may join with the Gold Star Mothers' organizations and other patriotic bodies throughout the country who have exhibited such an intense interest in this legislation in urging a favorable report upon the chairman and members of the Armed Services Committee.

There are two other pieces of legislation affecting veterans in which I have been particularly interested, although not the author of either. One relates to a raise in the ceiling in the apprentice and on-the-job training program. After many young veterans had incurred obligations, both family and financial, in reliance upon a promise by the Government to pay a fixed amount to them over and above what they were able to earn while in training, the last Congress, in the closing days of the session, hurriedly passed a bill placing a total limit on the amount a veteran could earn from all sources of $175 a month for a single man and $200 for a married man.

This was a devastating blow to these young men, particularly the married veterans who were trying to raise a family and had incurred heavy obligations of various kinds. Probably most people would agree that some ceiling is proper and that if a man's earnings during this training period are sufficient, there is no compelling reason why the Government should supplement them. My feeling, however, was that these veterans were misled by the Government which they loyally served and which should be their grateful protector and that a bill which was offered in this session to increase the over-all amount which they could earn from all sources deserved my wholehearted support. I shall continue the fight.

Finally, there are some $2,300,000,000 in Government obligations outstanding due to enlisted men in the form of terminal leave pay bonds. Many of you may remember a public statement which I made upon my return from overseas duty, at a time when public office was furthest from my thoughts, when I said that in my opinion it was absolutely inexcusable that officers should receive terminal-leave pay when enlisted men, who bore the brunt of the fighting and who, in most instances, needed the money more, were deprived of it.

The Congress rectified that situation in part in due time, but provided that the terminal-leave pay for enlisted men, rather than being paid in cash, as was the case with officers, should be given to them in the form of bonds payable 5 years from date. Now that is certainly a long step toward removing the earlier discriminatory provisions, but

many of these men need that money now, when they are trying to get started in business, or are just getting married, or are going through the readjustment period. I quite agree that it is a fine investment for those who feel able to retain their bonds; I urge upon all of them who can do so to hang on, but here we have over $2,000,000,000,000 in Government obligations, every dollar of which that is paid off reduces the national debt by that amount. In remarks which I made in the debate on the tax-reduction bill, for which I voted, I made clear my position that debt reduction should accompany tax reduction, my opinion being then as it still is, that the reduction in Government expenditures which is being effected and the financial condition of this country permits a balancing of the budget, a substantial payment on the national debt, and a reduction in the tax loads, and an increase in the take-home pay. Certainly there can be no doubt now that a Presidential veto has eliminated the possibility for this year of this increase in the take-home pay, that we can and should make a real dent in the size of our national debt.

I advocate that the first Government obligations which we retire under this policy be those owing to our fighting men who now stand in need of this assistance.

The opponents of such a measure make the same argument as those who contended that we should not reduce taxes and thus make available more spending money. They say that the release of these funds into the hands of the veterans or the taxpayers will lead to inflation. That is the threadbare argument of the Government spenders. They want to retain the money so that they can spend it rather than, by reduction in governmental expenditures, make it possible either for the wage earner and the taxpayer to have proportionately more to spend or for the GI who may be in critical need of financial assistance now, not 5 years from now, and who as a terminal leave bondholder is a creditor of Uncle Sam, to receive payment of all or part of the obligation he holds, thus helping him and at the same time reducing the national debt. As a matter of sound fiscal policy, therefore, as well as a principle of basic fairness to those young men who, when their country called, never faltered in their answer, I shall continue my fight to see that appropriate legislation is enacted to permit those who need the funds to convert their bonds into cash.

One of the most rewarding features in my job as your Representative in Washington has been the opportunity, so frequently presented, to assist my comrades, their widows, parents or family, in helping, so far as I could, to unravel some of the red tape surrounding their problems with the Federal Government. In this work I have at all times enjoyed the most complete cooperation from the American Legion both here in Rochester and at national headquarters in Washington. Your fine organization is performing a magnificent service for the veterans and their families.

In my remarks today the limitations of time have necessarily precluded a discussion of legislation other than that affecting veterans. Occasions may arise, and undoubtedly will, when your Representative may feel that the best interests of the country and the welfare of all its citizens may conflict with the official position of our organization. In such cases, if those interests cannot be reconciled, the decision must be—and you, I know, would not have it otherwise—that the ultimate good of the greatest number must prevail. That is the way democracy works; that is the way those very principles are upheld for which you and I fought and to sustain which so many of our brothers gave their lives. I am happy and proud, however, to give testimony here and now, and in so doing to pay the highest tribute to the American Legion, when I say that I recognize, as do the Members of Congress generally, the invaluable assistance which you have rendered to us in helping us to solve some of the complex and baffling problems which today confront the Government of the greatest country on earth. I can assure you it is thoroughly appreciated. You men who fought in wartime to save the country you love are continuing your fight in peacetime to keep her strong. My comrades, I salute you.

The Truman Policy and Planned Chaos

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, Henry Hazlitt, in the current issue of Newsweek, states that we are about to subsidize planned chaos in Europe. He says that it is time for this Government to get out of the foreign-lending business, and I agree with him. In the past few years we have set up international agencies which were created for that very purpose. And notwithstanding President Truman and his policy-makers are about to embark on a bigger and better lending and spending program. It does not make sense.

As part of my remarks, Mr. Speaker, I include the article by Mr. Hazlitt:

SUBSIDIZING PLANNED CHAOS
(By Henry Hazlitt)

It is unfortunate that Secretary Marshall, in his speech at Harvard, could come so close to diagnosing the real economic disease of Europe and then miss it. He pointed out that "in many countries, confidence in the local currency has been severely shaken." But he did not tell us why. It is because the Governments of these countries have insisted on living beyond their fiscal means; because they have financed the difference by printing more money; and because the ideology and vested political interests within these countries give little assurance that this process can be brought to a halt.

But there is an obstacle to European recovery even more serious. The money, though fallen in value, would still facilitate production and exchange if commodity prices and foreign rates were free to move in response to actual supply and demand. But precisely this is prevented by Government controls which make it a crime for anyone to buy or sell goods in accordance with the shrunken value of the currency. The European farmer refuses to plant wheat, or feeds it wastefully to livestock, not, as Secretary Marshall says, because "he cannot find the goods for sale which he desires to purchase," but because the distortions of price fixing either make it more profitable for him to sell wheat in the form of poultry, hogs, or beef, or make it unprofitable for him to raise wheat at all. And the principal reason why he cannot get goods in the cities is because price fixing in turn discourages and prevents production and sale in the cities.

Secretary Marshall's speech at Harvard represents an advance in American policy in at least one important respect. It indicates that further financial aid will not be forthcoming from this country except under conditions. But it is extremely vague regarding what these conditions ought to be. There must, said Mr. Marshall, be "some" agreement among the countries of Europe as to the requirements of the situation. Everything depends, however, on precisely what this agreement is. It is not important whether or not some European nations agree to a "joint" program. What is important is whether the programs they adopt, jointly or individually, are really such as to promote economic recovery.

Secretary Marshall's reluctance to suggest a definite program is understandable. He does not wish to put the American Government in the position of "dictating" to Europe or "interfering in its internal affairs." But this is the inescapable dilemma of Government lending. For unless the American Government does impose conditions, its future loans, like its past loans, will merely subsidize and prolong the socialistic and restrictive policies that are strangling production and making recovery in Europe impossible.

We now seem ready to make loans to practically any government that says it is anti-Communist, even though the policies it follows mean that the loan will soon be used up, that it will be back for more, that private enterprise in that country is tied hand and foot, and that the borrowing government, in short, though it is "fighting the Communists" is meanwhile pursuing the very economic course that leads toward communism.

All this suggests that, instead of framing still more grandiose foreign lending schemes, our Government ought to get out of the foreign lending business as soon as possible. The best immediate policy is to leave all further foreign loans either to private hands or to the International Bank, which is compelled to take credit worthiness into account because of the fact that it must sell its debentures to private investors. If the International Bank sends an expert economic mission to each country that applies for a loan, if it frankly tells each borrowing country that investors will not be interested unless that country makes certain specified economic reforms, then a loan may really achieve its purpose. Under such conditions, in fact (as experience with the League of Nations loans proved after the First World War), it is not the load itself that is important in assuring recovery, but the reforms made in order to get the loan.

Farmers Talk to Congress

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. LEMKE. Mr. Speaker, I have been requested by the United Farmers of Madison County, Ill., to insert in the RECORD a communication addressed to the Subcommittee on Agricultural Appropriations.

I realize that the farmer is much misrepresented. He is supposed to be rolling in wealth; he is supposed to be responsible for the high cost of living. The contrary is the fact. With very few exceptions the farmer is just getting cost of production, a price he always should have gotten.

A few months ago I had occasion to check on the price of meat. I discovered that the farmer on that day was getting, on an average, 21 cents a pound for his live hogs, while bacon was selling for 80 cents a pound. Out of that 21 cents the farmer paid for the raising and feeding

of the mother pig, that raised the pigs that produced the bacon. He raised the grain to feed these pigs and cared for them.

Then he hauled them to market, paid the transportation charges, and a commission. All out of his 21 cents. It took him over 12 months to produce this bacon. Yet he got 21 cents a pound, while those who handled the bacon took the other 59 cents. Remember that 80 percent of the live hog is now sold for edible meat, and every ounce of the other 20 percent is sold for other purposes. There is no waste.

Many similar instances could be cited. I am, therefore, happy to include in the extension of my remarks the article of the United Farmers of Madison County, Ill. I am confident the final solution is cost of production.

UNITED FARMERS OF MADISON COUNTY, ILL.,
Highland, Ill., May 19, 1947.

To the Honorable Subcommittee on Agricultural Appropriations, House of Representatives:

I want to thank the Committee on Agricultural Appropriations for the courtesy granted this writer on his recent visit to Washington in behalf of the United Farmers of America, Inc.

As stated to the committee in Washington, the United Farmers of America are seeking no financial assistance of their Federal Government. The men who make up this organization are confirmed in their belief that all Government should emanate from the consent of those governed.

They are ever conscious of the fact that a Government can spend no money or can have no reserve except from the taxes paid by those who themselves organize the form of Government under which they wish to live.

The United Farmers of America maintain that it is the duty of a people to support the Government which they themselves establish; and contrawise that it is not the function of the Government established by our Constitution to endeavor to support its peoples and that the taxes collected from the American farmers are the monies earned in the sweat and toil of labor and privation.

It is because of these reasons and for reasons hereinafter to be enumerated that the United Farmers of America are asking your committee and the Congress of the United States * * * to desist from making any further appropriation to refuel or to support a bureaucratic administration which never should have been fostered under an economy of free enterprise and certainly should not be refueled in this coming year by the appropriation of $944,241,318 of tax money to be syphoned out of the Federal Treasury and poured down the rat holes of extravagance and waste through the maladministration of the United States Department of Agriculture.

The United Farmers of America is not a political organization nor does it advance as its spokesmen or proponents those who seek either personal advantage or special privileges for its membership.

The United Farmers of America is exactly what its name connotes: They are first, last, and always Americans. They are all farmers.

They are men who, believing in rugged individualism, throw the harness on their mules and go down the furrow with a song on their lips—a song of liberty, a song of freedom—to earn their own bread in the sweat of their toil

The United Farmers of America are united solely in behalf of the industry of agriculture.

They are sprung from the loins of forebears who established this Nation—forebears who came to these shores armed only with their brain, their brawn, and their Bibles.

They are men whose forebears wrought fertile fields out of virgin forests, builded their barns and their homesteads out of native timbers and husbanded with equal care their families and their cattle.

The United Farmers of America are not unmindful of the economic struggle following in the holocaust of World War II. They are fully cognizant of the great national debt that was incurred by their Government in the prosecution of that war.

The United Farmers of America are not unmindful that the interest and a part payment on the principal on that national debt must be met annually and that, in the meantime, their Government must be supported in its every necessitous function.

The United Farmers of America take this opportunity to point out to this, the Nation's Eightieth Congress, that in the last decade and a half those charged with the administration of Federal affairs have gone far afield in effectuating laws, rules, and regulations which have proven wholly destructive of the American way of life and particularly so with respect to the treatment accorded agriculture.

The farmers of American believe that the economy of scarcity was wholly violative of the laws of nature and of nature's God.

Among other great precepts, the Master taught: "That we should feed the hungry—that we should clothe the naked—that we should minister to the sick."

These teach an economy of abundance.

Directly in contradiction of those precepts of divine origin laid down in the Scriptures, the heavy hands of a transitory administration in a time of economic scarcity and depression and while millions stood in bread lines, shivering with cold, made laws and proclaimed:

1. That the American farmer must plow up his wheat and his other grain crops.

2. That the American farmer must plow up his cotton and curtail the production of his crop of wool.

3. That the Federal Government, through its Secretary of Agriculture, should drown millions of our pigs as well as sows with pigs.

4. That administrative officials should shoot 5,000,000 head of our cattle.

5. That those administrative officials should throw the carcasses of hundreds of thousands of our sheep and our goats to rot as carrion in the canyons of our great west country.

These things—all of them—were done under the guise that an economy of scarcity would effectuate a rise in price for the products of our farms.

These things—all of them—were done without heed of the morrow.

Under that same fallacious economy the same administrative government regimented our farmers.

They measured our acres; they restricted our production; they told us when and where we could cultivate our lands and to what crops; they told us how to package them; they told us where and when we could offer them for sale and in what manner we could sell them; in some instances they even fixed the hours of sale.

American agriculture languished under that system. With crops and production restricted, shortages occurred, and a flood of imported products of foreign growth was brought into our country to furnish the American people with necessary fats, food, and fibers—after the destruction of our own production and the loss of hundreds of millions of dollars in the capital structure of our farmers.

Hams were shipped into America from Poland.

Corn and oats from the Argentine and Danubian countries.

Barley and barley malt from Czechoslovakia and Hungary.

Dried eggs, yolks and albumens, and frozen eggs from China and Japan.

Cattle—train after train—rushed across the borders from Mexico to the south and from Canada to the north into the markets of Houston, Dallas, St. Paul, Omaha, and Chicago.

Oats (hulled and unhulled), rolled oats, wheat, eggs, butter, cheese, pork products, rutabagas, maple sugar, and a host of other products came across the Canadian border.

Hundreds of millions of pounds of corned beef, canned roast beef, beef bouillon in cubes were rushed into American markets from the Argentine, from Uruguay, from Paraguay, from Brazil.

Fifteen hundred million (one and a half billion) pounds of coconut oil, palm oil, cottonseed and peanut oil, sunflower seed and corn oil, babasu and rape seed, perilla and whale oil, coming in by the boatload, drowned out the historic market for our American hog lard—historically used in all times by our people and upon which use of hog lard we had built the brawn and brain of these United States.

Gone was the historic home markets of the American farmers.

Prices were slaughtered by the influx of imports. There was unemployment on every side. Federal bonds were sold, placing secondary mortgages upon our farms and our firesides, and out of the proceeds of the moneys derived from the notes issued by the Government, American agriculture was lulled into the beggarly role of accepting hand-outs from the Federal Treasury in the guise of benefit payments to our farmers—with a complement of relief payments to the unemployed industrial workers in our cities.

Now the piper must be paid.

Interest, as well as principal, on all outstanding obligations must be met by the workers.

The tax gatherers are at work.

The farmers must repay, with interest, the money handed out to them by their Government.

The industrial workers, likewise, must meet the debt incurred to pay their relief checks and in addition thereto, must pay all accruals of interest on the same.

All of the above was done under the counterfeit guise of the good-neighbor policy and a "new deal" for farmers—a la Henry Agard Wallace.

In truth, it was a "new deal" all right. But:

It was a new deal for the farmers of foreign countries.

It was a dirty deal for the farmers of these United States.

The United Farmers of America never have sought and they do not want now any help from the Government which they themselves instituted and for which they are willing to pay their pro rata part to maintain.

They long since discovered that the dollars they send to Washington, D. C., are a whole lot smaller when they are returned!

They do not want any subsidy or handouts for the products that they produce.

They want no acreage benefit payments.

They will care for their own soils, and they require no so-called soil-conservation benefit payments, collected from themselves—and after extensive deductions have been made to support an unwarranted agricultural bureaucracy returned but in part—and bestowed as a gift from those in Government who exploit them to their personal and private benefit and gain.

The United Farmers of America do want an American price for their crops of fats, foods, and fibers on a parity with the cost of the products of other American industries and American services which they buy with the money they receive.

The United Farmers of America are entitled to such a parity of price and we petition this, the Eightieth Congress of the

United States, to fix the price at parity levels—not as of 1909 and 1914, but as of today, and to see that the American people henceforth pay, at law, an American price for that portion of the crop consumed in the United States.

It is only fair, just, decent, and equitable that the Congress fix the prices on the nonperishable crops of American production.

Is not the value of gold fixed by law?

Are not the freight rates fixed by law?

Does not the sovereign Government fix the rate of taxes—yes; and prescribe a legal rate of interest on borrowed money?

Are not the rates of electric power—the telephone and telegraph charges; water rates—household, industrial, and, as used in agriculture for irrigation—established by law?

Minimum wages for labor, the legal hours in a workday and the workweek are now part of the organic law of the land.

Passenger fares, bus fares, and a thousand and one other services, including that of the service obtained through the use of postage stamps, are things which farmers, by sovereign law, are compelled to pay for out of the products of their soil and their toil.

Because of these things we, the United Farmers of America petition the Congress of the United States to:

1. Reduce the expenditures in the Department of Agriculture and other departments by cutting out useless bureaucrats and waste.
2. Retain the support prices now established by law up to and including 1949.
3. Retain the Steagall amendment.
4. Proceed immediately upon the enactment of the Lemke bill to provide cost of production, including labor charges. as per the Pace amendment.
5. Reduce all expenditures by the Federal Government in its every unnecessary activity.
6. Reduce all Federal taxes by eliminating useless and inefficient personnel.
7. Reduce all excise taxes on necessities.
8. Bring the Federal budget into balance.
9. Reduce the national debt. Remove the Government from out of business, and put more economy and business practices to work in the Government.

By these tokens alone can we restore individual initiative, purchasing power to our farmers, and economic prosperity to our people.

Again thanking you for your every courtesy.

Yours respectfully,

RAY IBERG,
Secretary-Treasurer.

Tax Savings Through Estate Planning

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. GEARHART. Mr. Speaker, my attention has just been called to a highly informative and most interesting article dealing with the timely subject of tax savings through estate planning. It first appeared in a recent issue of the Texas Bankers Record, a highly regarded publication of wide circulation in the State of Texas where it has created much favorable comment in banking and legal circles.

The article is validated by the high authority of its joint authorship, coming, as it does, from the competent professional pens of the Honorable George Ray and the Honorable Oliver Hammonds, each of them a former special assistant to the Attorney General of the United States. The public service having ended with the commencement of World War II in which they both served with distinction, they are now engaged as partners in the practice of the law in Dallas, Tex.

Because of the timely importance of this splendid article, its high value to those of the legal profession who specialize in problems having to do with taxation as well as to those whose property interests may be involved, I offer it for inclusion in the CONGRESSIONAL RECORD as a part of my instant remarks.

Mr. Speaker, the article to which I have just referred is the following:

TAX SAVINGS THROUGH ESTATE PLANNING

(By George E. Ray and Oliver W. Hammonds)

The importance of adequate planning with respect to estates and the savings in taxes to be achieved thereby are becoming more evident each year, and particularly so with the sharp increase in Federal estate and income-tax rates. Among the principal tax advantages to be derived from adequate planning of an estate arises with respect to the Federal income tax. The reason for this lies in the fact that it permits the splitting up of property among many taxpayers, thereby taking advantage of the lower-rate brackets. A simple example will illustrate this. Let us assume that a grandfather, with a wife, a son, a daughter-in-law, and four grandsons, all living, has $500,000 over and above other property which will adequately take care of his needs. The $500,000, let us further assume, yields an income of $25,000 per year. On this income, aside from his other income, he pays each year an income tax of at least $9,000. If he were to transfer the property to his four grandsons, either outright or in trust, they would together pay a total of approximately $5,000 each year in income taxes, thus effecting an immediate saving of about $4,000 a year.

In addition to the income-tax saving, there would also be a substantial saving in estate tax on the transaction. On the transfer of the $500,000 to the grandsons or to trust for their benefit, the grandfather would pay a gift tax, after $30,000 exemption, of $99,000, whereas the Federal estate tax on $500,000, less $60,000 exemption and 5-percent administration expenses, would have been $110,000 had he kept the property until his death, plus $10,000 State inheritance tax, leaving out of consideration his other property. By making the transfer during his life he would thus save $21,000 in estate and inheritance taxes. The grandfather in our case has a choice as to whether he will make outright gifts to his grandsons or whether he will transfer the property to trusts for their benefit. If he does the latter, the trusts will enable him to place restrictions on the use of the money and, since his grandsons are minors, he may decide to have the property handled during their minority by a trustee of his own choosing. Of course, the grandfather should not, in either case, overlook the tax-saving possibilities inherent in making separate, tax-exempt, annual gifts of $3,000 each to his four grandsons, and to his wife, son, and daughter-in-law.

Proper estate planning also can enable the owner of property to effect an additional saving in estate tax through the setting up of successive ownership in various members of a family without payment of estate or gift tax upon the successive transfers from life beneficiaries. For example, if the $500,000 of property above referred to were transferred to a trust, with successive life interests in the grandmother and son, before distribution to the grandsons, the gift tax would be, as noted above, $99,000. If the property had not been transferred to the trust, however, estate and inheritance taxes would have had to be paid on it by the grandfather, the grandmother, and the son, in succession, not to mention the daughter-in-law, assuming that at least 5 years intervened between the successive deaths. The property would have been reduced by $120,000, when it went to the grandmother; her $380,000 would have borne a tax at her death of $82,000, leaving only $298,000 for the son; his estate in turn would have paid an estate tax of $58,000, reducing to $240,000 the property going to the grandsons, or less than one-half of the grandfather's original $500,000.

If, on the other hand, the grandfather had set up a trust and paid gift tax on the $500,000, there would have been $401,000 left for his grandsons. Of course, the grandfather's ability to pay the gift tax out of his other property without unduly impairing the funds he needs to live on should be duly considered. A further estate-tax benefit to him would result from the reduction of his taxable estate by the amount of the gift tax paid.

The efforts of taxpayers to retain control over their property through the flexible-trust device and yet rid themselves of the tax burdens on the trust income and property, coupled with the need for greater revenues, have accelerated the production of changes in the Federal tax laws which restrict the use of trust for tax-saving purposes. In planning the disposition of estates, all of these restrictions must be kept in mind.

The nature and scope of most of these restrictions can be examined by surveying briefly the pertinent provisions of the Federal estate-tax law, section by section. A similar survey should be made of the pertinent provisions of the income and gift taxes as well, both State and Federal, if the overall tax planning for an estate is to be comprehensive and sound.

The pertinent provisions of the Federal estate-tax law are found in section 811 of the Internal Revenue Code. The tax is imposed on the decedent's net estate, computed by deducting from his gross estate the exemptions and the various deductions for expenses, losses, indebtedness, and taxes. This article will be confined to a consideration of what interests are includible in the gross estate.

(a) Interest of the decedent at the time of his death.—Section 811, with disarming simplicity, first provides that the decedent's gross estate is to be determined by including the value at the time of his death of all property, real or personal, tangible or intangible, wherever situated, except real property situated outside of the United States, "(a) to the extent of the interest of the decedent at the time of his death." The subsections which follow attempt to define in specific terms what property interests are intended to be reached and included thereby in the gross estate. For purposes of brevity, only those of importance in connection with the use of trusts will be referred to herein.

(b) Transfers in contemplation of or intended to take effect at or after death.—Subsection (c) applies to transfers "by trust or otherwise, in contemplation of or intended to take effect in possession or enjoyment at or after his death."

The "contemplation of death" portion of this provision, together with the rebuttable presumption that gifts made within 2 years of death were made in contemplation of death, creates no special problems as to trusts except to the extent that a transfer made to a trust may be held to have been made in contemplation of death, like any other kind of transfer. Thus, if the grandfather in our case died within 2 years of the time the trust was created, or if he was elderly or in ill health, an effort would certainly be made by the Treasury to include the trust property in his gross estate for estate-tax purposes.

The balance of subsection (c) is of particular interest with respect to the retention

by a grant or "strings" upon property transferred in trust during his lifetime. Under subsection (c) the trust property must be included in the grantor's estate if (1) the transfer was intended to take effect in possession or enjoyment at or after his death, or (2) if the grantor, either alone or in conjunction with "any person," regardless of whether that person has an adverse interest or not, retained an interest in the possession or enjoyment of the property, or the right to income from the property, or if he retained the right to designate the persons who are to possess or enjoy the property or the right to the income from it.

The application of this last provisions has been the subject of much litigation in the courts, culminating in the now famous opinion of the Supreme Court in *Helvering* v. *Hallock*. In that case the Supreme Court held that where a grantor had transferred his property to a trust, with the income to go to his wife for her life and upon her death the trust to terminate and the principal and accumulated income to be paid to him, the trust fund must be included in his taxable estate. Later cases and the current Treasury regulations have interpreted the Hallock case as requiring the inclusion of the entire trust property in the grantor's estate if (1) possession or enjoyment of the transferred interest can be obtained only by beneficiaries who must survive the decedent, and (2) if the decedent or his estate possesses any right or interest in the property, "whether arising by the express terms of the instrument of transfer or otherwise."

The Hallock case requires great care in drafting trusts so that the Treasury cannot claim that the decedent grantor retained a taxable reversionary interest, or "string" on the trust property. In our case, for example, if the grandfather provided that in the event that the grandmother, the son, and the grandsons all died before he did the trust property should come back to him, the trust property would be included in his gross estate, under the Hallock case. Or, if the grandfather retained any interest in the trust property, or the income from it, or even the mere right to decide who should enjoy the trust property or who should get the income from it, the trust property would be included in his estate.

(c) Revocable transfers: Subsection (d) of section 811 relates to another type of "string" which will result in tax. It provides for inclusion in the grantor's estate of property transferred by him during his lifetime in trust if he alone, or in conjunction with any other person, may alter, amend, revoke, or terminate the trust. For example, if the grandfather in our case provided that he and the trustee, acting together, could amend or revoke the trust, the trust property would be included in the grandfather's estate. If, however, the trustee alone had that power, then the trust would not be included in the grandfather's estate.

In this connection, it is interesting to note that subsections (c) and (d) of section 811 speak of the grantor, "either alone or in conjunction with any person," whereas the corresponding sections of the income-tax law, sections 166 and 167, speak of "any person not having a substantial adverse interest."

This variance in language, as well as a number of other similar variances between the income and estate tax provisions, make the following possible in our case: (1) The grandfather can rid himself of the income tax on the trust property by reserving a power to revoke in conjunction with his son, when the son has a life interest, since the son is then a person having a substantial adverse interest, and yet the property will be included in the grandfather's taxable estate when he dies, because he has a power to revoke in conjunction with any person.

But this is only one of many situations where there is inconsistency or duplication in Federal taxes. For example: (2) if the grandfather places the power solely in the hands of another person who has no substantial adverse interest, as in the case of a disinterested trustee, the X bank, the property will not be included in the grandfather's taxable estate at his death, but he will nevertheless, during his lifetime, remain subject to income tax on the trust income. And (3) in case the grandfather's transfer to the trust is made in contemplation of death, both the estate and gift taxes will apply. Although there is provision, in computing the estate tax, for a credit of the gift tax previously paid, the credit is limited to the same percentage of the estate tax as the gift property bears to the entire gross estate. The credit may therefore prove in some cases to be more illusory than real, especially where the value of the property has declined substantially between the date of gift and the date of death.

(d) Property of other persons: Subsection (e) of section 811 requires the inclusion in the decedent's estate of interests held by the decedent with any other person as joint tenants or tenants by the entirety, or by the decedent and surviving spouse as community property. Although section 1000 (d) of the gift tax provides that gifts of community property shall be considered gifts of the husband, unless shown to have been derived from the wife's earnings or from her separate property, use of the trust would be of real help even in a community property State, since the gift tax would be imposed only once, while the estate tax would apply twice.

(e) Powers of appointment: Subsection (f) of section 811 provides for the inclusion in the decedent's estate of property with respect to which he held a power of appointment. This subsection was drastically revised in the 1942 Revenue Act and is of considerable importance with respect to the estate tax on trust property.

Just as the trust is a flexible device for transferring property and yet retaining control over it, so the power of appointment adds additional flexibility to the trust. To illustrate this provision, let us assume that in the case presented above the grandfather, as the trust grantor, instead of setting up four separate trusts in equal amounts for the four grandsons, were to provide that the trust property in each case would go as the son had appointed by will. This clause would enable the son to determine which of the grandsons needs the property. For example, it would enable the son, at the time he drafts his will, or a codicil thereto, to take into account facts such as the following: One grandson has no children and is married to a girl who is a spendthrift; another has two children and has been crippled for life; the third has married into a great deal of money, and the fourth is making a steady income of over $50,000 a year in his business. Obviously, the crippled grandson with the two children would really need the money. The others either would not need it or would not put it to such effective use.

The estate-tax problem with respect to the power of appointment held by the son would arise at the time of his death. Since, however, the son's power to appoint was limited to an appointment within a class consisting only of the four grandsons, the son's estate would escape estate tax under the statute. The reason for this lies in the fact that such a power falls within one of the two exempt classes of power specified by subsection (f) inclusion in which does not result in tax to the decedent's estate.

An additional hurdle in the statute lies in the provision that if a power to appoint is exercised by creating another power to appoint, the second power is not exempt from tax, even though it would otherwise qualify under paragraphs (A) and (B) above.

In fairness to trustees and others holding powers not previously subject to estate tax, it was provided in the 1942 Revenue Act that they could release otherwise taxable powers created prior to October 1, 1942, without payment of gift tax, if the release took place prior to the end of 1942. The period for such releases was extended several times, however, since in many cases it took years for people holding taxable powers to learn of their peril, let alone do something about amending the trusts or releasing the taxable powers. The time for release will now expire on July 1, 1947, except in certain instances not material here.

Despite the restrictions placed on powers of appointment by the 1942 Revenue Act, this flexible device, as in the case of the son's power in our case, remains a very useful technique in the planning of estates involving trusts, although, of course, great care must be used in drafting the trust instrument.

(f) Life insurance: The last of the subsections of section 811 of interest with respect to the use of trusts in tax planning for estates is subsection (g), dealing with the proceeds of life insurance. The trust is a very useful instrument for handling the proceeds of life insurance. For example, in our case the $2,000,000, might be composed in large part of life-insurance policies. A trust provides much greater flexibility than the usual optional settlements. Subsection (g) of section 811 requires the inclusion in the decedent's gross estate of the proceeds of insurance on the decedent's life: (1) to the extent received by the executor and (2) to the extent received by all other beneficiaries if, after 1942, (A) the premiums were paid by the decedent, directly or indirectly, or (B) the decedent possessed at death any of the "incidents of ownership."

Among the more frequent uses of the trust device in connection with life insurance is found in the business insurance trust agreement. While these agreements can vary greatly as to details, their usual form is as follows:

Two partners or business associates, each owning a half interest in a business, agree not to sell their interests except to each other; on the death of either, the decedent's interest is to be sold to the survivor at a price fixed in the agreement. Each partner insures the life of the other in an amount sufficient to provide the cash needed for the purchase of the other partner's interest on his death. The trustee serves as a stakeholder to make certain that the agreement is carried out. The plan avoids forced liquidation in case of death and provides money for carrying out the purchase. If the agreement is carried out at arms length, it may serve to establish a value for estate-tax purposes.

It seems evident, even from this very brief survey of the provisions of the Federal estate tax, as applied to our illustrative case, that the trust is still an important and useful instrument in planning any estate involving possible Federal estate tax. The importance of the trust is no less in the case of the income tax and gift tax phases of estate planning. Obviously all three taxes, and the needs of the decedent himself, during his lifetime, as well as those of his family, must be taken into account. Good planning, from a tax standpoint, involves balancing the taxable gifts during life with the taxable estate, so as to produce the lowest possible over-all rates as to both taxes, bearing in mind that the gift-tax rates are three-fourths those of the estate tax and that gift taxes paid are a credit against the estate tax, when both taxes apply to the same property.

The trust, together with the power of appointment, affords a very flexible means of balancing the various tax factors, reducing over-all rates, and yet affording protection to the beneficiaries. The trust is by no means a competitor or substitute for savings bank

accounts or life insurance. Those two methods of accumulating property should properly be used to supplement the trust. Their particular virtue, from a tax standpoint, lies in their providing sufficient cash with which to pay the estate tax, and the debts, expenses, and specific legacies of the estate. The other assets of the estate, such as stock in a family-owned corporation or real estate, which might otherwise have to be sold at a sacrifice, may thus be left intact.

One more caution should be added. Merely setting up a carefully planned trust is not enough. The trust must be watched, year by year, to see that it is still as useful and effective as it was when drafted. No one can guarantee that economic conditions or statutory provisions will remain static. The 1942 act amendments with respect to powers of appointment emphasized very pointedly the fact that Congress may at any time pass legislation upsetting trusts which were well drafted years before. Nevertheless, it appears clear that a well-drafted trust, carefully and intelligently serviced, can for some time to come, pay real dividends in tax savings to anyone aware of the tax problems involved in planning an estate.

Housing Show-Down

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Peter Edson appearing in the Washington Daily News, June 14, 1947:

HOUSING SHOW-DOWN

(By Peter Edson)

Anyone taking a dim view of the housing situation can today confidently expect that it may be a lot worse before it gets any better.

On half a dozen fronts in Congress and the executive agencies events are shaping up for an eventual show-down on Government housing policy. What it will lead to no private industry nor Government housing official can say with any certainty. But these developments seem likely:

Heavy cuts in appropriations for existing housing agencies.

Curtailment or abolition of many more housing controls.

A late summer and fall in which private-enterprise real estate and building interests will have everything their own way. If they are able to build more houses and bring down prices, as their trade associations have claimed they could, further expansion of Government participation in housing activities may be ended.

If private industry doesn't deliver, chances for passage of a Government long-range aid to housing bill, such as is incorporated in the Taft-Wagner-Ellender proposal, would seem to be much improved. There is little chance that the T.-W.-E. bill can get past the House in the present session of Congress.

Either way this situation develops, it is going to take the better part of a year to work out. In the light of recent developments in Congress, there appears to be no other solution than to scrap many present programs and start again from scratch.

If Congress and the real-estate and building lobbies had permitted the veterans' emergency housing program to operate, the story today might be different.

If Congress had approved President Truman's housing agency reorganization plan last year the story might be different.

If Congress should approve the President's new Reorganization Plan No. 3, sent to the Capitol on May 27, something still might be salvaged from the ruins. This plan would group the 13 existing Government housing agencies under a new Housing and Home Finance Agency, with a new director to boss the works.

On top of all this negative action, the House Appropriations Committee's special report blasting the Federal Public Housing Authority as "a complete failure" puts all Government housing programs under suspicion. The report is one of the most vicious criticisms ever made by a congressional committee against an executive agency. It charges waste, mismanagement, embezzlement, favoritism to labor unions and all manner of shady practices.

The new housing bill introduced by Congressman JESSE P. WOLCOTT, of Michigan, has already curbed much of the Expediter's powers. The bill has been passed by both Senate and House. The President will practically be forced to sign the measure. Failure to do so would allow all housing and rent controls to expire June 30.

The present mess in which Government housing agencies find themselves represents a complete victory for the housing industry. Real estate, materials, and builders' organizations wanted all Government housing programs killed so as to restore the business to uncontrolled free enterprise. That's what they will soon have. But if they don't deliver more and cheaper housing within the next year, the situation may well be dynamite for the Republicans in 1948 elections. Their only hope lies in Senator TAFT's being able to put over the T.-W.-E. bill or something like it, taking full credit for himself.

Honest Labor Unshackled

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. REED of New York. Mr. Speaker, a voice more forceful than that of President Truman has been heard this day. A sovereign people through the Congress of the United States has spoken with firm finality to those who would defy law and order.

The will of a people determined to be free and remain free through the processes of law will not be mastered by organized tyranny on the part of any group. The chains fastened upon the honest laboring men by self-serving racketeers have been removed by the labor bill which has now become the law of the land.

Under leave to extend, I am inserting an article by Frank Kent which appeared in the Evening Star of June 23, 1947:

THE GREAT GAME OF POLITICS—POLITICS, RATHER THAN TERMS OF BILLS, BLAMED FOR TRUMAN'S TWO VETOES

(By Frank R. Kent)

There are two notable things about those two veto messages of Mr. Truman—one on tax reduction, the other on the labor bill. In both, the case he makes for himself is weak and unconvincing. Poor on the tax bill, it is worse on labor. In neither does he tell the full truth as to his reasons.

The evidence is overwhelming that on both measures, but particularly on the labor bill, politics swayed Mr. Truman far more than any consideration of the merits or demerits of the measures. This statement does him no injustice. To ignore the fact is to be completely unrealistic. There is no way to alibi him out of it. Nor is it easy to exaggerate the disillusionment of vast numbers of citizens in all sections who believed in his basic courage and ability to disregard political threats in the general interests.

The disappointing truth is that he just did not stand up. It is true that on the tax bill there were some sound arguments for disapproval. But their soundness for Mr. Truman was diminished by two facts. One was in 1945 he had done exactly what he assailed the Republicans for trying in 1947. In the former year, Mr. Truman, with his own party in control of Congress, exempted some millions of individuals from all income taxes and completely wiped out the excess-profit tax on corporations.

PERMITS POLITICS CHARGE

The latter not only deprived the Treasury of enormous revenue which could have been used for debt reduction but enabled many corporations to make abnormal profits, thus providing an excuse for the wave of crippling strikes with which the country was afflicted in 1946.

In addition, Mr. Truman's tax reasoning was weakened by his implied promise himself to initiate tax reduction next year—which is election year. Clearly, this opened the door for a charge of politics hard to refute. But where the President went wholly political was in his use of the argument, so loudly mouthed by all the left-wing radicals, that it was designed to afford greater relief to rich taxpayers in the higher brackets than to poor ones in the lower.

This was sheer political demagoguery and involved a distortion of facts and figures to present any plausibility at all. Its lack of foundation was so apparent that its adoption by the President was dismaying to many of his friends.

LOST POLITICAL STRENGTH

However, it was in his labor bill veto and speech that politics was unashamed and undisguised. And what makes it more difficult to forgive is that politically it was so utterly unintelligent. In no other way could Mr. Truman have lost more political strength and gained less. Certainly, he has deeply offended many thousands of Democrats who have been voting Republican nationally for 12 years and wanted to support him in 1948. And he temporarily pleased only the labor and radical elements, whose leaders were pretty emphatically repudiated in the 1946 elections.

Clearly, the dishonest, violent, highly organized, highly financed campaign put on by the CIO, the AFL, the Communists, the professional liberal groups and the "bleeding-heart" journalists scared Mr. Truman. Combine this with the frightening antics of Henry Wallace and the short-sighted advice of Presidential counselors of the Hannegan-Sullivan-Schwellenbach type, who believe the one Democratic hope is in continued submission to the CIO bosses, and it is easy to understand how completely the merits of the bill were obscured.

Almost literally he crumpled under the pressure. This was as clearly shown by the strained indictment of the message as by the somewhat hysterical radio address in which he sought to justify himself. Both, as Senator TAFT declared, might have been written for him by the CIO general counsel, Lee Pressman.

FAILED TO BE CONVINCING

He had to resort to the arguments of the labor propagandists and press agents. He had to twist the words as well as the purpose of the bill. He had to misrepresent its character. He had to resort to ingenious and fallacious points to make the veto seem respectable—and he did not succeed.

He was disingenuous and uncandid. He ignored the fact that he himself had made a far more "drastic" and "punitive" request for labor legislation last year—and been turned down. And he failed to utter a single word in disapproval of the gross abuse of union power by which the comfort, health, and general welfare of the public had been menaced in the past year.

It is as impossible convincingly to defend Mr. Truman from the charge of politics in this matter as it is to regard his arguments as sound. He has not reflected the sentiment of the American people. He has not reflected the sentiment of his own party, a majority of which in both branches of Congress supported the bill.

Probably his veto will be overridden. Certainly, it should be. But should it be sustained, it must be plain to the American people that their only hope for legislation that will protect them from the labor bullies whose unrestricted power is a constant threat to the economic life of the Nation is through the election of a Republican President. It is discouraging, indeed, to realize that after the labor politicians have lost their grip on Congress and it has regained its independence, they are still dominant in the White House.

David I. Walsh

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 23 (legislative day of Monday, April 21), 1947

Mr. LANGER. Mr. President, I think it eminently fitting that the following lines by a lifelong friend in tribute to our late colleague, Senator Walsh, of Massachusetts, be added to those in the RECORD. The author, William H. McMasters, is a prominent publicist and newspaperman, and I understand was intimately connected with the political campaigns of the Senator in his early years.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

DAVID I. WALSH

I am presuming on a half-century of friendship for David I. Walsh, late Governor and Senator from my State, to offer a personal tribute to his memory. Ever since I first met him, in his law-school days, until his passing, I always saw in his public service a dignity and courage that is far too often lacking in many elevated to high office. He early developed an organized mind and broadened it through many years of devoted effort for the people of our Commonwealth. Never did he fear that he would be misunderstood. He had an abiding faith in the ultimate record to vindicate his judgment. Some distant day, should an inquiring student of history scan these lines, it well might be that he translate from them a rough composite of the sincere regard that thousands of other friends held for this distinguished son of Massachusetts. All who came to know him found him a gracious and cultured gentleman whose main ambition was to be a faithful representative of those who entrusted their civic affairs to his keeping. Swift flows the current. Men come and go. But their true worth lives forever in the enduring conscience of time.

WILLIAM H. MCMASTERS.

BELMONT, MASS.

Excerpt From a Speech by Hon. Owen Brewster, of Maine, on American Help to Other Nations

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, June 23 (legislative day of Monday, April 21), 1947

Mr. MARTIN. Mr. President, on June 14, 1947, the Senator from Maine [Mr. BREWSTER] delivered an outstanding address at Flag Day exercise in Philadelphia. I ask unanimous consent that a portion of the address may be printed in the Appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

How to help others without destroying ourselves is the challenging problem before Americans today.

Undermining our own economy by excessive grants will endanger the whole structure of our civilization.

All Americans must be grateful that there is now general recognition in all quarters that our grants abroad must begin to take into account not only the needs of others, but the needs of our own country in maintaining a strong and productive America.

Otherwise we shall be consuming the seed corn.

America today is the hope of the world, but this is a result of the sweat and toil and tears which in the last hundred years have made America the productive marvel of all the earth.

Glorified soup kitchens are not the answer to the world's economic ills, however, anxious America may be to help those who are in want.

Pouring out of our substance and our surplus to help others is the American way, but it must not be followed to the point of imperiling the industrial machine which has made it possible for America twice now to make the indispensable industrial contribution to the saving of our civilization and our way of life—and the machine to which the whole world looks now for salvation.

"For what is a man profited, if he shall gain the whole world, and lose his own soul? Or what shall a man give in exchange for his soul?"

America must make sure that America continues to expand its production, as we expend more and more in helping to save the world.

Let America continue to set an example of ordered progress for the inspiration of mankind.

"And I, if I be lifted up, shall draw all men unto me."

Flood Control

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, June 23 (legislative day of Monday, April 21), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I made on June 11 of this year when I appeared before the House of Representatives Appropriations Subcommittee considering flood control and rivers and harbors items in the Army civil functions appropriation bill for the fiscal year beginning July 1, 1947.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

This matter of flood control and rivers and harbors appropriations for the next fiscal year is so important to my State that instead of waiting for the bill to come to the Senate after passage by the House, I am making this somewhat unorthodox appearance here to urge that this subcommittee report out a bill providing adequate funds for these vital programs.

It was my pleasure during my three terms in the House to have had the present members of this subcommittee as my colleagues here on the House side. In those days, and in the subsequent years since I have moved over to the Senate, I have always had the utmost respect for the work of this subcommittee.

You earned that respect during the war years by the magnificent manner in which you put your entire energy to the task of obtaining sufficient funds for the prosecution to a victorious finish of that most bloody war of all time. I remember, too, how those of you who were members of this subcommittee in those years were not satisfied merely to sit comfortably in Washington and listen to the generals and the War Department officials tell you what they needed but went yourselves to all the battlefronts to see personally the conditions under which our Army was operating.

And in the risk you personally took in underwriting the cost of the atomic bomb, getting the rest of Congress to provide the money without us knowing what it was for while you men shared in that awesome secret, you earned not only additional respect but the gratitude of the entire Nation.

And so, although my good friend, the late Representative J. Buell Snyder, was removed by his death more than a year ago as chairman of this subcommittee, and although the control of Congress has since passed from Democratic to Republican hands, I see no reason to fear that this subcommittee, which has demonstrated such greatness and statesmanship in the past, and which is largely composed now of the same men who carried out its obligations in previous years, would now proceed to repudiate the things for which it has stood with such forthright courage in previous years.

I am referring specifically to the great program for control of our rivers and streams under the flood-control program launched by the National Government only 11 years ago and which you are now considering in this appropriation bill for the Army's civil functions.

I don't have to tell you how important, how vital, that program is to the Nation and to Pennsylvania, particularly, for you already know that. Suffice it to say that I can think of no program of the Federal Government which was instituted in the past 14 years or so which has been more popular in my State than this program.

Thanks to the work of this subcommittee in previous years, there are now large areas of Pennsylvania once subject to periodic devastation by floods where there is now a new sense of security.

The floods now rampaging down the Mississippi and tributaries would undoubtedly be much worse today had it not been for this flood-control program of previous years.

The war, of course, interrupted the normal expansion of this program into additional areas of Pennsylvania and of other States and today we stand on the brink of a very

important decision in regard to the program. We must decide whether to allow that program again to continue to expand the way it would have expanded had the war not intervened, or whether we are to begin, temporarily, at least, and out of a policy of false economy, to shrink down that program so that only a few projects here and there which are already under construction can be continued at a snail's pace while no new projects would be undertaken.

The same alternative exists in connection with traditional rivers and harbors activities.

I can understand the President's reluctance to make large-scale expenditures in the coming fiscal year for work of this sort which might be considered deferrable because of his desire to try to save every dollar of Federal funds he thinks can safely be saved at this time. But when I look at the over-all budget recommendations for flood control and rivers and harbors work, I can not help but think that if the rest of the President's budget is as bone-bare as this part, then the $37,500,000,000 total budget which he has recommended for the 1948 fiscal year and which is under such strong attack, far from being fat or bloated as some charge, is instead woefully small. I know for a fact it is too small, it is an undernourished budget, insofar as waterways expenditures are concerned, and I think you gentlemen, in all fairness, agree with me.

As you know, the Corps of Engineers of the War Department is under wraps and unable to tell even Members of Congress, with the exception of members of this subcommittee who may request the information, how much money they think they actually need in the next fiscal year, and are restricted, instead, merely to defending the recommendations made by the Budget Bureau. Those recommendations as to particular projects have not been made public—again under restrictions imposed on the engineers—and so I cannot discuss official estimates because I do not have them, except in occasional cases where "leaks" have sprung in this information. Since your hearings are closed hearings with the information produced in them not available until after the bill is reported out, I do not know what data you have on the projects in Pennsylvania.

But, from information which is available, I think I can discuss some of the Pennsylvania projects in their proper perspective.

I would like, first, to make this observation in regard to the budget. The House Appropriations Committee has taken the position on nearly every appropriation bill to come before it during this Congress that the President and the Budget Bureau are all wrong—way off—on their figures. Invariably, the result of this attitude has been deep slashes in budget figures. The committee appears convinced that the budget figures are wrong, as I said, but always the conviction runs to a conclusion that the figures are too high.

I notice that the one appropriation bill which has already come out via this subcommittee, however, the military budget for the Army, was cut less percentagewise than any other. That indicates how careful this subcommittee is trying to be, and I congratulate you for your care and your energy and your patriotism.

The observation I wished to make is that if the committee is so convinced the Budget Bureau figures are crazily out of line with reality, could the committee not be persuaded that the Budget Bureau can err on the side of too much economy in some instances, particularly in regard to this bill?

Now, as to specific flood-control projects in Pennsylvania, some of which I know have been discussed for you already by Members of the House in whose districts they are located or whose districts are affected by them:

CONEMAUGH RIVER RESERVOIR

This mammoth dam is a well-known project to you gentlemen who remember when it was started and who have discussed it at great length in previous years. Yesterday you heard from Members of Congress and from many individuals and representatives of organizations and municipalities in the western Pennsylvania area about the strategic importance of this reservoir in protecting not only Pittsburgh and environs but the entire Ohio River Valley. This is one project on which there has been an informational leak, and so we all know that the Budget Bureau har recommended $3,200,000 for it, whereas the engineers actually need $5,200,000 to keep work progressing at normal pace. I join with those witnesses you have already heard in urging that the budget figure be disregarded and that the full appropriation be provided.

My office has been deluged with mail on this project from hundreds and hundreds of Pitttsburgh businessmen, industrialists, civic leaders, and so on, pointing to the necessity for adequate flood protection for this part of Pennsylvania which is the heart of America's productive machine. You gentlemen, I know, have also received great volumes of mail in support of the full $5,300,000 figure. I urge that you grant it.

EAST BRANCH, CLARION RIVER RESERVOIR

The figures available to me show that this project will require $6,781,400 to complete by 1950, the scheduled goal. So far, only $588,600 has been provided, of which there will be practically nothing left for new work at the end of this fiscal year ending this month. I do not know what the budget recommendations are on this project, but I urge as vigorously as I can that you allow this project to continue and give it the necessary funds so that the citizens of this area of Pennsylvania in Elk County and vicinity can look forward with some degree of optimism to an early completion of the work. Funds are also needed for planning work on the Johnsonburg-Ridgeway-St. Mary's diking work necessary to supplement the reservoir project.

The $500,000 voted last year for the reservoir on the East Branch of the Clarion River was designed mainly to get the work under way in preliminary fashion. This has been done promptly and expeditiously, from the information available to me. I suggest, in view of the urgent need for protection for this area, that the committee make available at least $1,500,000, regardless of the budget aspects. I believe the engineers could use much more than that, but in view of the over-all situation, I know it would be useless to ask for more. I repeat: Since the House committee has not regarded the budget as sacred, and has cut it cruelly in many items, the budget should not then be sacred when the figures it asked are demonstrably too low. This subcommittee so far is the only agency which has had the opportunity to know and to study those figures, and hence I ask that you study them carefully from that standpoint.

PUNXSUTAWNEY FLOOD WALLS

The work on these dikes is approaching the halfway mark. The dikes originally were to be completed in 1948. So far the Congress has provided $1,192,000, of which only a few hundred thousand dollars will be available into the fiscal year beginning July 1. Needed to complete the work is $1,463,000. I strongly believe the engineers could complete much of the work in the next fiscal year if the funds are made available. I ask that you provide these funds.

WILLIAMSPORT FLOOD WALLS

Perhaps the members of the subcommittee recall the disastrous floods in Williamsport just recently, when the citizens of that oft-flooded community watched the floodwaters swirl around their unfinished and therefore still useless dikes and bring great financial loss to the business and industrial life of the community and great suffering to the people.

When I opposed in the Senate early this year the arbitrary proposals for $6,000,000,000 or even $4,500,000,000 cuts in the President's budget, I did so because I was unable to find out from the Joint Committee on the Legislative Budget what such reductions would mean to just such programs as these flood walls in Punxsutawney and Williamsport and Sunbury, and the Conemaugh and Clarion River Reservoirs and similar projects in my State.

I know for a fact that the $188,356,100 recommended in the budget for flood-control appropriations in the coming fiscal year is far too small to maintain efficient speed of operation on these projects and that is why I make the point that the budget should be disregarded. On this project, the Williamsport dikes, I do not know what the budget recommends, but I know this:

About twice as much money is needed to complete the work as has already been provided. The $3,408,700 appropriated and made available so far will largely be used up at the end of this month, leaving $6,987,400 yet needed.

In view of the recent terrible floods there and the persistent danger of new floods, the committee should provide for next year at least $3,000,000 or so and preferably in the neighborhood of $4,000,000 to allow full speed ahead. I urge that you do so.

SUNBURY FLOOD WALLS

A little less than $3,000,000 is still needed to complete this work. About half of that amount has been provided up to now, thus permitting about one-third of the work to be done. This project was started just about the time of the freeze order on new work and began slowly because of the uncertainty of having necessary money. Now that it is under way, however, I think it can be completed expeditiously if Congress does provide the funds. This is a very important project to an area which has frequently suffered bad floods. I suggest the committee provide at least $1,500,000 to guarantee completion of two-thirds of the work by July 1948 so that the project itself can be completed sometime during the 1949 fiscal year, perhaps before the spring floods of 1949.

OTHER PROJECTS

There are many other projects in Pennsylvania not now in the going stage which I believe should gradually be undertaken. These include the Bear Creek Reservoir for Allentown and Bethlehem, for which I believe planning funds and some construction funds should be made available; the Turtle Creek Reservoir; and the Allegheny Reservoir. I should like to see some funds made available also for the Latrobe project. As I say, I do not know the budget recommendations on these.

There are, incidentally, several reservoirs on the Susquehanna River in lower New York State, chiefly the Almond and East Sidney Reservoirs, which I hope the committee will expedite so that these dams in turn can help to hold back some of the terrific floods which have developed on the Susquehanna in Pennsylvania.

PLANNING FUNDS

It is my belief the engineers have not been receiving sufficient planning and survey funds to enable them to do what is perhaps the primary responsibility of their corps in times such as now when we are trying to hold off on Government spending as much as possible because of the possible inflationary pressure of such expenditures. Planning work is our insurance that if and when a time should come when it will be important to our economy to provide public works as means of maintaining employment that the plans will be ready for immediate use.

You gentlemen perhaps have heard of a series of recent flood in the Bradford area of Pennsylvania. A survey was under way there to determine the need for flood-control work. After the hearings were completed, a new flood struck the area, causing great damage and hardship and lending added weight to

the importance of control programs. The new flood meant some resurveying of the area in the light of the latest flood.

The cost of the Bradford survey was roughly estimated at about $10,000. Yet, so short on funds were the engineers that for a time, I understand, there was some doubt they would have the $10,000 to complete the work. I am happy to be informed that the work is progressing and that a report should be forthcoming from the district engineer in the near future. But this experience demonstrated to me the importance of having sufficient funds available to the engineers so that they can meet emergency situations when they develop.

RIVERS AND HARBORS

The port of Philadelphia, one of our most important in the Nation, requires for efficient operation sufficient channel clearance to accommodate newer type cargo ships and tankers now in use and this means continuous channel maintenance work and additional new work on the Schuylkill and Delaware rivers. I do not have available to me the budget bureau estimates on this work. The committee does. I know that this committee will examine the facts carefully. I urge that you provide sufficient funds, regardless of budget ceilings, for the Delaware and Schuylkill, and also, of course, for the Ohio River, a vitally important navigational stream from the standpoint of western Pennsylvania industry, and that pledges made by the Congress for deepening and widening of the Schuylkill River channel in Philaelphia be kept. This last one is a new project and hence probably not provided for. I urge that you set it up anyway, however, because it is urgent.

A total of about $2,000,000 was authorized for this work between the mouth of the Schuylkill where it enters the Delaware and the Passyunk Avenue Bridge and from the Passyunk Avenue Bridge to the University Bridge. The lower part of the work contemplates deepening the channel to 33 feet—a must for many industries along the river. The rest of the project is for restoring the old channel above the Passyunk Bridge.

Since the engineers are not permitted to tell me, I do not know how much of that $2,000,000 they could effectively use in the forthcoming fiscal year. The committee is in a position to know. I urge that you use that information to provide at least a minimum amount now to get the work under way. The Budget ruling against new work of this sort is not binding on the Congress and I urge you to ignore it.

In connection with the Schuylkill River work in Philadelphia itself, I might say I had intended asking for an initial appropriation for the long-range Federal-State program for the dredging of accumulated coal wastes from the Schuylkill above the Fairmount Dam. The Federal portion of this work rests on recognition of the importance of the upriver dredging in lowering subsequent Federal maintenance costs at the mouth of the Schuylkill and in the Delaware.

However, there now appears to be great doubt that the Commonwealth of Pennsylvania can comply with its required preliminary obligations on this program by the end of the 1949 calendar year or perhaps even in 1950. In any event, it will certainly not be in a position, I understand now, to comply in the coming fiscal year. There is, therefore, no occasion for asking for any of the $13,000,000 for this project at this time.

The point I want to make in connection with it is, however, that unless the Congress provides enough money now for necessary continuing maintenance and other projects now under way, and begins to provide this year for the start of some long-delayed projects which were never begun because of the war or intervening economy orders, that in subsequent years we will have built up such a backlog of very urgent projects that the amounts necessary then will be staggering. We are not saving money by long delays on waterways expenditures; we are, actually, wasting money, because floods get worse, and lose the Government large amounts in income taxes. Likewise, injuries to industry as a result of inadequate waterways maintenance and improvement tend to restrict business activity with possible serious repercussions on our economy.

Hence, I urge that you do your very best, within reason, to provide adequate funds next year for waterways—flood control and rivers and harbors work—and not put off this work until it piles up into an overwhelming backlog.

America's New Role in World Leadership

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, June 23 (legislative day of Monday, April 21), 1947

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by the junior Senator from Minnesota [Mr. THYE] at the commencement exercises at Carroll College, at Waukesha, Wis., on June 9, 1947.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

The event celebrated here today is full of meaning. This commencement program is representative of an experience and a tradition which all who are present here share with those who participate in similar observances all over this land. As the very word indicates, commencement must always have a forward look, although it recognizes past accomplishment. Today's commencements in our schools and colleges and universities have an unusual quality because of the urgent challenge of the times. Seldom, I think, have Americans stood at the threshold of an era more significant in the history of our country since that earlier time when young men and women heard the challenge and the opportunity of the great western frontier as the Nation developed across the continent.

When I speak of the larger significance of this commencement day, I do not forget that to you who are members of the graduating class, this event marks the culmination of years of earnest effort and brings with it the hope of useful achievement in the years to come. I know that for your parents and your friends, also, this is a most happy occasion.

For the college, this day marks the conclusion of another successful year, and one which has added interest because you have been going forward under a new president whose scholarship and whose vision are being translated into a dynamic leadership. Having known the large part which the educational institutions of my own State of Minnesota and throughout the country have taken in American life and in the growth and development of the United States, I feel especially honored and privileged to be able to share this day with you at the invitation of my distinguished oldtime friend, President Russell.

You young men and women of the class of 1947 are being graduated at a time when the need for disciplined minds and sound characters is pressing and immediate. The happiness of people everywhere will depend to a large extent upon the caliber of the thinking we do in this country in the next decade. There is unrest and lack of purpose in our country and in the world. There are complex and difficult problems to be met. We are seeking to rebuild a world that has been sadly torn and shattered by war. Our great problem is whether we shall be able to build a world that is better than the world of yesterday and of today.

We are indeed a part of a new age. It is a new age partly because of the achievements of our own scientists under the stress of war. We must provide scientists in peacetime with the same impetus and opportunity they had during war's emergency. At the same time we must broaden our horizons so that these scientific advances and discoveries, and our use of them, will serve continuously to improve the lot of humanity.

You graduates can, and you will, have a large part in shaping the future. If there were no challenges to be met, if all were simple and easy and well-planned, and if we knew just where we were going and just how we would get there—then I would have to say that you would be commencing your careers at a less significant time. It is partly because our Nation is troubled and humanity seems uncertain of the future that your opportunities are as great as they are today. Above all else your generation will have the privilege of helping to shape a pattern of life which will hold out hope to mankind.

I spoke of the challenge of today in contrast with that of the time when the frontiers of our own country beckoned the adventurous pioneers, the kind of young men and young women of whom this great State of Wisconsin had so many notable examples. That generation opened up a great land area to cultivation. Hardships were overcome or endured because people were free and were building for freedom for their children as they literally transplanted a civilization into the wilderness.

You may think that your grandparents lived in an era of greater opportunity than yours. That is perfectly natural. All of us have shared that feeling at one time or another. Yet each generation has had its opportunity. The generations which followed the early settlers saw the great development of power dams and reclamation projects which have contributed so much to our industrial and agricultural development. Congress even now is undertaking to continue and expand these projects.

Although today the United States has no territorial West to be developed and peopled, there are still many frontiers with challenges and opportunities as great as those which faced other generations of Americans. Every field of human endeavor offers opportunities for men and women who possess trained ability, courageous spirit, and human understanding.

For you of this generation there is a tremendous opportunity in the field of conservation of our forests and our soils, which, in turn, will make it possible for future generations to enjoy the fruitfulness of the land which you and I have enjoyed. America's amazing growth was made to a large extent at the expense of her natural resources and these reserves must be rebuilt. We must never forget that next to mankind itself, our greatest resource is the good earth.

Conservation of our human resources does naturally take precedence. You men and women of the graduating class of this college are trained in the field of education. Many of you are going to devote your lives to teaching. I can think of no frontier that is more important than this one, because in a very real sense it embraces all the rest. What we make of this new age in which we live will depend in a large measure upon the sense of awareness, the positive and creative spirit, and the skill and resourcefulness of our educational agencies. We look to education for leadership, for a keener understanding of the American philosophy of

government and democracy, for the answer to many human needs.

The work of the scientist, whose part in the new age I have already mentioned, helps to join all these resources together, the natural, physical, and human resources. There is, indeed, an almost limitless field for the human spirit and human genius in the research laboratory which will provide an outlet for the modern pioneer.

There are many frontiers today. Your imagination as educated men and women will enable you immediately to see and to understand what the possibilities are in the forward progress of mankind.

These new advances into unexplored areas are fundamentally frontiers of human needs and aspirations. They are to be found in the problems that arise out of political, social, and economic life, out of the countless hazards which changing conditions have brought to bear upon all relationships of life, and out of those challenges to faith, and courage, and ambition which beset us on every side. Today's pioneer seeks to preserve human values and to find the key to right human relationships. He would make the new forces of science and the mechanical appliances of our civilization the means to a fuller and richer experience for all, rather than ends in themselves or instruments of destruction. He knows that ability, and skill, and knowledge, important as they are, are not enough. The new order will demand a social conscience, a passion for justice, a sound approach to human relationships, and above all, a will to achieve them.

Yes; we are at the dawn of a new age—the atomic age. There are many questions still far from solution which offer a challenge to young Americans in the frontiers of today. The answer to these questions must be found if humanity is to progress. The challenges must be met if modern man is to be at home in the new world.

1. Can we live happily and securely in this new age that is opening before us?

Yes; we can if we develop a new sense of moral leadership that will help to solve the problems of peace with as much ingenuity and common sense as we did those of war.

2. Can that common ground of cooperation between various segments of our economic life be found which alone will preserve the free-enterprise system?

It would be a great tragedy in the present period of American life if we were to find ourselves unable to establish a common ground of understanding upon which we might reasonably unite in solving our difficulties. We certainly cannot, and we will not, admit that our complex economic, social, and governmental problems are beyond solution. Therefore, we must restore confidence and understanding. We must find a common plane of ideals and aspirations.

We must begin by understanding America. We need to ask ourselves why people from every country of the world have found a home in the United States and have shared in making this country great. Yes; the culture and the characteristics of the strong races of men have been woven into the fabric of our own American way of life.

We must also explore America's complex needs and problems as we seek to better our common life, for this is, indeed, a challenging frontier which demands the best that all of us have to give. You who have had the advantage of high educational training have a special obligation to proclaim the American philosophy. You are better able to evaluate it in contrast with other philosophies which destroy the individual initiative of man and subject him to the will of a totalitarian system.

3. Can a will to peace be nurtured and strengthened that will assure justice and make effective the machinery to end war among the nations of the world?

In many respects, the frontier of greatest promise and the frontier which we have barely explored is that of world peace and the relations among nations. Here is the great challenge of our day, for nothing else will matter in this new atomic age if we are unable to find the formula for a lasting peace. It is here that we especially need vision, courage, and a determined optimism. It is here that we need the will to achieve peace. Another world war would be so destructive and so devastating that it is unthinkable. It must not happen.

The United Nations organization offers the best hope of the peoples of the world for peace today. We know that it has weaknesses and imperfections, but that is to be expected of any newly conceived thought or plan. But do not become discouraged. The United Nations is a vital step in the right direction. It is plain folly to become indifferent to it before it has had a chance. How to improve it, how to make it work, offer the challenge.

The United Nations will not succeed unless the people of the world, and most of all the people of the United States, want it to succeed and work to make it succeed. That is why world peace, and what we do about it as individual citizens, stands as one of the most challenging and most promising frontiers today. It is not a fully explored frontier because we have not found the complete answer in perfecting the judicial, the legislative, and the operating aspects of this new agency of international cooperation for peace. Yet I venture to say that its very imperfections and the struggle to make it work are exactly the reasons why educated men and women, such as you who are graduating here today, should wish to devote their talents and their interests to building a sounder structure and an even more responsive international agency.

This leads directly into a consideration of where the United States is to stand and what we as Americans are to do in creating the new world order which we hope will emerge.

Three decades ago we entered World War I for purposes which seemed compelling in our own interests as a Nation and with ideals that brought us the moral leadership of the world. The League of Nations, quite like the United Nations organization, was intended to provide the vehicle and the atmosphere for the peaceful solution of the problems and differences among the nations of the world. We did not build the brave new order which we talked about so glibly. We did not create a permanent peace. A more devastating war followed as ruthless dictators, feeding upon deluded and unhappy peoples, sought to engulf the entire world in an alien philosophy in which there was no place for the democratic spirit. The terrible costs of that war are too recent to need recounting here.

The tragic truth is that after World War I we failed to build the kind of a world we thought we were fighting for. We Americans became indifferent to the obligations we had assumed. We became more interested in the gadgets and the comforts of living, and in that new automobile that had the horsepower to enable it to take this hill or that hill in high gear, than we were in the crying needs of mankind. We refused to become members of the League of Nations and shunned its councils while 55 other nations, with more or less sincerity of purpose, sought unsuccessfully to make the deliberations at Geneva effective in assuring justice and peace. I do not think we can escape a measure of responsibility for that failure. We turned to isolationism as a national policy, until the futility of isolation in the modern world was completely demonstrated and we were drawn into World War II. Again precious American youth were strewn on battlefields all over the globe and our treasure was poured out to gain victory in a conflict which should not have been. Again we gave all this so that men and women might at last enjoy the freedoms to which we are pledged. Americans sacrificed, fought, and died to gain not only security for themselves, but to create a world in which youth could grow to manhood and womanhood without the destructive element of war. We assumed obligations which even at this moment are pressing us to decide whether we are prepared to enter into the responsibilities which our victory made inevitable.

I do not wish to oversimplify the comparison between our present situation and the conditions that prevailed after the First World War, but recalling our own part in the failure of the peace at that time, I think we need to ask ourselves this question: Are we going to make the same mistake a second time? Or are we now sufficiently matured as a nation, and have we learned well enough that we cannot ignore the lessons of history, to accept the responsibilities which America's new role in world leadership involves? Upon the answer to those questions will depend the very future, not of ourselves alone but of all nations.

It is not often given to any nation twice in a quarter-century to have such a responsibility and such an opportunity thrust upon it. We did not obtain this opportunity by conquest. We do not have it because of any imperialistic motives on the part of our Government. We are not certain that we desire such leadership. But we have it, and we can neither ignore it nor lay it aside if Christianity is to go forward. Our great opportunity will be to develop that leadership for the benefit of all mankind. If we are able to do so, in keeping with the ideals which have made America great, we will have justified as no other nation in all history the peculiar destiny which has been ours, for in no other country have the sons and daughters of so many different races, so many diversified nations, so many rich cultures, been drawn together in a whole, as in our own. Americans should be fitted as no other people to understand the problems and the aspirations of all their neighbors in the world today. And we have the power and the strength, as well as the understanding, to assume that responsibility of leadership.

The history of the world has many examples wherein civilization has been held together by a single strong power. That power was maintained for centuries by the Roman Empire; in more modern times we have had the British Empire to provide the stabilizing force in the world. Today there are two especially strong nations, each with a different ideology, to one or the other of which the world will look for leadership. The United States is one of these nations. The other is Soviet Russia.

I do not believe there is any escaping the responsibilities of the United States in providing the stabilizing force that will hold civilization together as nations recover from the wounds of war. In assuming that obligation, we may find it more difficult to vote necessary appropriations. We may question why we tax our treasury for this purpose when there are crying needs of our own for flood control, reclamation, conservation of the fertility of our soils, and the great human needs in relief, welfare, and education. To many these may seem more worthy than relief and aid for stricken people of other lands. All of these questions we have constantly before us and we must measure them, but we must not forget that we did not have our country laid waste by the ravages of war. We have a great abundance of food, and if we are going to assume the leadership of the world we are going to have to share that food with the hungry and starving in other countries. We are going to have to show our good intentions and our good will in order that the world will look up to and follow the American philosophy of democracy and freedom.

As Americans we enter upon this leadership with no thought of imperialism. America seeks no military conquests. We do not desire merely to control or foist our way upon other nations. Our immediate pur-

pose is, and it must continue to be, to aid in the rehabilitation of the people of war-devastated nations, and to help these nations become self-supporting and self-respecting members of the family of nations. Our ultimate purpose is to use our influence to sustain justice and strengthen democratic forces, and to point the way for all peoples "to live together and to work together, in one world, at peace."

Eventually, we hope to find in the United Nations itself the stabilizing force that will assure peace and justice in the world, that will safeguard the rights of all nations large and small, but until that time comes the United States must accept the responsibilities which go with its new role in world leadership.

Only a strong America, enjoying economic and social health, can undertake this great task. Only an America that is well informed and united in spirit can do it. Only an America that commands the respect and good will of the world can do it. Setting a good example of the effectiveness of democracy in solving the Nation's problems, of allegiance to the common interest, and of friendly good will toward other nations will do much to make us worthy of the leadership of the world and will be necessary in making that leadership acceptable and effective as we embark on this adventure in a new chapter in the history of the world.

There is a call for another generation of American pioneers—and the American youth of today are equal to it, equipped and trained as are you graduates of this college—to explore and develop these new frontiers of better human relationships, a more enduring world peace, and the leadership of America in creating a happier world order. You will find the hazards as dangerous, the challenges as inspiring, and the needs as great as those which confronted the pioneers of our country in the days of the territorial frontier. And just as the American pioneers laid enduring foundations for a mighty Nation, so the pioneers of today, building in the heart of our civilization, will lay the foundations of a great new age. It will be a better age if we, as Americans, have the vision, the skill, the courage, and the faith to make it so.

Facts, Fiction, and Fancy As They Apply to H. R. 3342, the So-Called Mundt Bill To Establish a United States Information Service Abroad—A Specific Analysis Detailing Just What the Legislation Does and Does Not Do—Before the Final Roll Call on This Measure Members Will Want To Know Exactly What They Are Supporting or Denying by Their Votes

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. MUNDT. Mr. Speaker, partially because the legislative process by which H. R. 3342 has been considered has taken so long and has not run in consecutive sessions of Congress, some Members of the House still have sincere misconceptions about what actually is contained in this measure as it is presently written and as it will come before us for the final roll call vote. In response to requests received from some of these conscientious Members who have maintained open minds on the subject and who are desirous of voting with wisdom and prudence on this highly significant proposal to help preserve and promote the peace, I have prepared the following detailed analysis of the facts about this measure as contrasted with some of the fiction and fancy which has been said and written about it by well-meaning but ill-informed observers.

I hope this factual analysis will answer some of the groundless and irrelevant charges made against H. R. 3342 and that it will allay some of the fears and suspicions which have arisen in some minds because of arguments made on this floor in connection with eventualities and circumstances which have no pertinence to the legislation as it will come before you for a final vote.

Every responsible official of the Government charged with protecting our security and preserving the peace has spoken out in favor of this legislation in its present form, without further deletions or reductions. Secretary of State George Marshall, Under Secretary of State Dean Acheson, Assistant Secretary of State William Benton, our American Ambassador to Russia Bedell Smith, Chief of Staff Gen. Dwight Eisenhower all appeared before our House Foreign Affairs Committee to plead for the passage of H. R. 3342 with all of its major peace-serving provisions intact. They argued as strongly for the maintenance and development of information centers abroad as they did for the publication of news and information tracts telling the truth about America in regions which now hear only the slanderous falsehoods circulated by the spokesmen of unfriendly nations. They pleaded as emphatically for the educational exchange features of H. R. 3342—exchange of students, teachers, books, periodicals, newspapers, skilled personnel—as they did for a continuation of short-wave broadcasting. They urged us with all the eloquence and sincerity at their command not to deny them any of the essential tools they need in their efforts to help build a temple of peace in which humanity can be secure and in which the dove of peace can find a permanent haven.

Mr. Speaker, Members will find the complete text of H. R. 3342 starting on page 7517 of the CONGRESSIONAL RECORD for Friday, June 20. This reprint of H. R. 3342 in its present form brought down to date with all of the safeguarding amendments and restrictions added by our floor deliberations. H. R. 3342 now contains just those provisions included in the language on the pages above referred to in Friday's RECORD. Thus Members with open minds seeking to inform themselves on the bill's exact contents can in 10 minutes reading and study find the complete and current text of H. R. 3342 by examining Friday's RECORD on pages 7517 to 7520. All arguments, assertions, and allegations dealing with eventualities, projects, and propositions not included in the legislation as it is reproduced in final form in Friday's RECORD have no bearing and no relevancy on the decisions we must make on this legislation by our final roll-call votes.

At the conclusion of these remarks, Mr. Speaker, in the further interests of clarity and consistency I am also identifying each amendment added by our floor deliberations, together with the name of the author of each amendment. Most of these amendments were presented to our subcommittee for study and approval before they were adopted; all of them were adopted with the acceptance and support of the Committee on Foreign Affairs, which is eager to make this peace-promoting and peace-preserving measure as effective and foolproof as possible. There were 14 such amendments approved during our floor deliberations; all of them are constructive; they have made H. R. 3342 acceptable to many Members of the House who at first were hesitant about voting in favor of the legislation. A complete analysis and discussion of these amendments and how they tighten up the legislation and remove from it activities and authorities about which complaints were made, Mr. Speaker, will be found at the end of these remarks.

Now, in the interests of clarity, permit me to discuss some of the fiction and fancy which has been attached to this legislation, and let me answer these statements by citing the facts from the printed text of the legislation itself.

FICTION

The student and teacher exchange features of H. R. 3342 would "let down the bars against immigration" and bring aliens into this country for permanent residence.

FACT

Students and teachers entering the United States under H. R. 3342 come in under special visitors' visas which do not permit the holders to qualify in any way and by any method for permanent residence. Visitors in this classification are permitted to remain here only until the completion of their study under section 4 (e) of the Immigration Act of 1924. This type of visa limits the off-campus activities of its holders; it requires enrollment in a full course of daytime classes; it provides he must depart from the country immediately upon the completion of his scholastic work, and during his entire stay in the country he is subject to the supervision of the Immigration and Naturalization Service to insure full compliance with immigration laws and requirements. Every foreign student and teacher is required to report to the Immigration Service every 90 days while he is in the United States.

The State Department records disclose that in not one single instance has a foreign student or teacher succeeded in remaining illegally in the United States after completion of his studies or teaching services.

FICTION

By utilizing educational exchanges to promote a better comprehension abroad of our American concepts, ideals, purposes, and pattern of living "we would simply be opening our schools to Communists and agitators."

FACT

Quite the opposite is true. Section 201 of H. R. 3342 specifically provides that this interchange program shall be

on a reciprocal basis limited to those countries willing to accept American visitors on the same basis that we accept foreign students and teachers. Thus Russia and other Communist countries must admit our nationals behind their "iron curtain" or their visitors and observers will be denied visitors' visas to America under the terms of this act. Section 201 also provides specifically that "any person from another country while in the United States (who) is engaged in activities of a political nature or in activities not consistent with the security of the United States—shall be taken into custody and promptly deported."

Thus it is clear that H. R. 3342 sets up a working formula of realistic reciprocity together with instructions for the deportation of any person abusing the privileges extended to visitors in the United States. Neither of these two safeguards are now in operation despite the fact that nearly 17,000 foreign students and teachers are now in the United States, including over 3,000 visitors from Russia who are here despite Russia's refusal to extend reciprocal privileges to Americans seeking to visit the U. S. S. R. These two highly significant safeguards will become operative only if section 201 of H. R. 3342 is approved, and this new formula for the exchange of students, teachers, and official observers is enacted into law by Congress.

It should also be pointed out that before visitors' visas are granted incoming students, teachers, or specialists of any type the candidates for entrance are screened and investigated in their own countries by our American embassies prior to the awarding of scholarships, teaching assignments, or travel permits. H. R. 3342 is an effective weapon for rejecting and repelling Communists rather than a device by which Communists can extend their influence.

FICTION

H. R. 3342 would "flood our schools with foreign students at a time when they are overcrowded with GI and other students" and it "would provide up to $10 per day to pay the expenses of foreign students through giving them more generous treatment than accorded our American veteran students."

FACT

Both of these allegations are completely groundless and without fact. H. R. 3342 would provide scholarships for perhaps 500 foreign students carefully selected by our own representatives abroad because of their ability to return to their native lands after an educational tour in America and contribute to the development of more democratic and more pro-American governmental conditions at home. We now offer such scholarships to about 350 Latin-American students; H. R. 3342 would extend these scholarships to perhaps 500 additional students.

The total number of foreign students in the United States is now approximately 17,000. Of these only 350 have come in with State Department encouragement. The total number of foreign students in the United States of America is not likely to be increased by passage of H. R. 3342 but the type of visiting students will be improved by providing better criteria for approving their admittance. Now, foreign students coming to America are largely sons and daughters of rich foreign families who come here for cultural courses and a study of the arts and sciences. The State Department scholarship students will be selected because of their interest in economics, government, and national problems which will enable them to return home to make worth while and constructive improvements in their own countries.

An indication of how important such carefully selected students can be in bettering American relations with other countries can be found in the following facts: In 1944, a young man from Ecuador came here for training in agriculture; today after study in Washington, D. C., and in the University of Minnesota he has been promoted to be Secretary of Agriculture for Ecuador.

In 1943 an agricultural technician came up from Costa Rica to study in the United States. Today he is Secretary of Agriculture in Costa Rica.

The top three agricultural scientists of Argentina, specializing in forestry, in grain, and in fruit raising were all trained in the United States under such a program as is now envisaged by H. R. 3342 and which has been operating for some time with Latin-American Republics.

The head of the Agricultural and Industrial Bank of Colombia, South America, equivalent to our Farm Credit Administration, was trained in the United States.

On page 157 of our hearings, you will find a list of the 221 Latin-American students who are now being trained in United States Government agencies. In 15 percent of these cases the other Government pays all the expenses; in another 60 percent the other government pays part of the expenses of these trainees; State Department scholarships take care of the rest.

When I was abroad in 1945, I found the head of the Reclamation Service in Iran to be a man trained and tested in American Reclamation Service activities. In Bagdad, Iraq, a number of the prominent officials of that Government were American-trained. It is difficult to overestimate the importance to America and to peaceful understanding which attaches itself to the educational exchange features of H. R. 3342. We badly need the services of such American-trained and American-admiring young Government officials today in Greece and in Turkey; their services would be invaluable in helping to stabilize war-weary China. They can render indispensable service to prosperity and to peace in every country in the world which will work with the United States on a strict basis of reciprocity in conducting the educational and training exchange features of H. R. 3342.

IS SUCH A PROGRAM UNFAIR TO THE GI?

Probably the best answer to that question, Mr. Speaker, is that the American Legion, the Veterans of Foreign Wars, and the AMVETS have all endorsed this training and educational program.

However, here are the specific reasons why such a peace-preserving program is not unfair to the American GI student. In the first place, the total number of foreign students in this country has never been greater than one-tenth of 1 percent of the total enrollment. The number which could come under State Department scholarships as provided for in H. R. 3342 would actually be less than one one-hundredth of 1 percent of our total college and university enrollment.

Furthermore, under the State Department scholarship and assistance program only postgraduate students are brought into this country and these are absorbed in the departments of colleges and universities where the postgraduate courses are not now overcrowded.

Finally, Mr. Speaker, visiting students and teachers do not get $10 per day as has been asserted. The $10 per diem refers only to visiting dignitaries such as cabinet officers, military leaders, and prime ministers for whom the State Department is authorized to spend up to $10 per day in providing them American hospitality and housing. The average for the educational exchange people is actually only $700 per year which is substantially less than 50 percent of the assistance provided for American veteran students under the GI bill of rights.

FICTION

It has been said either on or off the floor of Congress that H. R. 3342 would enable the State Department to finance American tours by foreign visitors, that it would provide them with regal entertainment, that it would permit us to finance the visits of important foreign specialists to American conventions, and that it would enable the United States to set up reception centers for foreign students and visitors to help them orient themselves to American ways and customs.

FACT

Mr. Speaker, I am one of those who believes that some of the activities proposed above would be mighty good investments in good will and human understanding for the United States. I happen to know some of the Belgian editors who were given such a 2 weeks' tour of the United States 2 years ago under the war powers of the Executive. I talked with these editors personally. They went back to Brussels and Ghent and Liege and to other Belgium cities singing the praises of America. Ever since they have been writing editorials praising our free way of life, our private-enterprise productivity, our sense of fair play, and the might and spirit of the America they had been shown on a 2-week tour taking them from coast to coast.

Personally, Mr. Speaker, I think the few dollars we could invest in trips like the one taken by Belgian journalists are among the most productive investments this country could ever make in the areas of peace, human understanding, good will, and enduring friendships. I feel the same way about inviting a few foreign specialists to attend American conventions in the fields of medicine, den-

tistry, engineering, journalism, education, and so forth. I also feel that reception centers which help foreign visitors learn to know what to expect in the United States, where to go and what to see and how to interpret American life would be pennies spent to secure dividends which dollars could not purchase.

However, so that the record will be clear and so that the facts will refute the fiction spread about H. R. 3342 let it be clearly understood that none of the foregoing activities or projects are now included in the legislation. All of them have been deleted and removed by amendments which our committee has approved. We wanted our colleagues to support the major essentials of this legislation without having to accept minor activities and projects against which they were disposed. So we have removed all these projects from the text of H. R. 3342. In the form that H. R. 3342 now comes before you for a vote the legislation is limited to its fundamental essentials so no member need vote against it because he is out of sympathy with some of the collateral activities above described but which have now been deleted from the legislation.

FICTION

It has been charged the employees in the United States information service abroad are paid or would be paid salaries out of harmony with other Government salaries.

FACT

The records show that the salaries in this division of State Department activity come within the same salary classification act as Congress has prescribed for all Foreign Service personnel. The figures which have been quoted to show fantastic salaries are simply those provided by act of Congress to compensate State Department personnel abroad for the awesome inflationary conditions under which they must live. Their base pay is no different from other personnel and their promotions in grade are only such as are authorized by the Foreign Service Act which Congress approved overwhelmingly last year.

FICTION

Some have said they approve of such a program as it is set up under H. R. 3342 but that they have no confidence in the State Department personnel—especially that serving in the division headed by Assistant Secretary of State Benton, who is in charge of the temporary program being carried on in the office of the OIC.

FACT

H. R. 3342 does not continue the office of OIC in any way, shape, or form. It sets up a new office under the Secretary of State to be known as the Office of Information and Educational Exchange. Neither Assistant Secretary of State Benton nor any of his associates or employees are continued in authority by the passage of H. R. 3342. Secretary of State George Marshall whose wisdom in selecting such men as General Eisenhower, General MacArthur, General Mark Clark, and General George Patton when he served his country as Chief of Staff in time of war has not been questioned by anybody, will have to determine to whom he is going to entrust the operations of the Office of Information and Educational Exchange. Secretary of State Marshall will be held responsible for the conduct of the office by the Congress and the country.

Only such of the personnel that is presently employed as is affirmatively and newly appointed to positions in the new Office of Information and Educational Exchange will continue to function and the Secretary of State is free to pass over all present employees in his search for competent officials should that be his decision. It would seem logical that an administrator who chose his associates so wisely and effectively in time of war could be depended upon to utilize similar good judgment and prudence in selecting his coworkers in time of peace.

To make doubly certain that the questions which have been raised about personnel be not permitted to induce Members of Congress to demobilize our peace forces and disarm our peace department, however, our Foreign Affairs Committee wrote into H. R. 3342 two highly significant and completely effective safeguards. Section 901 provides for a loyalty check on all personnel—whether presently employed by the Government or not—which requires that the Federal Bureau of Investigation must affirmatively certify as to loyalty and security all people employed by the State Department to serve in the Office of Information and Educational Exchange. All citizens and all Congressmen may, therefore, be positively certain that no Communists, no disloyal Americans, and no un-American influences will be certified by the FBI for employment in this important new office.

As an additional safeguard our committee wrote into section 701, paragraph 7, the requirement that the employment of aliens within the United States in the Office of Information and Educational Exchange shall be limited to services related to "the translation or narration of colloquial speech in foreign languages when suitably qualified United States citizens are not available."

Mr. Speaker, no Member of Congress can in good conscience vote against H. R. 3342 on the basis of personnel, because we have provided for a more careful and complete check and investigation of the personnel to be employed in this new office than was utilized in selecting the personnel during the war which worked on the now famed Manhattan project, by which we developed our first great atomic bombs.

FICTION

It is all right to retain short-wave broadcasting to other countries but the other features of the Voice of America program are not needed, they are not important, and they are not considered by the State Department and by General Eisenhower as important and basic to our struggles for peace and our plan for security.

FACT

Gen. George Marshall, our Secretary of State, has repeatedly said that the short-wave broadcasts alone are not enough. Both he and General Eisenhower testified to that effect and their statements are found in the printed hearings on H. R. 3342.

In addition, on June 12, Secretary of State Marshall at his regular press conference again cautioned Congress not to cripple our efforts for peace by reducing the so-called Voice of America program to one of mere short-wave broadcasting. Here are the exact words of Mr. Marshall on that occasion. He said:

I am unreservedly in favor of the exchange of students, professors, and books. These methods, in the long run, may be far more important for the interchange of information than broadcasting. * * * I do not believe that a bill limited to broadcasting would give this Government the opportunities it must have to explain itself to the rest of the world.

Mr. Speaker, to the end that there could be no last lingering doubt in the mind of any Member of Congress about the tools he requires to build a temple of peace, Secretary of State Marshall sent a special letter up to Congress on June 19 which appears in full on page 7515 of the CONGRESSIONAL RECORD for Friday, June 20. In that letter, Mr. Marshall made this highly pertinent point, among others. He said:

I want to make my position plain.

I consider American security to rest not only on our economic and political and military strength, but also on the strength of American ideas—on how well they are presented abroad—and on how clearly we are understood abroad.

There is no question that some other nations are using ideas as weapons and distorting facts to fit their ideas. We do not propose to follow suit. But I am convinced that we must present ourselves clearly, candidly, and affirmatively if we are to achieve the kind of peace we believe in. I know from personal experience that we are grossly misunderstood or misrepresented in many parts of the world.

I gave your committee my view that the facts about the United States must be spread in various ways. In some countries we must rely largely on radio. In others, we use also the press or motion pictures or exchanges of students and books or the assignment of government advisers. All are important and must be used if we are to be successful. To remove any one of these activities from the bill would be a form of demobilization. Peace cannot be served by any rationing of American facts or by limiting the methods for making them known.

I have informed committees of both Houses of Congress that authority for this type of program is necessary if the State Department is to fulfill its responsibilities to the President and the Nation. Without legislative authorization it has become almost impossible to recruit additional highly trained personnel to work on this program, either at home or abroad.

I am asking for the tools which are necessary to meet present circumstances in world affairs.

Faithfully yours,

G. C. MARSHALL.

FICTION

A program such as that proposed by H. R. 3342 has merit but now is not the time to adopt it. Let us first of all settle world conditions. Besides the members of the other body have indicated they will not approve H. R. 3342 and will not appropriate the necessary money to maintain the program.

FACT

Winning the peace like winning the war requires specific action along definite

lines at mandatory times. We need the machinery to win the peace now at the time when the peace needs to be won. To postpone the use of these peace-serving proposals for a year or two or several years is to face the immediate future divested of some of the very most important tools which we are told are essential to winning the peace.

As to the members at the other end of the capital and what the other body will do it is significant to point out that at the time H. R. 3342 was reported out of our Committee it was generally stated that the Voice of America program was dead for this year. It was predicted it would receive no authority and receive no money. It was all over but the funeral and the burial. Now, however we have been advised by the chairman of the Foreign Relations Committee of the other body that a subcommittee has already been appointed to facilitate consideration of H. R. 3342. Furthermore, news reports bring us information that instead of denying this program any money with which to operate the gentlemen at the other end of the Capitol first suggested giving it a $6,000,000 interim appropriation while this legislation is being finally considered and this morning the news reports are that they are considering making $12,000,000 available for the program.

It is highly important that since money is to be made available for the program that the safeguards and regulations contained in this legislation be also put into action and that the whole program of United States information abroad be brought into the focus and under the control of Congress as is provided for by H. R. 3342. Simply to appropriate a sum of money and to permit the program to continue without permanence, without guidance, without the loyalty checks, and without the controls and directives included in this legislation would be for Congress to fail to face up to its responsibilities on this important problem. In all events, we of the House can only be guided by our own responsibilities and what takes place in the other body will have to be determined by future decisions.

Mr. Speaker, let me now call attention to the constructive and safeguarding amendments which have been adopted during the floor consideration of H. R. 3342. Several Members have stated that the addition of these corrective and constructive amendments has induced them to support H. R. 3342 with confidence and enthusiasm whereas at first they were hesitant to vote in favor of this peace-serving measure. For the convenience of those who have not found it possible to be on the floor during all of the debate on H. R. 3342, I am therefore summarizing at this point all of the important amendments added during our floor deliberations.

AMENDMENTS ADDED DURING FLOOR DELIBERATIONS

AMENDMENT NO. 1

By Mr. FULTON, of Pennsylvania: Adds to section 2 as an additional objective of H. R. 3342 "The dissemination abroad of public information about the United Nations, its organization and functions, and the participation of the United States as a member thereof." This amendment broadens the range of objectives of the legislation and permits our information service to refute the slander of those who would picture us as by-passing or ignoring the United Nations.

AMENDMENT NO. 2

By Mr. ALLEN of Louisiana: It tightens up the reciprocal formula included in section 201 of H. R. 3342 by removing some of the discretionary authority of the State Department in this field and providing that all interchanges must be conducted on a basis of reciprocity in the clear-cut, commanding language in which the text of the legislation now appears on pages 7517–7520 of the RECORD for Friday, June 20, 1947.

AMENDMENT NO. 3

By Mr. HOFFMAN, of Michigan: This amendment provides that any visitor engaging in political activity or whose behavior is not consistent with the security of the United States must be promptly deported. It strikes out all right for appeal or delay as provided by the Immigration Act of 1917, as amended. This amendment should set at rest any remote fears held by anyone that the foreign visitors coming to America under the terms of this act might engage in Communist propaganda or other un-American activities.

Amendments Nos. 2 and 3, moreover, set a pattern for State Department administrative procedure which may well be applied to all foreigners coming over with visitor's visas as well as to the very small fraction of such visitors who will be authorized to visit America under the terms of H. R. 3342.

AMENDMENT NO. 4

By Mr. KEEFE, of Wisconsin: This amendment strikes from the bill the authority to provide for the development and demonstration of better methods for teaching the English language abroad. Mr. KEEFE pointed out that the Office of Education now has facilities and authority for handling this service so it was stricken from H. R. 3342.

AMENDMENT NO. 5

By Mr. BRADLEY, of California: This amendment extends the prohibition against aiding foreign countries in any capacity relating to the organization, training, operation, development or combat equipment of its armed forces to all personnel associated with the functions of H. R. 3342.

AMENDMENT NO. 6

By Mr. BRADLEY, of California: This amendment prohibits any American Government employee from taking an oath of allegiance to another government while serving with that government in an advisory or administrative capacity. A search of the records reveals that no such oath of allegiance to a foreign power has ever been taken by such American personnel but Mr. BRADLEY's amendment was adopted as an additional safeguard.

AMENDMENT NO. 7

By Mr. FELLOWS, of Maine: This amendment struck out of section 403 all exceptions to the prohibition against any services rendered by Americans working under authority of this act which bar them from engaging in the construction or supervision of public works in foreign countries. At Mr. FELLOWS' suggestion the exception that such Americans might assist in investigative, instructive, or demonstration activities on public works projects even though barred from engaging in actual construction or supervision was eliminated. The present language appears in the text of the bill as printed in the RECORD on June 20.

AMENDMENT NO. 8

By Mr. SIMPSON of Pennsylvania and Mr. BROWN of Ohio: This amendment requires that all press releases, radio scripts, and so forth issued under authority of H. R. 3342 shall in the English language be made available to press associations, newspapermen, radio systems and stations in the United States and to Members of the Congress upon request within 15 days after release of the information abroad. Thus this amendment guarantees that private press and radio associations as well as 435 Members of Congress will be constantly on guard with complete information at their disposal to make certain the State Department programs are effectively and properly prepared and planned.

AMENDMENT NO. 9

By Mr. DIRKSEN, of Illinois: This amendment provides for an advisory commission to formulate and supervise the policies and programs carried out by the State Department in implementing our American information program abroad.

The Dirksen amendment sets up an 11-member advisory-control board not more than six of whom shall be of any one political party and all of whom must be approved by the United States Senate. This bipartisan board comprised of outstanding Americans who are prominent in walks of life reflecting a cross section of American activity brings to focus upon this significant peace-promoting program the best brains of America to assist the State Department in the development and administration of a program of information abroad which will serve to the maximum degree the best interests of peace and security.

AMENDMENT NO. 10

By Mr. KEEFE, of Wisconsin: This amendment strikes from the legislation the provisions which would have authorized the Secretary of State to provide official entertainment and to establish and maintain in the United States reception centers for foreign students and visitors in connection with the program set up in H. R. 3342.

AMENDMENT NO. 11

By Mr. KEEFE, of Wisconsin: This amendment strikes from the legislation the authority to provide planned travel itineraries within the United States for foreign visiors and to pay their expenses at meetings or conventions in this country.

AMENDMENTS NOS. 12 AND 13

By Mr. KEEFE, of Wisconsin: These amendments assure the fact that repayments by others for services rendered by this act shall be covered directly into the Treasury of the United States and not used as a revolving fund and that the State Department shall not be per-

mitted to receive gifts from private sources to finance or expand the purposes implemented by H. R. 3342.

AMENDMENT NO. 14

By Mr. HORAN, of Washington: This amendment emphasizes the stress placed by our committee on the use of private facilities and services in the administration of this program by stipulating that the Secretary of State shall encourage participation in the program by the maximum number of different private agencies in each field.

Mr. Speaker, each of the foregoing amendments now appears in the corrected text of H. R. 3342 in the form that it comes before us for final consideration and in the form in which it is printed on the pages referred to in the RECORD for June 20. Every Member can thus inform himself fully and accurately on what is and what is not contained in the present version of H. R. 3342. Every one of the foregoing amendments was approved by the committee handling this legislation and most of them were submitted to the committee and secured our approval before they were introduced. While two or three of them limit the scope of the legislation more than many of us would desire, none of them cripple the essential and basic features and functions of the program envisaged by H. R. 3342. Thus we have adopted 14 amendments in our desire to reduce this legislation to its basic essentials and to provide every conceivable safeguard for its effective operation. About an equally large number of amendments were rejected and our committee is grateful for the support of the House in that no amendment which we opposed was adopted.

H. R. 3342 is now stripped down to the basic minimums listed by Secretary of State Marshall and General Eisenhower as essential to their work in promoting the peace and protecting our security in these uncertain and chaotic times. It merits the support of Members of Congress. We have appropriated many billions of dollars to arm and equip our Military Establishment. That is as it should be. In good conscience, however, I believe that it consistently follows that we should not deny the few millions and the limited authorities which are required to equip our peace establishment in an era of history when no problem has more paramount importance than the prodigious one of holding at bay the hounds of war and making this a just and lasting peace. I solicit your support on that basis for H. R. 3342.

Public Power in the Northwest

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, June 23 (legislative day of Monday, April 21), 1947

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "New Attack on Public Power Is Threat to Northwest," published in the Seattle Star of June 13, 1947. The editorial refers to the so-called Dondero bill, House bill 3036, which in effect provides that all public power shall be sold at the bus bar. There are many of us in the Northwest who believe this would be not only a threat to public power but a a complete destruction of our public power and reclamation program.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW ATTACK ON PUBLIC POWER IS THREAT TO NORTHWEST

A new attack on public power is pending in Congress. It is a measure introduced by Representative GEORGE A. DONDERO, of Michigan, and identified as H. R. 3036. It provides that when Army engineers build future hydroelectric projects they shall control the sale of power and shall sell the power at the bus bar.

The bill provides specifically that it shall not apply to power sales from the Bonneville project. There is, however, a strong likelihood that if the bill should be enacted as introduced, it would apply to McNary Dam, now under construction; Foster Creek Dam, authorized but not yet provided with appropriations; and any other Columbia River developments other than Grand Coulee and Bonneville.

Such an arrangement would be manifest absurdity. The McNary and Foster Creek sites already are linked with the Bonneville grid plan. To require purchasers to build their own transmission lines to the bus bars, on these projects, instead of taking power from the Bonneville lines, would be the height of the ridiculous.

Probably the bill will be amended to eliminate anything like this. But it is nonetheless a vicious measure.

As Representative WALT HORAN, Republican, from Washington's Fifth District, said in a recent appearance before the House Committee on Public Works, in protesting against this measure:

"Bus-bar sales mean sales to a single company on the company's terms."

In the case of Grand Coulee and Bonneville the battle over sales at the bus bar was fought out long ago. The decision, clearly the proper one, was that to prevent monopolization of federal power, the Bonneville Administration should build its own transmission lines.

In recent months the only dispute between private power companies and the public-utility districts has been over whether this transmission system should be restricted to "backbone tranmission" or should include "feeder lines," the latter to serve the PUD's and Rural Electrification Administration cooperatives which could ill afford to provide substations and other connections between the "backbone" transmission lines and their own distribution systems.

Representative DONDERO's proposal to return to bus-bar sales is a proposal to turn the hands of the clock back—away back.

There are other reasons why the Dondero plan is unsound. The Corps of Army Engineers is not set up as a marketing agency. It is designed as an engineering and construction agency and so far as we can learn has absolutely no ambitions to go into the merchandising business.

Would a man who planned a butcher shop hire the architect who planned the building or the contractor who erected it to run the retail business? Giving the Army engineers the job of selling power would be scarcely less incongruous.

The Dondero bill probably can be stopped if Members of Congress from the Pacific Northwest are sufficiently interested, and the activities of Representative HORAN and the concern being expressed by public-power groups in this territory is an indication that this interest will be aroused.

But the fact that the Pacific Northwest must remember is that the enemies of public-power development never rest in their fight.

No sooner had Initiative 166 been swamped by the people in last November's election than an even dozen bills, threatening public power, appeared in the State legislature.

The opening of the Eightieth Congress saw enemies of public power cutting Bonneville and Columbia Basin appropriations to the bone in the House of Representatives, with the deepest slashes being made where the greatest injury would be visited upon the PUD's and REA cooperatives.

The Rockwell bill, planned to amend reclamation laws to make power projects more difficult to undertake and more costly, apparently has been beaten, but while it was being buried Senator ELMER THOMAS of Oklahoma popped up with his own anti-public-power bill in the Senate and now Representative DONDERO has this new measure in the House.

The enemies of public power never rest. If power development is to continue in this region, the friends of public power must be equally vigilant.

Congress and Housing

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, June 23 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the June 2, 1947, issue of the Haverhill (Mass.) Gazette, entitled "Congressional Failure," and another editorial entitled "Housing—This Session of Congress?" published in the June 13, 1947, issue of the South Boston Gazette. Both editorials relate to the urgent need for action by Congress on the housing problem.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Haverhill (Mass.) Gazette of June 2, 1947]

CONGRESSIONAL FAILURE

There does not seem the slightest likelihood Congress will do anything substantial at this session toward solving the serious housing problem.

This bleak prospect, we think, identifies a most serious congressional failure.

As Senator LODGE said, thousands of people in his own State lack adequate housing. Right here in Haverhill we know how serious is the lack of housing units. Haverhill's situation can be multiplied again and again in the State and in the country. Hundreds of thousands, millions, of Americans need housing.

Their need is serious enough to constitute a national emergency quite as serious as some emergencies that have inspired vigorous congressional action.

The huge cost of Government attack on the housing problem, the interference with private enterprise, the statement that time will solve it—these are the arguments we hear when governmental action is urged.

Well, time will solve the problem, as time will solve all problems. Time will solve the problem of personal illness, for instance, sometimes with death. Wise folks don't wait for time if there is anything they can do to hasten the result they desire; they do something.

Private enterprise undoubtedly will be interfered with by Government attack on housing, but private enterprise always is interfered with when Government attacks an emergency. War bothers it, and so does depression, but it manages to survive.

Of course, Government attack on the housing problem would be costly, but as LODGE said, it is not necessarily extravagance.

In a democratic country, LODGE rightly said, we simply cannot afford to have unhappy people, who, through no fault of their own, are existing under conditions which are below the American standard of living, which so many of them a little while ago were fighting to protect against foreign enemies.

It is unfortunate there are not in Congress more men who think and speak in agreement with the Bay State Senator.

[From the South Boston (Mass.) Gazette of June 13, 1947]

HOUSING—THIS SESSION OF CONGRESS?

The present session of Congress will adjourn soon. So far, there has been no legislation passed to help solve the country's most serious domestic crisis—the housing shortage. While divorces and juvenile delinquency are on the increase, and while hundreds of thousands of our best citizens are living in cellars, attics, garages, and other makeshift shelters, Congress continues to ignore their plight.

What can be the cause of all this inaction on the part of our national legislators? Is it one of ignorance of the need? If that is true, let them talk to any priest, minister, or rabbi, any social worker or veteran and they will soon get the startling figures. Here in Massachusetts we need more than 57,000 low-cost homes or apartments. And that is just the beginning.

Can it be that our elected representatives don't care about veterans who sacrificed so much—who lost so much time and so many opportunities. The average veteran seldom brings this up. All he wants is a fair deal. And a fair deal in housing will make for a better United States, and a better America, that now has to face the rest of the world with every single bit of strength it can muster.

Senator LODGE in a recent public statement said that Congress should not adjourn "without taking effective action toward solving the housing problem." We agree with the junior Senator from Massachusetts.

Spending by Government Departments

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, June 23 (legislative day of Monday, April 21), 1947

Mr. MARTIN. Mr. President, Herman A. Lowe, a columnist on the Philadelphia Inquirer, has written an article which I commend to the reading of the Senate, dealing with the plan of some of the bureaus to purchase 1948 supplies out of funds from the last appropriations. I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY

DEMOCRATS SAVING UP—1948 FUND GROWING—BUYING IN ADVANCE—IT'S YOUR TAX MONEY—FIGURES CONCEALED

(By Herman A. Lowe)

WASHINGTON, June 18.—The Democrats are hard at work down here building a special campaign fund for 1948. They are working to a fare-thee-well a source that only the "ins" get their hands on—your tax money.

You have not heard much about this yet, but you undoubtedly will during the coming months. In part it involves buying as much as possible of next year's necessary supplies and equipment with this year's funds. This will leave plenty of loose change in the department kitties next year for such things as adding personnel where it will help get votes.

The figures are being carefully concealed from inquiring newspapermen and inquiring Members of Congress, but it is estimated that in the last few weeks a couple of billion dollars have been obligated on purchases to be delivered for the next fiscal year.

These are things which should be paid for from fiscal 1948 (July 1, 1947, to June 30, 1948) appropriations. They are being bought instead out of 1947 funds. Hence, hundreds of millions of dollars of 1948 money, which Congress believes is necessary for certain specific purposes, will be free and unencumbered.

You don't have to be able to add more than 2 and 2 to realize the election-year possibilities of all that loose change, which the Democrats know about down to the last penny but which the Republicans have not been able to draw a bead upon so far. And, of course, no one accuses the Democratic high command of backwardness in the field of political higher mathematics.

Here is money which will serve to keep people on the pay roll although Congress thinks they are being dropped to save funds. It will also serve to put deserving Democrats on the pay roll where they can do the most good. This is not limited to Washington. It is even more important out in the field where a political worker can do the party a lot of good hustling among the taxpayers and citizens.

This is not a new trick. What makes it particularly important is that there is more of this political black-market money around than ever before. Remember, the highest prewar budget was about $9,000,000,000. Expenditures for fiscal 1947 (the fiscal year ending June 30) will be above $40,000,000,000, and will be almost the same for fiscal 1948, despite the best efforts of Congress to melt out some of the lard.

The fact is Congress has not been particularly successful in penetrating the iron curtain concealing substantial administration expenses. The cuttable items are there, but the legislators have not been able to put their hands on them. Which means that plenty is being piled up on the shelf to help out in next year's election.

Under the ideal set-up, when a department comes to the end of each fiscal year, it should release all its unexpended balances to the Treasury and start anew with its next appropriation. But even in nonelection years, no department is willing to let nature take its course. It might prove to Congress that the department was receiving too much money, and should get a smaller appropriation.

So the departments scurry around to spend as much as possible of what is left over, in order to prove that they need every penny. For instance, the Labor Department has recently equipped a lot of its offices with new rugs and carpets, using up money. And sometimes purchases, which would normally be paid for over 4 or 5 years, will be paid for in a single lump sum to evaporate large balances.

This year, particularly, there is huge ordering of equipment for the next fiscal year. This alone nails down hundreds of millions of dollars which would otherwise revert to the Treasury. To say nothing of putting fiscal 1948 money where it will be able to strike a blow toward the November election.

The Senate Expenditures Committee has walked around this thing for some time without acting. But Pennsylvania's Senator EDWARD MARTIN has been urging party leaders to hold a congressional investigation. If and when it ever gets started, there will be some tall explaining to be done in the executive departments.

Importance and Attractiveness of the Teaching Profession

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, June 23 (legislative day of Monday, April 21), 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of an article which I wrote for the magazine Forward, and which appears in its issue of June 21, 1947. The purpose of this article was to invite the attention of our young people to the importance and attractiveness of the teaching profession, which so many folks seem to want to belittle these days. The magazine Forward is published by the Publications Division of the Board of Christian Education of the Presbyterian Church in the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SO YOU DON'T WANT TO BE A TEACHER

(By Hon. ALEXANDER WILEY, United States Senator from Wisconsin)

"What? The teaching profession? I should say not. I'm not sure what I wish to be, but that is one job I don't want."

This kind of talk is heard frequently around the corridors of many of our high schools, according to many reports, now that graduation is getting near.

Because my three daughters went into the educational field and found much satisfaction in it, I suppose I took for granted that many young women entered that profession. While talking to one of my friend's daughters a few days ago, I said to her, "What are you going to teach?" With a withering look, she said to me, "Teach! My eye! I wouldn't teach. I'm taking a business course. I want to get married sometime. I sure don't want to be an old-maid school teacher."

That young lady was attractive, had personality and ability. In all probability she would make an excellent teacher. I wondered why she thought that teachers never married. Of course, many of our fine young women want to get married. That's the normal, happy way of life. If entering the teaching profession means automatic spinsterhood, it is easy to see why enthusiastic, vital, attractive young women, whose ultimate goal is family life, don't take to it.

But my good judgment tells me this is false reasoning. I have known many fine women in the teaching field—my wife, my daughters, my sisters, et cetera—and many of them have married. I'm certain if you teensters were to ask your own mother or the mothers of your friends, you would find that many of them had been teachers. Statistics bear out the statement that the marriage rate for women teachers is as favorable as for women in comparable professions.

Another eager, clear-eyed, ambitious young lady told me, "There is no money in it; you get practically nothing for teaching."

I've been reading many articles on the underpaid teacher, but it has seemed to me that an effort also is being made to increase teachers' salaries. I decided to find out. This is the letter I wrote to that young lady the following day:

"You may wonder why I am taking the liberty of sending you this letter. I'm concerned, Joan, about my country's welfare. Its future rests on the youngsters in our schools. No matter how much money the reports say we spend on education—way more than any other country—it isn't the amount of money spent that makes us good; it is the caliber of the teacher. And, seemingly, many teachers have left the profession, many are teaching who shouldn't be, but, worse yet, many of our talented younger people like yourself are not preparing to be teachers. You mentioned the money angle; of course, that is important. One should make enough to live nicely, but I think I know you and your bringing up well enough to know you'd never be satisfied with the kind of job that paid a large salary but was empty from the standpoint of growth, appreciations, and real service.

"The National Education Association makes this statement: 'If history repeats itself, there will be another year or two of a fairly rapid trend in the average salary of teachers, then a less rapid increase for another 9 or 10 years.' They imply that in the near future salaries will have reached a level high enough to offer a significant inducement to promising young people to consider it as a remunerative career as well as worth while from many other angles. You know, of course, that teachers have many vacations. Practically, something else you should consider are the provisions for retirement pension and sick leave.

"Joan, your generation appears to some oldsters as materialistic, selfish, and ruthless. Certainly you and I know that in many cases those are but defense mechanisms and that you and your contemporaries are searching for opportunities to express your talents, hopes, and aspirations. Have you had some poor teachers? You know, then, the harm they can do. You don't want your young brothers and sisters to continue having them. Talk it over with your friends; you can change it, you know, by entering the profession and becoming good teachers.

"Somewhere I have read, 'The duty of a teacher is to ring the rising bell in the dormitory of the soul.' Certainly, Joan, anyone who brings this idea to her job will never find it a humdrum existence.

"Joan, I hope you become a teacher. We make all kinds of laws down here, and there are times when we feel important to the Nation, but there wouldn't be much use for our work down here if our children didn't grow into good citizens. That job rests primarily with the teachers of the country. Quite a challenge, isn't it, young lady?"

How about it, you teensters? If you wish for great wealth, do not enter the teaching field, but in the near future there seems to be the promise of a reasonable salary along with a more human attitude toward the profession. Whatever profession you enter, success is dependent for the most part on good, hard work. Doctor, Congressman, or what have you—no profession, when you are in it, is all glamour. Enthusiasm, attractive personality, and ability are traits that should promote achievement in whatever you do. Along with them, if you have the yen to serve, the teaching profession needs you. How about it? Think it over.

Harry F. Sinclair and the Anglo-American Oil Treaty

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Monday, June 23 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, on Friday, June 20, there appeared in the New York Post, an article by the Honorable Harold L. Ickes, former Secretary of the Interior. This article, it seems to me, provides some very illuminating facts regarding the efforts that are being made to defeat the Anglo-American Oil Treaty which is now pending before the Foreign Relations Committee of the Senate. I ask that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAN TO MAN

(By Harold L. Ickes)

If Harry F. Sinclair succeeds in wrecking the pending Anglo-American oil treaty he will have consummated his most ambitious plot against the public interest since Teapot Dome. This treaty, if ratified, will make more sure American access to middle eastern oil. At the time of the Teapot Dome scandal, Mr. Sinclair tried to get his hands on some valuable oil deposits that belonged to the Navy of his country. With hands dripping with crude oil, he got caught at it.

This time he has again been working like a mole, and the only chance of his being convicted is in the court of public opinion. It is generally known throughout the oil industry that Mr. Sinclair has taken advantage of the delay in bringing this treaty to a hearing to build up opposition to it in the State of Texas. So far as is known, Mr. Sinclair is the only one who has been interested to invest a large amount of money in a plot which, if it succeeds, will not benefit even Mr. Sinclair financially, although it will seriously hurt his own country in its international relationships.

It will also disadvantage rival oil companies that have legitimately acquired interests in foreign oil. This country is going to need foreign oil in increasing quantities because even today we are not producing enough oil in the United States to supply the needs of our own people.

Just why Mr. Sinclair is working against the public interest this time, I do not know. Nor is he likely to take the public into his confidence. He is known in the oil industry as a contumacious person who is instinctively opposed to any policy that his competitors approve. He just naturally opposes anything that does not produce a business advantage or money profit to Mr. Harry F. Sinclair.

I would avoid cynicism, especially when such an altruistic citizen as Harry F. Sinclair is involved. However, I cannot but be puzzled when I consider his principal argument against the treaty—the simulated fear that its adoption will mean a flood of foreign oil in our domestic markets—because it is generally believed that Mr. Sinclair imports more oil now into the United States than any of his competitors. So he must have a different reason for opposing the treaty.

Mr. Sinclair first went to work after the agreement was signed in London on September 24, 1945. He has been as busy as a beaver ever since, but not in the open. Mr. Sinclair is too modest to appear before the Foreign Relations Committee of the Senate to say that he is against this treaty. Least of all would he say why. While he could advance the sham arguments that others have made against the treaty with as straight a face as they, he prefers to employ lawyers to speak for him. During the hearings that were recessed some 10 days ago to be resumed next week, a lawyer from Texas, by the name of Spencer, represented him, although the committee may not know who the client is. Others on the Sinclair pay roll have thronged the hearing room, but they were not proud enough of their Sinclair connections to disclose it.

Mr. Spencer, with a straight face, insists that the treaty is a cartel—or, at any rate, might be—well, at least it could lead to a cartel—or something like that. Moreover, believe it or not, according to Mr. Spencer, the treaty would compel the Government to impose its arbitrary will upon the oil industry besides liquidating the States into so many corporate corpses that would clutter up the greensward.

The technique employed by the Sinclairites in Texas has been of the same nature as that used in starting a run on a bank. To the State officials of Texas the Sinclair retainers whisper, "Pss-st! This treaty will cut the revenue of the State in two. Our whole State government will collapse." Teachers and educational associations are warned, "Pss-st! This treaty will force Congress to cut the Texas oil production to the bone. We will have no revenue for the schools." The small oil producers are greeted with, "Pss-st! This treaty will throw open the American market to a flood of cheap foreign oil. You will be ruined overnight."

The Sinclair forces pretend to be fighting for the interest of the common man. And, of course, hasn't Sinclair himself, who is paying the bill, which must already have reached a sizable figure, shown himself to be the champion of the common man, long before Henry A. Wallace discovered him? Certainly, at the time of the Teapot Dome affair he was enthusiastically, if quietly, trying to get possession of Government oil that would be sold to the common man at a profit. And even more certainly today his lawyers, his lobbyists, and his publicity men, as they crowd the hearing room of the Foreign Relations Committee of the Senate, are working for the common man at Mr. Sinclair's expense.

Statement by Hon. Warren G. Magnuson, of Washington, Before Appropriations Subcommittee on Agriculture Appropriation Bill, 1948

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, June 23 (legislative day of Monday, April 21), 1947

Mr. MAGNUSON. Mr. President, I am about to appear before the Senate Appropriations Subcommittee on the Department of Agriculture appropriation bill, 1948, to testify particularly with respect to some items as they affect the West. I ask unanimous consent to have printed in the Appendix of the RECORD

the statement I shall make to the subcommittee, and also an editorial entitled "Congress Mutilates Program To Preserve Nation's Soil," published in the Seattle Star of June 5, 1947.

There being no objection, the statement and editorial were ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR WARREN G. MAGNUSON, OF WASHINGTON, BEFORE THE SENATE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENT OF AGRICULTURE APPROPRIATION BILL, 1948

Mr. Chairman, and members of the committee, I have requested this opportunity to appear before you because of my sincere concern over the effect of House reductions in certain items included in the Department of Agriculture budget.

I realize that this committee has had full benefit of the testimony accumulated during House hearings, and that in addition you have heard many witnesses on many segments of this program.

At the risk of repeating some information you already have, I wish to express to your committee my own views on research, soil conservation, crop insurance, access roads in the national forests, and rural electrification.

RESEARCH AND CONSERVATION—GENERAL COMMENT

Funds appropriated by the Congress for research and activities aimed at conserving our natural resources classify as investments in the true sense of the word. We can increase goods for consumption by increasing our production per acre of field crops or national forests, but also we can increase such goods by discovering new uses and methods for utilization of these crops.

I am sure this committee would agree with me that had the Federal Government not invested, over the years, considerable sums of money in research aimed at more extensive utilization of the products of our forests, the drain upon that great natural resource would have been even more devastating than it is today. All of us remember the day when a substantial portion of the great Douglas fir trees in the States of Oregon and Washington were left to rot on the ground; when the lumber companies of the Nation skimmed the cream and left in our forests millions of board feet of timber as waste, a fire hazard, and a breeding place for injurious insects.

A few days ago representatives of the Department of Agriculture described to the committee the significant advances that have been made in the utilization of sawmill waste. They described the operations of a plant at Springfield, Oreg., which, if I recall the figures correctly, anticipates making some 6,000,000 gallons of alcohol this year out of material which otherwise would be completely wasted. This one process and this single plant are concrete evidence that funds appropriated by the Congress for research represent an investment in the wealth of the Nation. Likewise, funds appropriated for programs formulated to protect and conserve our soil and our forests are funds invested in the future of the Nation.

Research cannot be turned on and off like a bathroom faucet. Neither can advance guaranties be given that a particular piece of research will yield the desired result. In general, however, research is the handmaiden of progress, but continuity in staff and experimentation is imperative, and this is dependent upon stable and adequate appropriations. Well planned and executed research yields greater per dollar return than perhaps any other single part of an appropriation. I know your committee recognizes these facts and will demonstrate that recognition in the treatment accorded research items in this budget.

Most private utilities are now thought of as perpetual operations. The directors of such a private enterprise are extremely zealous in ploughing back into the business each year a sufficient amount of capital to keep the plant in top-notch operating condition. In my judgment wise congressional policy will make provision for a similar ploughback into our agricultural plant in the form of appropriations for greater utilization and conservation of our natural resources.

There is one other general observation I wish to make. The House Agriculture Committee has been holding hearings for weeks on what the chairman of the committee calls a long-range agricultural program. I think this is a very wise and important step on the part of this legislative committee. When the hearings first began I instructed a member of my staff to follow the hearings as closely as possible and to report to me periodically on developments. Obviously, I do not know how long the hearings will continue or specifically the kind of comprehensive program that will come out of those hearings. I am fully convinced, however, that any comprehensive and long-range agricultural program will of necessity contain, among other things, provisions for conservation and use of our croplands.

In view of the fact that this comprehensive study of agricultural problems is now under way, and in view of what I have just mentioned, it appears to me extremely unwise for the Congress through its appropriations powers to drastically curtail or to terminate entirely some of those very programs which the legislative committee will call upon us to reestablish when its deliberations take the form of concrete legislative proposals.

SOIL CONSERVATION SERVICE

For research, the Soil Conservation Service presented a budget calling for appropriation of $1,423,000. The House cut this to $673,000, a reduction of over 50 percent. For operations, the Service requested $43,437,000. This the House cut to $38,000,000, a reduction of about 12 percent.

At various points in the hearings before your committee, Mr. Chairman, two questions have been raised in regard to the Soil Conservation Service: First, are the farmers themselves in favor of this program? And, second, can this work be better carried out by the Agriculture Extension Service?

On the first question I should like to let the farmers of my State speak for themselves. I have received during the year a number of reports sent to me voluntarily by conservation districts in the State of Washington. Incidentally, most of them were sent to me long before hearings on this bill began in the House and do not represent an attempt on the part of the Department of Agriculture or anyone else to propagandize Members of Congress.

Let me quote briefly from the 1946 annual report of the Pine Creek soil conservation district at Oaksdale, Wash.:

"The Pine Creek soil-conservation district is located in the northeastern part of Whitman County in the State of Washington. The district covers an area of 188,000 acres. Approximately 90 percent of the area can be farmed in a wheat, pea, and sweetclover rotation. The district was voted into existence in 1941. * * * The Soil Conservation Service provided the district with two conservationists, a soil scientist, an engineer, and two conservation aides. Two and a half tons of grass seed and 2,000 trees were given to the district by the Soil Conservation Service. The personnel and material were distributed over the entire area, working with approximately 400 farmers in the district.

"In March we had our rally day. Our 1946 rally day varied considerably from the previous ones. Instead of speakers we had a panel discussion with the farmers of the district. In the afternoon we made a tour from Oaksdale to Thornton to Rosalia and back to Oaksdale. The lessons learned on that tour stuck.

"During the middle of June we arranged another tour, but this time we checked different methods of farming. The areas that had conservation practices stood out clearly and made us resolve to speed the work of conserving our soil and emphasized the problems for us."

Let me quote a few paragraphs from the 1946 report of the Lewis County soil-conservation district. On page 1 the farmers' committee states:

"The district is very grateful to the Soil Conservation Service for technical help to farmers in our district. The farmers appreciate the on-the-farm help with their land-use problems. * * * Detailed conservation surveys classifying the soil according to its capabilities have been made for 58,742 acres this year, totaling 119,367 acres to date."

Here are a few statements taken from the Montesano-Elma-Oakville district report. These statements relate specifically to soil-conservation practices. On page 4 the committee states:

"Our recent charted analysis shows that the seeding of improved hay and pasture mixture is one of the major practices needed in the district. In this respect it is gratifying to note that quite a number of farmers are buying equipment for improved soil preparation and seeding."

Then, concerning fertilizing hay and pasture, the committee states:

"We have in this district areas of first bench where lime should be used as a basis for the farmers' fertilizer program. Lime should also be the basis for any fertilizer program attempted on hill soils."

And then here is a typical localized item:

"Several farmers, like Andy Seifert, W. D. Olson, and Sam DeYoung, have found that fertilizer and seedings made by September 20 are, perhaps, the most important items in getting a fall seeding through the winter successfully.

I have just one more quote I would like to read to the committee, taken from the annual report of the Underwood soil conservation district:

"We have made over 260 farm plans since the district was organized and now have 198 plans in active operation. * * *

"We wish to take this opportunity to thank the Soil Conservation Service for its loan of technicians and equipment to our district. We appreciate the efforts of the Soil Conservation Service to keep a full staff on duty, and we hope, now that the war is over, the large turn-over in personnel will be eliminated."

The striking thing to me, gentlemen, is the fact that the farmers of these areas are sufficiently impressed with the necessity for soil conservation and with the service they are receiving from this division of the Department of Agriculture that they are willing to take time from their own farming operations to serve as committeemen and to assume the responsibility of getting this kind of program started and of contributing the stimulation that is required to keep it going. To me the excerpts which I have just read demonstrate conclusively that the answer to the first question I mentioned, namely, Are the farmers in favor of this program? must definitely be answered in the affirmative.

A second question has been brought up before your committee, Should the soil-conservation work be carried on by the Extension Service or by Extension Service methods? In my judgment it certainly is appropriate for this committee to indicate its views in this regard, but I think this is a problem which the Department itself or a legislative committee should decide.

My own experience indicates that both are necessary. Extension methods are essentially educational in nature, backed, of course, by a huge assemblage of factual information. I think it was one of our great

educational philosophers, John Dewey, of Columbia University, who said that the best way to learn is to learn by doing. My own view, therefore, is that a combination of extension methods and actual operations on the farmer's land will provide the greatest promise of success.

Safeguarding our productive land through sound conservation practices is a continuous program. The destruction of thousands of acres each year through erosion continues even while the Congress of the United States is making up its mind. I think we must view soil conservation as a permanent part of our agricultural program. There will always be a need for soil-conservation services, because even though the discovery of sound conservation practices may sometime be completed, the application of those practices to the individual acres of our farm lands requires technical knowledge and skill.

I wrote to the Department of Agriculture, asking what effect the House reduction in this appropriation would have upon soil conservation in the State of Washington. The Department answered my inquiry in a factual way, giving me the benefit of their best estimates.

The 1948 budget would have provided for the State of Washington about $32,054 for soil-conservation research. Under the program of the House less than $9,500 would be available. For soil-conservation operations, about $906,000 would have been expended in the State. As a result of the House action this would be reduced to about $810,000, or an over-all reduction in the State of Washington alone of approximately $120,000. Similar reductions, of course, would apply to the other 47 States of the Union.

The effect of the House action cannot be truly appreciated by simply saying that the funds expended in the State of Washington will be approximately $120,000 less. That $120,000 must be translated into terms of acres of soil eroded away because of failure on the part of the Congress of the United States to keep the program going.

CONSERVATION AND USE PAYMENTS

I want to speak now on a related program, conservation and use payments. The Department requested $301,720,000 with which to carry on this portion of the agricultural adjustment program. Of this sum, $267,620,000 is disbursed to farmers in the form of cash payments and advances, for soil-conservation materials. The House cut this figure to $150,000,000. The Department requested approximately $34,000,000 for administrative expenses at National, State, and local levels. This the House cut to $13,050,000. Two major problems confront your committee in this regard. The first one has to do with the commitment made last year by the Congress to finance a $300,000,000 program for the crop year 1947. The second has to do with the essential value of the program itself.

I realize that it is impossible for one Congress to bind its successor, but there is a moral obligation to the three and a half million farmers of this Nation to make good on the assurances which were given them in good faith by the Department of Agriculture. Last fall the Department announced a $300,000,000 program for the 1947 crop year. The Department made that announcement on the strength of certain language contained in the 1947 appropriation bill itself, and upon the discussion between Congressman Tarver and his associates on the floor of the House last year, when this item was under discussion.

I know that all members of your committee are familiar with these facts. To me it is almost inconceivable that the Eightieth Congress would refuse to honor the moral obligation to those farmers who have included approved conservation practices in their 1947 program. Some of the three and a half million farmers who are participating have already completed their practices. A majority, if not all of them, are in the process of carrying them out. I frankly don't see how we can renege at this stage in the crop year.

As to the merits of the program itself, I wish every member of the committee and of the Congress could read pages 1235–1276 of the House hearings, where Under Secretary Dodd and members of the House committee discussed this program at considerable length. Last year over half the Nation's farmers, operating almost 70 percent of our crop land, participated in the program, and indications are that more will participate this year. What I have said earlier in regard to the need for investing Federal funds in conservation of our natural resources is especially applicable to this program. Each year we harvest crops from some 350,000,000 acres of land. Some studies indicate that we are taking fertility out of the soil as much as 20 percent faster than we did 25 years ago. The present generation of owners and operators cannot be expected to make all of the sacrifice to keep our soil resources intact for future generations. Here the public interest is involved, and in the interest of the public welfare the Government is justified in giving assistance.

I want to emphasize just a few of the statements Under Secretary Dodd made to the House committee, because to me they reveal in a dramatic way what has been accomplished through conservation and use payments. Mr. Dodd pointed out that prior to the beginning of this program there were less than 3,000,000 tons of lime used in this country on the farms. Today farmers are using over 23,000,000 tons and would use in excess of 25,000,000 tons, if we had it available. In 1936 the total tonnage of phosphates used was 203,000 tons. In 1945 it was 2,401,000 tons. In 1936, 43,000 tons of potash were used; in 1945, 119,000 tons. Mulching materials in 1936 were used on 19,000 acres; in 1945, on 121,000 acres. In 1936 there were 1,900,000 linear feet of spreader terraces. By 1941 this had grown to 6,289,000 linear feet.

These figures contain not only a statistical demonstration of the fact that the program is working on the farms but, likewise, these figures demonstrate the tremendous collateral benefits to the fertilizer companies of the United States emanating from the program. If I were a lime manufacturer, I would write a sincere note of thanks to the Department of Agriculture, because in the process of teaching farmers sound conservation practices they have increased the farm market for lime by over 800 percent.

One other portion of this program deserves special consideration by this committee. Through the years the Department of Agriculture has built a tremendous farmer organization to formulate and administer the program. The Department has offices in over 3,000 counties. There are more than 9,000 elected county committeemen and over 97,000 community committeemen. The House committee in its report states:

"Well-considered expressions of opinion were placed before the committee to the effect that soil-conservation payments could be deleted entirely from the bill, but the committee believe that it should be tapered off, beginning in the present crop year, and completely eliminated for the crop year 1948."

If the advice of the House committee is followed, the county and community organization of which I have just spoken will disintegrate, and, in my judgment, the momentum which sound conservation practices have attained among the farmers of the Nation will come to a halt. I feel certain your committee will not permit that to happen.

FEDERAL CROP INSURANCE

Mr. Chairman, I want to speak very briefly about the action of the House in relation to the budget request of the Crop Insurance Corporation. For administrative expenses the corporation requested $9,330,000. The House cut this to $1,000,000. You will recall that for the year 1944 the activities of the corporation were suspended—the corporation was in liquidation. The administrative expenses for that year were $1,715,000. For the crop year 1943 the corporation, according to data shown on page 1641 of the House hearings, had in force 290,000 wheat contracts and 131,524 cotton contracts, or a total in these two major crops of 421,524. In 1946 the corporation had in force 305,000 wheat and 114,000 cotton contracts, or a total of 419,000. Secretary Anderson stated before your committee, on the opening day of these hearings, that for the 1947 crop year the corporation has in force some 540,000 contracts on wheat alone.

I mention these figures to indicate that even if your committee decides to force the Crop Insurance Corporation into liquidation, the appropriation approved by the House is grossly inadequate. With far fewer contracts in force in 1943 liquidation expenses of the corporation in 1944 were $715,000 more than the House has allowed. I understand that the Government's potential liability on 1947 wheat contracts alone is over $500,000,000. Certainly $1,000,000 will not finance sufficient personnel to protect the Government against unwarranted claims and losses on this vast coverage. Truly there is no economy in such an unbusinesslike procedure. To achieve a paper saving of eight and a third million dollars the House jeopardizes a half billion-dollar liability.

Now just a few words about the merits of crop insurance, and I am particularly concerned about wheat, because the eastern section of the State of Washington is one of the richest parts of the breadbasket of the Nation. The farmer faces multiple hazards in growing and marketing a crop. Many vital factors are beyond his control—he cannot control the weather; he cannot control the market price. Crop insurance provides a means whereby he can trade a sum certain in the form of premiums for a partial guarantee against disaster.

I readily admit that the history of crop insurance has not been a happy one. In the period 1939 to 1943 the Federal Government paid to wheat farmers almost $33,000,000 more in indemnities than it collected in premiums. Hedging operations netted a profit during the period of roughly $7,000,000, thereby reducing the net loss to about $26,000,000. In the years 1945 and 1946, however, as a result of the experience gained in the earlier years, insurance operations in wheat show a net gain of $7,065,000, Nation-wide.

In the State of Washington, even during the years 1939–43, the wheat insurance program was financially sound. During that period 16,588 farms were insured. Premiums collected totaled $811,119, against indemnities paid of $410,989. In 1945 and 1946, 1,666 contracts were written. $323,833 were collected in premiums; $167,509 were paid out in losses, for a net gain of $156,324.

A number of wheat farmers from my State have written to me urging the continuation of this program. They express a view in which I concur, namely, that after investing over $26,000,000 in wheat crop insurance during the 1939–43 period, why abandon the program now, when the experience during that period has enabled the corporation to operate in the years 1945 and 1946 at a $7,000,000 profit. They argue that the $26,000,000 loss must be charged off to experience—that it represents an investment in know how—that the know how purchased with that investment is paying dividends at the present time in the form of an actuarially sound wheat crop-insurance program.

May I read just one of the letters I have received. It is quite short. The others I would like to have placed in the record.

DOUGLAS, WASH., *May 29, 1947.*
The Honorable W. G. MAGNUSON,
Senator from Washington,
Washington, D. C.

DEAR SIR: I have been reading in the papers that crop insurance is to be limited to 50 counties. I am strongly in favor of crop insurance for Douglas County and hope we can keep it. My brother and I have carried it since it was available.

I believe that after a few lean years most farmers will realize its importance, and it will take a few lean years to do it.

It's basic for us. Why carry insurance on your house, or your life, if you can't pay for it if your income fails? It doesn't make sense.

Crop insurance is one of the strong factors in the well-being of our Nation as well as the farmers. No one benefits from an impoverished rural population.

Very truly yours,

CARL H. VIEBROCK.

I know the Agriculture Committee of the House, in cooperation with the Department of Agriculture, is considering this problem from a legislative standpoint. I sincerely hope your committee will restore the funds requested by the Crop Insurance Corporation. I understand they have urged restoration of at least $5,000,000. Let's not throw away the experience we have gained, unless the appropriate legislative committees and the Congress decide that such a course should be followed.

FOREST ROADS AND TRAILS

Your committee has already heard representatives of the Forest Service describe the importance of access roads to the proper management of, and sale of timber from, our national forests. Some of you were on the floor when Senator CORDON'S amendment to the rent-control bill was discussed—an amendment to make available an additional $10,000,000 in fiscal 1948 for access roads. In supporting Senator CORDON'S amendment I pointed out that funds expended by the Federal Government for access roads are returned with interest in the form of a higher price for national-forest stumpage—in addition that competitive bidding is insured, and the Government through the Forest Service is able to locate main-stem roads in the national forests on a planned basis.

The natural tendency of the private operator is to cut timber as he comes to it—moving from the perimeter toward the center of the body of timber he is working on. Such practice is not always the best method of harvesting timber, but for the private operator it is usually the most practical method. Access roads properly located permit the Federal Government to manage the harvesting of timber on that basis which will bring the greatest yield to the greatest number of operators. Access roads are one means of providing the small logger, the small millowner, an opportunity to remain in business.

Last year the Forest Service had available to it $18,900,000 for access roads. The budget this year called for $12,500,000. The House cut this request $2,500,000, leaving $10,000,000 available for fiscal 1948. In my judgment the $12,500,000 requested by the Service was too low to begin with. I say this because the Forest Service estimates that an appropriation of $15,000,000 yearly for the next 5 years would permit it to construct the additional access roads required to place our national forests on a sustained yield basis. On a sustained yield basis we would increase our yearly harvest of timber from about 4,000-000,000 feet to 6,000,000,000 feet. At $5 per thousand board feet this additional yield would increase our revenues from timber sales by $10,000,000 per year. In about 10 years the entire $75,000,000 investment in this 5-year program would be returned to the Federal Treasury—taking into account the 25 percent paid to the States from timber sales. Furthermore, at the end of the 10-year period, we would still have the roads, free and clear, for use in the sustained yield program.

I doubt there is a businessman in the Nation who would refuse to make such an investment under the same circumstances. Here by launching a 5-year program costing $75,000,000 the Federal Government will get its money back in 10 years on the additional yield alone, and still own the roads in perpetuity.

I sincerely urge your committee to add at least $5,000,000 to the House figure, thereby restoring not only the $2,500,000 cut, but adding another $2,500,000 to it. To do so is sound economy.

RURAL ELECTRIFICATION ADMINISTRATION

Mr. Chairman, there are many additional items in the Department of Agriculture budget on which I should like to speak, but time will not permit. I do, however, wish to comment on REA. This is a program which literally has brought light into the lives of 1,700,000 farmers of America. Like our great western hydroelectric projects to which REA is closely related, funds loaned to these farmer cooperatives have proven sound investments. The record of repayment of REA loans is exceptionally good. By the end of fiscal 1947 over $1,000,000,000 will have been allocated to borrowers, and about three-quarters of a billion dollars will have been advanced. On December 31, 1946, $126,000,000 in principal and interest had been repaid and payments overdue more than 30 days amount to less than $900,000.

In spite of the fact that REA loans are sound investments, the House cut the REA budget for salaries and expenses from $5,000,000 to $4,000,000—a reduction of over 28 percent—and, in addition, reduced its lending capacity from $250,000,000 to $225,000,000.

In the House hearings there was considerable discussion between the committee chairman and REA representatives as to the administrative costs of the program. The chairman chose to use the number of miles of line energized and the number of consumers connected in 1946, compared to 1940, as a yardstick for measuring REA efficiency and need for personnel. I do not wish to quarrel at length with this premise. I do wish to point out, however, that these measuring rods taken alone are not conclusive. These criteria must be judged in the light of conditions which preceded the year 1940 as compared to 1946—how much preparatory work was done in 1938 and 1939 which contributed to the lines energized in 1940—how availability of materials in 1940 compares with the same factor in 1946—and what is the supervision and processing load now compared to 1940. On the latter score it is significant that the number of borrowers has increased from 630 in 1940 to 1,150 by fiscal 1948. In this period the miles of line have increased 225 percent and the number of consumers 345 percent. These figures are indicative of the increased work load in REA. I am certain your committee will take them into consideration in determining the validity of the House reasoning upon which the 28½-percent cut in salaries and expenses was predicated. REA is a billion dollar business. Without adequate personnel it cannot discharge its obligation to borrowers, and to the taxpayers of the Nation, over whose funds it holds trust.

As to the borrowing capacity of REA—cut by the House from $250,000,000 to $225,000,-000—at the end of fiscal 1947 the department will have a backlog of applications totaling about $270,000,000. Assuming that as much as 15 percent of these applications were rejected, with a $225,000,000 limitation, REA will not have sufficient funds to finance applications already in hand, to say nothing about those which will come to it during fiscal 1948.

In the State of Washington, on January 31, 1947, we had 21 REA systems energized with 6,883 miles of line, serving 16,867 customers. About 85 percent of the farms are electrified. Washington State farmers have made far greater progress in this direction than those in many other States. North Dakota, for example, has only 10 percent of its farms electrified and South Dakota only 13 percent. However, at the time REA appeared before the House committee, applications on hand, under survey, or to be placed under survey by June 30, from the State of Washington totaled $5,380,000 and involved 2,921 miles of line to serve 4,843 rural customers. Since the funds are repayable with interest, I fail to see the economy in denying a portion of these farm families the benefits of electricity as a result of failure on the part of the House to provide REA at least $250,000,000 of lending capacity.

In closing, I want to emphasize again that funds appropriated for research, conservation of natural resources, and rural electrification, are investments in the prosperity of the Nation—investments which coming generations, were they able to speak for themselves, would demand of us as a set-aside out of our income to protect the basic natural resources which they will inherit.

ST. JOHN, WASH., *May 26, 1947.*
The Honorable WARREN G. MAGNUSON,
United States Senate,
Washington, D. C.

HONORABLE SIR: I understand that the Federal crop insurance on wheat has been changed so only 50 counties in the wheat States will be allowed to carry the Federal crop insurance.

I also understand there are a number of 173,000 bushels of wheat, which I do not feel we want to be deprived of if we cannot continue to have the benefit of this insurance. Furthermore, we have been striving for the 10-percent reduction in premium rate after 5 years' continuous average without a loss.

I also understand there are a number of policyholders in Whitman County who have had continuous coverage for 5 years and would also have to forfeit that benefit.

I do not think Whitman County would be in favor of discontinuing the Federal wheat insurance.

I also think the continuance of this insurance will be of great benefit to our war veterans in helping them to get started in farming after being in the service for several years.

Yours very truly,

ED SCHUSTER.

LACROSSE, WASH., *May 26, 1947.*
The Honorable WARREN G. MAGNUSON,
United States Senate,
Washington, D. C.

DEAR SENATOR MAGNUSON: As a farmer of Whitman County, Wash., I am much concerned of what we read in the newspapers and news letters. There seems to be some question of continuing the Federal crop insurance program on the old basis or possibly reducing it to 50 counties over the Nation.

I'm much opposed to such a drastic change. We, the policyholders of Whitman County, have accumulated 173,000 bushels of wheat through premiums earned. We feel this is our wheat. We have this reserve, if ever needed to pay off indemnities. It would be a great disappointment to all of us, and we would lose confidence in all Government programs.

We also were promised a 10-percent reduction on rates if, after 5 years, no losses. Do we have to give this up? It also gives the best security to our people who want to start out in life to establish a home. Thinking of the war veterans who fought so bravely, I urge you to help us to hold our programs and oppose a new bill. I hope we can keep our Federal crop-insurance program We are depending on you.

I'm also much concerned of all what we have read of reductions on appropriations on the agriculture program. I maintain that we

must have a sound farm program and need assistance of the Government to help us carry on. I hope you will be able to help the people in your State to carry on with the soil building and soil conserving program.

Sincerely,

KARL SCHRENK.

WARDEN, WASH., *May 26, 1947.*

The Honorable WARREN G. MAGNUSON,
United States Senate,
Washington, D. C.

DEAR SIR: A few days ago I noticed an article in one of the daily newspapers concerning changes that Congress contemplates making in our present Federal crop-insurance program.

As a wheat grower and leader of farmers in this county, I am expressing myself in that capacity. It is my opinion, and I am sure that the wheat growers in this county who are now participating in the crop-insurance program will back me up when I state that such changes as are in the process of being made will be a very serious mistake. With this in mind I am going to make an effort to notify or contact every farmer who is now participating in the crop-insurance program in hopes that they will also express themselves in regards to placing the crop-insurance program back into the experimental stage.

It is the opinion of the majority of wheat farmers in this county that the crop-insurance program is the best phase of the present farm program. It gives farmers and especially younger men and returning veterans some assurance of being able to meet their obligations in case of a crop failure. It takes a good deal of courage and financial backing to produce a crop of wheat for making a living and to help feed the business people of this world.

It is true that our present program is not perfect. However, I feel assured that such minor changes as are necessary can be worked out as time goes on.

The program in our county and State has certainly not cost the Federal Government very much. In addition to this, this county has built up a nice reserve in premium collections to cover any future losses, when and if they occur. In other words, we feel we have an equity in this program, and I assure you that we do not want Congress to take this away from us.

I know that the wheat crop insurance program is certainly beyond the experimental stage. It has provided a very definite amount of security to the farmers of this county, especially to the younger farmers and returning veterans, who have had difficulty in obtaining financial backing to cover the cost of their operations. If the crop-insurance program is going in the red, it is certainly no fault of those counties who have properly administered the program and by doing so have built up a good reserve. I feel that such a drastic change as Congress intends to make will certainly reflect on my ability in administering this program.

It seems to me that if there was a check made on losses, you would find they occurred mostly in States and counties on farms that are operated by men who derive only a small portion of their income from growing wheat, and not by the major producing States and counties.

I sincerely hope that you will give this matter favorable consideration when it is brought before you.

Very truly yours,

ALBERT WIDMER.

PASCO, WASH., *May 27, 1947.*

The Honorable WARREN G. MAGNUSON,
United States Senate,
Washington, D. C.

DEAR SIR: It has come to our attention, through newspaper releases, that Congress is considering limiting Federal crop insurance on wheat to 50 counties.

We feel this is a mistake as the Federal crop-insurance program has proven to be sound and operating without deficit. However, if this is to be done, we feel that our county, Franklin County, Wash., should be one of those selected.

The Federal crop-insurance program in Franklin County has proven to be popular with the farmers and has been in force every year that it was available to us. Our county has always operated well in the black, and we have the highest percent of participation in the State. The 6 years in which the program has been in operation we have had to pay only 22 claims and have an accumulated reserve of 103,633 bushels.

In our opinion, Congress would do well to give this program the merit that it deserves.

Sincerely yours,

R. C. WATSON,
Chairman, Franklin County Agriculture Conservation Committee.

ARCHIE PRIOR & CO.,
Yakima, Wash., May 28, 1947.

The Honorable WARREN G. MAGNUSON,
United States Senate, Washington, D. C.

DEAR SENATOR: This is to advise you that we are interested in seeing the present United States Department of Agriculture crop-insurance program continued in its present form.

We feel that this insurance program is to a considerable degree self-supporting and not a drain on the Treasury.

We also feel that this program contributes to the stability of our agricultural economy.

Yours very truly,

ARCHIE PRIOR & CO.,
By DONALD G. PRIOR.

KENNEWICK, WASH., *May 29, 1947.*

The Honorable WARREN G. MAGNUSON,
United States Senate, Washington, D. C.:

Benton County farmers alarmed over proposed drastic reduction in ACA funds and virtual elimination of crop-insurance program. If the farmer is forced to bear the brunt of economy drives by uninformed eastern legislators, we urgently request the selection of this county as the one to continue crop insurance, for which we have a very definite need.

BENTON COUNTY ACA COMMITTEE,
A. J. THOMPSON.
ROLLA LANNING.

[From the Seattle (Wash.) Star of June 5, 1947]

CONGRESS MUTILATES PROGRAM TO PRESERVE NATION'S SOIL

In his master's address yesterday to the fifty-eighth annual convention of the Washington State Grange, Henry P. Carstensen called soil conservation the No. 1 national problem.

This statement may seem overdrawn to some people. The American people have become used to hearing many things described as No. 1 problems—living costs, strikes, relations with Russia, automobile accidents, the sad state of the movies, or radio programs, or what not.

We shall not qarrel with Master Carstensen in his designation of the No. 1 problem. For food is fundamental to life. Food growth requires soil. And the soil of this country is wasting away at an alarming rate. The rivers wash tons of topsoil into the seas daily, especially from lands bared by overgrazing. The winds whisk other tons into the air, especially from lands impoverished by overcropping. Each year this Nation comes nearer the point at which it will be unable to raise the food it needs for its present population of 140,000,000.

Under these circumstances the action of the House Appropriations Committee, in slashing drastically the funds allowed for soil conservation programs, is indefensible.

Only within relatively recent years has the importance of soil conservation been generally understood. The dust bowl and the resultant emigration of Okies and Arkies helped dramatize the problem. But the dust bowl episode was only one act in an American drama of waste that has been building up toward a tragic climax ever since white men first saw this country, with natural resources that seemed inexhaustible.

Fortunately the dust bowl did set people to thinking. They began to listen to the scientists and farm leaders who had seen this tragedy mounting. The result was adoption by Congress of an administration program under which technical experts were provided to advise farmers who would set up soil conservation measures, with financial compensation promised those land owners who cooperated in carrying out these locally adopted programs.

It is these programs that are now threatened with wreckage. The House Appropriations Committee has cut soil conservation appropriation requests 52 percent.

The committee contends that a cut of only 12½ percent has been voted in the appropriation for the technical experts who aid the farmers. As indicated in the recent House debate, however, this 12½ percent cut is figured on the basis of the number of soil conservation districts in existence a year ago. This number was 1,838. New districts have since been created and are still being created at the rate of 20 a month. The effect of the cut is therefore to reduce present operations approximately 22 percent—actually to set operations back to a figure of pre-war years, since war conditions inevitably prevented reasonable extension of the program.

What is more serious is the fact that the committee has undertaken to end altogether a program under which $300,000,000 was set up a year ago as the amount which would be available to pay farmers entering into these soil conservation projects. The figure is halved for 1947 and eliminated altogether for 1948.

While it is legally true that no Congress can bind its successor in the matter of appropriations, the $300,000,000 item was adopted by the Seventy-ninth Congress with the clear understanding that farmers were to be notified what aid they could expect if they undertook their local programs. Now the compensation for the 1947 programs, already undertaken, is to be cut in half and the whole plan dropped for next year.

Let no one think that soil conservation is something that should interest dwellers in the dust bowl or the Atlantic Coast States or the deep South alone.

Mr. Carstensen noted, in his master's address.

"Farmers of this State have a right to be particularly concerned, in view of the fact that a high ranking Government soil-conservation official reported recently that in erosion damage our Palouse area was second only to an area in northern New York."

The problem is particularly important here, Mr. Carstensen noted, with Columbia Basin lands about to be brought under cultivation, adding:

"Unless the people of the Pacific Northwest take steps to protect those lands they will lose the millions of dollars that have been spent on this project."

Certainly it is timely for city people to be joining with farm people in recognizing the seriousness of the soil depletion problem. The city man has to eat, too.

And it strikes us that the city people might well join with the farm people in protesting the penny pinching that threatens to wreck one of the most worth-while programs being carried out under Government auspices. It is essentially a farmers' program, democratically operated by elected farmer-district supervisors, with technical help from the

Government to make it effective. But it is not for the benefit of the farmer alone. It is for the benefit of all of us.

Speech by Hon. Claude Pepper, of Florida, in Support of the President's Veto of Labor Bill

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Monday, June 23 (legislative day of Monday, April 21), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio speech broadcast by me at 10:30 p. m. on June 22, 1947, over the Mutual network, in support of the President's veto of the labor bill.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Tomorrow afternoon at 3 o'clock the Senate of the United States will decide the most momentous domestic issue of our times. If two-thirds of the Senate vote to override the President's veto, the American people shall have lost its greatest battle against forces of reaction and monopoly. For this legislation affects not only labor unions but the vast majority of the American people. Those who vote for the bill cheapen the labor of the Nation when actual workers' wages are already falling. They contribute to a depression when our prosperity is already slipping away. They weaken America when today the strength of America is the hope of the world.

Mark Hanna, a Republican Senator from Ohio, is credited with being the first to work out a firm deal between big business and politics in the United States. Tomorrow Mark Hanna would be proud of his successor, Senator ROBERT TAFT, of Ohio, if the veto of President Truman should be overridden and this antilabor bill should become a law. For through it Senator TAFT, also a Republican Senator from Ohio and also speaking for big business, would have fastened upon the American working people the servitude of big business as complete as that which Hanna achieved in his day.

The lines of battle between those who believe in the people and those who are against the people are sharply drawn. This is a struggle which can only be decided by the people themselves.

As early as September 1945, President Truman recommended to the Congress a 21-point program of constructive legislation designed to ease the transition from total war to a peace of plenty and progress for the American people. That program would have prevented the suicidal rise of prices, increased production of needed peacetime goods, built over 3,000,000 new homes and protected the American people against inflation and depression.

The Republican Party and a minority of Democrats wrecked that program of constructive legislation.

When the war ended and war production stopped, the take-home pay of the workers was cut. Senator TAFT and the Republican leadership sharing his views succeeded in ending all controls that protected the people from war shortages and profiteering. Caught between lower wages and higher living costs, the workers of the country demanded increased rates of pay. Big business arrogantly replied it was none of the workers' business, it was none of the Government's business, what they were able to pay.

The truth was that the corporate leadership of America were determined to break the power of labor organizations in America.

From the working people they determined to strip the protection of labor laws and labor unions. From the consuming public they determined to remove the protecting shield of price control and the fair distribution of the limited goods we had. From the Government they would remove controls over monopoly powers.

Over the veto of President Truman—which was as stinging a rebuke as his veto on the tax bill and this antilabor bill—Senator TAFT and the Republican leadership destroyed price control. Just last week in the Senate they destroyed effective rent control, under the false banners of "freedom for private enterprise—down with bureaucracy." What they really meant was freedom for the piercing sword of profiteering; down with the shield of Government protection.

Meanwhile the National Association of Manufacturers and the Republican leadership turned every weapon in modern political warfare toward battering down the defenses of the working people built under the leadership of President Franklin D. Roosevelt. They have pretended to be concerned only with curbing the leaders of labor, while they have been reaching out to encircle and destroy the working people themselves.

I should be less than frank if I did not warn you that if we lose this battle for the workers, not only the American worker but the American consumer as well as the American small businessman and the American farmer, will stand helpless under the crushing power of the big-business magnates and monopolists of America to fix wages, prices, and rents to satisfy their lusts for profit and power.

The Republican high command in this same week gave railroads immunity from the antitrust laws, another blow at the shippers and, hence, the consumers of this Nation. They tried to force through an inequitable tax law which would raise the income of the poor man 1 percent, but of the rich man 34 percent. President Truman courageously vetoed that bill—and his veto was sustained. They denied school lunches for the children of America. They denied veterans a chance for easy credit to buy farms. They cut the funds for electricity for the farmers of this Nation. They shut the doors to many GI's seeking training or loans by additional restrictions.

That is the Republican record. No health bill for the sick, no funds for teachers and students, not a dime for increasing old-age pensions. And at a time when two out of five families in America have savings of less than $40 and a weekly income of $40, we find that, as the New York Times reports this very morning, the profits of 228 corporations in the first 3 months of this year were 300 percent higher than their profits in the same 3 months of 1946—and 1946 was their most prosperous year in history. Can the American housewife buy three times more today than in 1946?

About one section of the labor bill Senator TAFT was strangely silent in his reply to the President. That section would deny the fundamental freedom of press and freedom of speech to the working people of this country, to their families and to all citizens. They could not use a penny of their common funds to publish the record of a Congressman. While the National Association of Manufacturers could freely advertise their views on legislation and political candidates, no union could spend a penny to defend their interests against their political oppressors.

While corporation executives can donate millions to the Republican Party, unions can not spend a dime for political contributions. While States and counties elect officers by a majority of those voting, unions can obtain union security only by a majority of all workers. While corporation executives can meet to agree on prices and maintain profits, union members in one plant cannot meet with union members in another to discuss or maintain standards of working condition. Employers are encouraged to hire strikebreakers—and usher in again an era of violence in labor relations.

It is a rank deception of the people if Senator TAFT or Senator IVES or any other supporter of this bill denies that it was intended to outlaw union security or make it almost impossible of accomplishment; to make it difficult, if not impossible, for labor leaders to speak for the union or for labor organizations effectively to represent the workers; to make it difficult, if not impossible, for workers to organize into a union and to retain their union, once they get it organized.

It is deception if anyone denies that under this bill it is difficult, if not impossible, for workers to work together in a whole region or in the whole Nation to maintain wage standards and living levels which are decent for the American family; it is deception if advocates of this bill deny that it is legally impossible for the working people of this country to have any real voice through their organizations in the free exercise of their rights as citizens to protect everything they hold dear.

No wonder the President has said that this bill is the most serious economic and social legislation of the past decade and that its effects, if enacted, will be felt for decades to come.

In this fight the Democratic Party is making its record.

I speak earnestly as a Democrat to those Democrats who are listening.

The President sent a stirring veto message to the Congress and appealed directly to the people by radio. Both were in the spirit of Franklin D. Roosevelt. He invited Democratic Senators for a private conference and impressed upon them the depth of his conviction against this bill and the meaning of this bill to the country and to the party.

While it is clear that a majority of the Democratic Senators will sustain the President's veto, yet the people know we have 44 Democratic votes in the United States Senate. That is more than the one-third needed, so that the people know that we Democratic Senators have it in our power to sustain our President's veto. If enough Democratic Senators do not sustain the veto, we shall be held accountable by the working people of this country and by those who see the un-American character of this bill.

The Republicans are making their record, too. This bill was thrust through the House of Representatives and through the Senate by the Republican high command. According to present prospects, at most only 5 out of 51 Republicans have indicated any possible support of the President's veto. If the Republican Party, by that overwhelming majority, combines with a minority of Democrats to thwart the President's veto and fasten this vicious legislation upon the backs of America's working men and women, there will be no escape for the Republicans from the wrath of those who have to bear the weight and sweat of a nation's toil.

President Truman has reminded the Congress and the country of what we fundamentally stand for in America, not only of our traditions but of our aspirations and our dreams. He has pointed to more democracy, not less; better living, not poorer, for American people—a stronger America in goods and in democratic faith to help a shattered and distraught world. We are shaping tomorrow in the Senate the kind of America—yes; the kind of world—we shall have for decades to come. Now, as to the minutemen upon the commons of Lexington and Concord, the moving stage of history has given to the people another glorious challenge to fight for their homes and for their freedom.

The Mississippi River Flood

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 24 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a brief United Press dispatch appearing in the Washington Post for June 18, describing the major Mississippi River flood, now hitting a 150-mile stretch of the central Mississippi Valley. There it is pointed out that the Iowa State Department of Agriculture predicts that most of the bottom land in the southern half of the State will produce no corn this year, with an estimated loss of millions of dollars. This new flood, now cresting along the Mississippi, is prevented only by already weakened levees from sweeping across 400,000 acres of the Nation's richest farm land.

These startling facts prompt me to also insert in the RECORD two ably written editorials describing this continuing problem of damaging floods, and pointing out the necessity of once and for all preventing such devastation through the enactment of a unified river-basin resources development plan, as suggested in the Missouri Valley Authority bill S. 1156. One editorial, appearing in the York (Pa.) Gazette and Daily for June 16, is entitled "At Expense of the Many." The other, printed in the St. Louis Post-Dispatch for June 11, is entitled "MVA Lesson of the Floods." I commend these thoughtfully written editorials to the Members of the Congress.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the Washington Post of June 18, 1947]

MAJOR MISSISSIPPI RIVER FLOOD EXPECTED

KEOKUK, IOWA, June 17.—Heavy rains poured torrents of water down Iowa streams today and Army engineers warned that a major flood would hit a 150-mile stretch of the central Mississippi Valley within 24 hours.

Hundreds of farmers in lowland areas had fled taking with them furniture, chickens, and livestock. The number of homeless, which reached 20,000 in Iowa, Missouri, Illinois, and Nebraska a few days ago and then dropped off, was building up rapidly as floodwaters rose.

Great areas of farm land were under water from recent floods. Whole villages were flooded. And rising floodwaters were spreading over new areas.

CORN CROP BLASTED

The Iowa Department of Agriculture predicted that most of the flooded bottomland in the southern half of this tall-corn State would produce no corn—the Nation's basic crop—this year. Crop losses in Iowa alone the department said, will run into the millions of dollars.

Heavy rains in northern Iowa brought one flash flood and predictions of others. A flood hit Waverly, Iowa, on the Cedar River, and inundated the entire southern section of town (population 5,000).

Col. W. N. Leaf, of the Army engineers at Rock Island, Ill., said the danger area on the Mississippi extended from Wapello, Iowa, to Clarksville, Mo. Surrounding the area nearly 400,000 acres of the Nation's richest farm land, protected from the river only by levees already weakened by last week's floods.

The Sny Levee, south of Quincy, Ill., was endangered by the pounding Mississippi. The Red Cross at St. Louis said the levee might give way at any time. The agency was preparing evacuation of the 600 residents of Hull, Ill. If the levee breaks, the agency said, it will have to care for 1,500 to 3,000 persons in the area.

Above Keokuk, the Des Moines River had spilled over its banks for 12 miles between Alexandria, Mo., and St. Francisville, Mo. The water spilled toward Wayland, 8 miles from the river, where evacuees from Alexandria still were waiting for last week's floodwaters to recede from their homes.

[From the York (Pa.) Gazette and Daily of June 16, 1947]

AT EXPENSE OF THE MANY

Through the efforts of the late George W. Norris, of Nebraska, and Franklin Delano Roosevelt the problem of flood control was solved in the Tennessee Valley. No longer does the Tennessee River run wild and add its former excess of water into the Mississippi when floods run rampant and cause so much misery and property damage throughout the Mississippi watershed.

We now know how to prevent these disastrous floods. Right here in York we are experiencing the benefits of flood control and escaping the damage which so frequently was our lot before the problem was tackled intelligently. Here, however—fortunately for us, no doubt—there was no power problem involved.

Mississippi and Missouri River floods can be prevented. There is no longer any doubt about that. And as a byproduct of such prevention cheap power can be produced which will prove of great benefit to the regions in which it will be available for use.

Why, then, have we failed to repeat the success of the Tennessee Valley project throughout the other parts of the Nation and done away with floods and the damage they cause?

There is seemingly only one reason. Private utility owners block more flood-control projects, because they fear for future profits. No cheap electricity for the people if they can help it. No real flood control, because a necessary incident would be the production of large amounts of electricity at small cost. What would so greatly help the people, the private power outfit consider against their personal interests and their influence is so great in Congress that the people suffer that they may have their pound of flesh.

We have spent billions of dollars in erecting levees to hold back flood waters on the Mississippi when the sensible thing to do was to prevent the waters from reaching the Mississippi by building storage dams in the upper parts of the tributaries as was done so effectively in the Tennessee Valley.

But flood control we cannot have generally because a very few of us must be permitted to continue to profit at the expense of the many.

Sometime, of course, unless we destroy ourselves in the meantime by one or the other of those instruments of mass destruction we have conjured up, there will be authorities like the Tennessee Valley Authority at many places throughout the Nation. Great damage from floods will have been done away with, electric power will be cheap and plentiful, and no one will have suffered. Not even the greedy private power crowd, for they will have been bought out at generous prices, as was done in the Tennessee Valley.

It is not that the private power crowd does not expect to be amply paid for their assets in case of the establishment of valley authorities, it is future big returns they object to being denied.

This present flood should be more than enough to bring about at least a Missouri Valley Authority. It will be if the people of the Mississippi watershed exercise anything like intelligent self-interest. Even a Congress so wedded to reaction as the present one would not dare ignore these people if they really set out to protect their interests.

The alternative is to order the Army Engineers to throw away a lot more money building levees and main river dams that cannot and will not prevent floods which are obviously uncontrollable once they reach the main rivers.

[From the St. Louis Post-Dispatch of June 11, 1947]

MVA LESSON OF THE FLOODS

The floods which are ravaging the upper Mississippi Valley and north central Missouri areas along the Missouri River are testimony to the bankruptcy of old ideas about river control.

For these old ideas, this year and every year's flood victims are indebted to pork-barrel-minded politicians in Congress and to the Army engineers. It is these same elements that are trying to patch up the old ideas and keep the pork barrel going by means of the fake MVA, the Missouri Basin Interagency Committee.

The levee system, which is failing in the present flood just as it fails in every flood, is a monument to the pork-barrel politicos and to the Army engineers, who have been their complacent beneficiary.

For the first 25 years of their flood-control work the engineers relied almost entirely on levees, built by State levee districts or private associations, sometimes with Army financial aid. As they proved inadequate, they were built higher and higher. In consequence, the narrowed channel silted, and floods became worse than when they had the deeper channel to run in.

The pork-barrel brigade in Congress, and the Army, continued going around in this vicious circle until 1927, when an unusually disastrous flood in the Mississippi made it apparent to everybody, themselves included, that something better than the levee system alone would have to be found.

The something better was first provided in the engineering works of the TVA on the Tennessee River system. TVA didn't wait to control floods after they had happened. It started before they occurred and worked to prevent them. It didn't use just one or two of the means of flood prevention; it used all of them in the book.

Some of them, like erosion control and forestation, were carried out for their own sakes, too, but always with the purpose of contributing to flood control. As much potential floodwater as possible was soaked into the land. Soil was kept from eroding into the streams and raising flood heights. Large reservoirs were built on the rivers tributary to the Tennessee, to catch and hold back potential floodwaters from the main stream.

The Army engineers, after the big failure of 1927, began thinking in terms of reservoirs, cut-offs, and spillways to keep the volume of water within the limits that could be dealt with by the levees. The Pick plan, which the Army devised for the Missouri Valley, makes use of reservoirs for flood control. So does the Reclamation Bureau's Sloan plan, which has been merged with the Pick plan.

But in their eagerness to imitate TVA and thereby avert—they hope—an MVA, the Army engineers have not been able to adopt the whole method. They are not authorized by Congress to go into erosion control and forestation for flood-control purposes, and, furthermore, their professional prejudices are against attaching very much importance to such activities, except, perhaps, as a political come-on. The Pick-Sloan plan contains ample blank spaces for other agencies to fill in with programs in these fields if they like.

The Interagency Committee includes the Soil Conservation Service and the Forest Service, through the Department of Agriculture, one of five committee members. But these activities are the stepchildren of the Pick-Sloan plan. The Army Engineers and the Reclamation Bureau are not bending every effort to make erosion control and forestation major parts of the program, as important as flood control and irrigation, and in fact parts of the same problem. They are not bending every effort to see that these essential parts of the program are adequately financed.

No; they are bending their efforts for their own parts of the program and their own appropriations. As long as partisans of fractional phases of the development are allowed to direct the whole development, that is the way it will be: incomplete and lopsided.

As the people of the upper Mississippi and Missouri Valleys see their farm lands, homes, and communities wracked again by floods that could be prevented, they can take hope if they have learned the lesson of these catastrophes. That lesson is that no more makeshifts are wanted, no more pork barrels, no more part-way measures.

No flood-control scheme is good enough unless it is complete. To be that good, it will have to be modeled on TVA—not in part merely, as the Army proposes, but in full. It will have to be administered by an agency big enough to use all the means in the book and to give them all their proper emphasis.

There is no such agency short of the proposed MVA.

St. Lawrence Seaway Project

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Tuesday, June 24 (legislative day of Monday, April 21), 1947

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Dream That May Come True," published in the Winnipeg Tribune of June 19, 1947. The editorial relates to the development of the St. Lawrence-Great Lakes seaway.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A DREAM THAT MAY COME TRUE

Arguments in favor of the joint United States-Dominion St. Lawrence seaway project are piling up and indications are that much of the opposition to it is being overcome. During his recent visit to Ottawa President Truman had a few significant words to say about it. Discussing cooperation between the United States and Canada he singled out the St. Lawrence route as one of the assets in common still to be developed to the maximum and declared the scheme to be economically sound and strategically important. In view of this it can be fairly assumed that the President intends to urge Congress to ratify the seaway agreement of 1941.

Less than a month ago George C. Marshall, United States Secretary of State, told a United States Senate Foreign Relations Committee that the seaway would aid immeasurably in United States-Canadian defense of the North American Continent. He held that completion of the project would make possible construction and repair of 80 percent of the world's oceangoing vessels on the Great Lakes and added that the route, for one-third of its length, would be safe from submarines.

It is only reasonable to believe that the advocacy by President Truman and Secretary Marshall will stimulate proponents of the scheme to greater activity in trying to bring about ratification of the agreement. So far as Canada is concerned, the lakes-to-sea route would have been completed years ago had Washington given consent. The Welland Canal was built, the Toronto Harbor deepened, and other links in the chain provided on Canadian waters in full expectation that the over-all project would some day be carried out.

While arguments are still being waged about the navigation benefits of the scheme, it is generally agreed that the deepening of the waterway to permit oceangoing ships to come up to Port Arthur and Fort William would lop off some of the costs of carrying grain overseas by the reduction of transfer and storage charges.

Apart from the navigation feature, however, there would be developed large blocks of hydro power that could not fail to benefit Ontario, Quebec and eastern United States industries. The chief disagreement now seems to be regarding the cost of the undertaking. In 1941 it was estimated at around $500,000,000. It is realized that with present labor costs and the high price of materials this figure is altogether too low. Many engineers now say the cost would be in the neighborhood of $1,000,000,000.

Opposition from United States ocean port authorities, railways and others has heretofore been strong enough to block action by Washington. Recently the New York Times said that most of their arguments had been answered repeatedly. It branded as untrue the statement that St. Lawrence waterpower would be dearer than power produced from coal; on the contrary it would be cheaper by perhaps 50 percent.

The latest proposal made in the United States that in order to meet costs of the navigation end of the project tolls should be collected from ships using the seaway has been agreed to "in principle" by Canada. This announcement was made by Hon. Louis St. Laurent, Minister of External Affairs, in Parliament last April.

Stressing of the "strategic importance" of the scheme by President Truman and its advocacy by Secretary Marshall as an aid to North American defense may do more to sway Congress than any economic arguments. All indications seem to point to the 50-year dream becoming an actuality comparatively soon.

Address of Hon. Benjamin V. Cohen

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 20, 1947

Mr. JOHNSON of Texas. Mr. Speaker, Benjamin V. Cohen, counselor of the Department of State, speaking before the national convention of the United States Junior Chamber of Commerce on June 12, made an eloquent appeal that the United States must not flinch before the tasks of peace, just as we were not daunted by the heavy tasks of war.

The urgency of his words makes them worthy of the study and thought of every Member who believes in peace through the United Nations. I am proud to commend them to your attention:

We are now engaged in a struggle for peace. But we are only beginning to appreciate the efforts and sacrifices that will be required. Peace in a free world requires more than good intentions. Peace no less than war requires courageous action.

We alone did not win the war. But the war could not have been won if we had not organized ourselves and our resources to win it—if we had not used our brains, our talents, our skills, our treasure, and all our strength to win it.

We alone cannot win the peace. But if we are going to do our part to win it, we must devote ourselves to the organization of peace as fully as we devoted ourselves to winning the war. Winning the peace may be in many ways more difficult than winning the war. But it is the task of our generation to win it.

We cannot afford defeatism about the peace any more than we could afford defeatism about the war. It took the Allies nearly 6 years to win the war after it had started in Europe in 1939. During the first 3 years it looked very much as if our side was losing. It took us in the United States a long time to realize how real was the danger that our side might lose the war, and how great our efforts would have to be if our enemies were to be defeated.

We are now only beginning to realize how difficult is the task of organizing peace under law and how great and continuing our efforts must be to achieve it. That is no reason for us to despair of success and to abandon our efforts. That is the reason for us to quicken and redouble our efforts.

In his last message on the State of the Union, President Roosevelt warned us:

"Perfectionism, no less than isolationism or imperialism or power politics, may obstruct the paths to international peace. Let us not forget that the retreat to isolationism a quarter of a century ago was started not by a direct attack against international cooperation but against the alleged imperfections of the peace.

"In our disillusionment after the last war we preferred international anarchy to international cooperation with nations which did not see and think exactly as we did. We gave up the hope of gradually achieving a better peace because we had not the courage to fulfill our responsibilities in an admittedly imperfect world.

"We must not let that happen again, or we shall follow the same tragic road again—the road to a third world war.

"We can fulfill our responsibilities for maintaining the security of our own country only by exercising our power and our influence to achieve the principles in which we believe and for which we have fought."

We cannot fulfill those responsibilities by withdrawing from the world in protest. Nor can we fulfill those responsibilities by yielding up our own freedom or expecting other people to yield up their freedom for our peace. Peace without freedom is not peace, but tyranny.

How then can we most effectively exercise our power and influence to fulfill our responsibilities to ourselves and to the world and strengthen the cause of peace in this imperfect world?

There are no simple, easy answers to this question. I will only suggest two avenues of approach which should be helpful.

In the first place, we can and must make it clear that we ourselves intend to live by the Charter of the United Nations and that we will exercise all our power and influence to see that other nations, large and small, live by the Charter.

In the second place, we can and must exert ourselves to help those countries whose economies have been shattered by the war to become again economically self-supporting. For only if the war-wrecked countries of the world are restored to health will their peo-

ple feel that they have a stake in a peaceful world of law that is worth defending.

The Charter of the United Nations expresses the common hope of the peoples of this world for enduring peace based on law, because the Charter is cherished by the peoples of the world, it cannot be completely ignored by any government that may find itself in power in any country. That is an impelling reason why we must hold to the Charter, defend it, live by it, and build upon it.

The principles of the Charter are not, however, self-enforcing. There is no self-operating mechanism which can be devised to give the world peace under law. There is no voting machine which can reflect with unerring accuracy world opinion or which can yield an incontestably right answer to every perplexing world problem.

The Charter of the United Nations, like the Constitution of the United States, was constructed, as it had to be constructed, on the basis of compromise. Its future depends not upon its lettered provisions, but upon the moral and material support which the nations of the world give to it and the extent to which they live by it.

President Truman has pledged that the United States will support the United Nations with all the resources we possess. If we keep that pledge and if other law-abiding nations likewise support the United Nations, the Charter will live and grow.

As our Constitution provides the basic law of our land, so the Charter of the United Nations provides the basic law of nations. The law the Charter provides may be incomplete, but it does strike without equivocation at the use of force in any manner contrary to its purposes.

Unfortunately much of the discussion of the unanimity rule and the veto has blurred and obscured this basic and all-important fact.

Under the Charter, all members of the United Nations, large states as well as small states, pledge themselves to refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state or in any other manner inconsistent with the purposes of the Charter.

Under the Charter, all members of the United Nations, large states as well as small states, pledge themselves to settle their international disputes by peaceful means, in such manner that international peace and security and justice are not endangered.

As our representative to the United Nations, Senator AUSTIN, has said, "These sweeping and binding commitments are not limited by the power of veto in the Security Council. The veto does not legalize any violations of these commitments. They are the law." As President Truman has said, "Every member of the United Nations is legally and morally bound by the Charter to keep the peace."

The General Assembly has also affirmed the principles of international law recognized by the statute of the Nuremberg tribunal and the judgment of that tribunal which make the planning or waging of a war of aggression a crime against humanity for which individuals as well as nations are responsible.

It is true that unless the permanent members of the Security Council are agreed that there has been a violation of the Charter no state is bound to act simply because a certain number of states believe that there has been a violation. But in case of clear aggression no state has the moral right to stand mute. In case of clear aggression, all law-abiding states have the right to and are under a moral duty to defend the Charter.

Magna Carta had no elaborate machinery to ensure its enforcement. The Constitution of the United States had no clauses dealing with what should happen in the event that States attempted to secede. The principles of the Magna Carta survived and the Constitution survived, because the people were determined that they should live. We must make it clear that we are determined that the law of the United Nations shall prevail and that we are prepared to use our power and our resources, veto or no veto, to defend the basic law of the Charter.

I think it is clear that respect for the purposes and principles of the Charter includes respect for present power relationships. As former Secretary of State Byrnes has said:

"The present power relationships of the great states preclude the domination of the world by any one of them. Those power relationships cannot be substantially altered by the unilateral action of any one great state without profoundly disturbing the whole structure of the United Nations.

"The great states are given special responsibility under the Charter because they have the military strength to maintain peace if they have the will to maintain peace. Their strength in relation to one another is such that no one of them can safely break the peace if the others stand united in defense of the Charter."

If we want peace in the world, and we cannot have peace in the world without some law in the world, we must realize and make others realize that delicate and sensitive power relationships cannot be undermined by unilateral action through force, coercion, or more subtle forms of pressure and penetration.

That does not mean that we oppose, and that the Charter of the United Nations forbids, all change in the external relations of states.

We believe in progress and in freedom. We are not defenders of privilege or of the dead hand of reaction.

The Charter of the United Nations permits and encourages free and friendly negotiations between states and provides means, particularly in article 14, for the concrete expression of world opinion on the need for peaceful change.

There will be need for peaceful change. The world does not stand still. But no nation or group of nations has the right to impose by force or threat of force its political or economic system or way of life upon other nations. No state has a right to wage a war of nerves against another state or seek through devious devices of infiltration and penetration to control or undermine its government and to destroy the freedom and dignity and basic rights of its people.

War inevitably brings changes in power relationships among the great states. Doubt and uncertainty as to the consequences of these changes generally creates uneasiness and fear among the victors as well as the vanquished. That is why it is vitally important that there should be no further unilateral action to disturb established power relations by force or coercion.

Uneasiness and fear in the world can only be increased if the world is divided among a few great states, each dominating satellite states. A contest for satellites is not a struggle for peace. It is a struggle for power. And it can only lead toward war. We do not want to force the smaller states, or the less powerful of the great states, to choose their guardian state or to have their guardian states chosen for them. Friendship among states like friendship among individuals should not exclude friendships with others. We want to live in a world where power is diffused and freedom under the law of nations is the right of every state.

The aim of the policy of the United States is not to engage in a struggle for power over other States and other peoples, but to help States and peoples to regain and rebuild their political independence and economic health. It is for that purpose, and not for the purpose of bringing them within the orbit of our power, that we are extending help to Greece and Turkey. We could not leave them economically weak and defenseless against a continuing war of nerves. Had we not placed ourselves in the postion to continue and supplement the assistance that the British Government had been furnishing these countries, there was grave danger that the war of nerves being conducted against these countries would have been intensified in the false belief that we would not act in defense of the rights of these countries under the Charter of the United Nations.

We are engaged, not in a struggle for power, but a struggle for the supremacy of law. We must not slacken in our efforts to maintain the law of the Charter. For only under law can peace endure.

While we must remain strong and ready to defend the law of the Charter, we must not ourselves fall victim to the belief in the inevitability of conflict. There is and has been room in this world for different ways of life. War is inevitably only if people fail to tolerate and respect ways of life that they cannot share.

None of us is wise enough to predict the future, but we should be slow to judge the future by the conditions that now prevail in this terribly sick world. In the immediate aftermath of war there is a tendency to think too much in terms of military power and too little in terms of economic need.

That brings me to my second point. It is not enough for us to take our stand for law and peace. We must do our part to make the peoples whose social and economic life has been shattered by the war, feel that they too have a worth-while stake in law and peace.

Peace is not merely a truce between wars. If we want peace, we must deal with the causes of unrest in the world and not merely their symptoms. It is economic distress, hunger, sickness, and hopelessness that breed political unrest and make men the prey of warring ideologies and rival tyrannies. People want freedom and law, but they must have food, shelter, and clothes. We have often said glibly that the last war was the most devastating war in all history. But we are only beginning to realize how completely it has shattered the economies of Europe and how difficult it has made the resumption of normal living.

Europe is not the only part of the world that is in need, but time compels me to confine my remarks to Europe whose economic recovery is vitally important to the economic health, peace, and security of the whole world.

If we want a free Europe—and it is hard to see how we can have a peaceful world without a free Europe—we must urgently consider what can be done to put Europe back on her feet economically, what can be done to help Europe to become again self-supporting.

We must, I think, face the fact our programs for economic aid to Europe, large as they have been, are going to be clearly insufficient to enable Europe to get back on her feet.

Our previous programs underestimated the ravages done to the European economy, the time which would be taken to restore its effective functioning, the substantial rise in the costs of American exports and other factors.

In 1946 we exported to the rest of the world about $15,000,000,000 of goods and services. This is more than twice as great in value as the goods and services we are importing from the rest of the world. In 1946, $6,000,000,000 of these exports were financed directly or indirectly by loans and grants-in-aid by the United States Government. Existing authorizations cannot possibly enable the flow of needed exports to continue at the extraordinary rate of the first quarter of this year, a level of more than $19,000,000,000 a year. Some leveling-off of this extraordinary rate of exports is inevitable. But

unless substantial additional financing is forthcoming the decline could assume proportions which would aggravate misery abroad and increase the possibility of recession at home.

Those who have been studying Europe's rudimentary rehabilitation needs tell us that Europe, including Great Britain, may require as much as five or six billion dollars a year for another 3 or 4 years to meet those needs.

Unless Europe can secure adequate assistance, it may be difficult for some European countries to avoid political unrest and political instability and the danger of dictatorships. People long tired, cold, hungry, and impoverished are not wont to examine critically the credentials of those promising them food, shelter, and clothes. And dictators, knowing that they intend to hold power if they can get it, will play the right side or the left side, and sometimes both sides, to get and keep power.

Our interest is in a free Europe. The way to keep Europe free is to restore the war's shattered foundations of the closely interrelated and interdependent European economies and to give the European peoples renewed confidence in themselves, hope in their future, and a genuine stake in peace and law.

At the close of the war many of the liberated countries of Europe were not concerned with the revival of the German economy. And while the liberated countries do not now want German economic revival to have priority over their own revival, they have come to learn that the extremely low level of productivity of the German economy is hampering and not helping the revival of Europe. Europe needs German products and German markets. In fact, coal from the Ruhr is one of the keys to European recovery.

As the liberated countries are learning that they have an interest in the peaceful economic revival of Germany, so we must learn that we have a definite economic as well as political interest in the economic revival of Europe as a whole. Europe's economic recovery is as important to the economic health of a peaceful world as Germany's economic recovery is to the economic health of Europe.

To cut Europe adrift and to compel her in her misery to shift for herself during the next few years would be a body blow to security, political stability, and economic progress the world over. The loss of European markets would not only cause serious and painful readjustments in our own country but would have repercussions all over the world.

Economic help to revive war-shattered Europe will be costly. But the withholding of economic help would also be costly—not only in economic consequences but in social and political consequences.

The more important problem in many ways is not whether Europe should be helped but how Europe should be helped. After the First World War we thought we were pursuing a policy of fairly prompt retrenchment on European aid and the gradual retirement of the war debts. It turned out, however, that we aided Europe substantially and not altogether wisely.

The problem of Europe's rehabilitation is much more serious now and we should try to think it through more clearly. After the First World War we were more concerned with questions of money repayment and money interest than we were with the question of the effectiveness of our aid in producing sound and healthy economic conditions throughout the world.

If we are to assist in intelligent programs of economic aid for Europe, our first and primary objective should be to assist programs that will rebuild a self-supporting European economy. Until the European economy does become self-supporting it is difficult to see how Europe can make substantial payment of capital or interest except as she borrows from or puts off payment to Peter in order to pay to Paul. And we must not forget that unless we wish to subsidize heavily our future foreign trade, we can over the long term be repaid only in goods and services which we are willing to accept and in investments which we are willing to hold in foreign countries. If we wish to preserve over the long term our economic position in the world, we must build up and replenish the resources base upon which the continuance of our productivity and prosperity depends.

Inasmuch as the economies of the individual European states are closely interrelated, priority in economic aid should be given to programs which will serve to revive the European economy as a whole. Particular consideration should be given to projects which will serve to remove economic bottlenecks which obstruct the efforts of European states to increase their trade and production. For example, whatever we can do to help increase coal production and facilitate its transport would have a stimulating effect upon the economy of nearly every European country.

Even with our large food exports to Europe there is an acute shortage of food through Europe. A project to increase overall European food production by the supply of fertilizer, seed, and farm machinery could have its effects throughout Europe.

Trade between European countries has been hampered and has become largely a matter of barter because they have no confidence in one another's currency. Possibly a project could be devised to finance trade between European countries which would have a stimulating effect upon trade and production throughout Europe.

We should consider our help to Europe and other countries not merely in terms of dollars but in terms of production and goods for which the dollars are to be used. We must not permit our economy to be inflated or distorted to the point that our own economic health is impaired. We cannot hope to be able effectively to help create economic stability in a free world unless we can keep our own economic house in order. Our productivity and resourcefulness, which won the war, will be equally necessary to win the peace.

The task of helping to rebuild a war-wrecked world is a heavy task. But it is a challenging task. We were not daunted by the heavy tasks of war. If we want peace, we must not flinch before the tasks of peace. If we want a free, peaceful, law-abiding world, we must see that the peoples of this world have a stake in the peace and have the vitality, strength, and will to maintain peace and freedom under law.

Citations by B'nai B'rith to Secretary of State George C. Marshall, Associate Justice Robert H. Jackson, and Secretary of War Robert P. Patterson

EXTENSION OF REMARKS
OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 24 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, that great national patriotic organization, B'nai B'rith, which has made such outstanding contributions to our country in war and peace, held its triennial convention May 11–14 in Washington, D. C. The theme of that inspirational convention was freedom and democracy. Citations were awarded to three great Americans for their contribution to humanitarianism and justice, Secretary of State George C. Marshall, Associate Justice Robert H. Jackson, and Secretary of War Robert P. Patterson. I ask unanimous consent to have printed in the Appendix of the RECORD the responses of Secretary Marshall, Associate Justice Jackson, and Secretary Patterson to the award of citations, as well as the address of the Attorney General, Tom C. Clark.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

RESPONSE BY THE SECRETARY OF STATE

Hon. GEORGE C. MARSHALL. Mr. Goldman, Mr. Chairman, ladies and gentlemen, I am naturally greatly honored by this award, by this distinction, and by the generous expressions with which it was presented to me. I shall naturally treasure it.

During the war years I had some contact with your organization and was familiar with your work, in particular in hospitals and with the transports with which you lent great assistance. More recently, in my present position, I became involved in the effort to salvage the tragedy of Europe, and I became more imminently aware of the tragic situation of so many of your people in Germany and in Austria.

I have met and listened to many of your leaders here in the United States, in Berlin, and even in Moscow. I can but assure you of my profound sympathy for that tragic situation in Europe, and I can assure you of both my deep personal and my deep official interest in reaching a prompt solution.

Thank you very much for this honor. [Whereupon the assembly arose and applauded unanimously.]

RESPONSE BY ASSOCIATE JUSTICE JACKSON

Hon. ROBERT H. JACKSON (Associate Justice, U. S. Supreme Court). Mr. Vice President, Mr. Chairman, I am of course deeply touched at the tribute and the award. It is quite natural that the Jewish organizations and the Jewish people should have taken a great interest in what was done at Nuremberg. The Jewish people stood a good deal of the pain of the Nazi regime, but it was non-Jewish people who must bear the shame of the Nazi regime, and it was the non-Jewish people who needed to square themselves with civilization for the wrongs which had been inflicted, among others, predominantly upon the Jewish people.

I find great difficulty in talking about it, because one is either inadequate or sensational. We have become so numb in this country, so accustomed to these recitals, that we cannot grasp the enormity of the program of crime that was carried out in Europe. We believe it could only occur in some dark age; indeed it has only occurred in a dark age, because when the story is written, ours is one of the darkest ages of all history. Never has the world seen a program of enslavement that reached so many people; never has it seen a program of extermination, that exterminated so many people. Of all the history of the world, ours in that respect is the darkest age of all times, and it is not a pleasant thought.

When I face an audience like this, I cannot help but think of the comparison: more people than are in this room were exterminated at single gasps in the gas chambers in the Nazi concentration camp at Oswitz—More than 2,000 at a time. Look about you and see how many souls that really is, and you can see how impossible it is for us to grasp the program. More than 4,000,000 people—more than a city like Cleveland, almost of the city of New York, wiped out by

this process, and we in this country find it in our hearts sometimes to complain about the absence of steak or the amount of taxes or some other detail. I confess I have little patience with it.

The trials at Nuremberg represented some effort to square this era with history; to write into the record something that would make clear that the history that records these atrocities must also record that the mass of mankind did not approve of them. We have tried to set up principles by which the second half of this century may redeem its first half, by opening up a better way—but it is a long way to go.

I deeply appreciate the interest that you have taken in this effort, and the expression of appreciation which you have voiced.

Let us hope that the four nations which united in condemning aggressive warfare will unite in carrying through the principles they declared. Let us hope that the rights of minorities which we sought to protect, the right to live, the right to follow their own creed, the right to have their own thoughts and express their own views, that those rights may win broader protection. Those are the things that Nuremberg tried to write into the record to offset as far as possible the record which darkens our time.

[Whereupon the assembly arose and applauded unanimously.]

RESPONSE BY THE SECRETARY OF WAR

Hon. ROBERT P. PATTERSON (Secretary of War). Mr. Chairman, ladies, and gentlemen, and friends of B'nai B'rith. I am profoundly moved by the distinguished honor you have given me tonight. To have received it from an order of the traditions of service and the ideals of service that B'nai B'rith stands for is, indeed, a great source of satisfaction to me.

I like to think of it, however, as a tribute by you to the men and women of the United States Army. [Applause.] Having fought a war on the tremendous scale of World War II, and having with our allies forced the surrender of the German Nazis, the United States Army in Europe found 6,000,000 enslaved persons, dragged from their places of origin, to work for the so-called master race in Germany. They aided, succored, and sent back the greater part of those persons, but they took care of 600,000 remaining and they have extended that succor, aid, and assistance to them now for 2 years, giving them the necessaries of life, and enabling them at least to live a decent existence.

Of course, that is only a stopgap. It is a program of improvisation. The real solution must come in resettlement, with hope for those people in another land. [Applause.]

I go along wholeheartedly with what Mr. Harrison has said. [Vigorous applause.] The International Refugee Organization is a step in the right direction, but it is by no means the whole distance. It is for the United States of America to show its faith by its own program; to take its share of displaced persons to our own shores. It is a blunder and a mistake and a fallacy to believe that those people will be a burden on us. They will not be. Their mere survival through the years of misery, degradation, and hardship, their mere survival proves their stamina. They will bring talents, skills, and energies that will be an asset to this Nation, and that will make them paying passengers, not deadheads. [Applause.]

Until that day comes the Army will do its assigned duty, and so, as I said in the first place, I prefer to think of it as a tribute from you to the men and women of the United States Army. [The assembly arose and applauded and cheered.]

ADDRESS OF THE ATTORNEY GENERAL

Hon. TOM C. CLARK. Mr. Chairman, Mr. Chief Justice, Associate Justice of the Supreme Court, members of the Cabinet, and friends of B'nai B'rith, it is an honor and a privilege to gather with you here tonight to honor the memory of our friend, Henry Monsky, and to recognize the accomplishments of three patriotic, courageous, God-fearing Americans, Marshall, Jackson, and Patterson [applause and cheering]—three names that shall long be close to the heart of every American. But tonight on behalf of peoples all over this earth who believe in a living, dynamic democracy, I wish to say to Secretary of State Marshall, and to Associate Justice Jackson, and to Secretary of War Patterson: God bless you and keep you.

My friends, it is in a mood of sadness, coupled with deep respect, that I come here tonight to greet the triennial convention of the supreme lodge of B'nai B'rith. I, too, miss Henry Monsky. I miss his smile, his warm handclasp, his kindly, brotherly greeting. Tonight his heart would be filled with deep satisfaction at this distinguished gathering that honors him.

Henry Monsky's untimely passing is not only a great loss to his people, but also to the entire Nation. It is a personal loss to me, for I knew him well, worked with him often, and loved and admired him for that work. His accomplishments for humanity were many. He recognized no racial barriers. He loved mankind. Tonight I think of him as being here with us, for in the words of James Whitcomb Riley, "I cannot say and I will not say that he is dead—no; he is just away."

He leaves behind him in the flesh the oldest and the largest Jewish organization in the entire world's history.

Nobody knows what freedom is so well as those who do not have it. No Americans are better equipped to cherish and guard their heritage than those who have once known what it is to endure oppression, to live in the shadow of persecution and under the handicap of unequal opportunity.

American Jewry is versed in the meaning of these injustices, these inhumanities to man. You, the Jews of America, are members of a free society, citizens of a democratic country. But your forebears lived in the house of bondage.

Yes, you know, you understand well. And that is why your forebears, 104 years ago, founded the B'nai B'rith. They founded it "to reaffirm faith in fundamental human rights." Those fundamental precepts of democracy live today incorporated into the Charter of the United Nations.

Yes, like Henry Monsky, Henry Jones, and his 11 associates back on October 13, 1843, when they founded your order, built it on a solid foundation of faith and service, and as their adopted country, America, expanded to the limits of its geographical frontiers, so has your organization extended its services until you delegates here tonight represent more than 300,000 men, women, and young people throughout this earth.

I need not recount to you its active leaders and workers, the superb record of your order as a cross-section of Americans of Jewish faith in every patriotic national endeavor since your inception. You are familiar, too, with the organization's participation in every field of activity in the recent war. That record, to which President Truman, the War and Navy Departments, the American Red Cross, and other Government and civilian agencies have paid merited tribute, needs no embellishment from me. It is written in the pages of history, as are the names of the more than 500 members of your organization who gave their lives in World War II for our peace and our security.

Under our democratic form of government we have grown from 13 colonies, with their sparse population scattered along the Atlantic seaboard, into the world's greatest nation. We owe this to no one faith, to no one color, to no one race. The quest for freedom, for the inalienable right to enjoy the civil and human rights of man, has brought immigrants of every creed from every part of the globe to these shores of ours. They and their children were the pioneers who forged our Nation; they and their children are the citizens who brought us safely through two world conflicts in our own generation. Every faith has played an important part in our history. There is not a single one which has not made a vital contribution to the building of America. It is gratifying to you, I am sure, to know that none exceeded the people of your own faith, and that none has striven more diligently for the principles of unity and humanity without which there would have been no United States of America.

The history of the Jewish people in America goes back to our very founding.

One of the most important figures of the War of Independence was Haym Salomon, who came to New York from Poland in 1772. Who will forget Haym Salomon? Some historians estimate that Salomon poured a tremendous sum into the Revolution, and he died impoverished in 1785 at the early age of 45. His reward, like many, delayed over 150 years, came on December 15, 1941, with the unveiling of a monument in Chicago as a joint memorial to George Washington, Robert Morris, and Haym Salomon, the funds having been contributed by Americans of all religions and of all ancestries.

In every period of our history, whether in peace or war, prosperity or adversity, members of your faith have played a leading part. When our future as a united people hung by a thread in Civil War days, they served with distinction on both sides of the Mason and Dixon line. One of the greatest men on the side of the South was Judah P. Benjamin—United States Senator—while on the North was Mayer Lehman. It was he who arranged for the shipment of food to the suffering through the blockade of the South.

It is hardly necessary to recall the familiar names of those who, since the turn of the twentieth century, have labored so unceasingly and so well in the cause of Americanism and the brotherhood of man.

It is no secret that for 20 years or more we have been the target of an adroit, a subtle, but a wholly vicious campaign designed to lull us into a false sense of our own security—to blind us to the dangers from totalitarian forces bent upon conquest of the world and subjugation of all its peoples.

It was Goebbels who said, "No other country has so many social and racial tensions as America. We shall be able to play on many strings there." We fooled Goebbels and we fooled all of his kind.

The military threat from without we met squarely and turned back. But, it is true internal dangers of this nature are still with us; it seems they never cease.

One fact cannot be hurdled by any clear-thinking American today: For a strong Nation, a safe Nation, loyalty to our Government is of the very essence. When asked the question, How many subversives can the United States Government afford to harbor? our prompt answer is, Not a single one. It is my purpose to make this a living reality.

This can—and it will—be done. We shall eliminate the abuses of freedom, but in so doing we shall not destroy freedom itself. There will be no whitewash. There will be no witch hunts. There will be an America safe from the fifth column and equally safe from the gestapo. That is the only kind of America that true Americans want.

No law is better or worse than the personnel administering it. And because we are men and women and not robots or stones, we rightly try to humanize our law rather than legalize the human soul.

And so all of the argument, legal or otherwise, in the world cannot prevail against ideals. It was an ideal, the flaming zeal to

make democracy a living fact, which carried our ancestors safely through the trying times of the War for Independence. But there is another type, the insidious infiltration of propaganda by the Communist Party, by bigoted Fascist-minded groups like the Ku Klux Klan and the Columbians, and by other nefarious organizations which would destroy our unity and with it our way of life. I am very proud of your organization; it is in the forefront fighting against that type of thing, as so forcefully stated in a recent issue of the National Jewish Monthly:

"We are opposed to communism in the United States. We are opposed to it because it would substitute for our present social freedoms the dictatorship that would mean the end of free speech, free press, free religious assemblage. There is nothing wrong with democracy that more democracy won't cure."

Oh, how true—let me repeat, "There is nothing wrong with democracy that more democracy won't cure."

America today is proof positive that democracy works. It works for peoples of different races, religions, and natonality backgrounds. Here all classes live together in harmony under the laws of God and the government of their fellow man. In this connection, I voice the hope that President Truman's plea for us to accept a fair share of those homeless victims of world cataclysm be promptly heeded. As the descendants of immigrants we cannot now lock the doors of our beloved land to a fair share of those worthy souls that now ask legal entry.

Our country today is the only hope of the world. For democracy to live and work, its peoples must have hope. They must have that same hope that fired the enthusiasm of our ancestors, the hope of peace, the hope of a tomorrow, that hope that kindles, thrusts out fear and destroys want.

The recent plea of President Truman for aid to stricken countries has done much to rekindle that hope throughout the world. By admitting our fair share of immigrants who have a background not inimicable to our ideals, we strengthen the hope of democracy throughout the world.

All of us—hand in hand—will march on—side by side, contributing each in his own way, not only to the advancement of our own country but to the advancement of the world. In so doing we have the hope of eliminating want and fear and bringing about a permanent peace among all peoples everywhere on the face of the earth—for God intended it so to be.

It Did Happen

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, June 24 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a column by Thomas L. Stokes which appeared in the Atlanta Constitution, the St. Louis Globe-Democrat, and other papers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT DID HAPPEN

[By Thomas L. Stokes]

It can happen here. In our own Capital, seat of a proud democracy and of the most powerful nation today.

Freedom of speech and assembly challenged. The right to testify in one's own behalf denied. The right of petition denied. Espionage on American citizens gathered at a public meeting. And all at the command of responsible Members of our Congress.

All this did happen in a chain of events preliminary to the public appearance here of Henry A. Wallace—a chain of events rather frightening because it showed how insidious the fever of persecution can become—how minds fired by emotion and prejudice and fear can rationalize one step after another.

It all started a few days ago when Representative PARNELL THOMAS, Republican, New Jersey, chairman of the House Committee on Un-American Activities, announced the committee would have "spotters" at the open-air, public meeting that Henry Wallace would address here.

This preliminary maneuver became clear when the committee subsequently issued a report for publication the day before the meeting charging that the Southern Conference for Human Welfare, which sponsored the Wallace meeting, was a Communist-front organization. This obviously was designed to warn Government employees. Under President Truman's recent Executive order, Government employees who are members of such organizations, or even sympathetic with them, can be fired.

This paved the way for another move, which was the attempt of the American Anti-Communist Association, headed by a Member of Congress, Representative O'KONSKI, Republican, Wisconsin, to get an injunction to prevent the meeting. It failed.

But that was not all that happened in the House. Representative HOLIFIELD, Democrat, California, read a telegram from Clark Foreman, a native of Atlanta Ga., president of the Southern Conference. Mr. Foreman attacked the Un-American Activities Committee as being itself "un-American," said its report contained "lies and half-truths," and protested that the conference had been given no opportunity to testify on its own behalf.

This criticism of the committee was too much for Representative RANKIN. He moved to expunge the telegram from the RECORD. Only seven members stood up to vote against his motion, all on the Democratic side, with 146 for it.

It was left to a woman, Representative HELEN GAHAGAN DOUGLAS (Democrat, California), one of the seven, to rise and voice a protest. She said she would be present at the Wallace meeting. She reminded the House that "the American way is to listen, to read, and to try to think for yourself."

"God help America," she concluded fervently, "if ever freedom of speech and freedom of assembly are threatened."

In an abject and unexplainable fear of communism, which is not complimentary to our strength as a Nation, some people would strangle the only force which can combat it, which is a strong democracy, and strangle it in all its manifestations, spiritual and material.

Somebody's got things all mixed up here.

New Labor Act

REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1947

Mr. LANDIS. Mr. Speaker, the Taft-Hartley law protects the fundamental rights of labor. It is directed toward safeguarding the public interest in connection with labor disputes, setting forth more explicitly the rights, duties, and responsibilities of both workers and employers and eliminating certain abuses that have crept into the labor movement. It preserves every basic right of labor. It guarantees labor's right to join a union, the right to organize and the right to strike. It guarantees the rank and file of labor the right to take a greater part in their problems. The secret ballot preserves for them the right to decide for themselves secretly without coercion by radical labor leaders or management. It guarantees labor the right to bargain with management on a local, region, or industry-wide basis. It guarantees them the voluntary check-off and the right to bargain collectively on wages, hours, safety measures, and better working conditions.

Do you think we need labor legislation? I do. Let us take a look at the record.

First. How would you like to return from the Navy and start in the wholesale produce business and have a union prevent you from using your own truck with union labor because they wanted the teamsters' union to do the hauling?

Second. How would you like to own a dairy with 150 cows and have your milk declared "hot milk" and dumped in Main Street because your 5 men who milked the cows would not join the union?

Third. How would you like to pay a stand-by band a high price in order for a high-school band to be permitted to play on the radio?

Fourth. How would you like to be a union stone fabricator in Indiana and be deprived of work because the building trades in New York or Chicago refused to use stone fabricated by union men in Indiana?

Fifth. How would you like to be forced to hire an orchestra of 15 members when 12 members were sufficient to do the job?

Sixth. How would you like it if you were in a business for 50 years and the union gave you 15 minutes to get off the streets because your office girl would not join the teamsters' union?

Seventh. Do you think labor leaders should draw their salaries while their union is out on strike?

Eighth. If the right to strike and collective bargaining mean anything, do you not think unions should abide by their contracts?

Ninth. Would you like to ask a union's permission to enter your business at certain hours of the day or night?

Tenth. How would you like the building of your home delayed for weeks because of jurisdictional strikes?

The law is far better than either the country or labor unions have had any reason to expect. It will not destroy labor unions. The present National Labor Relations Board may have trouble in administering the law. However, many difficulties can be avoided by decent and common-sense administration. A committee of 14 Members of Congress will be selected to watch over the new law so that Congress will be in position

to act intelligently on any needed revisions.

The radical labor leaders are crying the loudest. Well let us take a look at the new law and see what they are crying about.

The toughest section of the law is the mandatory injunction against secondary boycotts. Now let me give you an example of a secondary boycott. The building trades in New York will not put up a building in New York made of Indiana limestone if the stone is not fabricated in New York. However, if this building stone had been fabricated in Indiana by union labor the building costs would have been reduced about $100,000. The CIO refused to install electrical goods made by the AFL and vice versa. Now can you see any reason why Congress should not put a stop to this nonsense?

Another section of the law to which these labor leaders object is the penalty for jurisdictional strikes. These strikes grow out of disputes between two or more representatives of employees. These strikes should be outlawed because innocent employers should not be penalized because unions force a strike to settle difficulties between unions. The mill or factory should continue operating during jurisdictional strikes. Under the new law unions are given 10 days to settle these disputes. The penalties for these strikes are: First, discretionary injunction by the regional office of the Board; second, suit for damages; third, workers discharged for this cause are not entitled to reinstatement. All of the labor leaders I have contacted admit that jurisdictional strikes are wrong.

We have received many complaints from radical labor leaders on the section dealing with subversive union officers. Under this section unions are denied the protection of the act unless officers have filed affidavits that they are not Communists or subversive individuals. Officers can be fined if they falsify their affidavit. All Federal employees are required to file the same affidavit. So, I see no reason why labor leaders should object to such a plan.

The chief reason why Congress outlawed the closed shop was that it prevented many workers from obtaining a job. On many occasions many skilled men were barred from closed-shop unions. Closed-shop unions and other labor organizations may organize union shops if more than 50 percent of them vote for it and their employer agrees to it. Workers are allowed to strike for a union shop.

Peaceful picketing is allowed but no picket or group of pickets is allowed to stop workers going to and from their place of work. The penalties are: First, cease and desist order by Board; second, discretionary injunction by Board; third, workers discharged for stopping workers are not entitled to reinstatement.

Strikes which imperil national health and safety—if the President finds a strike affects the public health and safety he can have the Attorney General issue a temporary injunction which will extend over a period of 60 days for mediation and 15 days for the rank and file of labor to vote on the employer's last offer. Another 5 days is allowed to report the results back to the President and Congress. The time limit on the injunction is 80 days. This plan is like the one used in the Railway Labor Act.

The act's provisions relating to welfare funds, which are paid for by the employer exclusively or by the employer and employees jointly, is to be managed under written rules and under joint administration. This is a prolabor measure. The rank and file of labor should welcome protection of their funds which provide for sickness and death benefits.

This act will outlaw strikes against the Government. Federal employees who strike are barred from Government service for 3 years.

This act will guarantee free speech to employers in their dealings with workers, provided their statements about unions are not coercive nor threatening.

This act permits supervisors to join unions but they receive no protection from the act.

Vote on the employer's last offer—if the Mediation and Conciliation Division of the Government is called in on a dispute, the Director of this Division may submit the final offer of the employer to a vote of the rank and file of workers.

This act would ban unions from charging excessive dues or initiation fees.

The Corrupt Practices Act is to be strengthened by extending its provisions to cover all types of expenditures by corporations and unions designed to influence the outcome of elections. To invoke the assumed danger of an invasion of the right of free speech and freedom of the press is to draw a red herring across the trail.

Both management and labor has the right to sue for a breach of contract.

The National Labor Relations Board is not abolished but increased to five members.

The functions of the Board are separated. General counsel appointed by the President exercises the prosecuting functions and the Board acts as the judicial body.

The act says you cannot compel an employer to pay its members for services not performed. Financial reports must be filed with the Secretary of Labor and distributed to each member of the union.

This act shall not be applicable with respect to any matter which is subject to the provisions of the Railway Labor Act, as amended from time to time.

As a member of the House Labor Committee for the past 9 years and as one of the conferees on this bill, I have worked hard and long on this problem. It has been seriously considered from every angle. The general public is vitally interested and there was a genuine demand for constructive legislation with the view of creating a system whereby disputes between labor and management might be peacefully settled, without violating the fundamental rights of either, and without causing long periods of strikes and unemployment or great loss to industry.

I believe this bill goes a long way to bring this about. While this bill may not be perfect, it is not a vicious antilabor bill, as many radical labor leaders have tried to make the rank and file of labor believe. I suggest that every man who labors get a copy of the bill, study it, and learn just what the provisions of the bill are. They will find it is not as represented by these radical labor leaders or as represented by President Truman. A few days before he sent his veto message to Congress he said at Princeton University that he had not read the bill. I think he told the truth about that and anyone who will read the bill and then read the veto message must come to the conclusion that the President, or whoever wrote the veto message for him, did not know what was in the bill, or there was an attempt to misrepresent the facts.

I am convinced that if Government, labor, and management will make a good, faithful effort to comply with the provisions of the act, that it will provide the system for industrial peace and prosperity.

Federal Aid for Education

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 13, 1947

Mr. HAYS. Mr. Speaker, under leave to extend my remarks I include the following editorial from the New York Times of Saturday, June 7, 1947:

FEDERAL AID TO EDUCATION

Hearings before the House Subcommittee on Education have now come to a close and the subcommittee is considering its report. Some 60 witnesses appeared before it to argue the pros and cons of Federal help to the Nation's schools. Previously a Senate Education Subcommittee had voted to report a similar bill favorably, and is now ironing out the final details of the measure.

Some leaders of the House contend that this is not the time to add new expenditures to the Federal budget. But the House itself ought to have an opportunity to consider this question and to debate the bill openly and on its merits. To keep it "frozen" would be poor strategy; too many people are concerned with the plight of the American public schools. It is neither advisable nor desirable to kill so important a measure in this manner.

Twenty-seven organizations have banded together to see that the House gets an opportunity to vote on the bill. The reason they are centering on the House is that little difficulty is expected to arise in the Senate, where Senator TAFT is sponsoring a Federal aid measure. It is to be hoped that the House, too, will assure a vote.

Answer to Commander Griffith

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1947

Mr. MADDEN. Mr. Speaker, last week in extending my remarks in the CONGRESSIONAL RECORD, I included an editorial written by H. B. Snyder, editor of

the Gary Post-Tribune, of Gary, Ind., wherein he criticized National Commander Paul H. Griffith, of the American Legion, for making unfactual statements in addresses concerning the immigration and admission of refugees and displaced persons to the United States.

I am hereby presenting the testimony of Ugo Carusi, Commissoner of the Immigration and Naturalization Service, which was made before the Subcommittee on Immigration of the House Judiciary Committee on June 20, 1947. This factual testimony reveals that Mr. Snyder's editorial was justified in that Mr. Griffith's figures of 1,540,000 illegal entries of persons to this country is about 800 percent too high.

This testimony should be read by every Member of Congress in order to clear up the propaganda being carried on against the admission of a reasonable number of helpless or displaced war victims to the United States. It follows:

SUMMARY OF THE STATEMENT OF UGO CARUSI, COMMISSIONER OF IMMIGRATION AND NATURALIZATION, MADE BEFORE THE SUBCOMMITTEE ON IMMIGRATION OF THE HOUSE COMMITTEE ON THE JUDICIARY, WASHINGTON, D. C., JUNE 20, 1947

Much has been said and written of late on the subject of immigration. Unfortunately some of the writings and utterances are false and misleading. A recent example is the address delivered by Paul H. Griffith, national commander of the American Legion, to the Daughters of the American Revolution in Washington, D. C., on May 22, last. Because of the prominence of Commander Griffith's position, these assertions of misinformation and gross exaggeration were given wide circulation in the press. Failure to challenge the commander's statements, and to meet them with facts, may give them undeserved weight in the public appraisal of the immigration picture.

Attorney General Clark properly insists that the people of this country should know exactly what is going on in the field of immigration, and I am happy, at his direction, and through your courtesy for this opportunity, to set forth in this memorandum a statement of official fact which he and I are confident will lead to a better understanding and appreciation of our immigration problem, and what the Department of Justice and its Immigration and Naturalization Service are doing in the administration and enforcement of our immigration laws.

Inasmuch as Mr. Griffith in his recent address had something to say on each of the important aspects of immigration, I have chosen in this memorandum to take up each point as he has raised it.

LEGAL IMMIGRANTS

Mr. Griffith says: "Legal immigrants are entering this country at a rate of 154,000 a year."

The largest number of immigrants to come to this country in any one of the last 10 years was 108,721, in 1946. The annual average in the last decade is 55,157, of whom the quota immigrants comprise 29,463, and the nonquota immigrants (mainly immigrants from Western Hemisphere countries and spouses and minor children of American citizens) number 25,694. The actual number of quota immigrants in the fiscal year 1946 is extremely close to the annual average for the past decade, it being 29,095. The nonquota immigrants in 1946 showed a decided increase over prior years, due primarily to the 45,496 war brides and their alien children who entered during that year and boosted the nonquota figure to 79,626. So far the figures for the present fiscal year indicate that the number will be slightly higher.

Mr. Griffith's assertion that 154,000 immigrants are entering legally each year may be explained by the fact that the immigration quotas fixed under law total 153,929 each year. He may have assumed, without verification, that every one of those quota numbers connotes an actual immigrant, when, in fact, in the last 10 years 80 percent of the quota has not been used.

ILLEGAL IMMIGRANTS

Mr. Griffith says: "But for every legal immigrant for whom Richard opens the door to America there are at least 10 illegal immigrants—black-market immigrants, if you please They belong to the 'Sneak Into America' 1947 World Club."

Based on his statement that 154,000 are entering legally each year, his figure for illegal immigrants must be 1,540,000 per annum. Continuing on that basis, he adds: "Every day thousands of foreigners run our borders or skip our laws in illegal entries into the United States."

The largest number of illegal entries is over the Mexican border. Almost to a single man or woman or child, those illegal entrants are Mexican laborers or members of their families. No evidence has come to the Immigration and Naturalization Service that that border or the Canadian border is being used by persons from other countries seeking to enter the United States surreptitiously, in other than rare, isolated instances. The vigilance and cooperation of the Mexican and Canadian Governments have had much to do with this result. On the Canadian border most of the illegal entrants are Canadians coming into the country to work, shop, or visit without strictly following the legal requirements. The experience of the Immigration and Naturalization Service has shown that persons who seek to "slip by" the immigration bars at our seaports are limited to less than 2,000 a year. In the past year about 1,400 of them were stowaways. All but a handful had been apprehended by the master of the vessel and turned over to the immigration officers at the pier. A few who succeeded in getting ashore have been apprehended and subjected to deportation proceedings.

In his reference to illegal border crossers, Mr. Griffith says: "Outlanders from the four corners of the earth run our borders daily along the Canadian and Mexican boundaries and over the Caribbean waters, making a mockery of our meager patrols."

It has already been pointed out that the illegal crossers are almost exclusively Mexicans and Canadians. As for the mockery which they are making of our meager patrols, it is sufficient to say that in the first 10 months of the fiscal year 1947 the Border Patrol and other officers of the Immigration and Naturalization Service have brought about the apprehension and expulsion of 171,703 deportable aliens, of whom 15,313 were deported and 156,390 were made to depart at their own expense in lieu of deportation. Of this number more than 90 percent were Mexicans; the next largest number were Canadians. In 1946 the number was 116,320. It may be of interest to know that this large number of expulsions has brought about a labor shortage in the States bordering Mexico; this is convincing proof that the expulsions are now exceeding the entries. Indeed, in order to meet the labor shortage, agreements have been reached between the United States and Mexico by which Mexican agricultural labor is now being recruited and imported in compliance with our immigration laws. The largest estimate of illegal entries which can be made from the number of apprehensions (including the large number of Mexicans) clearly shows that Mr. Griffith's figure of 1,540,000 is about 800 percent too high.

SEAMEN

Mr. Griffith says: "Seamen, many of them that only in name, are jumping ships in American ports."

In the past 10 years there have been 7,665,342 arrivals of alien seamen at United States seaports. Of this number, 45,100, about two-thirds of 1 percent, deserted. The records of the Immigration and Naturalization Service show that most of them have either been apprehended, deported, or reshipped foreign. Desertions in the fiscal year 1944 were 5,811, in 1945 they totaled 5,577, in 1946 they totaled 4,365. In the first 6 months of the fiscal year 1947 the number is 1,860. This shows a definite downward trend of desertions. Our most recent figures tally closely with those of the prewar years. In speaking of desertions by seamen we must not overlook the fact that this is a technical term and does not, in many instances, indicate that the seaman has left the vessel with the intention of abandoning his calling or remaining in the United States. If a seaman arrives at the pier just too late to sail with his vessel, he is counted as a deserter, although he departs on her next sailing, or, indeed, on a sooner sailing of another of his employer's vessels.

VISITORS AND TRANSIENTS

Mr. Griffith says: "Foreigners arriving 'in transit' on the way to other lands make it a permanent 'sit' in the good old U. S. A.," and "Aliens dropping in on 'visitors' visas' manage to get 'lost' in our wide-open spaces."

The three largest groups of legal nonimmigrants are the visitors for pleasure, who have averaged 40,642 for each of the past 10 years; visitors for business, 29,525; and aliens in transit through the United States to other countries, 33,060. Other nonimmigrants are resident aliens who are returning from trips aboad; foreign government officials, their families and servants; students; and treaty traders. The complete nonimmigrant figures for the fiscal year 1946 are:

Government officials, etc	17,031
Temporary visitors for business	74,913
Temporary visitors for pleasure	59,913
In transit	31,124
Treaty traders	378
Returning residents	13,306
Students	5,855
Members of international organizations (United Nations delegates and families)	658
Other classes	291
Total	203,469

As of April 30, 1947, there were in the United States in legal status 78,543 visitors and 11,391 transits. During that month more visitors and transits departed than entered; 53,090 visitors had entered and 55,357 had departed; 14,348 transits had entered and 13,336 had departed. These figures are cited in connection with the assertion that visitors lose themselves here and transits just sit. Of course, many visitors and transits do seek to extend their stays here and some attempt to remain permanently. The experience of the Service has been, however, that most of them seek to accomplish it by legal means; that is, by asking for extensions or change of status. Inasmuch as such applications are granted only in cases of real merit and where the application is obviously made in good faith, the number of denials of applications runs between 80 and 90 percent.

A check-in and check-out system is maintained by the Service in order that illegal overstays may be detected and appropriate action taken. Our field officers are alerted to act promptly to bring about the departure of those who seek imprcperly to extend their stays. The law does not require nor does limited personnel permit the checking of every person who leaves this country, par-

ticularly persons who leave by train or automobile. Consequently, while we have accurate statistics on the number who enter the country legally, the recorded number of departures is always less than the actual departures. However, in order to be safe, we proceed upon the assumption that a person whose departure is not of record is still in the United States. On that basis, our records as of April 30, 1947, showed that 85,471 visitors and transits were possibly in the country in illegal status. In the past 2 months, we have assigned additional personnel to the task of checking these records. As a result, the number is dwindling fast. Already, a large number have been found to have departed, confirming our judgment that the majority of them had departed at the expiration of the time for which admitted. We hope to complete this survey in the next few months.

STUDENTS

Mr. Griffith says: "Overseas students come here to study and make it life jobs."

In the past 10 years the yearly average of student visitors has been 2,302. The number to come in the fiscal year 1946 was 5,855. Periodic checks are being made by the Immigration Service to determine whether the student is continuing his studies at the university in which he was enrolled. Some instances have been found where students have left the school to go to work or have taken up unauthorized employment while going to school. In those instances the status of student is declared breached and appropriate action taken.

We are watching the student cases very closely, and requiring reports from the school officials as the activities of each alien admitted as such.

GENERAL COMMENT

I have tried in the foregoing to give specific information as honestly as I can on those observations of Mr. Griffith which he would term factual. It has not been my purpose—nor do I feel it appropriate—to comment upon his general views or characterizations. I do add this thought, however: To the extent that he infers that the officers and employees of the Immigration and Naturalization Service are acting dishonestly, carelessly, and without regard to the public good and their oaths of office, with the result that there is—in his words—"skulduggery * * * under our existing laws," and that "Immigration in 1947 has run amuck." Mr. Griffith unfairly condemns a large group of loyal and efficient public servants, a very large number of whom are members of the great organization which he presently heads.

Oil for Moscow

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. WEICHEL. Mr. Speaker, last week when it first came to the attention of the House that petroleum products were being exported to Russia I made inquiry covering the matter of American tankers and I was informed by the Maritime Commission that they knew of none being used for transporting of petroleum from the United States to Russia.

However, I find that on June 14, 1947, the tanker *Belgorod*, claimed to be owned by the U. S. S. R., 4,374 tons, cleared for Vladivostok with 49,131 barrels of fuel oil and 15,999 barrels of bunker fuel, with the consignee being Sanzneflexport, Moscow, Russia, and the information is that this ship was built by the Cal Shipping Corp., Los Angeles, Calif., in 1943, and was formerly the *Paul Dunbar*, and the oil is being provided by a well-known petroleum company in Los Angeles.

Further, I find that on June 14, 1947, the tanker *Elbruz* claimed to be owned by the U. S. S. R., 6,301 tons, cleared for Vladivostok with 35,000 barrels of fuel oil and 14,000 barrels bunker fuel, with the consignee being Sanzneflexport, Moscow, Russia, and the information is that this ship was built by the Swan Island Yards, Portland, Oreg., and was formerly the *Muir Woods*, and the oil is being provided by a well-known petroleum company in Los Angeles.

Further, I find that on June 17, 1947, the tanker *Emba* claimed to be owned by the U. S. S. R., 6,301 tons cleared for Vladivostok with 123,835 barrels of 71-octane gasoline and 12,500 barrels bunker fuel, with the consignee being Sanzneflexport, Moscow, Russia, and the information is that this ship was built by the Swan Island Shipyards, Portland, Oreg., and was formerly the *Shawnee Trail*, and the oil is being provided by a well-known petroleum company in Los Angeles.

Mr. Speaker, I am informed that 71-octane gasoline is a much better quality than that supplied to American automobile owners, and I cannot understand why our Government and petroleum companies of this country are shipping to foreign nations better grades of gasoline than are supplied to American citizens.

Mr. Speaker, I have further examined into the matter of these ships being built in the United States in connection with their present use of transporting oil and gasoline to Russia. It has been claimed that there is a shortage of gasoline in the United States, and it must be imported, yet it is being sent to Russia in ships that were formerly part of the United States tanker fleet.

Since February 1947 I have requested the return of American-owned ships now in the hands of Russia consisting of dry cargo, tankers, and other vessels, but up to this time they have been neither returned nor payment made to the United States for their purchase.

In addition to the three tanker loads of gasoline and oil that have been shipped from Los Angeles to Moscow in the last 10 days, I find three other tankers in the Los Angeles area awaiting cargo and repairs. These tankers were built by this Government as late as 1943, by the Cal Shipping Corp. of Los Angeles at San Pedro, Calif., by the Swan Island Shipyards, in Portland, Oreg., and the Sun Shipbuilding Co. at Chester, Pa.

Mr. Speaker, today discloses that these very same 6 tankers loaded and to be loaded with gasoline and oil for Russia are part of the Americant merchant fleet turned over to Russia without payment during the war, being 36 Liberty dry-cargo vessels, 3 Liberty tankers, 4 T–2-type tankers, 2 tugs, 47 older dry-cargo vessels, 1 older tanker, and 1 older tug, and still being used by the Russians to carry on their philosophy of government.

Within the last 2 weeks the Department of the Interior says that there is insufficient petroleum in this country that it must be imported, and today we find the Department of Commerce making arrangements to export oil and gasoline, with the State Department and Maritime Commission, using American-owned ships to carry gasoline and oil to Russia.

Mr. Speaker, by what kind of reasoning is this Government giving away hundreds of millions of dollars supposedly to preserve the American way of life and at the same time our Government-owned tankers are carrying gasoline and petroleum products to foster and expand the Russian philosophy of government?

Food Surpluses

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. POULSON. Mr. Speaker, I am moved to address this body today on a subject well known to a majority of my colleagues. I would hesitate to estimate the number of speeches that have been made, and the reams of newspaper copy that have been printed, on this subject. Scores of indignant Americans have demanded action by the United States Government or through the United Nations to halt the vicious practices I am about to summarize. Despite the interest aroused, however, the Yugoslavian Government continues to violate in terrifying manner the principle of religious freedom—that freedom so highly valued among all of the Allies in the recent war and chief among the ideals represented in the "four freedoms."

It is not my intention to present these abuses in great detail, Mr. Speaker; but I feel it is important that my colleagues have placed before them, in sharp highlights, the essential practices of the Yugoslavian Government which are destroying the Christian religion within that country. In summarizing these practices, I should like the Members of this body to bear in mind that while the Catholic Church, as the oldest and largest religious institution in Yugoslavia, has borne the brunt of the government's program, I speak as a Congregationalist concerned simply with antireligious persecution wherever it may exist.

Mr. Speaker, the following facts were obtained from a cross section of the American press and were compiled in a number of petitions to the President of the United States. These practices stem directly from governmental action in Yugoslavia and have been substantiated by travelers, refugees and on-the-spot reporters.

First. In Croatia alone, 369 Roman Catholic priests have been killed; 400,000 lay people killed and thousands have been imprisoned because of their religious beliefs. Unspeakable outrages have been committed against the bodies of those executed and Christian cemeteries in general have been desecrated.

Second. Churches, religious, and wayside shrines all over the country have been destroyed, desecrated, and profaned.

Third. Religious books and objects of piety have been burned in homes and churches.

Fourth. Practically all Roman Catholic church property has been destroyed or confiscated. All religious endowments have been seized by the Government.

Fifth. In the State schools, atheism is openly taught and religion is scoffed at. Children are forced to recite anti-religious songs and lessons.

Sixth. All citizens are obliged to attend "spontaneous demonstrations" on Sunday mornings; forcing most people to miss church or suffer consequences. Priests are advised by their superiors not to preach, but to advise; on a non-political basis.

Seventh. All government propaganda agencies are conducting an unceasing campaign against the church of Christ.

Eighth. A reign of terror is being conducted against those who actively practice or preach Christianity. Men and women are taken forcibly from their homes in the night and seldom return.

Ninth. Roman Catholic young people have been barred from all institutions of higher education. Christian youth are constantly terrorized by youth groups sponsored by the Government.

Tenth. The best known example of these practices is typified in the imprisonment and trial of Archbishop Stepinac. This Christian leader, who had conducted an unceasing campaign against nazism and fascism, was given a hearing no civilized system of jurisprudence could call a trial and condemned to 16 years of hard labor. Confiscation of his property by the Yugoslav Government followed, as well as his citizenship rights for a period of 5 years following his release from prison.

Mr. Speaker, I ask the Members of this body to weigh these facts in their respective minds; remembering that Yugoslavia is but a reduced reflection of the Soviet Union; remembering that oppression of religious freedom was one of the initial steps in the creation of Hitler's Germany; and finally remembering that the people of America cannot safely look to their liberties when such practices are so openly practiced abroad.

GOP Tax Bill

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Carleton Kent, from the Chicago Times of June 7, 1947:

GOP TAX BILL

(By Carleton Kent)

WASHINGTON.—If the Republicans in Congress had written a better income-tax reduction bill, they would have been in a better position to argue that it was President Truman's duty to sign it.

There is at least one good argument for a tax cut at this time. Perhaps it is superior to the President's contention that in good times like these there should be no tax cut at all—that any Government surpluses should be paid on the Federal debt.

Many economists believe the inflationary peak of prices has now been reached, and that on the other side is a deflationary slope down which the Nation may slide into a pile up—a recession, which might even become a depression.

One good way to avoid a deepening deflation, they think, is to pump more spending money into the national economy by tax reduction—by giving to the mass of low-income consumers tax savings with which they can buy goods that otherwise would pile up on the Nation's shelves, close factories, cause unemployment, and play general hell.

A tax expert of 30 years' service in the Treasury Department puts it this way: "At such a time a billion-dollar tax reduction is worth several times that much in public works projects."

But most of these economists feel that the only equitable way to distribute the tax rebate, as well as the only way of getting most of the savings into the hands of the low-income groups that would spend it best for the national economy, is by raising the personal income tax exemption from $500 to $700.

This the Republican authors of the new tax bill have not done. Instead they gave people with a net income of $1,500 a 30 percent cut. From $1,500 to $137,000 a year, the reduction is 20 percent, 15 percent up to $302,000 a year, and 10.5 percent for all over that.

They helped the poor man a little bit; and the rich man a lot more.

More than 46,000,000 people, or 93 percent of those paying income taxes, earn $5,000 or less a year. Yet the other 7 percent of the taxpayers get something like 36 percent of the benefits from the Republican reductions.

It was noticeable that the House delegates, in conference committee, yielded on 15 of the 16 amendments proposed by the Senate conferees, but stood pat on the one giving those with incomes of $79,000 to $137,000 a year a 20-percent tax cut, instead of the 15 percent which the Senate thought was enough.

The Republican argument for giving the high-income man a disproportionate share of the tax relief is that it is necessary to encourage "risk capital" to invest in enterprises that will raise production, bring down prices, and keep employment and pay rolls high.

The Democratic rejoiner never successfully refuted, is something like this: "That's all very well, but what's the matter with giving some real encouragement while you're at it to the workingman who's trying to raise a family on $2,500 at prices which you boys sent sky-high when you 'did in' the OPA?"

Terminal-Leave Pay

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. SMATHERS. Mr. Speaker, I would like to remind the Members of Congress we have only 5 weeks left in this session and to date nothing concrete has as yet been done to live up to the many promises made to the veterans. The terminal-leave-pay bill has not yet passed and even though after the President vetoed the tax bill, the majority leadership decided to have hearings on terminal-leave pay, because now there will be sufficient money in the Treasury, still there is little time left for consideration and the veterans back home need the help now. We have met for 23 weeks and no concrete step has been taken toward the housing problem which plagues and harasses the veteran. Those veterans who attempted to go to school under the GI bill found that their subsistence was not sufficient to continue their courses and many of them have been forced to drop out. This problem has been brought to the attention of Congress time and again and yet nothing has as of today been done about it. Those veterans who are needing hospital facilities and medical attention, instead of getting what it was reported to them they would get, are now seeing this Congress cut the appropriation for their medical assistance and help. It appears we are making the same mistake that has heretofore been made at the end of previous wars. We are forgetting the obligation that we owe to those men who gave so much in order that others might continue to enjoy the fruits of their sacrifices. I have in my district a very talented gentleman by the name of Francis J. Brady who has written an eloquent and moving poem entitled "Let's Not Forget." Under my extension of remarks, I submit this poem for consideration:

LET'S NOT FORGET

When the boys come marching homeward
What will they have to look toward,
Will they get the same old glad hand
And then be forgotten by the land
They fought so bravely to uphold,
Will the country turn them down cold,
The same as the boys of eighteen
When they have their lives to redeem.

Let them know our welcome is real
And not give them the same old deal,
Will this country forget again
The debt owed these boys in the main;
Will we forget what they went through
Let's not forget, but still be true,
They were the cream of our young men
Let's keep the faith we had in them.

These boys were the cream of the land
As we prepared to make a stand
Against a foe of savage mind,
Beastly cruel and insanely blind,
Against great odds they made their stand
For you and I and our great land,
Let's not forget, lest we regret,
We owe these boys an honest debt.

Give them a chance to start anew
And don't forget what they went through,
They left behind a broken thread
To take up arms of war instead,
They'll need our help to start again,
Some will come back, others were slain
On fields of battle where they remain,
Did these boys give their lives in vain?

Let's not forget, lest we regret,
Let's pay these boys our honest debt
So they can take up once again
Where they left off, though not in vain,
The threat of life they can redeem
And not like the boys of eighteen
Be pushed aside and forgotten
By a once grateful nation.

—*Francis J. Brady.*

New Labor Act

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of June 24, 1947:

NEW LABOR ACT

Now that the Taft-Hartley bill is the law of the land the great obligation of the Government is to put it into operation with as little friction as possible. The overriding of the President's veto in both the House and Senate, by substantially more than the two-thirds vote required in each instance, leaves no doubt that the bill reflects in general policy the will of the people. We think it should be accepted in that spirit.

The clash between President Truman and the Republican majorities in the Senate and House has undoubtedly dragged the issue into politics. Yet the bill can scarcely be said to be a partisan measure. In the House 60 percent of the Democrats voting were for it even when it carried the mark of a Presidential veto. In the Senate 20 Democrats voted to override the veto and 22 to sustain it. Such liberal and fair-minded men as Senators HATCH, FULBRIGHT, and HOLLAND were among those who cast the winning votes on the Democratic side. It is a pity that, in spite of this opposition from his own party and in the face of certain defeat, the President did not have better judgment than to imply that enactment of the measure will "adversely affect our national unity." As for Senator MORSE'S comment that organized labor "is going to dig in along a united front to prevent the application of this bill," we think that is a gross insult to labor. It implies that labor does not believe in democratic government and is not willing to abide by the will of the majority in matters of broad public policy.

The administration's last-ditch attitude in fighting the bill puts it under an especially heavy obligation to take a thoughtful view now that the measure has become law. For purposes of argument the President had put the most unreasonable and extreme interpretation on many provisions. Now it becomes necessary to administer the act with fairness and temperate regard for the policy that Congress is seeking to effectuate. It will not be a pleasant task for the administration or for the National Labor Relations Board. But it is an obligation that must be faced with sincerity, good temper, and diligence if the strength of our democratic system is to be maintained in this critical period.

Congress, too, has acquired a heavy obligation. It has written this act into the books without removing all of its defects. Modification of some of the more harsh and doubtful provisions will undoubtedly be needed. Congress can unquestionably ease the problem of making the new law effective by studying its operation. To this task it ought to assign its most skilled and experienced members. We think that the appointment of Senator IVES to head the joint committee "to study and report on basic problems affecting friendly labor relations and productivity" would go a long way toward assuring labor that legitimate grievances against the new act will be carefully weighed and that corrections found to be warranted will be promptly recommended. The very nature of the task calls for a man of Senator IVES' background and temperament. It is especially important to name a chairman with whom organized labor will freely cooperate. For the committee's first task will be to smooth out the friction points of the present legislation and to adjust its operation in the light of experience.

Food Surpluses

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. POULSON. Mr. Speaker, in the acute food shortages which are being experienced all over the world, surely there is enough ingenuity and common sense in our Government departments to handle the surpluses such as the thousands of tons of potatoes recently destroyed. While the rest of the world is starving, I find it hard to explain the situation set forth in the following letter which I should like to enter in the RECORD:

TURLOCK COOPERATIVE GROWERS,
Modesto, Calif., June 19, 1947.

Congressman NORRIS POULSON,
House of Representatives Post Office,
Washington, D. C.

DEAR CONGRESSMAN: This is to call your attention to the difficulty we are having in trying to move a rather large block of dried peaches from last year's crop.

We have tried all avenues of outlet and find it impossible to move these peaches at any price. For your information, we are offering them packed f. o. b. car or dock California as follows:

	Cents per pound
Ungraded	13
Standard	11
Choice	12
Extra choice	13½
Fancy	14¼
Extra fancy	15

It may interest you to know that if the peaches were sold on this basis, the grower would not get back enough money to pay for the cost of harvesting and drying the fruit. The prices, therefore, are on a salvage basis.

We also wish to direct your attention to the fact that unless these distressed stocks are moved, they will have a very definite adverse effect upon the 1947 crop, which will be harvested in about a month and a half.

Your assistance is earnestly requested in attempting to move some of this fruit on the foreign relief program, or any other channel which may be used in this connection. We were very much disappointed when told that the Foreign Relief Procurement Agency had decided that this fruit did not contain sufficient nutriment to justify channeling it into the foreign relief market. We sincerely hope that a change of attitude may be had in this respect, since we all know that dried fruit does have a very stimulating effect, not only from the standpoint of vitamins but also as a part of any diet.

Any assistance you may offer in this connection will be greatly appreciated by the writer and this organization.

Thanking you for your indulgence, we are,
Very truly yours,

L. E. NEEL,
General Manager.

United States Employment Service—Views of Idaho State Employment Service

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Tuesday, June 24 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, I should like to state that I favor approval of the President's reorganization Plan No. 2. I believe that a more effective Employment Service will be provided the American workers and industry by retaining the United States Employment Service permanently in the Department of Labor, rather than in the Federal Security Agency, which is primarily concerned with welfare functions.

In that connection there has been some misunderstanding as to the attitude of the Idaho State Employment Service on the pending legislation.

I therefore ask unanimous consent that statements by Col. S. D. Hays, director of the Idaho State Employment Service, and Mr. A. J. Tillman, assistant director of the Idaho State Employment Service and presently acting director, be included in the CONGRESSIONAL RECORD at this point.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

The undersigned, at present recalled to active military service for purposes of observation, treatment, and appearance before the Army retiring board at Fort Lewis, Wash., and in civil life holding the position (now on leave without pay) of State director of the Idaho State Employment Service, a division of the State Industrial Accident Board, states as follows:

1. That as director of the State employment service, I do not subscribe to the opinions expressed by Mr. H. F. Garrett, the executive director of the Unemployment Compensation Division of the Industrial Accident Board, nor to his statements of purported facts.

2. That prior to 1941 the two divisions were integrated and the undersigned was the executive director of both divisions.

3. That it has always been the opinion of the undersigned that the Employment Service to be an efficient service should never be integrated in either operation or administration with any other division or agency, as the administration should be devoted solely to the operation of an efficient and complete employment service. Any integration lessens efficiency.

4. That the statement with regard to interference or undue assistance from a Federal level in the organization and operation of the Employment Service in Idaho is not true and without basis and is a distortion of the facts.

5. The statement that the Regional Director of the United States Employment Service went over Mr. Garrett's head and approached the Governor of Idaho to establish the employment service is a distortion of facts. Mr. Garrett heads only the unemployment compensation division with no authority or jurisdiction over the employment service so it was not a matter of going over his head. I understand the Regional Director of the United States Employment Service did go to the then

Governor of Idaho, I believe sometime in September 1946, and discussed with him the return of the Employment Service to the State, that the Governor stated to him that whatever the undersigned, then the State Director of the United States Employment Service in Idaho, proposed as the proper organization was acceptable with him as Governor of Idaho. Further, on the following day the undersigned with the said Regional Director of the United States Employment Service met with the State Industrial Accident Board and discussed the method of return and organization. That, at that time integration was mentioned and that the Regional Director said it might be possible to make some, but that the Board following the recommendation of the undersigned decided that they would return the employment service as a separate division pending the possible results of legislation, which it was expected would place the service in a new department of labor in the State or otherwise determine what was to be done. True, Mr. Garrett, as head of one of the divisions of the said accident board, and a subordinate of that board, was not consulted, it was not deemed as a concern of his. He was considered, however, in the return of personnel as it directly affected his personnel operations as it did all agencies operating under the State merit system.

6. That during the recent session of the legislature, when the State veterans organizations and others were driving to get the employment service established as a separate entity by law, which the members of the legislature thought they had accomplished and would have accomplished except by a "fluke" in the engrossing committee of said legislature, the regional director and the Washington office kept hands off at all times.

7. That to the knowledge of the undersigned as witnessed by the acceptance by the legislature members of laws (which they thought they had passed) which they voted upon and their votes thereon, there is no desire of the people of Idaho to integrate or consolidate the two divisions of the Industrial Accident Board. The undersigned is without knowledge as to the Governor's attitude, however, during the legislative session he was agreeable to an amendment to the laws of Idaho permitting and establishing the employment service as a separate organization, hence it is not the belief of the undersigned that the Governor when apprised of the facts would condone Mr. Garrett's statement as his position.

8. That as director of the State employment service with previous experience in directing the two services in an integrated form, gave careful consideration to various integration of administrative sections of the two divisions: That there is no justification in the form of economy of funds, personnel or space for the consolidating of the two services not considering the effect such integration or consolidation might have upon the efficiency of operations in local offices.

9. That the statements with regard to referral of workers and the classification of registrants are misleading and not confined to complete facts. That to the best of our knowledge the complaints registered to the committee by Mr. Garrett are confined to the actions of new employment service personnel who were untrained, and that he should be requested to support his broad statements by documentary facts. If Mr. Garrett did receive complaints from farmers about inability to secure farm labor, he withheld these complaints from the employment service for political purposes and for such purposes as is here disclosed.

10. That the costs of operation of the Unemployment Compensation Division of Idaho, particularly with regard to the taking of benefit claims is purely created by Mr. Garrett and was made excessive by his lack of cooperation and with the withdrawal of the claims taking function from the local United States Employment Service offices in Idaho, July 1, 1946, and was done solely for purposes to force integration.

11. That the regional head of the Bureau of Employment Security of the Social Security Administration expressed to the undersigned that he did not favor the separate establishment of claims offices.

12. That it is the belief and opinion of the undersigned that either from a Federal level or State level the consolidation, joining though any integration of the two services herein mentioned, would only work to the disadvantage of the Employment Service, which should be strengthened rather than weakened, as it is the constant attacks of power-desiring persons and agencies (Federal and State) attempting to obtain control over the Employment Service which takes from said Service a portion of its effectiveness of operation. That in Idaho there is more justification from an operating standpoint to make the Employment Service a part of the Department of Agriculture, for it has more functions in placement, contacts, etc., with farmers (not covered by the unemployment-compensation law) than with the unemployment-compensation-covered workers or employers. To subjugate or even "tie in with" the Unemployment Compensation Division in Idaho of this Service does not further the best interests of the majority of workers or employers in the State. A check-up of Idaho's placement record will show that over one-half of all placements during any year have been agriculture and that only a percentage of other placements have been in covered industry.

This statement is made by the undersigned, at present a patient in Madigan General Hospital, Fort Lewis, Wash., this 10th day of June 1947.

SAMUEL D. HAYS,
Colonel, FA, O170950.

Witness of signature:

JAMES R. HYDUK,
Captain, Ordnance Department, O907655.
JOHN BUNYAN,
Chief Warrant Officer, U. S. A., W2103924.

The undersigned, assistant State director of the Idaho State Employment Service since February 1946, State director for 5 years previously during the absence of Col. S. D. Hays on military duty and from December 1933 to March 1941 serving in other capacities in the employment service, having read the statement of H. F. Garrett, states as follows:

1. That, in my official capacities and with full knowledge of the activities of the Employment Service in Idaho both as Federal and State entities, I do not concur in the opinions expressed by Mr. Garrett.

2. That it has always been the opinion of the undersigned that the free public employment service must be maintained as a separate service devoted to the principles of an efficient organization serving all of the people and not certain segments. In order to accomplish this purpose it must not be integrated with or subordinated to any other division or agency.

3. That the reason Idaho is not now integrated is because of the desires of the people of this State as expressed through the State legislature, veterans' organizations, labor unions, individual employers, farmers, and others. It is not a separate service as a result of Federal interference or insistence at any time. It is a separate service because Mr. Garrett and the interstate conference have so far been unable to override the wishes of the people of this State. It would be a separate service by State law had the bill as passed by the legislature been properly engrossed and signed.

4. That the then Governor of Idaho approved of a separate employment service because of his knowledge of its functions and activities and not because of pressure from the regional director of the United States Employment Service.

5. That there is no more reason to insist upon a combined statistical department or business-management department because we are dealing in the same field than to combine these functions with any other State department. It is only because of the desires of certain individuals to increase the scope of their own power and authority. It is not because of economic waste which has been stated but not proven. In fact, the only separations affected from previous integration (except for the war emergency transfer of the employment service to the Federal Government) have been made by Mr. Garrett, who stated that separation would increase efficiency and lower costs. These actions were: Separation of the joint statistical department in May 1944 and taking claims-taking functions away from the Employment Service June 30, 1946.

6. That the statements concerning referral of, or failure to refer, certain benefit claimants because of classification are misleading or are contrary to the unemployment-compensation law itself regarding suitable employment. The statement that the Employment Service makes the determination of suitability is also misleading, as all determinations of eligibility for unemployment insurance are made solely by the Unemployment Compensation Division. It is the Employment Service's responsibility to properly register, classify, select, and refer workers on the basis of qualifications, and not because an applicant is or is not a benefit claimant. It would seem that the Unemployment Compensation Division should, if properly performing their duties, inform the Employment Service of these complaints. We have had numerous complaints about the unemployment compensation and have referred them in writing to Mr. Garrett. Does it seem reasonable that the Employment Service would fail to or refuse to refer an applicant to a farm or any other job, if qualified, and in the face of employers' and farmers' demands for workers, when the primary function of the Employment Service is to place workers? All functions of the Employment Service are geared to that ultimate good which is literally its bread and butter.

A. J. TILLMAN,
Assistant State Director.

Witness of signature:
DOROTHY I. ANDERSON.
W. J. ADAMS.

Flood Control

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1947

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Quincy (Ill.) Herald-Whig of June 15, 1947:

WHAT TO DO ABOUT OL' MAN RIVER IS POST-FLOOD PROBLEM

For the second time in 3 years, the upper Mississippi Valley has experienced a disastrous flood. Several levees have been broken, flooding thousands of acres of rich farming land. Cities have been inundated. Lives have been lost, and the damage to property will run into many millions. Other properties have been saved at tremendous cost in time, effort, and money. Crops may be

grown this year in the drainage districts where the levees were held, if dikes withstand the coming flood.

The entire upper valley must face the problem of what to do about the Mississippi. It isn't enough to say that the recent all-time record river stage is unprecedented. Three years ago, the river stage was only a foot lower and the damage was almost as heavy. It is true that we are now in a heavy-rainfall cycle, that the long average has not produced rainfall of such heavy proportions along the upper river. But we have had floods each spring for many years, and twice in 3 years they have attained disaster proportions. We must accept the fact that similar conditions will occur two or three times in each decade.

WHAT CAUSES FLOODS?

Why are present-day floods worse than those of a generation or more ago? There were periods of heavy rainfall a half-century ago, and the lands now protected by levees were flooded. In those days, the river bottoms near Quincy were several miles wide. The water stretched from the Illinois bluffs to Taylor, Mo. A part of the cause of the present high stages must be charged to the restrictions placed on the river.

When the early drainage districts were set up, there was little perceptible change in flood stages. But when area after area was drained and leveed and the flood basin was narrowed to little more than a mile in many places, the flood water, unable to spread out, was forced to go to higher stages.

Still, floods in the 20's failed to rival the one last week in severity. The big flood of 1929, worst on record to that time, reached a peak of 21.4 feet, almost two and one-half feet under the recent one. Yet more rain fell over a wider area in that spring than was responsible for this flood. In the 75 years prior to 1929, the river exceeded a stage of 20 feet only once, when it reached 20.3 feet in 1903. Average yearly high stages for that period ran little over 15 feet.

After the construction of the levees, there was a marked increase in the flood stages. Then, in the late thirties the system of navigation dams was constructed in the upper river. Since that time, the average flood stages have been higher, and this area has had two record-breakers.

The claim that the dams are in part responsible for higher water is denied by Army engineers in charge of the upper river. Perhaps the run-off has not been retarded, although the dams, even when the roller gates are open, offer a considerable obstacle to the free flow of water. But the dams maintain an average normal stage of approximately 11 feet in Quincy. Many springs in the past opened with a river stage of 4 or 5 feet. When the heavy rains come now they find the river only a few feet below flood stage.

The steady deposit of silt along the banks of the river also has played a part in causing floods. At one time the river bottoms and the hills bounding them were covered with trees. As these were cut and the land put under cultivation, soil erosion increased until, today, millions of tons of top soil go down the creeks into the Mississippi each spring. There it builds up back of wing dams, along the shores, further narrowing the stream.

POSSIBLE REMEDIES

Several remedies for the flood condition have been proposed. Each would, perhaps, help to relieve an almost unbearable situation. A system of huge run-off reservoirs has been suggested. Col. W. N. Leaf, chief of the Rock Island district, who directed the battle on the flood here last week, explained the plan which has the support of his office.

Most of the water that causes floods in this stretch of the river comes from Iowa streams. Little rain that falls in northwestern Illinois goes directly into the Mississippi, but virtually all the State of Iowa and southern Minnesota drain into the big river, principally through the Des Moines near Keokuk.

The proposal is to build big lakes along the Iowa streams, reservoirs of sufficient size to handle great quantities of flood waters. In rainy season, much of the excess water would be diverted to these reservoirs where it would be held until the flood crisis had passed. Then it would be released gradually at times when it would cause no damage.

The weak points in the reservoir plan are that it would require huge areas, totaling a fair percentage of the total of the land in this area from which the river is barred by levees and that the reservoirs would in a few years fill with silt. But the plan offers many advantages and is, perhaps, the best offered in the way of mechanical control.

A measure of relief could be obtained by setting back levees, thus giving the river more room. To be effective, all drainage districts would have to adopt the plan. The setback would have to be at least one-half mile, thereby doubling the flood width of the river. The difficulty in this plan lies in the heavy cost of buying land to be abandoned and the great tax burden necessary to rebuild all river levees. The program is being followed in the Coal creek district west of Beardstown, where the levee was virtually destroyed in the great Illinois river flood of 1943.

A great deal could be done in halting the run-off of silt from the hills. This lost top soil comes from the entire watershed. Some of it travels through creeks for 100 miles or more and comes to rest along the banks of the Mississippi. There it builds up mud banks and lessens the water capacity of the river. This erosion is costly to the owners of upland and drainage district land, but it can be checked only if farmers are willing to put sub-marginal land in grass and timber.

TIME FOR ACTION

The time for action is now. Many thousands of acres of the most fertile land in America are in danger of being put out of production in the next few years unless a solution is found. The productive capacity of these areas is fabulous and the investment in land, drainage equipment and buildings is tremendous. It is evident that some permanent plan of relief is needed. Excess rainfall must have means of reaching the Gulf. That avenue is the Mississippi River that must carry most of the run-off of all the land between the two mountain ranges.

The reservoir plan is for the present. The matter of levee set-backs might well be considered for future action. Too much cannot be said for control of erosion as a long-range plan of soil conservation and flood control. Congressional plans for appropriating fifteen millions and the Illinois Legislature's program for two millions in aid will help to alleviate current distress. But more than temporary aid is needed. The great floods are no longer extraordinary events. They will come again and some better way for handling them must be devised.

Our Foreign Policy

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1947

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Vermont Royster, from the Wall Street Journal of June 9, 1947:

PIN ON A BADGE, TAKE VOW OF SILENCE—LEARN OUR FOREIGN POLICY—TO SPREAD "INFORMATION," STATE DEPARTMENT SHUTS OUT PRESS, TALKS TO CLUB, CHURCH FOLK

(By Vermont Royster)

WASHINGTON.—The State Department is unlimbering its biggest propaganda guns in support of its foreign policy.

The diplomats are holding a series of "off the record," unpublicized conferences in Washington and elsewhere about the country, with representatives of women's clubs, church groups, fraternal organizations, and independent voters' leagues. In these sessions, top officials of the State Department have set out to sell the Truman "Stop Russia" Doctrine and gather aid for other phases of the administration's foreign program.

A direct appeal is being made to these organization representatives to go home and make sure the State Department's views are known within the groups they represent.

The latest, and to date the biggest, of these conferences was held here this week end. It was attended by approximately 250 delegates representing organizations with total membership estimated by a State Department official at 75,000,000.

NOT ENOUGH PUBLICITY

These delegates were told by a department representative that the conference was called because the Department could not get out enough information on foreign policy through the usual publicity channels. Newspaper reporters were excluded from the meetings.

During the course of 3 days of meetings the delegates were told:

The United States must be prepared to give economic, as well as political, assistance where needed in the world. The Truman doctrine is simply an extension of the Monroe Doctrine and the only logical course America's foreign policy can follow.

The public should support the State Department's effort to educate the rest of the world in the American way of life through pamphlets and radio. (Congress is still considering whether this effort deserves funds.)

The State Department has an obligation to see that the people understand foreign policy. The usual press and radio information channels need to be supplemented by direct contact between the policy-makers and representatives of leading organizations.

The public should be taught to understand the benefits of a liberal trade policy.

More people should join organizations interested in foreign policy. They and their organizations should work with the proper legislative representatives to see that the United States follows a sound foreign program.

The delegates should return home and "work through the organization to which you belong" to insure that the country does have this sound foreign policy.

The official purpose of the conferences is to help the public participate in the formation of foreign policy. But all of the discussions were on policy matters already settled, so far as the State Department is concerned, and major emphasis was placed on getting the delegates acquainted with the official State Department views.

THE KEY POW-WOW

Apparently the key meeting was a session on citizen participation in foreign affairs. It was at this meeting that the delegates were told of the Department's difficulties in getting their views on foreign problems understood by the public. The delegates were asked to cooperate in this effort.

Citizen participation, apparently, did not include the press. Newsmen who applied for

permission to attend the discussions were turned down. One who slipped in without a guest badge was ejected.

Speakers at the sessions included Secretary of State Marshall; Dean Rusk, of the Office of Special Political Affairs; Loy W. Henderson, of the Department's Far Eastern Division; and William Benton, Assistant Secretary of State for Public Affairs. Mr. Benton spoke on the need for an international information program. Francis H. Russell, Director of Public Affairs, presided.

SENATOR VANDENBERG DECLINES

Republican Senator ARTHUR H. VANDENBERG was invited to address the delegates, but declined.

Visual explanations of the administration's foreign policy, including movies, were used to supplement the oral discussions. A wealth of booklets and pamphlets explaining foreign policy in simple language was distributed among the delegates.

The week-end conference was part of a general program planned by the State Department for the education of the public on foreign problems. It is being handled by the Division of Public Affairs under Mr. Russell.

This Division has set up a series of committees, each headed by a State Department official, to deal directly with the various private organizations. One official handles women's groups, another veterans' organizations, another church societies, still another fraternal organizations, and so on.

SECRETARY MARSHALL'S EXPLANATION

Explaining the meetings, Secretary Marshall told delegates the purpose was to give out accurate and timely information regarding foreign affairs.

"I hope these meetings will result in subsequent programs," the Secretary said, "which will explain to a far wider audience the complexities of charting the Nation's course in world affairs."

Apparently, great effort was made to give the meetings an air of importance and the delegates a feeling of being on the inside. Admission was by special invitation only, and each delegate was issued a badge and an identification card. These were carefully checked.

Although all the speeches seemed to repeat recent public statements of Secretary Marshall and other top officials, with little new added, the delegates were warned that all discussions were off the record.

Delegates reported most of the emphasis in the conference discussions was placed on the so-called Truman doctrine and the need for the United States to use its economic resources abroad. The delegates were told that no one, not even President Truman, could say yet that the need for United States financial assistance abroad is over.

One speaker appealed for assistance in the State Department's information program. The Department, he said, needs to distribute a greater quantity of concise and simple explanations of foreign policy and the State Department's program. In addition, he said, the Department would like to get together the best editorial opinion on the administration's foreign policy and see that it is widely distributed. The Department, he added, is at present handicapped by a lack of funds.

A wide range of organizations was included in the conference guest list. Here are a few: The League of Women Voters, the Southern Council on International Relations, B'nai B'rith, American Friends Service Committee, Muncie (Ind.) Community Discussion Council, National Conference of Christians and Jews, National Council of Negro Women, Southern Baptist Public Affairs Committee, Junior Leagues of America, National Society of the Daughters of the American Revolution, and the Girl Scouts.

Unnecessary Operations

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, June 24 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the RECORD a condensation of an article on Unnecessary Operations from the July issue of the Woman's Home Companion. The article was written by Albert Deutsch, who is also a writer on health and welfare for the newspaper PM, of New York. I am also pleased to announce that reprints of this condensation are available from the Woman's Home Companion, 250 Park Avenue, New York City 17, N. Y.

There being no objection, the condensation of the article was ordered to be printed in the RECORD, as follows:

UNNECESSARY OPERATIONS

(American medicine, including surgery, is undoubtedly the finest in the world. But do surgeons often operate needlessly? This straightforward answer may shock readers, but it will be no news to most doctors. It is a condensation of an article by Albert Deutsch appearing in the July Companion.)

Medical men have long known the shocking fact that many of the 9,000,000 surgical operations performed annually in America are unnecessary. Among doctors it is an open secret that in many an operating room the cloak of surgery covers mayhem and even manslaughter.

Every year thousands of anatomical parts from tonsils to stomachs are cut away or taken out because of faulty diagnosis, overzealous surgeons, incompetent or mercenary doctors, fee-splitting conspiracies, or an inexcusable surrender to the morbid wish of some patients to be cut open.

"The public must be told," a noted surgeon told me. "We cannot erase this sin of surgery in the profession without the support and pressure of an alerted laity."

There are too many unqualified doctors literally getting away with murder in the operating room. There are too many operations motivated by an interest in the patient's pocketbook.

Does this sound fantastic? Ten years ago the American Foundation made a survey of the state of American medicine. Here are some excerpts:

A member of the American Surgical Association said: "It is probably true that at least half of the surgical operations of the country are done by physicians without special qualifications." Today that would be an understatement. Now about 40,000 practicing physicians perform surgical operations, although fewer than 15,000 are certified.

An Ohio surgeon, ex-president of a medical society, said: "In this country we have the largest postoperative mortality in ordinary operations of any civilized country."

A certified gynecologist in a well-known medical school said: "In the smaller communities the chiefs of the various (hospital) services lack training. But they operate—often with disastrous results."

The present-day testimony of medical experts reveals that the situation remains basically disgraceful.

The appendix, of course, has been the classic object of unnecessary operations. Although many lives have been saved by the prompt removal of a diseased appendix, many a life has been endangered by needless excisions. Vain and neurotic patients, sloppy diagnosticians, and mercenary surgeons have combined to make appendectomy the biggest surgical racket of all time.

Commenting at last year's meeting of the American Medical Association, a midwestern pediatrist warned: "I am amazed at the discrepancy between the number of abdominal scars I see daily and the few cases of genuine acute appendicitis."

A professor of obstetrics and gynecology at a large university recently made a study of 246 womb operations performed during a 4-month period in 10 midwestern hospitals. He found that fully one-third of the excised wombs were not diseased at all.

A noted urologist recently warned: "In the surgical treatment of diseases of the kidney, the fetish for nephrectomy (excisions of the kidney) comes near to being the surgical 'original sin'."

Many unnecessary operations are also performed on neurotics who get a morbid satisfaction in being cut up. A New York surgeon of unquestioned reliability told me this:

A general practitioner asked him to operate on a patient for cancer of the breast. The surgeon reported an operation was unnecessary. "The patient insists she has a breast cancer," the general practitioner responded. "If you don't operate, some other surgeon will." Later the surgeon learned that the woman had found a complacent colleague who removed one of her breasts.

Adenoids, tonsils, thyroids, intestines, and teeth are also the object of surgical vagaries.

Widespread ignorance of the emotional and mental sources of ill health has also led to unnecessary operations.

A well-known western psychiatrist recently studied a hundred psychoneurotic patients, finding that 72 had been wrongly diagnosed as suffering from organic diseases. Reporting to the American Medical Association, he revealed that the 72 had undergone a total of a hundred and seventy-two operations, at least half of which were unnecessary.

A clinic specialist in internal medicine adds: "No internist with psychiatric interest can help feeling distressed as day after day he sees the unfortunate results of surgeons who expected to make a diagnosis after opening the abdomen."

A prominent surgeon calls attention to one of the most vicious sources of unnecessary operations—the fee-splitting racket. It is the practice of dividing a patient's fee among two or more doctors without the patient's knowledge. To be sure, the practice is confined to a small minority. But it is not so insignificant that it can be ignored.

Here's how the racket operates. A woman visits her doctor who, unknown to her, is a fee-splitter. With a keener eye on her purse than on her complaint, he suggests an operation, recommending a surgeon with whom he has an understanding. She is subsequently relieved of some normal organ. The fee is split between the profit-sharing medics.

The American College of Surgeons and other reputable medical societies have repeatedly condemned fee splitting and, on occasion, taken steps toward repressing it, but with little result.

What steps can be taken by and for the patient, to safeguard him against these menaces?

1. Surgery should be licensed by each State. Every doctor should have a surgical license, based on examination of his special training, skills, and ethics, before he is permitted to perform a major operation.

A doctor may be competent to do a minor operation but unable to cope with an emergency. Recently a prominent surgeon of my acquaintance was suddenly interrupted by a nurse in the midst of an operation. Quickly she whispered that the patient in the next room was near death from a hemorrhage which the operating surgeon was unable to stop. Luckily it was safe for my friend to

leave his case halfway, push aside his scared colleague and tie together the bleeding veins of the patient, thus saving his life. What happened to his bungling colleague? He is still doing major operations.

In larger cities there is a growing trend—which isn't moving fast enough—to insist on definite standards before a doctor is permitted to perform major operations. In one city, for example, no doctor is allowed to perform a major operation unless he has had at least 3 years of special training in surgery, beyond his internship, or is a Fellow of the American College of Surgeons or a diplomate of the American Board of Surgery.

2. If your surgeon is a certified diplomate of the American Board of Surgery or of some allied medical specialty board or is a member of the American College of Surgeons, you have a guaranty that he has the minimum training and experience deemed necessary for good surgery and that he is considered ethical by his colleagues.

3. Be sure to choose a reputable hospital. The American College of Surgeons annually lists the hospitals it approves for surgery.

4. Decisions involving major operations should, except in acute emergencies, be made by more than one doctor, in consultation with colleagues representing other specialties.

5. A well-conducted modern hospital has a pathological department which analyzes every anatomical part removed from a patient's body by surgery. These reports are vitally important in detecting incompetent surgeons and needless operations.

In one case, reports showed that 28 of 35 appendices removed by a hospital's chief surgeon were normal. He was dropped from the staff.

6. Every hospital should be compelled to organize regular staff conferences to pass on every surgical operation. It is very difficult, under such circumstances, for a surgeon to make many mistakes and remain undetected.

7. Some leading surgeons propose that no major operation be permitted without the signed approval of two or three acknowledged experts.

8. One surgeon at a famous eastern hospital makes the radical recommendation that no surgeon be permitted to engage in private practice. Financial considerations, he argues, should never enter into decisions involving operations. The best safeguard, he says, is for every practicing surgeon to be a full-time staff member of a reputable hospital on a salary basis.

9. Finally, the vicious practice of fee splitting that debases medicine and encourages excessive surgery should be forcibly repressed. States should make it a criminal offense with loss of medical license upon conviction. Medical societies should take far more active measures to eliminate the practice in their own ranks.

The South as I Know It

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, on April 30, 1947, the Southern States Industrial Council, composed of large and small industrial organizations from the 16 Southern States, assembled in Washington, D. C., and invited the United States Senators and the Members of the House of Representatives, and other governmental officials to be their guests at a dinner. The principal address of the evening was delivered by Mr. T. Russ Hill, presently residing in the city of Detroit, but a native of Kentucky. He spoke on the subject The South as I Know It. Mr. Hill's address was most timely and illuminating.

Following Mr. Hill's address, the Honorable HARRY F. BYRD, United States Senator from the State of Virginia, addressed the meeting. Senator BYRD's address was an outstanding appeal to the American people, and especially to the people of the South, to stand by, and militantly support, the principles upon which our Government was founded, the principles laid down in the Declaration of Independence and the Constitution of the United States.

It is my pleasure to quote the addresses of Mr. Hill and Senator BYRD on that occasion, as follows:

THE SOUTH AS I KNOW IT
(By T. Russ Hill)

Mr. Toastmaster, members of the Southern States Industrial Council, ladies and gentlemen: There is something about a gathering of Southerners that makes everyone glad they came. This is true whether the gathering is in the South, noted for its warm brand of hospitality, or in any other section of the land. Probably in Southerners this feeling is greatly above the reactions which others experience, but others get similar responses. This characteristic of the South increases the pride of her sons in their nativity no matter where they roam. They shout when they hear "Dixie" and experience a degree of nostalgia when they hear Stephen Foster melodies or spirituals. This tie holds. Southerners are warmly proud of the scenes of their birth.

That is not always true. A young man came home from school recently pretty much fed-up. He expressed his dislike of school to his mother, basing his opposition primarily upon the fact that his teacher was always asking foolish questions. "Today, for instance," said he, "she asked everyone in the class where they were born."

"Well," replied his mother, "you certainly had no trouble with that question. You told her 'The Woman's Hospital,' didn't you?"

"Ah, no. I didn't want all of those kids to think I was a sissy, so I said Yankee Stadium." You will never find a Southerner who isn't eager to give you the place of his birth. That is one of the things that the South means to me, and it is important.

You know it isn't easy to boil down into a speech, the length of which you would endure, what the South means to me. In fact it would be very easy to reach filibustering proportions in covering even her major elements of importance. There is a chance, a good chance, of being accused of omitting important elements and violating some others.

A short time ago a friend in Detroit was relating her experiences in a medical center in which she was interested. It seems health and some other important matters were being discussed with a colored lady who had had little or no experience with medicine or its exponents. After being questioned in every conceivable manner to get to a starting point, the lady finally desperately asked, "Weren't you every X-rayed?"

"Lawdy, no!" replied the distracted sister, "but I has been ultraviolated." I shall depend upon the tolerance, which I have always found in the South, to forget all omissions, trangressions, and violations.

THE SOUTH'S RISE

It would be relatively easy to spend all of the allotted time reciting statistics to prove how well the South has done on her own since she was left absolutely destitute some eighty-odd years ago. Not only was she destitute, she was oppressed. Her accomplishments in that short period of time are a glorious chapter in the Nation's history. When the attitude of today's prostrate nations of Europe are considered, the story of the South's rise takes on new luster. The European nations are dazedly begging crumbs from others' tables. The South in her darkest hour never begged or winced. She has come far under her own power. The spirit that made that possible, cannot be put on a statistical chart. She has done well and will do better, and she has the brains and courage with which to do it on her own. Many who are so busily engaged in trying to pass laws to regulate the South into salvation should drink deeply from her reservoirs of Americanism and courage and gain strength thereby to bolster the Nation against a lot of sophisticated nonsense that threatens its verities and, therefore, its existence. Nonsense resulting from statistics fever. Statistics, after a certain point are often confusing.

In fact, too many have the effect that a handsome young man had on an attractive young sales lady in a Detroit department store. Rushing up to her counter hurriedly, he asked, "Do you keep stationery?"

"Up to a certain point," gasped the young thing, flustered by the handsome chap, "then I go all to pieces." Statistics often have the same effect.

Besides, statistics aren't easily understood and can be answered according to the mood. They also smack of lecturing, like the uncle who was taking two nephews to task on their extravagance. "All you boys of today think about is money," said the irritated uncle after a long discourse on the values of life. Then he made the mistake of continuing with: "Do you know what I was getting when I married your aunt?"

And one nephew popped back, "No; and I bet you didn't either."

Charles Gilbert also left the gate wide open anyway when he assigned such a general subject as the one on the program. He took a lot for granted. It is a difficult subject to fit, and it is doubtful if I have the proper implements with which to do the job. Speaking of implements, a businessman went to Chicago recently to address a Rotary dinner. When he got to his place on the podium, he suddenly discovered that he had left his teeth at the hotel. Turning to the man seated next to him, he disclosed his dilemma. "I cannot speak without them. I'll only whistle." His friend, jumping to the rescue, shot his hand into his coat pocket, pulled out a set of teeth with a "Try these." The speaker slid them in, tried them with a snap, and then dolefully remarked, "They are too big. If I managed to keep them in, they would hinder my speaking as badly as no teeth at all." The "serving" boy was not stopped. His other hand dove into the other coat pocket and brought out another set of teeth. "Try these," said the fixer. The speaker did and found them just right. After finishing an unusually forceful speech, he sat down and immediately turned to his benefactor with gratitude. "It certainly was fortunate," he remarked, "that they happened to seat me next to a dentist." "Dentist," shot back the helper, "why, I'm an undertaker." Perhaps the liberties with the subject will not prove so shocking.

The beauty, charm, hospitality, gentleness and valor of the South are known throughout the world. Its share-croppers, gunpowder tempers and illiteracy ratings are almost as well known. The South means this and more to almost every one, but there are other characteristics of the South which are more important to the Nation at this disturbing moment. Because of what these elements represent, they mean more to national security than anything else that belongs to the South that is known to me.

This is increasingly true in the light of current conditions.

Since the war the Nation has experienced a discord beyond a normal expectancy for such a period. The people have turned from fighting their enemies to quarreling among themselves and with their friends. The heroism of sacrifice which characterized the war effort has been choked out by the grasping of greed. The workers who were fused by fear are engaged in conflicts of hate. There are ample evidences of the abuse of power by labor and by management, while power politics has reached a new high or a new low according to the point of view. Wages and prices have played an exaggerated game of leap frog, spiralling into a war of nerves under the threat of economic revolution.

WHAT'S THE USE

These and other eruptions of the period have jangled the people into a sense of insecurity, and filled them with forebodings for their futures. In many important quarters a "what's the use" attitude prevails. This uneasiness is fanned by the evident agreement of the leading economists that we are in a boom spiral which will turn into a depression by middle or late summer. Buyers' strikes, heavy inventories, industry's pricing responsibilities, large profits, labor demands, budgets and taxation are two-inch, front-page headline news frightening in their implications and, therefore, devastating in the reaction upon the morale of the people. So much so that constructive action is hampered. In such an atmosphere it is difficult to estimate and correct the basic causes of surface eruptions. The proper emphasis is not given to hidden elements of security, bulwarks against the avalanche of ruin which some forecasters hear roaring down upon the people carrying varying degrees of injury for all.

It seems very popular to give credence to forecasts of gloom. The American people just love a good cry. Many attend every funeral they hear about for that purpose. If the minister doesn't wring the hearts of the mourners, they consider the service a flop. Such eat up tear-jerker scenes in movies. They encourage the kind of news that makes the front page of the papers, particularly the calamity stuff. Such reactions by the public does not make the forecasters' prophesies correct. The present crop could be wrong, too.

Just as the practical joker in the country was when he came upon a young lady in swimming in a secluded creek, tied her clothing in knots, and sat down on the bank to await developments. Of course, the shocked young lady was staying submerged to the chin and the water was cold. She remonstrated in every way with the interloper, even appeal to what he did not possess—chivalry—to no avail. In desperation she began to search the bottom of the creek for some sort of covering under which to emerge. Her foot finally struck an object which proved to be a tub. She pulled it up and holding it in front of her strode up the bank hurling epithets that were just within the border of a lady's vocabulary. Receiving no response except a grin on the face of her tormentor, she finally screamed, "You beast! I know just what you are thinking."

To which the grinning tormenter replied, "You do? Well, I know what you are thinking, too. You think there is a bottom in that tub."

The bottom is not going out of America's tub. Nevertheless, to many, present conditions must only be considered as paralleling those of 1920. On this premise there must be a 1921, if not a 1929, somewhere in the future. It is inconceivable to others that the country could allow its spirits to again ebb to the level of this belief. The Nation pulled up stakes and ran for the caves in 1929 when just such roars as are now being heard echoed through the land. Courage instead of ghost hunting would have reversed the trend then as it will in 1947–48. Even completely discounting the favorable condition of Government bonds, private debt, savings accounts, and money in circulation in the Nation today, not to mention the world's needs now as compared to the late teens—forgetting all these plus factors would not justify a damaging recession in our economy. Only a recession of spirit can permit it to happen. Certainly a strengthening of spirit, a difficult process because of the contrary selling being done, will prevent it.

SYSTEM ON DEFENSE

There is no clearer example of this defeatist attitude than the fact that it is found necessary to defend the American system at home and abroad. The fact this Nation pulled the world through two wars in 30 years, financially and industrially, is evidently overlooked. Being the only solvent world power today, and in the process of underwriting and actively manning the rehabilitation of that world, is not considered as basic evidence for our system—rather an invitation for much of the world to take a shot at democracy. Until late years people have continuously come to this country to get away from their systems of government and to get a chance to carve out their own destinies. They are now coming to tell us how good those same systems are and to ask us to adopt them. Some among us, who sponsor the cause of those foreign systems, are good sounding boards for their doctrines here as well as abroad. Such go lecturing to those people on the fallacies of America and her leaders. Naturally, many abroad are susceptible to such preachments. Being stripped to the bone, it is something of a consolation to find that a land they regarded as so fortunate could be in such danger of going to pieces. Thus they draw away from us if not actually lining up against us. The right answer is not in that direction.

Like the case of the youngster who asked his father one evening—"Dad, how much is a billion dollars?" Dad replied without looking up from his paper—"A hell of a lot of money." After school next day the boy came in crying. "What is the matter son?" inquired his father. "It wasn't the right answer," sobbed the boy.

If her people get the facts, America will be too shrewd, too sensible to come up with the wrong answer on collectivism under any name. Such systems are moon-bayings as far as material worth or spiritual benefit to man is concerned. They cannot match ours in a single department. There is nothing new in or to them. Their leading exponent can not even put her stolen machine tools into successful operation because of the poor management that always characterizes such governments. For the same reason poverty and some hunger stalk her lands in spite of lend-lease equipment and materials forwarded to offset such conditions. America has no need for such a system. She has one that has taken her on the fastest run of accomplishment in the world's history. It may need a new bearing here and there or some other slight overhauling but it is still the best government ever conceived by man. Recent history strengthens that fact.

BENEATH THE SURFACE

When the people stop listening to the rattles, mechanical and vocal, and get to their causes, the jitters of the day will give way to hard thinking and constructive action. Laws and policies of expediency will be superseded by those based upon facts. Modern man is not as brilliant as he pretends. His spontaneous and crisis judgment is, therefore, not good nor conducive to the continued smooth performance of the democracy to which he belongs: America needs to revalue her tap roots and then take the offensive. She is entitled on her record to do so. A defensive role does not befit her or belong to her. Neither is such an attitude good for one world no matter what the boundaries. Reducing America to the political status of other world powers would mean the end of hope for all mankind everywhere. She cannot continue to back up under appeasement's press or because of false conceptions of free speech. To do so will hasten the destruction of those things she seeks to save. There will then be no consolation in measuring the extent of the losses or in nursing regrets.

Recently a bum in front of the Detroit Statler approached an emerging guest in deep humility and asked—"Mister, would you give me a penny? I haven't eaten in 5 days." The size of the request startled the guest so that he asked—"If you haven't eaten in 5 days, what good would a penny do you?" The suppliant replied with increased humbleness—"Mister, I just want to weigh and see how much I've lost." There is no compensation to the patriot in weighing the amount of the loss if it is his democratic way of life. The logical course is that of corrective measures, and, therefore, loss preventives. America's mission is to raise other systems to our level if she can, but to stand her ground if she cannot.

UNDERLYING CAUSES

To be sure, there are many underlying economic causes for the distorted condition in the Nation. The chief ones lie deeper than wages, prices, production, or controls. Because such are not obvious they are often overlooked, particularly by the average citizens, which are most of us. The correction is not too difficult. The will to correct is something else. Both can only be superficially discussed here.

One of these underlying causes, it seems to me, is taxation. The basic question cannot be whether to have more or less taxation. The purpose for which the tax is levied and what the money will accomplish for the Nation when spent for that purpose is the important thing. Taxation of any successful individual or business to provide for the unsuccessful is a basic plank in the platform of the advocates of an alteration of our way of life that is natural, because that practice will destroy it. It is a two-edged knife of annihilation because it destroys ambition in one and encourages indigence in the other. The answer is all indigence, all wards of the State, which by the process has been deprived of its milk for succor. That is what Alexander Dumas was warning against when he wrote long ago, "If we are to submit absolutely to the level of equality, we had better choose the level of nobility. I like equality that elevates, and not that which lowers mankind." Taxing the automobile business at the beginning of the century to keep the buggy and wagon plants going would have been today's theories in operation then, stopping the progress and development of the Nation. When taxation is for the essential functions of government only, without the extras, democracy will be relieved of its spasms.

Another is money manipulation; selling bonds, printing money, taxing it, and spending it. Such processes push the money supply ahead of the merchandise it can buy. We have reached that stage here. With a money supply now of $163,200,000,000, highest in our history by almost $100,000,000,000, it is past time to stop the printing presses and start paying the debt. That illustrious son of the South, the late O. Max Gardner, cried out against this practice. "Three words," said he, "taxes, borrowing, and spending stand as silent monuments to mark the fall and decline of character, credit, and governmental stability in every hamlet, city, and State throughout the length and breadth of this Nation."

A third is monopoly of labor which forces laborers out of their jobs at the whim of an industry-wide union czar. Why do the workers strike when the call goes out from head-

quarters? Because they know they cannot work again if they do not. Why cannot apprentices get started in many trades? Because competition in labor is not welcomed by the oldsters. These conditions stifle progress and therefore destroy jobs. It is the steel band of an organized minority, forged in the furnace of greed for power and tempered in the laws written primarily in the same spirit. The freeing of labor and the holding of its despoilers, within and without, to strict accountability is the third of the fundamental economic adjustments required to relieve the Nation of its present nausea. The closed shop, and the same thing by another name, the union shop (crucifiers of human liberties) and the right of promiscuous striking must be weighed in that light and not the light of who loves or hates labor or industry.

Laws alone will not suffice. Our Congress has been much concerned about a labor law. Tough and wild are the two types mentioned. No labor law alone can solve this problem any more than prohibition and controls solved those problems. England has laws forbidding strikes against the Government, laws against secondary strikes and boycotts, against wildcat strikes and mass picketing, against political contribution by unions, and laws requiring financial reports by unions. What did these do for England? Her laws walked around industry-wide bargaining and closed and union shops just as we are doing. Their inclusion might have produced a different result. However, the will of the people, not law, is the final remedy. There is no one here who does not know what that will is in labor matters as well as the other two needed basic corrections. Probably the people have not expressed that will strongly enough to secure proper conduct. They will and action will come, but probably not until the plums of 1948 have been gathered and that could be a bit late. The people are long suffering, but they finally erupt and with emphasis—a behavior which recalls a story Eddie Guest told me of a Detroiter who married three times. After losing his first wife he married again. As he entered his house with the second wife, he explained a lady's hat hanging on the hall tree by saying: "Dear, that red hat was a favorite of my first wife. As a matter of sentiment I'd like to let it hang there, if you do not mind." It didn't worry the current spouse and she gladly consented. After losing the second wife and marrying the third, he found it necessary to explain two hats to her. This he did stating that the red one was his first wife's favorite and the brown one was a favorite of the second wife. That out of sentiment he would like them to continue to hang on the hall tree if it were all right with her. She did not even hesitate. "Perfectly all right," said she. "I do not care anything about those little, old hats and they do not worry me at all. But there is one thing I want to tell you right now. The next one that goes up there is going to be your gray fedora."

SPIRIT

In this battle to increase the spirit of the people, look to the South. She has the requisites, still undiluted, for citizenship of force and character. That is what the South means to me, and I am grateful to the omnipotent that she stands at this particular time just as she is—solid. Whether she is an economic disgrace or an economic opportunity is unimportant in the battle before us. Her zeal for the elementary tenets of the democratic way of life is much more important. The contributions of southern leaders during the past 15 stressful years to the continuance of our way of life will not be completely evaluated in our day. The South's ratings in some classifications may be low, but not in the particular requirements of democratic citizenship.

Her irresponsibles may resort to lynchings, a form of savagery which may be lower or higher than the political death beating in New York of a worker at the polls or an ambush slaying in Peoria of a president of a railroad. It is popular in some so-called more enlightened centers to point the finger of scorn at the South. One day even these centers may see the sunrise of a revitalized democracy. The glow will be from the South. There, possibly to a greater extent than in any section of our land, are the ingredients of the lost cord in the fabric of our democracy. It is the lack of that cord which is largely contributing to the break-down of the spirit of our people. That failing spirit is spawning the "what's the use" attitude.

Three of the vital cords in our democratic fabric are strong and easily recognized. There is the crimson cord of glory, spun on our battlefields, against which there can be no indictment. The crosses of victory on the breasts of many lands and many men attest that. The silver cord of culture, outlined in the establishment of colleges and libraries, research and extension courses, lectures and radio, art, music, and drama is an equally vivid monument. The golden cord of industry, the wonder of the world, needs no statistical support or eulogistic treatment. It is enough to state that it paid for the first two. But the platinum cord of character, particularly in human relations, is not so clearly defined. It is almost invisible. Its weakness endangers the entire fabric of democracy. The South, as I know her, embodies the elements for restoring that invisible cord. The three cardinal elements necessary to produce that cord are basic with her people.

SOUTHERN CHARACTERISTICS

The Southern people almost universally practice a belief in God, the cornerstone of democracy, and the chief element in the weaving of the lost cord of our way of life. Freedom of speech cannot be found where freedom of worship does not exist. In fact, no freedom exists without this belief on the part of the people. All America needs to hear and heed what my friend, Fred Zeder, of Chrysler, told a group of scientists in this city recently—that the Master Mechanic is needed. The vast majority of the people of the South believe that, and take it seriously. When the same percentage of the rest of the Nation believe that and defend it without flinching against the blitzkrieg of ism atheism from any quarter, within or without, the lost cord of character will begin to take shape and peace will begin to settle over our land and then the world. Long ago a historian wrote that God could not see the South lose with Stonewall Jackson praying for it so He had to take Jackson. The South still prays to the same God who never let Jackson lose a battle and who cradled him in peace in the thick of the battlefield. A peace that enabled him to mutter with his last breath, "Let us cross over the river and rest under the shade of the trees." That is characteristic of the South as I know it. The fires of worship burn on her millions of altars—enough to start the furnaces for tempering the metal of character throughout the Nation.

The southern people blindly love the flag, another required element for the reclamation of the lost cord of the American way. In the South is the only county in the Nation from which not a man was drafted in the First World War—every eligible male volunteered. Travel the South and question people in all stations and activities. You will not find one native who supports or believes in any other form of government. He may be in rags, but the flag still covers him. He may know nothing of the Constitution, the Bill of Rights, the budget, or one world, but he does know the stars and stripes of the flag and will fight for it at the drop of a hat. He belongs to the "what's right with America" group and refuses to listen to the "what's wrong with America" destructionists.

The South puts heavy emphasis upon the home, basic in the character of a nation. She is often assailed for living in the past, for being reactionary, for clinging too long to the odor of jasmine, lavender, and old lace. However, no face lifting has been able to pull her away from this cornerstone of society, the home. That far overshadows the ridicule often thrown at hoop skirts or Prince Albert cutaways, especially in this day of 30-percent divorce rates and spiralling juvenile delinquencies. The latter are eating away at the Nation's platinum cord. Nevertheless nothing very serious will happen to this Nation internally as long as man's castle is his home and so regarded. The South is the bulwark of this philosophy.

SOUTHERN SHRINES

Visit the Hermitage near Nashville, Tenn. Drive down its avenue of stately cedars, walk through the house and into the garden where lies the body of Old Hickory. As you gaze on his tomb and that of his beloved wife, and notice the simple slab nearby marking the grave of his faithful servant, your thoughts are not on the battle of New Orleans, his duels with adversaries, the bank fight, and his stand against secession. A voice seems to come out of the hush of the garden, saying: "This, American, is my home, sacred above all else to me, and you stand here a freeman because of my belief and that of thousands of others who believed as I."

Journey to Monticello and walk in the gardens designed by the great exponent of democracy. His Declaration of Independence, Bill of Rights, charter for University of Virginia, of the fact that he declined a portfolio to a foreign court in order that he might go home to a failing wife, are not uppermost in your thoughts. You do seem to hear a voice rising out of the sacred stillness, saying: "This, American, was my home. You stand here a freeman because I and countless others fought for it. You will stay free as long as you are willing to do the same."

Or visit Mount Vernon. Roam through its gardens and buildings and over its rolling lawns. Pause before the tomb of George and Martha Washington. Valley Forge, the Continental Army, the Farewell Address, the early struggles of Washington to form a Nation—all these will fade before a voice that seems to come from the tomb saying: "This, American, is my home and you stand here free today because men of my day fought to preserve it and their homes."

From the pages of history these and countless other southerners step to portray the South as I know it far better than I could ever do. Their challenge is still the South's challenge today. It rings from the plains of Texas to the heart of Maryland. From the depths of hearts stimulated by justifiable pride in their accomplishments and humbled by divine solicitude, they cry: "Leave us our freedom that we may continue to carve out our own destinies; that we may make even greater contributions to the continuance of this greatest Nation on earth."

INTRODUCTION OF SENATOR BYRD

The council is highly complimented tonight by the presence of a large number of Senators and Congressmen from the South. We have and do deeply appreciate the interest you gentlemen have manifested in the position the council has taken on legislative matters, and the courteous reception we have always received at your hands. I feel that the evening would not be complete if we did not have a short response from one of your number.

There is among you a man whom we all love. He has served our country faithfully and efficiently for many years. His fame is Nation-wide—not alone as a statesman but as a hard-headed businessman who has worked day in and day out to eliminate the waste and extravagance that has followed centralization of power in Washington. He

has been selected for these, and for the additional reason that he is my Senator and my friend. I am honored to present the senior Senator of Virginia, the Honorable HARRY FLOOD BYRD.

RESPONSE BY SENATOR HARRY F. BYRD

I am very happy tonight to have the privilege to say a word of welcome to the members of the Southern States Industrial Council. I am proud of the fact that your president, Remmie Arnold, comes from Virginia, and I have known your general counsel, Tyre Taylor, for a long time, and your secretary, Mr. Gilbert. I am especially proud to welcome such a fine group of southerners, with whose fine work I am familiar. Barring some economic catastrophe, the South, I think, stands on the threshold of a great industrial development.

I am always glad, too, to see businessmen come to Washington. What we need here are more businessmen and fewer bureaucrats.

I cannot say that the American businessmen deserve the credit alone, but this cannot be denied: That the system of free business enterprise in America, directed by the American businessmen, has given to us a greater progress, higher living standards, and a greater development in a shorter time than any country has ever experienced in the history of the world.

It was not long ago that it was made to appear somewhat discreditable when a businessman succeeded by his own efforts and without the aid of the Government. We were called economic royalists, copperheads, and other names that tended to hold businessmen up to public contempt. But times have changed, and American businessmen are in better repute after an example of efficiency during the World War in the production of war materials unparalleled in all the world's history.

As our problems multiply in foreign fields, it is well to remember that the greatest single obligation we owe to ourselves and to the world is to keep America strong at home—to preserve our fiscal solvency, our productive capacity, and safeguard our ability to finance our obligations without crushing taxation. Upon our financial security depends our capacity to protect our defense if another war should come. An American internal collapse would be the best weapon for the advocates of expansion of world communism. The financial strength of America is the chief bulwark in the world today against autocracy and totalitarianism. Weaken the financial security of America at home and you have made the whole world defenseless to the assaults of communism.

I may mention at this point that since the end of hostilities, the United States has made outright gifts, exclusive of lend-lease, to Russia and her satellite countries of $1,500,000,000, and other appropriations are now pending, bearing Presidential approval, for further gifts to these same Soviet-dominated countries. On the reverse side, we are about to appropriate hundreds of millions of dollars to fight communism. This effort to ride two horses going in opposite directions—to nourish communism with our right hand and attempt to crush communism with our left—is, to me, so fantastic that I will never vote for a single dollar of American money to go to strengthen any communistic country. The chief result of this contradictory and ineffective policy will be to dissipate our resources and destroy our strength.

We hear a lot these days about the high cost of commodities. What about the high cost of government? Just to mention one item of cost: Two years after the war we still have 2,232,143 Federal employees as compared to less than 1,000,000 the year before the war. This charge on the taxpayers is $7,500,000,000 annually—nearly twice the cost of all Federal Government when I came to the Senate 14 years ago. Today all governments—National, State, and local—are collecting more than $50,000,000,000 in taxes—about three times the collections the year before the war—from the American people, and this is nearly one-third of our total national income. So taxes, next to labor, are the main cost of doing business.

Lower prices with only reasonable profits, would be best for all of us. The businessman today, however, is faced with a condition never before experienced to an equal extent. His chief costs are for labor and taxes, and these items are, in the main, so rigid and inflexible as to place it beyond the power of a businessman to accomplish reduction so as to lower the cost and the selling price of his products. Excepting in instances of unreasonable profits, when we are told that prices must come down, we have the right to ask of our Government what is being done to reduce the high cost of government, and is the Government encouraging or discouraging new increases in the cost of labor.

We have a bipartisan program to unite all Americans behind our foreign policies. It would certainly seem wise to have a bipartisan support at home for economy in government, so as to enable and strengthen us to adequately perform our obligations abroad and keep ourselves strong at home.

Since, and before the November election, the Republicans have talked a lot about economy and simplification of the Federal Government. The two go hand in hand. Now we will see what the Republicans will do about it, as they control by working majorities both the Appropriations Committees of the Senate and the House, where appropriation bills are, in effect, actually written.

In this difficult task of establishing economy in a government notoriously wasteful for 14 years, I pledge, as a Democrat, to continue my years of effort for economy and efficiency with all like-minded colleagues, whether they be Republicans or Democrats. The sooner we forget partisanship politics in our effort to restore government to efficient and economical operations, the better we serve the vital interests of America.

In recent years the average citizen has been influenced to hold the belief that a grant from Uncle Sam is a gift. Many think of the Government as a third party, when, in fact, we ourselves are the Government. Its wealth is the collective wealth of all our citizens. If our democracy is to survive, the people must support the Government and not the Government the people.

At Washington a public man is often judged as a liberal in proportion as to how liberal he is with other people's money.

It is a basic and indisputable fact that no democracy has or can survive if its fiscal solvency is impaired. However, the modern self-professed liberals do not hesitate to imperil the very institutions of our Government by attempting to continue to expand their schemes of experimentation.

The people at home want to clear the confusion here at Washington. They want less legislation, fewer directives, less regulations, and less governmental interference with business. One example illustrates my statement: The vital question of housing. There are actually nine agencies attempting to regulate the housing program. In the Federal Government there are 1,100 main boards, bureaus, agencies, and departments, and hundreds of these have powers conflicting with each other. The almost unbelievable stupidity with which many of these Government agencies have been administered has seriously menaced our prosperity.

Many people are asking: "Why not try freedom?" It is time for us to realize that it is only economic freedom combined with hard and steady work that will overcome wartime dislocation and start our country on the road to financial stability. Work and public economy are our best, and I think our only protection to safeguard our progress and go forward to a new and greater destiny.

We have built up great labor-union trusts controlling the necessities of our life—coal, railroads, steel, shipping, etc.—in short, our national economy. Our Government broke up monopolies in business years ago, but in doing so labor unions were exempted. What is a greater monopoly than the United Mine Workers? It mines all the coal; it has the closed shop, and one man controls it. Without coal our Nation cannot function. Never has a more powerful trust existed.

I do not pretend to know all the answers to the problems as to what must be done to control these labor leaders who have such power, but I do know that full production is essential to our economic prosperity and that continued and unwarranted strikes must be curbed.

It may well be that we can only preserve our security at home by breaking up great national monopolistic unions so that no one union can destroy our economy. The exemption given labor unions in the Sherman and Clayton antitrust laws should be cancelled. In this democracy we cannot give special privileges to any group of our citizenship.

The same applies to the Wagner Labor Act. It gives special privileges to labor, and these should be promptly removed. Some seem to think that the Wagner Labor Act is sacrosanct, but I think the time has come to strike directly at the Wagner Labor Act by specific amendments, preserving always the right of workers to organize and bargain collectively. Mutuality of responsibility by law must exist in labor contracts. A union, like an employer, must be liable for civil damages in the event of nonperformance of contracts or damage to property. Jurisdictional strikes and secondary boycotts must be outlawed. Essential industries must be kept in continuous operation. The Corrupt Practices Act should be applied in politics against labor unions as well as business corporations. The labor unions should be required to incorporate, to hold honest elections, and to account for their funds. The closed shop should be barred. It is undemocratic in a democratic country. Abolition of the closed shop and industry-wide bargaining would effectively break up labor's monopolistic control of the essentials of life, and this may well be the best and simplest way to destroy the power of these great labor leaders who have dealt so cruelly with the American people and have done such a disservice to the laboring man himself. The House labor bill passed by an overwhelming majority is, in my judgment, the best labor reform measure yet enacted by either branch of Congress. I shall do my utmost to see that the labor measure passed by the Senate conforms as nearly as possible with the House bill.

We made good progress in the Senate today when, in the vital question of sending the bill back to committee, the Senate voted in the negative by 59 to 35. This is a good omen that the amendments pending to strengthen the Senate Labor Committee bill, of which I am a copatron, will be adopted by about the same majorities. Short of a Presidential veto, which I hope will not occur, we have the brightest hope in the past 10 years to enact strong but just labor legislation which will restore the balance of equality, under the law, between labor and industry.

The Wool Bill

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following newspaper editorials:

[From the Pittsburgh (Pa.) Post-Gazette of June 13, 1947]

WOOL AND WAR

The wool-grab bill, by which this country would revive its suicidal high tariff policies of the twenties, is almost certain to be passed by Congress. This bill would not only retain the present duties on wool, but would require the President either to raise them or to impose quotas whenever imports were found to be reducing the amount of domestic fiber produced.

The immediate effect of the bill will be to sabotage the efforts of our State Department officials who are now negotiating reciprocal agreements with representatives of 18 nations at Geneva. It is questionable whether these nations can now place much credence in our pious words about freeing world trade when our legislative actions prove us hellbent for economic isolationism.

The wool tariff hits most of all the British Empire, that family of nations which should provide our closest allies. For example, almost 90 percent of Australia's exports to this country—and a large part of New Zealand's—are accounted for by wool. If we are to close our markets to these Dominions, we shall not only invite a resumption of the Empire preferential system, but will set an example in those discriminatory trade practices which are the sure harbingers of war.

Unless all our postwar foreign policy is to go by the board, President Truman must veto—and Congress must sustain his veto of—the wool tariff bill.

[From the St. Louis (Mo.) Post-Dispatch of June 16, 1947]

LET THE COSUMER SPEAK

Most of the opposition voiced against the wool bill which Congress is about to pass is based on the fact that it conflicts with efforts of the State Department to broaden international trade as a basis for American leadership in world affairs.

This argument should be sufficient to kill the bill, but the tariff-minded Republican majority is not impressed. It is bent on opening the way for a 50-percent increase in the tariff on wool. It also wants to impose wool quotas for the further protection of our poor little western lamb against the predacious sheep of Australia, New Zealand, Africa and Afghanistan.

But what about the poor little consumer? According to a carefully researched article in the January issue of Fortune, the tariff on wool added $136,000,000 to America's clothing bill in 1946, or about $10,000,000 more than the value of all the wool produced in the United States that year.

If the tariff is upped 50 percent, the cost to the consumer will rise to more than $200,000,000. The tariff itself won't cost the consumer that much, but when the cost is compounded in the mark-up of the various processors, that is the resulting burden on the consumer.

What it amounts to is this: Every man, woman and child in America has been contributing $1 a year to the support of the American wool grower. If the new bill is not vetoed, the consumer will contribute from here out $1.50 a year. Yet America produces only a third of the wool it requires, and that is not of the best quality.

If Congress is not impressed by the pleas and protests that the new wool bill will sabotage our foreign policy, the consumer should speak up and see if he can impress Congress that he doesn't want his pocket picked for the benefit of a handful of wool growers. Maybe the high-tariff boosters will be impressed by that. Votes are involved there, too.

[From the Washington (D. C.) Post of June 17, 1947]

BREAK IN THE DIKE

Some persons will see in the congressional enactment of the new wool bill a return to economic isolationism. Such an assessment misses the mark. The superprotection provided for American wool stems, in our opinion, from a combination of purely domestic circumstances. It has been fostered by representatives of the western wool-producing States in part as retaliation against Republican cuts in reclamation projects. Their colleagues then passed the buck to the President as a way out of a predicament which is always felt on the favor-bartering Hill. The trouble is that this action is buck-passing with economic peace and treaty observance.

The dilemma in the wool industry could have been resolved for at least the present by acceptance of the Senate bill providing for domestic subsidies. Instead, the conferees left the President with the ugly alternatives of raising the import fees or lowering the import quotas to support the price of domestic wool. It is bad enough that such ill-conceived action makes a mockery of all our high-sounding talk on new trade agreements at Geneva. What is worse is that the amended program, if upheld, will provide a flagrant violation of reciprocal trade agreements we have already signed with the wool-exporting nations.

As Mr. Stimson phrased it, it will "amount to a repudiation of the whole structure of American economic policy developed * * * during the 15 years since Cordell Hull began his great work for trade agreements" and would be "a shocking indication that the policy of the United States can at any time be shackled by the sort of economic short-sightedness for which all the world has paid so dearly in recent years." If this blow is sustained in contravention of our pledged word, what nation can then afford to trust us? An emphatic veto should be forthcoming.

[From the New York (N. Y.) Times of June 20, 1947]

A BILL TO HINDER TRADE

By a Senate vote of 48 to 38 yesterday afternoon Congress completed action on a measure which might truthfully be called "An act to hinder world trade." This was, of course, the wool bill, a hybrid produced by grafting on an administration price-support plan a provision for quotas or import fees to keep foreign wool from competing with domestic wool. The drive behind this amendment originated with the American wool producers but was not confined to them. Other producers, foreseeing future need for protection in their own fields, joined in. The wool bill, as it stands, is a device to keep up the domestic price of wool and consequently of woolen goods and clothing. By the same token, it is a bill to encourage the use of synthetic fabrics, against which no protective system will avail.

But it is more than that. It is a declaration by 151 Representatives, out of 216 voting, and by 48 Senators, out of 86 voting, that when it comes to a pinch they do not believe in making concessions to encourage international trade. It is a notice to Australia, New Zealand, and South Africa that they had better stick to cartel arrangements within the British Empire preference system. It is an admonition to the nations which we encouraged to send representatives to the Geneva Trade Conference that Congress differs with the administration's policy, as expressed by Under Secretary Clayton, of eliminating discriminations against trade and reducing barriers against trade." Supporters of the bill have argued that the President need not fix import quotas or impose import fees if he does not care to. It is certainly the intent of Congress that he shall do so if the interests of a small minority of domestic wool growers seem to require it. The interests of the larger public and the integrity of our foreign policy were disregarded.

This is clearly a case in which a Presidential veto would be justified.

It Takes Hard Work, Effort, and Patience To Accomplish Deeds for Constituents

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 20, 1947

Mr. MORRISON. Mr. Speaker, it has been with extreme pleasure and pride that I have had the good fortune of representing the Sixth Congressional District of Louisiana for several terms as Congressman in the Nation's Capital here in Washington. I have had numerous requests from various individuals and organizations for a résumé of some of my activities. In compliance with these requests, I will do my best to outline and relate a few of the things I have worked diligently to help and serve the constituents of my district and their needs.

CORRESPONDENCE FROM THE PEOPLE

Every letter addressed to my office has been answered promptly and every request for service to be rendered or help extended has always been complied with as fully and quickly as possible. Such data and service have been furnished on request to individuals, to civic and patriotic groups, or other organized committees, as well as to city, parish, or State government departments or agencies.

ASSISTANCE TO BUSINESS

Active cooperation has been extended to literally hundreds of private commercial businesses and enterprises and chambers of commerce, boards of trade, and other similar governmental units.

HELPING VETERANS

Many thousands of GI's and veterans have been assisted promptly not only throughout the State and Nation but throughout the far corners of the world—wherever Louisiana boys are stationed. In addition, the numerous requests for help from their parents, relatives, and friends receive the same courteous and efficient consideration. Active and frequent cooperation has also been rendered the veterans' posts and veterans' service centers.

These requests involve action with regard to family allotments, furloughs in case of family sickness and death, location of missing GI's, action on delayed applications for separation from service, transportation of wives of our servicemen, loans to veterans for home building and business, back pay and travel reimbursement, cars for our amputees, disability pensions, estates of deceased veterans. Also action has been taken on application for reemployment rights, housing priorities, GI educational benefits, invalid pension cases, and many other types of assistance.

To further help the veterans I introduced various veteran legislation, including H. R. 482, which provides for terminal leave to be paid in cash in lieu of bonds and those bonds already issued for terminal leave be redeemable at any time. Other bills of interest to veterans, introduced by me since the beginning of the Eightieth Congress in January, are H. R. 2528, for removing maximums placed on income of veterans receiving subsistence allowance for schooling and employment; and H. R. 500, which provides for a bonus for the members who served in the armed forces during World War II. Altogether I have introduced many bills at the request of veterans and veterans' organizations in the Eightieth Congress.

FUTURE FOR LOUISIANA

I have stressed and I have worked actively to bring about industrial and agricultural development to Louisiana. I have tried for a number of years to cooperate with all organizations to bring new industry to Louisiana. Much of my time has been spent in trying to aid the farmers and help them with their many problems.

AIRPLANE INVESTIGATION

In the midst of the last war I became astonished at the sudden and alarming number of Army and Navy air crashes. I made a thorough investigation of the facts and found that a number of aircraft companies were producing defective and faulty ships for our armed forces. I took the floor of Congress on many occasions and demanded that the Government take immediate action to save the lives of our boys—and action came quickly. On May 18, 1943, the St. Louis (Mo.) Post-Dispatch carried a front-page banner headline crediting your Congressman with bringing these shameful facts to the attention of the Nation. Months later, the Senate War Investigating Committee released its startling report upholding my charges. Needless to say, my work in this connection in all probability, saved thousands of American lives and millions of dollars of taxpayers' money.

VETERANS' HOSPITALIZATION

On February 8, 1945, the Stars and Stripes, a veterans' newspaper, published in Washington, D. C., carried a front-page editorial in which your Congressman was congratulated for his forceful efforts in the fight to eliminate veterans from being required to take a pauper's oath in order to get into a veterans' hospital, and for my work in bringing about a thorough investigation and clean-up of the veterans' hospitals throughout the Nation and for my assistance to veterans generally.

HELP TO FARMERS

On April 6, 1946, the New York Packer, which is the largest produce newspaper in America, published the following story on the front page:

STRAWBERRY PRICE CONTROL EXEMPTION—CREDIT MORRISON

WASHINGTON, D. C., April 5.—Score a bull's-eye for JIMMY MORRISON, Congressman from the famed Louisiana strawberry area, who has just successfully convinced Government officials that exemption of price control over strawberries deserves a trial. This is good news, which equals the excellence of the Louisiana strawberry, as far as producers from that and other late-producing States are concerned.

SCHOOL-LUNCH PROGRAM

Your Congressman introduced one of the very first pieces of legislation that provided funds for school lunches in behalf of needy and deserving children of the State of Louisiana and made a number of speeches on the House floor, urging the immediate passage of this worthy measure. This matter was soon after approved.

AID TO TEACHERS

In this Eigthieth Congress I introduced H. R. 2525, a bill for Federal aid to education providing for a better and improved educational program, increasing present teachers' pay and to establish additional schools so that a greater percentage of our children will be able to receive a decent and proper and better education.

BENEFITS FOR THE AGED

On April 9, 1947, I introduced H. R. 2979 which provides that the Social Security Board pay $65 to those needy citizens who have reached the age of 55 years or over and are physically handicapped or unable to work any longer or who have already worked for 20 years or more.

ADDITIONAL LEGISLATION

I have introduced numerous other bills which affect the welfare, happiness and future of nearly every person in the State. I shall discuss these measures more fully at a later date.

AT YOUR SERVICE

I know you will understand that the foregoing is not intended to, nor can it be a complete report of my numerous activities in behalf of my constituents, but I trust it will serve to give you some of the information which will add further to your own knowledge of what your Congressman has done for you. If you have any questions or if you seek further information on any matter, will you please communicate with me.

The following represent a few of the thousands of letters I have received in appreciation of my efforts and are, of course, self-explanatory:

STATE OF LOUISIANA,
DEPARTMENT OF PUBLIC WELFARE,
Baton Rouge, La., May 23, 1946.

Hon. JAMES H. MORRISON,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MORRISON: I have your letter of May 15, 1946, advising that my testimony has been included in the official record of the hearings of the Committee on Ways and Means and in the CONGRESSIONAL RECORD.

I sincerely appreciate your prompt and efficient cooperation in our efforts to secure Federal legislation which will be beneficial to the needy people of our State.

If at any time I can be of service to you, please let me know.

Sincerely yours,
W. S. TERRY, Jr.,
Commissioner of Public Welfare.

BATON ROUGE, LA., *May 22, 1946.*

DEAR MR. MORRISON: I wish to inform you that I have received my check from the commission.

Your efforts and interest in this matter are greatly appreciated by both myself and my family.

All people you meet admire the interest you show in the folks back home. They are always assured of an early reply and feel that your office is well taken care of. So, to our next Governor, thanks a lot.

C. R. MASSEY.

LOUISIANA DEPARTMENT OF
AGRICULTURE AND IMMIGRATION,
Baton Rouge, January 29, 1945.

Hon. JAMES H. MORRISON,
Member of Congress,
Washington, D. C.

DEAR JIMMY: Yours of the 25th to hand and note what you say in reference to farm labor.

I can assure you we appreciate your splendid efforts in assisting in this most important matter.

With best wishes, I am
Sincerely yours,
HARRY D. WILSON,
Commissioner.

STATE OF LOUISIANA,
SECRETARY OF STATE,
Baton Rouge.

Hon. JAMES H. MORRISON,
Member of Congress,
Washington, D. C.

DEAR JIMMY: Thanks very much for your telegram advising me that the House had passed the insurance legislation in which I was interested.

Your cooperation and support in this matter are deeply appreciated.

With kindest personal regards, I am,
Sincerely yours,
WADE O. MARTIN, Jr.,
Secretary of State and
Insurance Commissioner.

ZACHARY, LA.

Congressman JIMMY MORRISON,
Washington, D. C.

DEAR SIR: I wish to thank you for giving us your assistance in extending the mail route that I requested. I feel that I am also expressing the appreciation of the other 26 signers of said petition. It will be such a benefit to our community.

Thank you again for giving it your immediate attention.

Yours truly,
MRS. GERALD PHARES.

SLIDELL, LA., *February 9, 1946.*

Hon. JIMMY MORRISON,
Member of Congress,
Washington, D. C.

DEAR CONGRESSMAN: I wish to take this opportunity to thank you for your efforts in my behalf in securing my annuity. I am indeed indebted to you for quick action, as I received my first check last week.

I feel that without your help this matter may have continued indefinitely.

Again assuring you of my sincere appreciation, I am,

Yours very truly,
WILLIAM M. PAINTEN.

BATON ROUGE, LA.

Mr. JIMMY H. MORRISON.

DEAR SIR: I will again write you to thank you for your service that you rendered me, and I highly appreciate what you have done for me. At any time that I can do something for you in return I will be more than glad to do so. Thanks again.

Yours truly,
E. J. VICKNAIR.

Hon. JAMES H. MORRISON,
Member of Congress,
Washington, D. C.

DEAR SIR: I wish to take this opportunity to thank you for your efforts in helping us get the mail delivered to our homes on Route 1, Gonzales, La. The extension of this

route is of great benefit to all of us, and we are all grateful to you for helping us.

I understand the mail will be delivered to our homes beginning the 16th of this month. I will return home in a few weeks and will enjoy with all the others the convenience of having our mail delivered home instead of a mile away.

Respectfully,

MRS. F. K. MORRIS.

LOUISIANA STATE UNIVERSITY AND AGRICULTURAL AND MECHANICAL COLLEGE,
Baton Rouge, La., August 19, 1946.

Miss FLORENCE H. COOLEY,
Secretary to Congressman James H. Morrison, House of Representatives, Washington, D. C.

DEAR MISS COOLEY: In the absence of President Hatcher, I wish to thank you for your letter of August 13 and your telegram of August 16 with regard to the triple-A priority for this institution. I passed the information contained in both messages on to the comptroller, who gave the matter his prompt attention.

Assuring you that we appreciate everything your office has done for us concerning this problem, I am

Sincerely yours,

FRED C. FREY,
Dean of the University
(For and in the absence of the President).

BATON ROUGE GENERAL HOSPITAL,
Baton Rouge, La., August 22, 1946.

MR. JAMES H. MORRISON,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR MR. MORRISON: I greatly appreciate your work, on behalf of the hospital, in securing the prompt attention to our application for priorities.

We appreciate your assistance in this matter several times before, and I assure you that you are making a definite contribution to the public health of the community.

Yours very truly,

BATON ROUGE GENERAL HOSPITAL,
W. E. B. LOCKRIDGE,
Administrator.

LOUISIANA STATE UNIVERSITY AND AGRICULTURAL AND MECHANICAL COLLEGE,
Baton Rouge, February 21, 1946.

Hon. JAMES H. MORRISON, *Member of Congress,*
House of Representatives,
Washington, D. C.

DEAR MR. MORRISON: In the absence of President Hatcher, who is recuperating from a severe case of influenza, I wish to thank you for the faithful cooperation you have given us on our housing problem. Please be assured that we appreciate all of the courtesies you have extended us.

Sincerely yours,

FRED C. FREY,
Dean of the University
(For and in the absence of the President).

WASHINGTON PARISH CANNING CO.,
Franklinton, August 9, 1946.

Representative JIMMIE H. MORRISON,
Washington, D. C.

DEAR SIR: We have your telegram advising us that the Department of Agriculture has granted us an additional 150,000 cases of cans for sweetpotatoes, and we certainly appreciate your efforts in helping us get this quota.

Yours very truly,

WASHINGTON PARISH CANNING CO.,
LOUIS JOHNSON.

STATE OF LOUISIANA,
DEPARTMENT OF EDUCATION,
Baton Rouge.

Hon. JAMES H. MORRISON,
House of Representatives,
Washington, D. C.

DEAR MR. MORRISON: I acknowledge receipt of your letter of March 22 to which you attached a copy of a letter received from the Honorable Paul V. McNutt, Chairman of the War Manpower Commission, dated March 21. This letter advises of the approval by the Commission's Interdepartmental Committee on Essential Activities of the publication of textbooks approved by State educational authorities.

The action of this committee of the War Manpower Commission should relieve the problem of getting a reasonably adequate supply of instructional materials. This is more necessary now than ever, due to the personnel problems which are being experienced by parish and city school boards.

We know that you have been very busy, and we hesitated to call upon you for the time required to press this to the successful conclusion which has been reached. The importance of a successful solution to the problem, however, dictated the action which was taken. We want you to know that we sincerely appreciate the splendid work which you performed in this instance, and we express again our thanks for this aid.

With best wishes, I am

Sincerely yours,

J. M. BOYET,
Supervisor, Materials of Instruction.

LOUISIANA BAPTIST FOUNDATION,
Shreveport, La., April 17, 1945.

The Honorable JAMES H. MORRISON,
House Office Building,
Washington, D. C.

DEAR MR. MORRISON: We greatly appreciate your prompt assistance in securing early ruling from the Commissioner of Internal Revenue. The Commissioner passed on our request on the 10th of April and we had been warned that it took 6 to 8 weeks to secure a ruling. Without your assistance we would have been handicapped in our work.

We greatly appreciate your courtesy and your cooperation.

Sincerely yours,

W. E. B. LOCKRIDGE,
Treasurer.

EAST BATON ROUGE
PARISH SCHOOL BOARD,
Baton Rouge, La., February 23, 1946.

Hon. JIMMIE H. MORRISON,
United States Congressman,
House of Representatives,
Washington, D. C.

DEAR MR. MORRISON: Your telegram in which you advised that you voted for and supported the school-lunch program has been received. We appreciate your interest and support in all problems pertaining to public education.

With best wishes and kindest personal regards, I am

Yours sincerely,

CLARK L. BARROW,
Superintendent.

BOLOGNA BROS.,
Baton Rouge, La., May 22, 1946.

Hon. JAMES H. MORRISON,
Congressman, Sixth Louisiana District,
Washington, D. C.

DEAR CONGRESSMAN MORRISON: I greatly appreciate your assistance in quickly obtaining my passport for trip to Italy. Passport was issued 2 weeks after I wrote you.

Thank you, and with kindest regards, I am,

Sincerely,

JOE BOLOGNA.

STATE OF LOUISIANA,
DEPARTMENT OF COMMERCE AND INDUSTRY,
Baton Rouge, April 5, 1946.

Hon. JAMES H. MORRISON,
Member of Congress,
House Office Building,
Washington, D. C.

MY DEAR MR. MORRISON: I want to take this opportunity to thank you for your kind expressions contained in your letter of April 2.

We in this department are watching with keen interest the negotiations of the Kaiser interests in acquiring the now idle aluminum plant here at Baton Rouge and want to assure you that we want to render any services that we can to you or the Kaiser interests in expediting this matter in order to open this plant, thereby helping the reconversion program as well as our State's further economy.

Again thanking you, and with sincere good wishes, I remain

Respectfully,

W. HARRY JOHNSON,
Executive Director.

LOUISIANA TEACHERS ASSOCIATION,
Baton Rouge, La., March 4, 1946.

Congressman JAMES H. MORRISON,
House of Representatives,
Washington, D. C.

DEAR JIMMY: I appreciate your letter of February 28 advising the House approval of H. R. 3370. I am grateful, too, for your wiring me of this action on the day the bill was acted upon.

Let me know at any time of any service I can be to you for the many courtesies you have extended to me personally and to the office of the Louisiana Teachers Association.

With kind personal regards, I am

Yours cordially,

H. W. WRIGHT,
Executive Secretary.

RADIO SERVICE,
Plaquemine, La.

Hon. JAMES H. MORRISON,
Congressman, Washington, D. C.

DEAR MR. MORRISON: On behalf of the entire population of Plaquemine, La., and Turnerville, I personally wish to thank you on the great favor you have rendered us, by securing through your untiring effort, the renewal of the practice of crossing the Plaquemine locks, by pedestrians.

We have been notified by the local engineers on the locks that we are permitted to use same as a means of crossing Bayou Plaquemine and this past Sunday it looked like old times to see all of the pedestrians going to and returning from church use this means of crossing Bayou Plaquemine.

I personally would like to have more of your friends here sign this letter with me, but as I do not have time to pass it around for their signatures, I know that I speak for all when I say "Thanks again, all of us appreciate your untiring effort on this matter."

After seeing that so much has been done in such a little time by you, I feel that even more now than before you are working in Congress for the good of all the people of the State that you represent, and here's wishing you continued success in all that you undertake to do for the people of the good State of Louisiana.

Sincerely,

C. C. NEUBIG, Sr.

STANLEY MARTIN POST, No. 69,
THE AMERICAN LEGION,
Lafayette, La., February 15, 1946.

Congressman JAMES H. MORRISON,
Sixth Congressional District,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I thank you for your efforts directed toward aiding the veterans of Southwestern in obtaining housing facilities so that they can attend college.

Your work will receive due recognition at the February meeting of Stanley Martin Post, No. 69 of the American Legion.

Trusting that you will continue the fight, I am

Sincerely,

R. L. BROWNE,
Commander.

JOINT EMERGENCY COMMITTEE,
FOR THE SOUTHERN PINE INDUSTRY,
New Orleans, La., March 8, 1946.

Congressman JAMES H. MORRISON,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN MORRISON: This committee, representing the entire southern pine industry, desires to express to you its appreciation for the interest you have shown in the problems of the southern pine industry and, particularly, for your efforts with Government agencies to bring about relief to our industry through amended Directive 94, issued February 13.

Our industry, which produces one of the key materials for the reconversion's construction program, is anxious to do its full part in this great responsibility. Its ability to render maximum service to the Nation depends, to a large extent, upon the realism with which our problems are handled by agencies of the Government.

We, therefore, hope you will continue to show the high degree of interest you have manifested in the seriousness of our problems and that our industry may continue to have the benefit of your careful thought and attention.

Yours very truly,
JOINT EMERGENCY COMMITTEE FOR THE SOUTHERN PINE INDUSTRY,
C. C. SHEPPARD, *Chairman.*
H. C. BERCKES, *Secretary.*

SOUTHWESTERN LOUISIANA INSTITUTE,
Lafayette, La., April 1, 1946.

Hon. JAMES H. MORRISON,
Member of Congress, Washington, D. C.

DEAR MR. MORRISON: This is to acknowledge your letter of March 29, to which was attached one from Commissioner Philip M. Klutznick relative to veterans emergency housing for Southwestern.

We deeply appreciate your splendid cooperation.

Sincerely,
JOEL L. FLETCHER,
President.

WASHINGTON PARISH CANNING CO.,
Franklinton, La.

Hon. JAMES H. MORRISON,
Member of Congress, Washington, D. C.

DEAR CONGRESSMAN MORRISON: I wish to express our appreciation for your efforts in securing approval from the War Food Administration in issuing to the Washington Parish Canning Co. an additional 25,000 cases of No. 2½ cans to be used in the completion of the sweetpotato-canning program for Washington Parish, La.

If this allotment had not been granted the Washington Parish Canning Co., over one-half of the sweetpotato crop would nave been a loss to the farmers of this vicinity. You have not only favored the Washington Parish Canning Co. by your efforts, but also Washington Parish and its entire agricultural interests.

Yours very truly,
NICK A. SKRMETTA,
Manager.

HUB CITY MOTORS,
Lafayette, La.

JIMMIE MORRISON,
Congressman, House of Representatives, Washington, D. C.

DEAR MR. MORRISON: As you will soon depart for a much needed rest and vacation, having very closely followed your work and efforts during this session of Congress, I want to congratulate and thank you for your untiring efforts and self-sacrifices under the most trying conditions. We, as well as the Nation, owe you a debt of gratitude for your splendid efforts and accomplishments.

With very best wishes for your continued health and success in the hope that we will have the pleasure of seeing you in person on your return to our good State.

Very truly yours,
HUB CITY MOTORS,
BROWN A. FORTIER,
Managing Partner.

BATON ROUGE, LA., *May 12, 1947.*

DEAR JIMMY: I want to thank you for what you've done; you have been a great help to me. I appreciate it from the bottom of my heart, and I know Dad will too when I tell him in my letter today what you have done. It will be a surprise to him.

Thanking you sincerely.
Mrs. CARL H. MILLER, Jr.

UNITED STATES MARINE CORPS,
Pensacola, Fla., June 17, 1947.

Congressman JAMES H. MORRISON,
House of Representatives,
Washington, D. C.

DEAR SIR: Please accept my sincere appreciation for your great help in my securing housing. I received a permanent house shortly after your second letter, moved in, and like it fine. I assure you that I won't forget your kindness in the future, neither will my extra large family of four brothers and two sisters, all married.

Wishing you continued success and again thanking you for your help, I am

Very truly yours,
BILLY DAY, Sr.

FORT LEWIS, WASH., *June 3, 1947.*

DEAR SIR: Upon reading the latest edition of the Army Times, I found that you have introduced a bill into the House providing that reenlistment leave taken before enactment of Armed Forces Leave Act will not be charged to leave credits. I wish to thank you, sir, for introducing such a bill. It is about time that someone started to give us Regular Army soldiers a break and it looks like you will be the man to start the ball rolling. Nearly everyone in the Regular Army lost $300 to $400 when the War Department canceled out our reenlistment bonus and counted it against our regular leave time. This was a serious blow to us as we had been promised at the time of our reenlistment that the reenlistment furlough would not count against our regular leave. Needless to say we were all pretty disgusted when they did so. Your bill is exactly what we have been waiting for and I assure you that we are a thousand percent behind you. I, and my thousands of comrades in the Army, wish to thank you, sir, for what you are trying to do for us.

Sincerely yours,
Staff Sgt. MILTON L. ASHBY, 19022619,
Annex 1, Madigan General Hospital,
Fort Lewis, Tacoma, Wash.

NATCHITOCHES, LA., *May 20, 1947.*

Mr. JAMES H. MORRISON,
Washington, D. C.

DEAR MR. MORRISON: I want you to know that I appreciate your effort and support of bill H. R. 1625, and that your support will not be forgotten.

Thanks a million and best wishes, I am

Sincerely yours,
AUSTIN E. BROWN,
C-280725.

BATON ROUGE, LA., *May 8, 1947.*

Congressman JAMES H. MORRISON,
Washington, D. C.

DEAR CONGRESSMAN: Sorry to have been so long in letting you know that I have received two of my checks for on-the-job training since you looked into the matter for me. I wish to express my thanks for your very prompt attention.

Yours very truly,
HARRY F. PRICE.

RESERVE, LA., *May 8, 1947.*

Mr. JAMES H. MORRISON,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR MR. MORRISON: It is with overwhelming gratitude that I write you this letter of thanks for all the assistance you have given me. Your kindness will be remembered by me and my family always. Thanks a million for everything, Mr. MORRISON. Any assistance I can render you at any time will be done with pleasure.

With kindest personal regards and appreciation unending, I remain,

Gratefully yours,
PAUL J. CAMALLO.

DELTA TANK MANUFACTURING CO., INC.,
Baton Rouge, La., April 24, 1947.

Hon. JAMES H. MORRISON,
Member of House of Representatives,
House Office Building,
Washington, D. C.

DEAR SIR: I appreciate your cooperation and efforts with the War Assets Administration in getting them to release that blast furnace to Sheffield Steel Corp.

I would like to take this opportunity to express my appreciation for your handling the numerous requests that have been made. If at any time any of us can be of assistance to you do not hesitate to call on us.

Sincerely,
HAL S. PHILLIPS,
President.

ARLINGTON, VA., *April 23, 1947.*

Hon. JAMES H. MORRISON,
House Office Building,
Washington, D. C.

DEAR MR. MORRISON: At long last I have received from the Veterans' Administration in Washington my certificate of eligibility which will facilitate my own end. From here on I will carry the ball. Thanks a lot for your kind cooperation.

Sincerely yours,
CLINTON C. GAUTREAU.

AMERICAN LEGION,
DEPARTMENT OF LOUISIANA,
New Orleans, La., April 21, 1947.

Hon. JAMES H. MORRISON,
Sixth District Representative,
State of Louisiana,
Washington, D. C.

MY DEAR CONGRESSMAN: Many thanks for your letter of April 17, together with copy of telegram sent to the Coca-Cola Co. in reference to assistance to the United States Marine Hospital at Carville, La.

I am just in receipt of a letter from Dr. Johansen, senior surgeon, temporarily in charge, that your assistance has been of a great benefit and apparently things are now coming through for that hospital.

Again let me assure you of the deep appreciation of these patients and also of the Legionnaires.

Yours truly,
VICTOR H. KENNEDY,
Department Vice Commander.

RICHARDSON & RICHARDSON,
Bogalusa, La., April 14, 1947.

Hon. JAMES H. MORRISON,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR JIMMY: Thank you for sending us copies of correspondence with W. L. Schillings, 101 Huron Avenue, Bogalusa, La. We deeply appreciate the services rendered by you, and in order to be fair in these matters we always try to call your good services to the attention of our clients.

Wishing you every success, we are

Very truly yours,
RICHARDSON & RICHARDSON,
By JIM W. RICHARDSON.

BATON ROUGE, LA., *April 10.*
Hon. JAMES H. MORRISON,
Member of Congress,
House Office Building:

Thanks for your message about transfer of property to School for Spastics. Greatly appreciate your help in this matter.

SPENCER PHILLIPS,
Superintendent,
Louisiana State School for Deaf.

LE BLANC'S AZALEA AND CAMELLIA FARM,
Lafayette, La., April 8, 1947.
Hon. JAMES H. MORRISON,
Member of Congress, Washington, D. C.

DEAR JIMMY: I want to thank you kindly for the letter you sent me from the Department of Agriculture. The information it contains is exactly what we were seeking.

Many thanks and with the kindest personal regards, I am.

Yours very truly,
LE BLANC'S AZALEA AND CAMELLIA FARM,
DUDLEY J. LE BLANC.

AMERICAN SUGAR CANE LEAGUE OF THE U. S. A., INC.,
New Orleans, La., April 3, 1947.
The Honorable JAMES MORRISON,
Member of Congress,
Washington, D. C.

DEAR CONGRESSMAN MORRISON: We desire to express our appreciation for your support of the bill to decontrol the price ceiling and rationing of sugar on October 31, 1947.

All elements of the Louisiana sugar industry will thereby be given the opportunity to harvest and market their 1947 crop under free enterprise.

We are convinced that October 31 is the appropriate date for decontrol and that it will permit a gradual change from war controls with the least violent market fluctuations.

Thanking you, and with kind regards,

Sincerely yours,
AMERICAN SUGAR CANE LEAGUE,
Per GEO. L. BILLEAUD, *President.*

STATE OF LOUISIANA,
DEPARTMENT OF VETERANS' AFFAIRS,
Jennings, La., April 2, 1947.
The Honorable JAMES H. MORRISON,
Member of Congress, House of Representatives, Washington, D. C.

DEAR CONGRESSMAN MORRISON: I have just received your letter of March 31 in regard to Roy W. Johnson (ASN-1036428), deceased veteran of World War I.

The certified copy of his discharge obtained from the clerk of court in Tangipahoa Parish is sufficient for our purposes.

Again I would like to thank you for the many times you have given me much needed assistance in the interests of Louisiana veterans and I assure you they are deeply appreciative. Kindest regards.

Sincerely yours,
DEPARTMENT OF VETERANS' AFFAIRS,
ALLEN G. SIBLEY,
Parish Service Officer.

STATE OF LOUISIANA,
DEPARTMENT OF EDUCATION,
Baton Rouge, April 2, 1947.
Hon. JAMES H. MORRISON,
Congress of the United States, House Office Building, Washington, D. C.

DEAR MR. MORRISON: I wish to acknowledge with thanks your letter of March 27 relative to the availability of certain items, consisting chiefly of tools, to educational and public-health institutions and with which you enclosed a copy of War Assets Administration Regulation 14, Order 7, dated March 3, 1947.

We sincerely appreciate your interest in our program and offer of assistance in acquiring any of the items listed, and should there be occasion for their purchase we shall contact you.

With best wishes, I am,

Very truly yours,
S. W. HENDRIX,
State Supervisor,
Vocational Rehabilitation.

EAST BATON ROUGE METHODIST CHURCH,
Baton Rouge, La., March 28, 1947.
Hon. JAMES H. MORRISON,
House, Building, Washington, D. C.

DEAR MR. MORRISON: I am in receipt of your letter of March 24 this morning and naturally received your wire yesterday afternoon advising me of your success in our securing one of the Army chapels.

Jimmy, it goes without saying that we greatly appreciate the effort you have put forth in our behalf and board members want me to express to you their appreciation, and we know as long as we have representation such as you in Washington things of this nature can be made a reality.

I would like to say that your wire came at a very opportune time to build up our pastor's enthusiasm and ambitions to go forward with this little church as it has been a grind through the months for him and his father passed away the day before your wire was received and naturally, when this information was given him, it really did help, which I know will make you feel mighty good to have this information.

I have not had occasion to talk to our friend, Jesse Webb, as he has been out of his office. Again thanking you for your efforts, I remain,

Yours very truly,
EAST BATON ROUGE METHODIST CHURCH,
F. A. NEAL, *Treasurer.*

NEW ORLEANS, LA., *March 26, 1947.*
JAMES H. MORRISON,
Member of Congress,
Hammond, La.

DEAR MR. MORRISON: Your kind cooperation regarding my retirement status recently was greatly appreciated. The information received was just what I desired.

I wrote you directly because I felt assured of speedy results and if at any future date I can return the favor, I shall be very happy to do so.

Thanking you again, I remain

Sincerely yours,
BESSIE K. KIFT.

HAMMOND, LA., *March 19, 1947.*
MR. JAMES H. MORRISON,
Member of Congress,
Washington, D. C.

DEAR MR. MORRISON: I received your letter of the 12th of March, concerning the hearings of my case by the Board of Veterans Appeals.

I want to thank you for your efforts there and for all of your services. I am waiting for the opportunity to show you my appreciation to better advantage and in a more practical way.

Thanking you, I remain

Sincerely yours,
EMERSORE.
JAMES E. WANNAMAKER,

IBERVILLE PARISH SCHOOL BOARD,
Plaquemine, La., March 13, 1947.
Hon. "JIMMY" MORRISON,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR MR. MORRISON: I wish to take this opportunity to express my personal appreciation of the fine efforts you are making in behalf of better compensation for the school personnel of the State of Louisiana and the Nation. I feel that leaders like you, with the interest you have, can accomplish very much if you receive the backing of the people back home and I want you to know that I am 100 percent back of your efforts to increase State and Federal aid to education.

Please accept my best wishes.

Sincerely yours,
L. P. TERREBONNE,
Superintendent.

ESSO,
Baton Rouge, La., March 14, 1947.
Hon. JAMES H. MORRISON,
Member of Congress, Washington, D. C.

DEAR "JIMMY": I received your wire concerning my daughter's request. Thanks a million for your prompt action, which, of course, is nothing unusual. I am going to have to hand you a new title—"The minute-man of Congress." The pity of it all is that we don't have more like you. Just carry on as you are, and nothing can stop you from going places, and upon arrival at your destination I hope you'll continue to do things in a way that will reflect nothing but good for our people and our State.

Thanks again and with kindest personal regards and best wishes, I am

Yours as B4,
J. A. "JIMMY" MCCURWIN, Sr.

ORLEANS PARISH SCHOOL BOARD,
New Orleans, La., March 13, 1947.
Hon. JIMMY MORRISON,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. MORRISON: Thank you very much for your kindness in sending me copy of the telegram which you addressed to Governor Davis. We in New Orleans deeply appreciate your intense interest and activity in behalf of public education.

With kindest regards, I am

Cordially yours,
LIONEL J. BOURGEOIS,
Superintendent.

PEARL RIVER, LA., *March 6, 1947.*
Hon. JAMES H. MORRISON,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR MR. MORRISON: You can hardly imagine my great appreciation and thanks for the assistance you gave me when you made it possible to have electricity extended out to my neighborhood in Pearl River. The power company went to work immediately and have already completed stringing up the wires.

My neighbors and I will always remember this good work on your part. We all feel as if we are very much in debt to you for this. All the people in Pearl River know that you were responsible for making it possible to get electricity for the neighborhood.

I have already wired my house and am now using the electric light. My neighbors are wiring their houses as quickly as they can have it done. The electric lights make all the difference in the world when you have not had them before. Now my house seems like a different place for my family. It looks more cheerful and cozy, and now I can get the electrical appliances which I have longed for to make housework more easy.

All of Pearl River is talking about the quick results obtained through your efforts. They will not forget. I can assure you that they will be pulling 100 percent for you in the coming Governor's election. They know you are working all out for their benefit in all matters in Congress.

Again I wish to thank you for what you did for me and my neighbors. This is the quickest service with 100 percent results on anything I have ever received in my life.

Best wishes to you and your continued good work for the people.

Very sincerely yours,
MELVIN J. BRENNAN.

STATE OF LOUISIANA,
DEPARTMENT OF VETERANS' AFFAIRS,
Baton Rouge, La.

Re Shelton, Inez M., ASN O579208.
Hon. JAMES H. MORRISON,
House of Representatives,
Washington, D. C.

DEAR SIR: On behalf of the above-named veteran and this office, please allow me to thank you for your splendid cooperation in obtaining for the above-named veteran his certificate of satisfactory service from the United States Army.

Your cooperation in this matter has made it possible for the veteran to purchase a home here in Baton Rouge, La., under the GI bill of rights.

With every good wish, I remain
Sincerely yours,
DEPARTMENT OF VETERANS' AFFAIRS,
WILLIAM G. ROBINSON,
Assistant Parish Service Officer,
Parish of East Baton Rouge, La.

FARM SERVICE, INC.,
Opelousas, La., March 5, 1947.
Hon. JAMES H. MORRISON,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR JIMMY: I wish to acknowledge receipt of and thank you for your telegram of February 14 and your letters, with enclosures, of February 26 and 28, concerning the fertilizer situation.

Your interest and attention to this matter are appreciated and will be remembered.

Yours very truly,
FARM SERVICE, INC.,
J. B. BLACK.

EUBANK, RICHEY & RICHEY,
Alexandria, La., February 27, 1947.
Hon. JAMES H. MORRISON,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: On behalf of the Veterans of Foreign Wars I want to express our appreciation for the splendid attention which you gave to the theater project. We are advised that there will be a delay of perhaps 14 days while the title to the property is being transferred. However, now that we have the assurance that the deal is going through, we are proceeding with our negotiations with the architects and contractors and we are looking forward to having the unit in operation within a relatively short time.

Again I thank you for your splendid cooperation and I would like to assure you that the members of the VFW will remember that in you they have a true friend in Congress.

Very truly yours,
GORDON L. RICHEY,
Cochairman, Theater Project.

FIRST STATE BANK & TRUST CO.,
Bogalusa, La., February 12, 1947.
Hon. JAMES H. MORRISON,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR JIMMIE: We have just received information that the new southbound mail schedule from Bogalusa to New Orleans will come into effect on Monday, February 24. We wrote you asking your assistance in December 1946 and want to thank you very much for the assistance that you gave in connection with the securing of this additional mail service.

With kindest regards, I am
Cordially yours,
W. M. BABINGTON,
Executive Vice President.

BATON ROUGE, LA., *January 27, 1947.*
Hon. JAMES H. MORRISON,
House of Representatives,
Washington, D. C.

DEAR SIR: This will acknowledge receipt of your letter dated December 30, 1946.

Although I'm a bit late in writing this letter I want you to know my wife and I were grateful for everything you did for us concerning my Government school checks. I'm happy to say my checks are now received on time.

Thank you very much.
LOUIS V. GAUDET, *a Veteran.*

Voice of America

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. TWYMAN. Mr. Speaker, when this so-called Voice of America proposal was first presented, it sounded like a good idea and a number of us were either for it or were at least open-minded on the proposal. The more we got into it as the result of reading the bill, the more apprehensive some of us became. I am now opposed to this bill and shall vote against it. I cannot understand why it was brought up at this session in its present form. In the first place, it is going to be very difficult to justify paying $10 a day to people to come to the United States to study and in addition receive expense money and be entertained, and at the same time pay for the education of our people abroad and pay for the difference between what professors receive in this country and what would be paid to them in other countries. At the same time, it is proposed that we will pay foreign professors the same salaries that we pay to our own professors. It is not clearly determined what these foreign professors are going to teach in this country. The GI's going to school here are going to wonder how we can afford to pay foreigners $300 a month for the privilege of an American education. There is no reason for going into the radio end of this deal, which may have some merit, except that the number of receivers abroad are few and far between.

Egypt in the Family of Nations

REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. GEARHART. Mr. Speaker, though it was not my privilege to hear it delivered, my attention was recently called to the text of a very profound and, at the same time, most interesting address which was recently delivered by His Excellency the Ambassador of the Kingdom of Egypt, to the Woodrow Wilson School of Foreign Affairs of the University of Virginia, an address of such unusual excellence upon a subject of such timely importance that I feel constrained to offer it for inclusion in the records of this day's proceedings as an historical pronouncement of great moment.

The author of this most timely commentary upon developing events, the Honorable Mahmoud Hassan, is one of the outstanding and most highly respected members of Washington's diplomatic corps, a gentleman of extraordinary learning and international understanding, and, it must be added, one of its most popular figures, and justly so.

Mr. Speaker, the Ambassador's address, to which I have just referred, is the following:

Ladies and gentlemen, it is my purpose today to bring you greetings from the people of Egypt, from Egypt to these Virginia hills, from the Egypt of today that reaches back into the antiquity of the ages for the roots of her culture, to the Virginia of today that in her past nurtured the beginnings of American democracy and encouraged the growth of the greatest democratic government on earth. I am happy to be here.

As the Ambassador of the Kingdom of Egypt, it is a privilege to speak a few simple words about our past, our present, and, in fact, our future aspirations as a nation. With it, I dare say, you will, out of your own past history find a sympathetic and comprehending tie. And that is good, for the more ties there are to bind the people and civilization of one part of the world to the civilization and people of another, the closer we have come to the simple ideal of world understanding and world peace.

Here, my friends, may I digress just a moment to say a word of tribute to my great friend, your rector and distinguished alumnus of the University of Virginia, Edward C. Stettinius, Jr. As both Under Secretary of State, Secretary of State, and the United States delegate to the United Nations, it has been my privilege to know him in both official and nonofficial capacities. He has brought to his duties a wide experience in government and business, which, with abounding vitality and personality he has contributed to win for his country the high position it now holds in international affairs.

To speak before the Woodrow Wilson School of Foreign Affairs, in my judgment, is a rare and distinct privilege. To one who reads even casually the history of American democracy, the part which Virginia played stands out in plain relief. It reflects to no small degree the thoughts and beliefs of the immortal Jefferson, founder of your university, governor of your State, author of the Declaration of Independence and then President of the United States. Jefferson's outlook on government—all governments—was such that we today can readily subscribe to the tenets that he advocated. And, in the modern sense, what may we say in praise of the idealism of Woodrow Wilson, the Virginian.

Two great Virginians out of the galaxy of famous Americans—Jefferson and Wilson. We do them honor.

"Justice," wrote Jefferson to du Pont de Nemours in 1816, "is the fundamental law of society." "Peace and justice should be the polar stars of America," he reiterated later, and the same thought gained new emphasis when he declared that "the most sacred of the duties of a government is to do equal and impartial justice to all its citizens."

In the dim vistas of the past, in my own country, law and justice have ever been guiding stars. The first written evidence of law comes from Egyptian papyri of four or

five thousand years ago in a fragment revealing a legal proceeding that would have relieved a tenant farmer from the oppression of a greedy landlord. Justice under the law—an aim that today takes new significance when the nations of the world are trying to work out the concept that the Egyptians of the past believed in; that Jefferson echoed out of his fruitful philosophy and that we today embrace in our efforts to direct the United Nations along the same pathway.

Woodrow Wilson followed in the footsteps of his great Virginian predecessor. His 14 points which he laid down as a foundation of peace after World War I were echoed in the 4 corners of the world. The fact that the 14 points failed to achieve the permanent peace to which he had set his heart, does not deprive them of their merits. Following in the same footsteps and on another occasion Woodrow Wilson declared that "the world must be made safe for democracy, its peace based on liberty."

Out of sentiments such as these has been fashioned through the years of travail and suffering a philosophy that finds a modern counterpart in the beginnings of peace in the world, through international cooperation. But it builds on the insecure and shifting sands of impermanence when it overlooks the vital and basic ingredient of justice for one and all, justice for big and small, justice for the poor as well as the rich. In a word, justice under the law.

It has been my pleasure to sit as a member of the delegation representing my country at the sessions in San Francisco for several months at which the United Nations organization was developed, as well as at the later sessions in New York. I recognize that there are handicaps to the eventual success of the undertaking but I must perforce point out that the handicaps are more of the making by the larger, than by the smaller powers. In any organization of this character, the power of veto now incorporated into the Charter becomes at once an obstacle to the normal and progressive functioning of the entire group, and for that reason my Government has indicated a desire for the elimination of this veto provision from the Charter as it now stands. It is my considered view, which I believe is shared by the vast majority of the peoples of the world, that the true purposes of this association of nations cannot be achieved until this veto power is eliminated.

Let us consider the veto first as an obstruction to the free forces of normal argument and logic. No matter if a problem is deemed right, in the sense that it is reasonable after argument, sound as to logic, and overwhelming in the simple question of right or wrong—the veto of a single nation can override it, a veto often based on purely selfish political considerations, on perhaps just the mere whim or passing fancy of a single country. That is one reason why the veto is unsound.

Then, the veto violates, in my judgment, the simple principle of majority rule, on which every fundamental right of free people is based. Scarcely is there a constitution of any nation which does not recognize the majority rule, that the minority must yield to the majority after free discussion and unhampered vote.

It has been argued in this respect that since the big powers assume the heaviest burden, and consequently the greatest responsibility, they are entitled to this special right. But this premise not only has no leg to stand on but also runs against the elementary rules of law. We all know that members of a court of justice enjoy equal standing and rights among themselves, so it is a logical conclusion that members of the United Nations Security Council should enjoy one and all the same equal rights when they consider for their judgment any international situation. In fact, to my mind, the Security Council, with its quasi-judicial powers, should definitely be regarded by reasons of its functions more of a judicial body than a political one. Given the full exercise of its judicial prerogatives, the Security Council could well eliminate many of the possible causes of irritation or war.

We often hear the expression that history repeats itself. Looking at contemporary history we find that it is one of the big powers, and not a smaller one, that has repeatedly been responsible for plunging civilization into the horrors of a world war. The motive behind such aggression is greed for conquest and lust for power. And greed, gentlemen, is insatiable. So the other big powers, if for no other reason than self-preservation, have repeatedly seen to it that such wild dreams come to a halt. On the other hand, if the aggressor is a small power, seeking expansion, it is my belief that the other smaller powers could settle this aggression without the benevolent intervention or undue sacrifice on the part of any of the big powers.

So much for the veto, and now if you will bear with me, I will try to give you a simple and brief picture of Egypt. Egypt's area approximates about nine times the area of Virginia. Yet its total population of 18,000,000 lives in an area one-third the size of this State.

The inhabited areas of Egypt show an average population of about 1,350 persons to the square mile. The Nile River, life giver to all Egypt, is the center of all agricultural productivity. From the South to the North, it traverses the length of our country, overflowing from June to September with the life-giving rain waters of equatorial Africa and giving the fertility to the adjacent land which blossoms into two and often three crops a year.

The Nile is our link to the Sudan, through which flow these regenerative waters from equatorial Africa. It becomes, too, a link that binds us to their people, united as we are through racial ties, through language, and through religion. That is why, in these trying times, we find cause to resent political propaganda campaigns, seeking to alienate us from the Sudanese people and to build in them the feeling that we as Egyptians are trying to make them a subservient people, eagerly proceeding in the colonization of their acres. I feel that these subversive movements shall fail.

I want to stress here the fact that Egypt and the Sudan have been, since time immemorial, united. The mural paintings on the walls of the tombs of the Pharoahs bear witness to this. And when I say united, I mean united in every sense of the word and that implies that neither have been subjugated the one to the other. They are united by bonds of mutual interest especially those sharing the same destiny and the same aspirations. The unity of the Nile Valley is indivisible, just as indivisible as is the unity of your own Mississippi Valley. And, by the same reasoning, the defense of Egypt or the Sudan merges one with the other.

We welcome the idea of a referendum, provided that the expression of the wishes of the Sudanese is free and unhampered. This can only be accomplished if British troops evacute that territory and British officials release their hold on the country's administration. I believe this is a fair request.

The reason behind all these maneuvers is the following: Whenever, in times past, the British grip tightened on both Egypt and the Sudan, they promptly proclaimed through their statesmen that both countries were one and indivisible. In a book recently published, whose author is none other than Mr. Churchill you will find him describing the Sudan as the air pipe connected to the diver in deep sea water. The diver is naturally at the mercy of the one who holds the air pipe. But now that the British are losing their grip on Egypt their tactics have changed, but not the facts.

Gentlemen, Egypt is in a sense the gift of the Nile to which it owes its very existence and livelihood and which supplies her with water and fertility. Good weather and the perennial sun contribute to her richness. A country so endowed, must undoubtedly be mainly an agricultural country, so Egypt has been from time immemorial and so it shall remain, as long as the Nile keeps flowing unhindered. And I repeat: unhindered.

The Khedive Ismail, the grandfather of the present King, described the timelessness of Egypt when he said "Today is here the same as yesterday and tomorrow will be the same as today; and so it has been, and so it will be for thousands of years."

Yet, out of this apparent monotony of existence, new ideas are germinating; new ideas and plans to provide a better standard of living for the average man and woman of Egypt. We realize the precarious condition of an economy depending solely upon the cultivation of a small area of arable and reclaimable land with a rapidly increasing population. We have found the cure in a partial industrialization, enough not only to serve as a haven for the hordes of hard-pressed labor but also to improve the general standard of living. We are developing the vast water power resources that lie unused, for example, in the Assuan Dam, in the upper Nile. We are making available to the populace of Egypt better hygiene facilities and thus improving the public health. We are extending to the physical and economic limits the arable land areas through reclamation and scientific irrigation and thus providing food for the ever-increasing population of our country.

These are but a few of the forward-looking projects that are in the offing for Egypt, in the development of her domestic economy. The measures to accomplish them have been promulgated by the sovereign of Egypt, King Farouk, whose interest in the welfare of his people lights the torch that will lead us into the more prosperous and healthy days that lie ahead.

Egypt, during the recent war, was, as you all know, the veritable center of the early days of the German conquest outside of Europe itself. Besieged and beset by stronger German forces, the Allies were able to win at El Alamein because they had the friendship and active assistance of Egypt. In the conflict, Egypt fulfilled her treaty obligations with Great Britain to the letter, and as a democratic nation, gave the full weight of her cooperation to the Allied Nations fighting Axis powers.

Geographically, Egypt became a crossroads of traffic for the Allies, and she provided air fields for the greatly increased international movement of men and materials, ports for the movement and shelter of Allied fleets, and of her railroad system to carry the tremendous loads of war materials. This was in addition to the great service rendered through the efficient operation and protection of the Suez Canal. Egyptian fliers were constantly on the watch for enemy attacks, either providing an air cover for convoys or driving off attacks to obstruct the canal.

From the year 1819, the University of Virginia has gone a long way, and is still traveling—inculcating in the pattern of liberty and freedom the necessary spiritual and practical ideals which fit the young man and young woman for the intricate problems of life. The present Ambassador to Egypt from the United States has his ties here in these storied halls, as his father, Somerville Pinkney Tuck, the distinguished jurist, graduated from Virginia. In Egypt, education and the visible written record of it stretches back into the centuries of the Pharoahs. We have in Cairo a university still functioning, the University of El Azhar, founded over 1,000 years ago in the year of 937.

While this university has been devoted to the study chiefly of theology and philosophy, we have, in the modern sense given a great and powerful stimulus to education with such other universities as the one in Alexandria and also the University of Cairo, with its general courses of engineering and the arts, and a student body in excess of 10,000 students.

We have compulsory education in our primary schools, a constitutional provision, so that in actuality, we have a high percentage of our youth getting the benefits of modern teaching.

Here in the New World you Americans sometimes express awe at age; you venerate the past, and even we of the Old World sometimes see your competitive spirit splitting on the thin edge of Jamestown versus Plymouth Rock—the year 1607 as against the year 1620, a difference of 13 years. In Egypt, we too venerate the past, the antiquity of the ancients, but perhaps we don't feel that 13 years makes much difference, when some of the studies that we are currently making in the exploration of Egyptian antiquities reach back to 5,000 years B. C., a mere 7,000 years ago.

We draw from the ancients much besides the history of the past and stories of the endless dynasties. We see stories in the culture, the architecture, the painting of the past. We draw something of the spirit from the ancient hieroglyphs which we have learned to translate. This is due to the fact that a man named Bousard, an officer under Napoleon back in the year 1799 when the Little Corporal made his bid for power in the south Mediterranean, happened to have his eyes open while building a fortification in the Nile Delta. Here was a block of granite with three separate inscriptions on it—one in hieroglyphs, one in demotic characters, and the third in Greek. The wise Frenchman took the block and sent it back to France, where under the initial guidance of Champollion, scientists pored over it, studied it, and eventually came up with the identical translation of the three texts—a feat which opened up for study the vast picture story of the pyramids and tombs for the past 5,000 years.

This key to the antiquities is the Rosetta Stone, so named because it was found at Fort St. Julien, near the present town of Rosetta.

In this day of rapid travel, when the airplane has cut down the size of the world, Egypt has become in a sense the crossroads of the modern world, fulfilling a destiny that was hers in the world of the ancients. I think it was Napoleon who said in his first interview with the governor of St. Helena that Egypt was the most important country in the world. He was combining perhaps experience of his past and his opinion of the future in world affairs. So, now let us consider the position of Egypt, the Near East, and Middle East in the world today.

How can the Near East contribute to the peace of the world? That is a question that today is in the consciousness of every country, east or west, north or south. In my judgment, the No. 1 answer will stem out of the actions of the larger nations. Let these larger nations treat the nations of the Middle East and Near East with the sincerity of equality rather than with the patronizing attitude of an overlord; and I am sure they would find a reciprocal friendliness developing overnight. But when one of these powers has the effrontery to speak of taking us as partners in what is exclusively our own domain then we will know how to meet this challenge. We are determined not to tolerate any interference in our internal affairs. It may well be to quote here the words of Jefferson himself when he wrote to President Monroe: "Nor is the occasion to be slighted which this proposition offers of declaring our protest against the atrocious violation of the rights of nations by the interference of anyone in the internal affairs of another."

The countries of the Near East are national entities, with their own history and their own culture extending back for thousands of years. The ties that bind them together are enriched in association through the Arab league, a vehicle for joint effort patterned much along the lines of the successful and influential Pan American Union of this hemisphere. In fact the Arab league has come to constitute a new entity—one and indivisible. Its bonds are growing stronger and stronger. I want to warn those who are trying to sow the seeds of discord among its members to keep their hands off lest they get burnt. It would be advisable for the Big Powers instead to let us quietly settle down to tend our own affairs. For our group constitutes the pivot of security in that part of the world. The Big Powers have everything to gain through our friendship and everything to lose if they choose to antagonize us.

In the case of Egypt, it is pertinent to point out that whenever the ruling hand of the foreigner has held the helm of our Ship of State, our initiative has suffered. We need only to turn back the pages of history to find Egypt a hundred years ago under the benevolent rule of Mohammed Ali, founder of the present dynasty—with less than half our present population—a power of consequence, reaching the heights as a free and enterprising nation. We had our own Army, our own Navy, and in a very real sense our independence. Independence to us today means that the mailed fist of the outsider must relinquish its hold on Egypt; we cannot be free as free men in a free world, no matter how apparently benevolent and kind may be the ostensible gestures of the outside power or powers, until we are truly free from every outside influence.

In this connection, I must confess that I am extremely distressed to see some of your thinkers, writers, and statesmen, in fact, some of the prominent ones among these, accuse Egyptians of suffering from xenophobia when they seek to rid themselves from political and economic imperialism which has been forced upon them by a foreign power. I remember that during the last war some of our older statesmen had been deliberately accused of having pro-Axis leanings because they refused to submit to pressure and domination of a foreign country occupying our soil illegally. I do hope that this unwarranted accusation, this distortion of fact, and misrepresentation of sentiment shall stop, and that in its place an unbiased judgment will henceforth prevail. May I add that Egypt—and this is no illusion—is one of the most tolerant countries in the world, including the United States, if not the most tolerant.

The Second World War has been waged, and won, but the peace seems to be stalemated on the dead center of selfish ambitions, first of one country and then of another.

We had, during the active stages of the war, a pronouncement which came to be known as the Atlantic Charter. It was a lofty declaration of principles; it was the Magna Carta of freedom and independence to the smaller nations of the world—some within, and some without, the sphere of activity of the so-called big nations.

Comes the peace negotiations, first in one capital and then in another, but where are the principles of the Atlantic Charter? Silent as the tomb are the pronouncements of the Big Three or Big Five. And yet we struggle through the growing pains of the United Nations; we fight off the threat of imperialistic ambitions and areas of influence with the hope that somewhere ahead lies the open road to world peace.

We hear often the old term of "zones" and "spheres of influence" which is the English equivalent to the old German practice, that of "lebensraum" of prewar days. It is my firm belief that this was the principal cause which led to international wars in the past. Such a practice should cease. The people of the Middle East are, therefore, genuinely concerned about decisions being taken by the big powers with regard to the future policy to be adopted in the Middle East. The governments, as always, have not even been consulted, and there is good reason to believe that they are not prepared to fit themselves into an already-settled, prearranged policy of zones and spheres of influence. These friendly governments are conscious of their duties and obligations toward world organization, and they cannot, by conviction, tolerate such subterfuges.

The question, as I see it, is the following: Are the powers ready and willing to give up their own privileges in the Middle East? Are they willing to speak frankly and honestly with us along the new lines of political equality within the framework of the United Nations Charter? Then, and only then, will they find us willing to extend a friendly hand. If otherwise, I fear we shall have to resist their imperialistic and aggressive policy, thus increasing the bitterness which has hitherto marked our relations. For creating such an atmosphere of political bitterness, they, and they alone, will be held responsible. I hope that these powers choose the former path of peace and conciliation, which even from a selfish point of view would be the rational policy for them to follow.

To implement this policy we must remember that the free interchange of goods and services is the aim which modern economists set up as one of the necessary means of preserving healthy communities among the family of nations. It is certainly not a new American purpose, for we find Jefferson writing in 1783 that true democracy embodied the freedom of intercourse in commerce. He wrote a friend in these words: "The finest parts of the Old World are now dead to a great degree to commerce, to arts, to sciences, and to society. Greece, Syria, Egypt, and the northern coast of Africa constituted the whole world almost for the Romans, and to us they are scarcely accessible at all."

And today, when we give study to the underlying motives for world peace, we cannot escape the conclusion that a greater freedom in trade and commerce is necessary. We need, for example, in Egypt freedom from the shackles of the dollar scarcity through outside control which forces us to channel all our trade to one country or group of countries. However, we cannot buy from America unhindered unless we have dollars, and these can only be secured if you are willing to buy from us the products we can best offer you and which you can best use. To maintain a high tariff and introduce quota systems would only mean less benefits to everyone concerned. We also need freedom to choose our own companions in business and industry and finance, to pursue those inexorable laws without restriction which are the keynotes of true democracy—to buy where we may do so cheapest, to sell wherever we desire, and to be paid for our goods and services in a medium which we can use anywhere else.

I should like to say a few words about a problem that has recently been receiving a lot of attention, namely, that of disarmament. We have heard that the big powers are thinking seriously of it. But as time passes, we find them dallying with this all-important question. In point of fact, we even hear that there are many difficulties to be surmounted. But we never seem to pause and ask ourselves just what is the source of these difficulties. It is obvious that the very discussion of disarmament suggests the previous existence of armament. What have always been the motives behind armament? Only two—offense or defense. To arm is generally the primary stage for an act of aggression, or, sometimes, the defense of such a possibility. So we ask: Why aggression? The answer again is quite simple.

It is to carry out plans for expansion or colonization, or to maintain the status quo of a colony already acquired by the sword.

So, if you concede me this point, as to the real motive for armament and its eventual aftermath—the declaration of disastrous wars, then you will agree with me that expansion and the search for colonies are at the root of the evil. This evil must be eradicated and under no circumstances should we seek a palliative. If we eliminate this malignant disease we need no more to look for a remedy. All nations would then know that the practice of empire building is dead. Empires, gentlemen, built on the bodies of people weak but certainly innocent, have been the curse of this world. These empires, to the good fortune of our harassed civilization, are now crumbling, because these weak and subjugated peoples are awakening and becoming conscious of their right to live as free people.

In concluding, it would be appropriate to quote Mohammed Ali, founder of modern Egypt and head of the present dynasty, who said, after ruling Egypt for some years: "I had to begin by scratching the soil of Egypt with a pin; I have now begun to cultivate it with a spade; but I mean to have all the benefit of a plow." I might paraphrase that saying that after being in Washington for nine fruitful and interesting years, it expresses my own feeling with regard to the spirit of America, its friendliness, the graciousness of the people, the cooperation of both business and government toward us of another world.

And now may I assure you that you will always find Egypt and the Arab League eager and ready to cooperate with America, provided we enjoy full sovereignty and equal rights so that we all may uphold the ideal of peace and prosperity within the framework of the United Nations Charter. May I also assure you that we will always throw all our weight for the cause of peace, and not of war.

I thank you.

Taft-Ellender-Wagner Bill

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. JAVITS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and accompanying report:

THE ASSOCIATION OF THE BAR
OF THE CITY OF NEW YORK,
New York, June 20, 1947.

MY DEAR SIR: I submit with this letter a copy of a report on the Taft-Ellender-Wagner bill approved by our Committee on Real Property Law. You will note that the report recommends that this bill be enacted into law.

If our committee can be of any service to you in your consideration of this legislation, I know you will feel free to call upon them.

Sincerely yours,

PAUL B. DEWITT.

THE ASSOCIATION OF THE BAR OF THE CITY OF NEW YORK COMMITTEE ON REAL PROPERTY LAW REPORT ON THE TAFT-ELLENDER-WAGNER BILL

The Taft-Ellender-Wagner bill is now before the Senate, having been reported out of committee. The bill is the result of years of work, hearings, and consideration by a subcommittee of the Senate which was headed by the senior Senator from Ohio, ROBERT A. TAFT.

The bill recognizes that private enterprise should provide the overwhelmingly greater part of new housing. Not only the explicit declarations of statutory purposes, but also the substantive provisions of the various programs of the bill leave no doubt that the bill does direct itself to the largest private expansion of construction by private enterprise. In fact, the bill restricts public housing within narrow limits which are well outside the scope of private enterprise. The bill contains long sought after improvements in the operations of Federal savings and loan associations, the Federal home-loan banks, the Federal savings and loan insurance corporations, and the Federal Housing Administration, all of which exist to encourage or to insure private investment in housing. The bill contains new FHA plans to enable private enterprise to expand its operations by serving families of low income more extensively than before with home ownership and with rental housing. The bill sets up a new plan to encourage direct investment by insurance companies and other financial institutions in private rental housing. The bill is designed to make it possible for private enterprise as well as public housing to participate more extensively in the development or redevelopment of slums or other areas. The bill contains and explains the low-rent public-housing programs, but explicitly restricts public-housing activities thereunder to the income groups well below those for which private enterprise is building in any community.

REPORT ON S. 866, TAFT-ELLENDER-WAGNER BILL

(Prepared by Charles C. Weinstein for the committee on real property law)

"There is growing recognition that the housing problem facing the Nation is the No. 1 domestic issues at this time. Despite this there has not been adequate realization of the failure of all levels of Government to cope properly with the crisis nor has there been sufficiently considered action to stir the city, State, and national legislatures into immediate action.

"The city of New York unfortunately does not have the funds for new subsidized public housing. The additional State funds appropriated for State-aided low-cost housing, if the people approve at the next election, is only $135,000,000. S. 866 is, therefore, an imperatively necessary bill because it offers a comprehensive program for the solution of the housing difficulties in which we now find ourselves.

"There is no legislation before the Congress which will enable us to meet the housing situation in a faster or more effective way than S. 866.

"Undeniably, the heaviest impact of the housing shortage falls upon veterans and their families. Bureau of the Census surveys of some 70 cities in the summer of 1946 disclosed that, in most cities, between 25 and 40 percent of married veterans are without homes of their own.

"At the start of 1947, there were about 2,200,000 married couples in nonfarm areas living as extra families doubled up in homes with other families and about 300,000 married couples were living in hotels, rooming houses, tourist camps, and similar places. The number of new families which will be formed during 1947 is estimated at about 500,000. Even allowing for the most optimistic estimates as to the number of dwellings which will be completed during 1947, it is obvious that at the end of the year more than 2,000,000 families will still be in need of homes of their own.

"The provision of an adequate supply of decent housing for the American people involves a twofold task. The current critical housing shortage must be overcome, and new house construction maintained in a volume sufficient to accommodate the annual net increase in the number of new families. At the same time our whole housing supply must be raised to levels of quality and decency compatible with American standards of living, through the rehabilitation of substandard dwellings where economically feasible, large-scale elimination of slums and blighted areas, and the provision of decent housing for families who live in those areas and at prices they can afford to pay.

"The preparation of S. 866 was preceded by detailed investigations and committees of the Senate, and every opportunity was given for full discussion of the problem and for the presentation of every side of the question by every affected interest.

"In 1944 the subcommittee of the Senate, headed by the senior Senator from Ohio, ROBERT A. TAFT, examined every aspect of the housing problem and communicated with the major organizations concerned with housing, construction, management, and consumer standpoints. In 1945, extensive hearings were held by the subcommittee and testimony was presented by every source of informed opinion.

"On the basis of these studies and investigations, and the recommendations of the subcommittee, S. 1592, a comprehensive housing bill, similar to S. 866, was introduced in November 1945, under the joint sponsorship of Senators WAGNER, ELLENDER, and TAFT. The Senate Committee on Banking and Currency conducted hearings on S. 1592 for a period of several months. After further consideration by a subcommittee, it was taken up by the full committee, reported to the Senate, and passed. Before the House had completed hearings on the bill, the Seventy-ninth Congress adjourned.

"During the early part of the Eightieth Congress, S 866 was introduced by the same three sponsors and was favorably reported to the Senate without amendment.

"The general purpose of the bill is to establish by congressional action a consistent housing policy on the part of the Government, to provide for the coordination of the housing agencies and activities of the Government, and to improve existing statutory tools so as to provide effectively for the housing needs of the Nation.

"This bill gives attention at every stage to the needs of the veteran and at the same time avoids the mistakes of hasty and temporary action. It gives the fullest practicable assistance to private enterprise in filling the maximum housing need within its capacity, and it brings public housing into play for only a minor but important proportion of the need which private enterprise clearly has not met and cannot be expected to meet.

"The bill seeks to create the favorable conditioning factors under which the objective of the construction of 1,500,000 homes a year can be accomplished, with maximum reliance upon private enterprise and local initiative. It would do this by providing for the coordination of the housing functions of the Government through a single agency; by authorizing a program of technical housing research to aid industry in progressively reducing the costs of housing; by perfecting the existing aids to private home financing administered by the Federal Home Loan Bank Administration and the Federal Housing Administration; by providing special supplemental systems of FHA mortgage insurance for families of lower income; by extending the principle of FHA insurance to direct investments in rental housing; and by extending aid to cities for the assembly and preparation of land in slums and blighted areas for redevelopment. At the same time, it recognizes that there are families in the lowest-income group for whom adequate shelter in new or existing housing cannot be provided by private enterprise; and therefore authorizes a carefully restricted extension of the program of aid to localities for low-rent public housing for such families. Provision is made for a program of farm

housing through assistance by the Secretary of Agriculture and an adaptation of the urban low-rent public-housing program to provide similar housing for rural families of low income not living on farms.

"For low-income families, those with incomes below $2,000 per year, private industry cannot now and never has been able to build new housing. For the large middle-income group, those with incomes between $2,000 and $4,000 annually, private builders are finding it increasingly difficult under present land and construction costs and financing charges to produce new dwellings. This latter group is particularly unfortunate in that it falls in a 'no-man's' land, unable to meet the charges of new housing and earning too much to be eligible for accommodations in subsidized public housing. These two groups comprise upward of 80 percent of the population. How to bridge the gap between the needs of the majority of the Nation's families and the housing which private industry can normally produce is the great challenge.

"The Wagner-Ellender-Taft bill which was passed by the United States Senate in 1946 represents a carefully considered plan to meet this challenge.

"What does the bill seek to do? By way of illustration, title VI contains a basic plan for enabling private enterprise to serve middle-income families who have been largely in a 'no-man's' land between private and public housing activities. The title adds three innovations to the FHA system: (1) to make initial purchase easier, the insured loan would cover 95 percent of the cost of the house (as compared with a present 90 percent maximum); (2) to lessen the monthly financing charges, the maximum period of repayment would be extended to 30 years instead of the present 25, and the maximum statutory interest rate would be reduced from 5 to 4 percent; and (3) to encourage participation by builders in this low-priced house program, the FHA would be permitted to issue firm mortgage-insurance commitments to builders up to 85 percent of the value of the house. The title VI plan would likewise assist private enterprise to serve middle-income families with rental or mutual ownership housing projects. It provides for 90 percent FHA insured loans; 40 year maturities; and a maximum interest rate of 4 percent. The title contemplates that FHA will collect premiums to cover both estimated losses and administrative expenses on these new insurance plans.

"Title VII provides for a special program of yield insurance, to be administered by FHA, designed to encourage direct investment by institutional and other large-scale investors in rental housing for families of moderate income. It guarantees, in return for the making of such an investment at an annual return upon outstanding investment ranging from 4 to 3¼ percent, a minimum return of 2¾ percent per annum on outstanding investment (plus 2 percent amortization of the full capital investment) until such time as only 15 percent of the original investment remains unamortized. As in the case of FHA's other programs, a self-sustaining program made possible by appropriate premium charges is contemplated. Altogether, a billion-dollar insurance program is authorized.

"Title VIII sets forth a program for Federal aid to localities for the clearance of slums and blighted areas so as to make such areas available for redevelopment with the active participation of private enterprise. The essence of this plan is that Federal and local aid will be combined to bring the cost of land acquisition and preparation for redevelopment down to the point where its reuse in accord with sound planning principles will be feasible. This write-down is to be accomplished by Federal and local contributions with the requirement that the local contributions must equal (1) at least one-third of the net project cost (i. e., the difference between the cost of the project and the new capital or reuse value of the land comprising the project area), and (2) at least one-half of the Federal subsidy base. Federal aid under this plan extends only to the acquisition and preparation of the land and the write-down of its cost to its reuse value and not the various building undertakings that will be put on the land as it is redeveloped. The title requires feasible methods for both the temporary and permanent relocation of the families who are displaced as a result of the clearance of the redevelopment area.

"For this plan, the title provides $500,000,000 in temporary Federal loans which must be repaid in full with interest within 5 years, and for a 5-year program in permanent loans at the rate of $50,000,000 a year, repayable in full with interest in not more than 45 years. These Federal loans would cover only part of the project costs; most of the borrowing would be local. For the Federal contributions to help cover the write-downs, the bill authorizes annual contributions to be contracted for at the rate of $4,000,000 a year for each of 5 years next following the enactment of the bill, involving a maximum commitment by the Federal Government of $20,000,000 a year in annual contributions at the end of the 5-year period. Such contributions would run for not more than 45 years. These aids would be enough to cover about $1,500,000,000 of land acquisition and preparation for development.

"Title IX provides for the resumption of the public low-rent housing and slum-clearance program needed to serve those families whose incomes are so low that private enterprise, even with the improved aids provided in this bill, cannot hope to service them. In order that the current higher costs of construction may not prevent the provision of housing need for veterans and others of low income, the section authorizes certain increases in cost limitations. For the Federal contributions to help reduce rentals so that they will be within the means of low-income families, the title authorizes annual contributions to be contracted for at the rate of $26,400,000 a year for each of the 4 years next following the enactment of the bill, involving an additional maximum commitment by the Federal Government of $105,600,000 a year at the end of the 4-year period. Such contributions would run for not more than 45 years, as compared with a present statutory maximum of 60 years. This title would not cover more than 500,000 units of public low-rent housing over a 4-year period.

"We have operated under the provisions of the Veterans Emergency Housing Act of 1946 for about 9 months. We have witnessed the substantial increase in the supply of many of the items which go into home construction as a result of the plans formulated under that act. The next step is the passage of legislation to assist in bridging the gap between the housing needs of the Nation's families and the dwellings which private enterprise can produce. The plan to accomplish that goal is contained in the Taft-Ellender-Wagner bill. It should be enacted into law at the earliest possible time."

False Economy's Tragic Blight

EXTENSION OF REMARKS

OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1947

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following constructive editorial from the Commercial Appeal, Memphis, Tenn., June 22, 1947, with respect to the importance of adequate flood control, particularly along the Mississippi River and its tributaries, to wit:

FALSE ECONOMY'S TRAGIC BLIGHT

Twenty thousand persons have been driven from their homes.

More than 800,000 acres have been inundated.

Thirty million dollars in direct damage has been done.

That's the rough approximation to date of the present Central Mississippi Valley's flood. A current $60,000,000 Missouri Valley flood is something else—and worse!

There is no way of calculating indirect damage. For the first time in 99 years the price of corn futures on the Chicago market passed the $2 mark. Crop shortage, partly due to excessive rains and floods, plus heavy demand, are responsible.

There is no economy—no savings in floods.

The Commercial Appeal pointed that out last August in opposing President Truman's curtailment of expenditure for authorized flood control works. It said then:

"Curtailment of essential flood control construction very definitely comes under the heading of foolish and wasteful economizing.

"It invites expenditures in emergency situations infinitely greater than the amounts saved by so-called economy restrictions.

"In the case of flood prevention it is something worse—a gamble with human lives."

The Upper Valley flood has already claimed the usual quota of lives.

The Congress has already voted the usual emergency appropriation—in this case $15,000,000.

The flood is tragic, and sad is the fact that it could have been prevented.

It could have been prevented if the Congress had appropriated the funds to construct Army engineer-designed flood control works the Congress itself had approved and authorized. Its effect would have been lessened had there been no Budget Bureau-Presidential interference with spending last year.

The public needs to know these facts:

There is an authorized project for practically every area in which there is inundation in the Upper Valley.

Not a single Army-engineer-built levee or flood control works in the Upper Valley has been topped or crevassed by flood waters.

The destruction has been entirely of local structure of substandard design.

It has been the Army engineers, however, who have had to lead the heartbreaking fight to try to hold substandard levees.

And it will be the Army engineers who will have to go in with the urgent deficiency appropriation of $15,000,000 to do what?

To rebuild destroyed levees to project design? Oh, no! They will repair, restore and strengthen the damaged works to former dimensions.

And the next upper valley flood of comparable stages will knock them down again!

To the $30,000,000 in direct damage to needed crops, farm homes, business property, ruined highways and damaged communications facilities must be added the $15,000,000 emergency appropriation wasted on futile and foolish reconstruction.

The upper valley flood is, therefore, a $45,000,000 flood.

And much of the damage has been done in President Truman's home State.

Senator JOHN H. OVERTON, leading flood control exponent of the Congress, has made an appeal in person to President Truman to submit a supplemental flood control estimate to the Congress.

It would increase budget estimates for general flood control purposes to $200,000,000 and the lower valley estimate (Cairo-New Orleans) to $50,000,000.

After what has happened in the upper valley, the President ought not hesitate one day in so doing. The $24,000,000 allocated the lower valley is grossly insufficient.

The only reason this section will escape the consequences of an upper valley flood is because the Ohio has a relatively low stage.

The flood control appropriations bill will be submitted to the House this week. There is ample time yet for reconsideration of the President's budget estimates and for the Congress to provide enough money to enable Army engineers to ditch the patchwork policy which is being imposed on them.

Floods can be prevented. The designs are at hand. Engineers are eager and willing to do the sort of job they know how to do better than any other agency in this or any other country.

Penny-pinching expenditure policies under which temporary flood-control works are constructed are almost criminally extravagant in the long run. They cannot effect genuine savings, and when politically propagandized in the name of economy are a fraud against the people.

Floods over a 7-month period of 1945 inundated 15,800,000 productive American acres and did direct damage of $103,000,000.

Now comes this $45,000,000 upper valley flood—too near at hand for comfort.

The lower valley's terrible 1927 flood resulted in complete revision and modernization of Federal flood-control policies.

In the 20 years which have passed they have been permitted to become too involved with partisan politics and the sort of political opportunism which hides reckless extravagance behind a penny-wise front.

It is time to get them back on the sound basis of farsightedness and nonpartisanship, where the Seventieth Congress placed them.

Floods cannot be held in check by arbitrary, politically inspired budgetary reductions. A fraudulent savings made for the purpose of keeping a political-party promise is no preventive of the waste which comes when a substandard levee is topped or crevassed.

Present policies which prevent the War Department from building the flood-control projects approved by both its Corps of Engineers and the Congress are policies of waste, futility, and disaster, as is proved by the record of pyramiding flood damage. Real savings can be achieved only through adequate building.

The wet and tragic misery of the people of the central valley is the inevitable consequence of such false economy policies and of bungling political interference.

The whole valley has had more than enough of both.

Redeem Terminal Leave Bonds Now

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. VURSELL. Mr. Speaker, it is hoped the Republican leadership which is considering redeeming the GI terminal leave bonds in cash will expedite the matter and get the job done before the administration, under its most recent foreign policy, gives this $2,000,000,000 to the European countries with Russia cut in on the divide.

Members of the House will recall that we of the House in the Seventy-ninth Congress voted by a big majority to give enlisted men their terminal-leave pay in cash.

When this bill went to the Senate the President opposed paying the servicemen in cash, giving the Congress to understand that he would veto such a bill which would leave the GI or enlisted man without either bonds or cash. The Members of this House reluctantly compromised by voting for the bonds.

Along with several Members of the House, sometime back I introduced a bill providing for the cash payment of these bonds. Other bills with the same provision have been introduced by Members. I hope the committee will expedite hearings and report a bill to the House as quickly as possible so that the Congress may have time to enact this legislation into the law before the adjournment of this session.

The President who prevented this legislation 2 years ago and who has recently vetoed the tax bill which would have aided the veterans and everyone, is now planning to donate and loan more billions to foreign countries.

We had better pass this legislation and let the veterans who defended this country get their two billions before it is given away to the other nations of the world.

The Oil Shortage

EXTENSION OF REMARKS
OF
HON. THOMAS L. OWENS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. OWENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Herald-American for June 21, 1947:

THE OIL SHORTAGE

If the petroleum shortage in the United States is now the worst in the history of the country, as Government officials at the highest levels are saying, why does the Government continue to permit export of petroleum on a scale that further depletes our dwindling national reserves?

At the very moment eight Cabinet members and the heads of three key Government agencies were conferring in Washington on this critical shortage and calling it the most serious national problem since the end of the war, six Russian tankers were preparing to load more than half a million barrels of oil and gasoline in Los Angeles Harbor.

A spokesman for the Department of the Interior has said the shortage of gasoline, already so severe as to threaten virtual exhaustion of supply, is rapidly getting worse instead of better.

There is even talk in high quarters of a growing need for return to the wartime rationing system.

If all this reflects the true aspects of the situation, it would surely be an unwise national policy to continue unrestrained petroleum exports, even to friendly nations—and to do so in the case of Russia, a nation openly and ruthlessly conducting economic and political warfare against the United States, seems to be an approach to utter stupidity.

The 600,000 barrels of American gasoline and oil currently destined for shipment to Russia is only a small part of the total American petroleum exports to the Soviet Union.

Last year alone, Russia took 2,500,000 barrels of American fuel, including 150,000 barrels of aviation gasoline.

The current shipments are to be delivered to Vladivostok, which is the nearest major Russian port and naval base to Alaska, and in the vicinity of which the Russian Army and fleet recently held full-scale maneuvers for the first time in history.

And as a final irony, all of the purportedly Russian tankers now loading in Los Angeles harbor or preparing to do so are in reality American vessels, merely lent to Russia under the lend-lease program and thus actually American property.

Although the war has been over nearly 2 years, Russia has made no move to return these vessels to their American owners, and has in fact refused to negotiate for their return.

And in considerable degree, the present critical oil shortage in the United States is attributable to our own lack of sufficient tankers for adequate coastal transport service.

There is something incongruous about the contrasting attitudes of American Government authorities in the obviously related matters of petroleum shortage and Russian exports—and indeed something mysterious.

"If the emergency is as acute as Secretary of the Interior Krug says," comments Representative WALTER G. ANDREWS of New York, "those west coast ships should not even start to load."

And as Secretary Krug himself acknowledges:

"The United States had better keep all the oil and gasoline it has."

When former President Hoover warned the other day that our excessive exports to foreign countries and particularly to Russia and the satellites of the Soviet Union are impairing American productive stability and will ultimately impoverish the American people his words plainly fitted the pattern of our policy of national depletion in the case of oil.

Stream Pollution

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. SEELY-BROWN. Mr. Speaker, on June 17 I offered a bill granting the consent and approval of Congress to an interstate compact relating to control and reduction of pollution in the waters of the New England States.

The New England Interstate Water Pollution Control Compact has been approved by Massachusetts, Rhode Island, and Connecticut. It provides that Maine, New Hampshire, Vermont, and New York may also join but imposes no obligation whatsoever on any of those States until such time as they see fit to join.

Each detail of the compact prior to its introduction in the legislatures of the various States was approved by representatives of all the New England States. A representative of the New York State pollution-control agency attended a conference at which the compact was drafted and and expressed informal approval insofar as his State would be affected.

Each State which ratifies the compact will have five members in the Interstate

Commission. The administrative head of each State pollution-control agency will be a member ex officio. The other members will be appointed by the Governor of each State. The compact recommends but does not make mandatory that the Governor appoint members representative of manufacturing, municipal, and fishing and conservation interests.

The Interstate Commission will classify interstate streams in accordance with the present and proposed highest use of their waters and will establish reasonable physical, chemical, and bacteriological standards of water quality deemed satisfactory for each classification of use. Interstate agreement on these matters will permit each State to require that municipal sewage and industrial wastes originating within its boundaries be treated to the degree necessary for the protection of the neighboring State without putting any of its municipalities or industries to the expense of providing a higher degree of treatment than is necessary.

It is my hope that speedy and favorable action will be taken on this bill, H. R. 3875.

Veterans' Assistance

EXTENSION OF REMARKS
OF
HON. FRANK A. MATHEWS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. MATHEWS. Mr. Speaker, it is my hope that the Members of the House will read the following news item from the New York Herald-Tribune of June 20, 1947, regarding one phase of New Jersey's program for helping veterans.

The division of veterans' services, which is part of the Department of Economic Development of the State of New Jersey, has been functioning from about July 1, 1944.

There is also a permanent legislature's veterans' commission, which is headed by State Senator Alfred Littell, which has done extraordinary work in studying the problems of veterans and making recommendations for legislation.

Before being elected to the House of Representatives, I had the pleasure of working with the division of veterans' services as a deputy attorney general of the State, and many of the men operating this State facility are my personal friends, and I have had an opportunity to watch the functioning of the division of veterans' services at first hand.

The Honorable Charles R. Erdman is the commissioner of economic development, under which this division of veterans' services comes. Col. Warren Hood is the director of the division, and Col. J. P. Barney is in direct charge of the loan section, the workings of which are so well set forth in the newspaper article.

New Jersey has taken the lead in showing what can be done in the States and locally for veterans on a sound business basis of helping the veteran to help himself. Many other States are now studying the New Jersey plan because of its great success.

The article from the New York Herald Tribune is as follows:

NEW JERSEY'S VETERAN LOAN PLAN IS MODEL FOR UNITED STATES—12,000 EX-GI'S HAVE BEEN AIDED IN SETTING UP BUSINESSES; MANY PAY UP AHEAD OF TIME, FEW DEFAULT AND STATE IS AHEAD BY $50,000

(By Earl Mazo)

TRENTON, N. J., June 21.—The New Jersey State program of helping veterans to establish themselves in small businesses, farms and professions is approaching its third birthday next month, with a record of success so outstanding that other States are using it as a model for program of their own.

Some 12,000 veterans of World War II have been established, or reestablished, in business during those 3 years with the aid of State-guaranteed loans totaling close to $26,000,000.

The soundness of the program, according to State officials, is evidenced chiefly by these rather astonishing figures:

1. More than 760 of the loans—more than 6 percent—already have been paid back in full, from 2 to 4 years ahead of time.

2. Less than 50 of the loans—a fraction of 1 percent—are in complete default, and the State is having marked success in helping others who are partially in default to get their businesses running smoothly and profitably.

3. Instead of costing New Jersey money, the program already has enriched the State treasury by close to $500,000, over and above all costs of administration. This money is derived from small fees charged for processing the loans, a 10 percent charge which the State levies on the bank's interest from the loans, and interest obtained on the money set aside by the State for guaranteeing payment of defaulted loans.

Only one other State—California—has its own program for helping veterans get started in business, and California is different in that the State makes the loans itself, instead of guaranteeing loans from the banks. However, in recent months legislators and other officials from several States have visited Trenton to study the New Jersey plan with a view to establishing plans of their own. Pennsylvania, according to word received here, may write a veterans' loan law word-for-word like New Jersey's.

The program is administered by the State division of veterans' services, a unit of Commissioner Charles R. Erdman's department of economic development. J. P. Barney, a retired Army colonel, is in direct charge. It became effective July 1, 1944, and the first loan was granted the following September 5.

Under the program veterans can borrow up to $3,000 for 6 years at a maximum interest of 4 percent on the unpaid balance. The banks which lend the money can choose either of two arrangements with the State: the State will guarantee 90 percent of each individual loan, or 20 percent of a total sum which the bank elects to set aside for the program. Most banks have chosen the latter, for the careful screening and checking which the State requires of each borrower virtually guarantees that losses will never reach 20 percent.

Some 2,000 loans have been refused by the State or by banks either because the proposed business ventures were deemed unsound or the applicants unfit. Approval of both State and bank is required.

The plan differs markedly from the Federal Government's program of helping ex-GI's establish themselves in small businesses under the GI bill of rights. The Federal plan guarantees only 50 percent of a loan up to $4,000, and then only to men who already have business credit ratings, so there is almost no occasion in which the State program is not more beneficial to all parties.

HELPS IN TIME OF DIFFICULTY

After enabling veterans to start their businesses, the State also helps them if they run into difficulties later on. A delinquent section of the veterans' agency functions solely to examine businesses which begin to skip payments on their loans. Its investigators suggest means by which veteran-proprietors can get back on their feet. To date some 400 veterans who otherwise might have gone bankrupt have been straightened out by the delinquent section and are now running their businesses smoothly.

Veterans in the more populous northern counties have taken advantage of the program in the greatest numbers. In Essex County some 1,800 have got loans; in Bergen, 1,400; in Passaic, 1,200; in Union, 900; and in Hudson, 800.

The businesses started include everything from grocery stores to pet shops and small newspapers. Six hundred filling stations head the list. There are 296 food markets on the loan roster, 122 electrical appliance shops, 103 ice, coal, and wood businesses, 104 milk routes, 324 restaurants, 226 taverns, 7 pet and 10 antique shops, 10 fishing-boat rental agencies, 1 egg-and-poultry route and 45 florists. Others include glass shops, stores selling greeting cards, hardware, clothes, musical instruments, monumental stone, and almost everything else imaginable.

About 400 have gone into poultry breeding, cattle raising, dairy farming, tree surgery, and other agricultural pursuits. Some have gone in for small manufacturing enterprises.

LEARNED FARMING AT HOSPITAL

Morris E. Reid said he would still be driving a produce truck if it were not for the loan program. Mr. Reid, a 36-year-old Army veteran, learned the fundamentals of farming while recuperating from war wounds in the Valley Forge General Hospital. When he was released he and his wife pooled their savings and made a down payment on a farm near Stratford, N. J. Because there was no money for equipment last year they raised only enough to feed themselves. In February Mr. Reid heard about the State loan. He borrowed the limit, bought a tractor, transplanter, seeds, fertilizer, and other necessities, and with the help of his wife and two teen-aged sons planted 25 acres of tomatoes in addition to a vegetable garden which will produce more than the family can eat.

"We'll do all right this summer," Mr. Reid said. "This State loan is the best thing I ever saw. It beats a bonus."

Robert and William McCalley were grocery clerks. In the war, Robert, 29, served with the Air Forces, and William, 23, was a marine. Recently they pooled their State loans and bought a grocery store, the Village Market, in Fairview, N. J. "We're doing very well," said Robert, proudly. "It feels mighty good to be working for yourself."

Is It an Iron Curtain?

EXTENSION OF REMARKS
OF
HON. JOHN H. FOLGER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. FOLGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Raleigh (N. C.) News and Observer:

IS IT AN IRON CURTAIN?

We are told over the radio and by cable everyday that there is an iron curtain surrounding Russia so that no outsiders can know what is going on in that communistic country.

Is there an impenetrable curtain? If so, can some people see through it, while it is dense to others?

A day or two ago Lt. Gen. Lawton Collins in a speech at Miami, according to an Associated Press dispatch, said that there were 200 divisions of Russians "in the field right now, compared with 10 divisions in the whole United States Army" and that Russia has over 10,000 airplanes—while the United States cannot man 4,000 aircraft today. He added that "Russia's satellites in Europe could provide another 100 divisions." Continuing, General Collins said that the War Department feels that "great ports like New York City would be logical targets; that great industrial centers like Detroit, Pittsburgh and Chicago would be areas of attack, not the military dispositions of troops deployed in the field."

He said attack might come by long-range aircraft strikes across the polar cap and might include atom bombing and bacteriological warfare.

If General Collins has looked behind the iron curtain and seen these marching millions, and if Russia intends to mobilize them against the United States, what is the answer Uncle Sam can and would make? A study of what happened at Hiroshima is the answer. Neither 10 nor 100 divisions of marching men would be a match for the destructive power of the atomic bombs of an improved and more deadly type than the one the United States used to knock Japan out of the war.

If Russia has such a preponderance of men under arms right now, that fact is evidence that it has no atomic bombs while the United States is so far advanced in knowledge of and possession of atomic bombs that they could do in Russia more effectively what they did in Japan and destroy Russia's great cities before it could move its hundreds of divisions.

Missouri River Flood

EXTENSION OF REMARKS
OF
HON. ALBERT L. REEVES, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. REEVES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News of June 24, 1947:

FLOOD TOLL: $200,000,000 AND 3,800,000 ACRES

The fourth, and most disastrous, flood crest in a month moved relentlessly down the Missouri River Valley today, ruining all hope of a 1947 crop in the inundated areas.

The new flood was expected to drown almost 300,000 fertile acres. This would give the Nation a total loss to floods this year of 3,800,000 acres with an immediate monetary loss of almost $200,000,000 in crops, equipment, and personal possessions.

Estimates do not take into account the amount of topsoil ripped away, ruining the land forever. The floods have driven 20,000 persons from their homes in 4 weeks.

The new swell of high water was expected to reach St. Joseph, Mo., today, shoving the United States engineers' surface markers to a height of 21.5 feet. Flood stage is considered 17 feet at St. Joseph.

As it juggernauted down river, the flood ruined some of the finest corn and wheat farm land in America. About 400 miles of bottom land was expected to be overrun in the section where Missouri, Kansas, and Nebraska join.

The weather was clear and residents hoped it would hold long enough to permit the river to discharge the overload of water it received from torrential rains last week.

Engineers predicted the river would go over the top of the levee protecting the St. Joseph Municipal Airport. They said the dike probably would collapse under the strain, permitting millions of gallons of water to overspread the field.

At Boonville, Mo., engineers and city officials were attempting to keep the municipal water works intake pit from collapsing. The engineers said that if the foundation walls collapsed the intake would be buried, shutting off the town's water supply.

The crest was moving through the valley like a long, low wave. The river was falling above and below the rise.

At Nebraska City, Nebr., 70 miles above St. Joseph, the surface level fell two-tenths of a foot. At Kansas City, 45 miles downstream, the river dropped slowly to 19.2 feet from the crest to 19.4 feet hit by the previous flood, which was still moving down the river in advance of the new rise.

Verne Alexander, regional river engineer for the Kansas City weather bureau, said the new flood would "beat anything we've had so far this month and clean out the valley for this year as far as crops are concerned."

The Platte River was leveling off at Agency, Mo., where only the housetops showed above the surface.

Rescue workers still sought five persons at Cambridge, Nebr., where eight persons died in a flash flood Sunday. The waters of Medicine Creek and the Republican River had receded today, leaving the streets and houses full of silt.

The week-end flash floods in Iowa and Nebraska were pouring their burden of water into the larger rivers today. Alexander said the Missouri would rise to 6 feet above flood stage at Kansas City tomorrow.

Funds for the United Nations Headquarters

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. KEFAUVER. Mr. Speaker, throughout the centuries there has been a constant struggle between two groups—those who seek to aid civilization and those who retard it. The world has recently witnessed a great conflict, begun by power-mad dictators who sought to dominate the entire universe. Their aim was to impede progress toward a better civilization using as their chief weapons intolerance and persecution. Fortunately, their armies were defeated, their aims destroyed. We and our great allies emerged victorious and in our victory we realized the urgent need for international assistance and humanitarian action.

Out of this realization was conceived the United Nations organization—a bulwark against tyranny and despotism. This organization was begun by men who were seeking a higher understanding, a finer civilization. Mr. J. Russell Earp, whose extremely worth-while suggestion I submit today, is a good example of this type. Like any average citizen, he is greatly interested in promoting humanitarian projects and is always anxious to support a worthy cause. He recently read a newspaper release about the United Nations organization having difficulty in obtaining funds for the building of their world headquarters in New York. His reaction to this was to suggest to me that a fund be established to which the "little people" of the world could contribute, the money to be used to aid in the construction of the U. N. world headquarters. This is the people's problem, the people want to do something about it and Mr. Earp has proposed a means whereby they can show their interest.

Since the primary purpose of the U. N. is to assist and defend the "little people" of the world, I think Mr. Earp's suggestion should be adopted.

I have written the following letter to the Secretary General of the United Nations organization forwarding Mr. Earp's check for $25 to begin the fund, and I sincerely hope it will be favorably considered:

JUNE 24, 1947.

The Honorable TRYGVE LIE,
Secretary General,
The United Nations Organization,
New York, N. Y.

MY DEAR MR. LIE: The enclosed check for $25 dollars has been given to me with the express wish that it be submitted to your organization to initiate a fund which would be used to aid in defraying the cost of constructing the world headquarters of the United Nations organization in New York City.

Mr. J. Russell Earp, the donor, has suggested that this fund be contributed to by average citizens, like himself, throughout the world. He feels that the people would want to do this since their future way of life depends to a great extent on the strength of the United Nations. Such contributions could easily be compared to the paying of premiums on a fully covering form of life insurance with the dividends to be of untold benefit.

We are all aware of the tremendous task that lies before the United Nations organization—the preservation of peace throughout the world. In our hearts and minds we join with you that your mission may be accomplished and that acts of aggression, tyranny, and the evils of war may be forever banished from this universe.

Sincerely,

ESTES KEFAUVER.

On-the-Job Training for Veterans

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. KEARNEY. Mr. Speaker, on February 24, 1947, after several weeks of testimony, H. R. 246, the so-called on-the-job training bill for veterans, was unanimously reported out of committee. For some unknown reason we were unable to obtain a hearing before the Rules Committee and on March 21, 1947, I offered House Resolution 159 making H.

R. 246 a special order of business. Seven legislative days having passed without consideration by the Committee on Rules, a discharge petition—No. 4—was placed on the Speaker's desk, as I was convinced that was the only means whereby H. R. 246 would be brought to the floor of the House. On May 22, 1947, nearly 3 months after the bill was unanimously reported out of committee, a hearing was granted by the Committee on Rules and today, 1 month after the date of that hearing, no action has been taken by that committee.

Briefly, the foregoing is the record on H. R. 246 up to the present time. Over one hundred names have been placed on the discharge petition and it looks from here as though we were getting nowhere fast.

It seems incredible to me that only a short time ago we were telling the men and women in the armed forces that nothing was too good for them. But the shooting war is over and many of us have short memories. I can think of no earthly reason for the Committee on Rules to pigeon-hole action on this bill. It is legislation needed and needed urgently—needed to correct the harm done the working veteran by the passage of Public Law 679 during the closing days of the Seventy-ninth Congress.

We have been told not only by individual members of the Committee on Rules but also by other Members of the House that we will get no action—not only on this bill—but also no action on other pieces of veteran legislation so urgently needed. I ask the question—why? Who determines whether this bill or any other bill in behalf of the veteran shall be brought to the floor of the House? It is a tremendous responsibility that rests on someone's shoulders to deny fair and just legislation to the men and women who saved this country of ours so that we could remain free men and women. It is certainly something to wonder at when we can vote millions of dollars to foreign countries but, when we are asked to do something for our own, we are met with the cry "It will cost too much" or "We have done enough for them." I will accept no part of a program which would deny to the veterans the things they are entitled to; and I believe that after hearing of this bill in detail, you will agree it is right and proper that it should be brought to the floor of the House and without further delay.

H. R. 246 concerns itself with the revision of certain parts of Public Law 679 relative to on-the-job training of veterans.

The primary purpose of this on-the-job training is to provide returning veterans with the most direct and best training possible, so as to equip them for suitable employment. It was designed to give the returning veteran a particular skill, through training, so that the veteran could earn a decent living and earn a livelihood for himself and his family. The payment of a subsistence allowance of either $90 or $65 a month during this period of training is designed to aid the veteran to carry on with his current obligations with sufficient income, until such time as his skill became such that he would be capable of producing enough work on his own initiative to enable the employer to consider him as a qualified employee and pay him the wages of an experienced trained man.

Despite the fine purposes of on-the-job training, poor supervision on the part of some States of the programs that the States have the authority to approve or disapprove, lack of knowledge on the part of employers as to what was expected of them, an insufficient number of training officers in the Veterans Administration to investigate these abuses and withdraw the veteran from training, led to certain abuses. Supposedly, for the purpose of correcting these abuses the Seventy-ninth Congress in its closing days of business hurriedly passed Public Law 679 at the request of the Administrator of Veterans' Affairs, Gen. Omar Bradley.

This law placed a wage ceiling on the combined subsistence and wages of veterans in training from all sources of employment. Under Public Law 679, the veteran without dependents has a $175 ceiling imposed on him and a $200 ceiling is imposed on the veteran with dependents. This simply means that no matter how many children a man may have in his family, the veteran's combined subsistence and wage cannot exceed $200. If they do exceed $200, his subsistence is automatically reduced in proportion to the wages received. It means further that while this veteran is still learning his trade, he must be content to feed, clothe, shelter, and provide medical care for his family on $200 per month. The law provides further that the job customarily requires a period of training of not less than 3 months and not more than 2 years of full-time training; and finally, that prior to the States giving their final approval to training programs, they must conform to certain standards established in Public Law 679, for the purpose of achieving some uniformity throughout the United States in the approval of training programs.

The passage of Public Law 679 brought considerable reaction in the public press. Letters from all parts of the country were coming in to Congressmen asking for a change in the ceiling. The Veterans of Foreign Wars conducted a survey that showed the veteran as the victim of Public Law 679, rather than the benefactor. The American Legion made demands upon the Congress for a complete withdrawal of the ceilings because of its drastic effect upon veterans. In no one instance did anyone recommend that the ceiling as it now stands be maintained. It is evident from the barrage of comment from all sides that Public Law 679 was not the perfect medicine for the ill that it sought to cure. Instead of attacking the real causes of the abuses, it attacked the veteran instead.

Thousands of veterans entered on-the-job training with the expectation that they would receive a definite income over the period of their training. With a feeling of security in the hope that some day they would be proficient in the trade they were learning and confident that their income would continue in accordance with their training program, some of these veterans entered into contracts for the purchase of homes, furniture and other household necessities. But the very low ceilings imposed by Public Law 679 exploded their plans, meaning in many instances a foreclosure proceeding took place on their property, their personal possessions, and, further, they lost any further use of their benefits under the loan provisions of the GI bill. Many others had to leave what was a good training situation, providing a low income now, but a promise of a higher income in the future, so that they could take a more lucrative job, but one that offered little or no security in the future.

As evidence of the effect of Public Law 679, the following Veterans' Administration figures for the year 1946 are given, to show the growth and the decline in the number of on-the-job trainees since this law went into existence on August 8, 1946:

Month	Number	Net addition since previous month	Under Public Law 346	Under Public Law 16[1]
January	39,925	12,557	24,627	15,298
February	56,714	16,789	38,952	17,762
March	94,070	37,356	72,198	21,872
April	169,823	75,753	142,205	27,872
May	262,312	92,489	228,523	33,789
June	357,885	95,573	317,822	40,063
July	447,484	89,599	400,527	46,957
August	525,960	78,476	471,313	54,647
September	584,796	58,836	522,991	61,805
October	666,332	81,536	595,541	70,791
November	693,038	26,706	614,882	78,156
December	712,799	19,761	629,157	83,642

[1] Public Law 16 trainees are not affected by Public Law 679.

These Veterans' Administration statistics show that from April to October, inclusive, an average of about 70,000 each month were added to the number of trainees under Public Law 346. About 6,000 per month for the same period were added to the trainees under Public Law 16. However, it is important to note that during the months of November and December 1946, the number added to the trainees under Public Law 346 had declined to an average of 12,000 per month from 70,000, while the trainees under Public Law 16 had maintained the monthly average of about 6,000.

These figures tell a startling story. Employers and veterans both are bewildered. The employers is reluctant to seek approval of worth while training opportunities and the veterans do not know what to expect when they enter training. Therefore, the majority of veterans and employers are marking time awaiting the necessary action by this session of Congress.

The majority of our discharged veterans are not eligible to attend college. Is it fair then to deny this group the opportunities afforded by on-the-job training? Compare the individual cost of training a veteran on the job to the cost of sending a veteran to college. How does the $500 per year plus $90 a month for the married veteran compare with just a plain $90 per month for the veteran taking his training on the job? I believe we will all be saving the taxpayers a lot of money as well as providing the veteran with the opportunity to earn a decent livelihood, to say nothing of giv-

ing the veteran an occupation that he can follow for life, by the passage of H. R. 246.

It is a well-understood fact that the wage ceiling imposed by Public Law 679 is not a limitation on the amount of income that a veteran may earn. It merely calls for a reduction in subsistence allowance where the veteran begins to earn more than the ceiling allowed him. But this ceiling is placed so low that it affects veterans who are located in large industrial and manufacturing centers in the United States, where wages are normally higher and the cost of living proportionate.

A higher wage ceiling and a lifting of the 2-year limitation on training is necessary because of the following reasons:

First. The present wage ceiling prevents a certain group of veterans from entering a bona fide training situation where he is qualified in his present job and is now ready to train for the position of foreman or superintendent.

Second. It encourages the employer to train the veteran, whereas without a subsistence allowance the employer is reluctant to employ a trainee, because his wage payments would be too low for the beginner to earn a living, and the veteran could not afford to take training.

Third. The wage ceiling as proposed in H. R. 246 will benefit the veteran in his current need and still prevent the training monstrosities recently cited in the press by the Veterans' Administration. It strikes an average more in line with the average veteran, rather than the exceptional one who is in a higher wage bracket, and whose salary while in training is ample to support him and his dependents.

Fourth. In 1943, 50 percent of the male workers earned $200 or more per month, and over 30 percent earned $250 or more. Since 1943 the cost of living has risen, particularly on the Pacific coast, large communities in the Midwest, the eastern areas, and in certain southern communities, which reflects a need for higher ceilings.

Fifth. As of July 31, 400,527 veterans were in training. At that time the Veterans' Administration predicted that 55 percent of the veterans or better would have their incomes reduced or discontinued by Public Law 679, at some time in the near future. I ask you, if you consider this a fair way to treat the very veteran who left his job and security to win this war for you and me. Public Law 679 was signed by the President on August 8, 1946, and in the months of November and December the effects of Public Law 679 on the veterans in training became evident. A reduction of from 70,000 to 12,000 trainees was noted while the training under Public Law 16, which was unaffected by the ceilings, maintained its static influx of 6,000 per month. The Department of Labor predicted last July that better than 70 percent of the veterans in on-the-job training would be affected by Public Law 679. The facts most certainly bear out the truth of this contention. Where 70 percent are affected by Public Law 679, the wage ceiling was most certainly entirely too low.

Sixth. The majority of abuses relating to a $500 a month and better income were shown to exist largely among professional people, but the vast majority of veterans training on the job are in a wage group below that figure. The wage ceiling proposed in H. R. 246 prevents an employer from setting up a training program merely for the purpose of subsidizing labor, and does not create a hardship on the veteran.

Seventh. The veteran suffers a period of loss while in training, where he earns more than $110 a month from the employer, until such time as the employer wage compensates for the loss of subsistence. Many employers have reported to me that trainees are reluctant to work overtime as the salary would then exceed the ceiling and the veteran would receive no benefit from the overtime worked, since this overtime would be deducted from the subsistence allowance. H. R. 246 gives the veteran a chance to earn the bare living essentials before any reduction takes place in subsistence, and to encourage employers to set up only those training programs that are really designed as such, and to keep the training programs in those places where there is an actual need and not in the high-salaried brackets.

Eighth. Veterans have entered on-the-job training with the expectation of receiving a definite income over the period of their training. With a feeling of certainty, some of these veterans entered into contracts and obligated themselves for the purchase of homes, cars, and so forth, and now find that the legs of security to meet their payments have been taken away from them by these wage ceilings. They have lost any further benefits under the loan provisions of Public Law 346 and have lost heart with the whole intent of the GI bill.

Ninth. H. R. 246 insists on a wage ceiling. A higher wage ceiling, however, than now in existence. I am fearful that without some reasonable ceiling, and without proper and intelligent supervision on the State and national level, the same unfortunate situation which brought about the enactment of Public Law 679 will again develop.

Tenth. The wage ceilings must be lifted, as proposed in H. R. 246, to accommodate the majority of the veterans who are seriously affected by the present low ceilings and who are living in the high-wage regions of the country. It is true that some veterans in a low-wage area will benefit by a higher wage ceiling, but it is impossible to proportion subsistence payments on the basis of locality, in relation to the customary wages that are paid, because the experience at the end of the last war has proven that one State feels as though it is entitled, and rightly so, to as much as is granted to any other State. Therefore, the higher wage ceiling should be granted between the high-wage areas and the low-wage areas, with the preference being given the majority of the States where the veterans are employed in training. It is contended that H. R. 246 satisfies this requirement.

The House Committee on Veterans Affairs has unanimously endorsed H. R. 246 as being the bill best adapted to apply to this on-the-job training situation. For several weeks we listened to testimony from all sources. We are all agreed that over 630,000 veterans now engaged in on-the-job training are anxiously awaiting the decision that this Congress must make. Some definite action must be taken so that we will not break faith with the men who so honorably served our Nation in its time of need. Their period of readjustment is a most difficult one, and it is our duty to see to it that everything possible is done to provide them with those tools that will help rehabilitate them to the type of life they knew before they went off to war.

I invite all my colleagues to sign Discharge Petition No. 4 in order to correct a wrong to our veterans.

Deport Charlie Chaplin—Clean Up Hollywood and Protect the Youth of America

---

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1947

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a letter I have just received from Mr. B. M. Dorrity, a leading businessman of Shreveport, La., together with an editorial from the Shreveport Journal of Friday, June 20, 1947.

The letter referred to follows:

SHREVEPORT, LA., *June 21, 1947.*

Hon. J. E. RANKIN,

Member of Congress, Washington, D. C.

DEAR CONGRESSMAN RANKIN: Enclosed herewith is an editorial page from our Sheveport Journal in which you and your stand is praised regarding un-American activity of members of the motion-picture industry in the person of Charlie Chaplin, and your tribute to Hon. Lloyd T. Binford, of Memphis, Tenn., who is waging a fight for the youth of our country against unclean and corrupt pictures.

Mr. Binford has been my very close personal friend since 1909, and I happen to know that he has so lived all these years to merit the commendation of all good citizens who appreciate a real man in every sense of the word.

The defense of America with arms against foreign aggression is necessary, but defense of American youth against vice and corruption that will certainly undermine the national fiber of our citizens is much more important, for without the salvation of our youth from moral turpitude we cannot and will not continue to exist.

Until American representatives wake up to the fact that the protection of our children against vice and disease such as is encouraged and promulgated through the medum of many seditious motion pictures, road houses, legalized gambling in public places, saloons, and the greatest of all, horse racing bookie houses, is more important than the cultivation and protection of the livestock of our Nation, we cannot hope to achieve any greatness worth while.

Your courageous fight for America and the protection from her enemies has the approval and sanction of all good citizens.

Very sincerely yours,

B. M. DORRITY.

Here is the editorial to which I referred which appeared in the Shreveport Journal of Friday, June 20, 1947:

CLEAN CENSORSHIP

Lloyd T. Binford, who heads the censor bureau at Memphis, Tenn., gave the Nation an example worthy of emulation recently when he banned from the screen "a rotten picture made by Charlie Chaplin." The quoted words are from a statement in which Congressman J. E. RANKIN, of Mississippi, minority member of the Un-American Activities Committee, commended the censorship official for his uncompromising and courageous decision.

To American citizens interested in wholesome motion pictures and opposed to activities by actors or others who are not unquestionably loyal and patriotic the Binford ultimatum meets with favor. The career of Actor Chaplin, whose degrading affairs have been aired in the newspapers time and again have been such that the mention of his name is read or listened to with resentment by theatergoers who dislike "nose holding."

Chaplin's reputation also is regarded with pronounced disfavor by citizens who have no patience with persons who make fortunes through the years in this country and do nothing to even indicate respect for American principles.

Congressman RANKIN reflected the sentiment of the American people generally when in commenting on Censor Bureau Director Binford's action he demanded Chaplin's deportation on the ground that his movie life is "detrimental to the moral fabric of America," and further commented:

"He has refused to become an American citizen, and deporting him he can be kept off the American screen and his loathsome pictures can be kept from the eyes of the American youth."

Mr. RANKIN is right in his estimation of the non-American actor whose "rotten picture" has been banned from some of the Nation's film houses, and should be banned from all, judging by the comment of the Mississippi Congressman.

Housing

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. JAVITS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

DEPARTMENT OF SOCIAL WELFARE,
THE WASHINGTON FEDERATION OF CHURCHES,
Washington, D. C., June 23, 1947.

The Honorable JACOB K. JAVITS,
The House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN JAVITS: I am writing you on behalf of the Social Welfare Department of the Washington Federation of Churches to urge your support for immediate legislative action in the interest of adequate housing for all our fellow-citizens.

Our organization represents more than 200 individual Protestant churches in the city of Washington, with a total membership of approximately 110,000. Many of these people know from harassing personal experience the housing needs of our community and our country; and all of them know from observation that the suffering and frustration being inflicted upon so great a number of our families, who through no fault of their own are denied decent housing, are rapidly undermining the very foundation of our Nation's strength and security—the American home and family.

Such a situation weighs heavily upon our conscience, not only because of the present hardship being worked upon our people, but also because of the countless social, moral, and physical diseases that are being bred as a result of this unmet need in American life. We simply cannot produce a healthy citizenry so long as we permit such a cancerous evil to exist in our land.

We beg of you, therefore, to do all in your power to hasten House action on the bill H. R. 2523 and to bring about its adoption. You can be assured that in urging this legislation you will have the complete support of our organization.

Respectfully yours,
LEONARD S. EDMONDS,
Director.

Voice of America

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. GORDON. Mr. Speaker, every hour of the day the story of life in the United States is being told to the peoples of the world via the short-wave radio and the printing press. It is beamed to six continents in 30 languages. It appears in a vast flood of controlled or influenced publications. It is neither a pleasant story nor an accurate story. It is a story of the United States as an imperialistic menace to world peace, as a center of seething chaos that contains only industrial discord, economic instability, racial conflict, exploited masses, and monopolistic capital. I need hardly tell you that this story radiates from Moscow.

Now it is not necessary to refute these fantastic charges—in the United States. It is essential, however, that they be counteracted abroad where they are doing inestimable harm. I submit that in the conflict of ideologies now loose in the world, we should be derelict in our obligations to this Nation if we let slip any valid opportunity to strike a blow for truth and for democracy. It is for this reason that I should like to comment on H. R. 3342 which is now before us for consideration. This bill as amended has a clearly stated objective:

To enable the Government of the United States to correct misunderstandings about the United States in other countries which constitute obstacles to peace, and to promote mutual understanding between the people of the United States and other countries.

There are few who would disagree with this objective. Its desirability is indicated by the fact that H. R. 3342 was unanimously endorsed by the members of the Foreign Affairs Committee. The question which we must answer is whether or not the present bill meets the valid objections which have been raised against a similar program now in operation.

One of the most frequent complaints against the information program currently operated by the State Department is that the foreign policy of this country has been so vague and conflicting that it cannot be projected successfully abroad by a Government service. It seems to me that the solution to this particular problem lies in the clarification and coordination of our foreign policy, not in the elimination of the machinery for publicizing it. In the absence of effective information from this country, those who seek to undermine us in the world will have a free hand to distort our motives to suit their purposes. The Greek-aid program is a perfect example. Broadcasts from the United States explaining our financial assistance to that stricken land depict our true aims and are doing much to frustrate those who describe our efforts in the Middle East as an initial thrust of American imperialism.

Other criticism of this information program has centered on the effectiveness and the personnel of the State Department agency responsible for its execution—the office of International Information and Cultural Affairs. There have been complaints that this office, headed by William Benton, has been extravagant, that it has continued to employ individuals of dubious loyalty to the United States, and that the payroll includes many persons whose non-partisanship on domestic issues is opened to challenge. The committee which examined this bill went into these charges with great thoroughness. I think it accurate to point out that it found that much of this criticism is a carry-over of an understandable antipathy for such wartime agencies as OWI. Mr. Benton is making a determined effort to improve the service, to have it present abroad an objective and honest picture of the United States, its principles and its peoples. In the interests of economical and efficient operation, he has cut back the number of employees in the service from 10,700 in 1946 to 3,000 for 1947. This has also had the effect of removing many undesirables from the payroll. As to loyalty of personnel, the bill as it now stands sets up careful safeguards. Title IX provides for a thorough FBI check of employees. Furthermore aliens can be employed only as linguists and even then strictly in jobs for which suitable American citizens are unavailable. Still another clause of the bill provides that any alien while in the United States under this program may be deported immediately if he engages in activity detrimental to this country.

A specific criticism frequently has been raised against that portion of the program dealing with the dissemination of news. It is held that the Government is competing with the private news agency such as the Associated Press and the United Press. Let me say that this bill makes very clear the intent of Congress in this respect. The State Department is specifically instructed to give every encouragement to private American news agencies and to minimize Government distribution facilities in any area whenever commercial dissemination is found to be sufficient. This program is solely for those parts of the world where, for different reasons, private news channels are not operating adequately.

Mr. Speaker, discussion of the information and education program has centered on the more spectacular features of the service. We have heard a great deal of the "Voice of America" broadcasts beamed by 36 great transmitters in this country and relayed from strategic stations abroad. There are other parts of the story, however, which are of great significance in promoting fuller understanding of this country abroad. The program also provides for student exchange, technical cooperation, information libraries, and motion-picture distribution. The latter is a particularly significant factor. At present, the United States Information Service is showing films in 46 countries to audiences of some 8,000,000 persons per month. The pictures that are being sent out are chosen with a view to presenting a balanced, accurate description of all phases of American life. As long as great care is exercised in the selection of films, this phase of the program can be a tremendous force for understanding and good will.

Mr. Speaker, in conclusion, I should like to point out that H. R. 3342 bears the endorsement of some of our finest public servants. Secretary Marshall has urged it as an important tool of our foreign policy. It has the support of General Eisenhower. Secretary Harriman, former Ambassador to Russia, and his successor, Gen. Bedell Smith, both enthusiastically endorse the program because it is practically the only effective way of getting an accurate presentation of the United States to the Russian people. Outstanding leaders in the radio industry and in the newspaper field are on record as favoring a Government information program of this type.

Mr. Speaker, this legislation is essential if the program is to continue through the critical months that lie ahead. Let me make clear that H. R. 3342 does not establish a permanent Government agency. The entire program may be terminated at any time by a concurrent resolution. It may be that Congress will want to go into this entire question very carefully with a view to setting up permanent machinery. Until that is done, however, H. R. 3342 proposes to keep open this important channel of good will with friends and potential friends beyond our borders.

Weak and Unconvincing

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. ELLIS. Mr. Speaker, I submit for the consideration of my colleagues an editorial from the Huntington (W. Va.) Advertiser.

This editorial by Mr. Clyde A. Wellman seems to be the prevailing appraisal of the President's statement on the labor bill.

It will no doubt interest you to know that the Huntington Advertiser is one of the important Democratic papers of the Ohio Valley, and through the years it has been a consistent supporter of the administration.

The editorial follows:

WEAK AND UNCONVINCING

The reasons President Truman gave in his message to Congress in justification of his veto of the Taft-Hartley labor bill were weak and unconvincing.

His radio address later to the Nation, appealing for popular sympathy and support for his action, was equally weak and unconvincing.

The dangers to the public interest that he attributed to the bill to justify his position were ridiculous and fanciful. They were arbitrary, meaningless statements without foundation in fact or the content of the measure.

The House, promptly and without debate, voted overwhelmingly to override the Presidential veto. The vote was 331 to 83, a 4 to 1 majority, whereas only 2 to 1 was required. Seldom in history has a President been so severely rebuked for vetoing a congressional measure. The Senate, at this hour locked in furious debate, should concur in the end on the House's action.

The False Voice of America

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I submit herewith the following very fine editorial entitled "The False Voice of America," which appeared in the Chicago Daily Tribune on Friday, June 20, 1947:

THE FALSE VOICE OF AMERICA

Executives of the Columbia and National broadcasting chains, testifying before a Senate subcommittee, said that their chains could not afford to take over the State Department's Voice of America broadcasts. When the suggestion was made that the networks might operate the foreign short wave broadcasts as contractors for the Government, the two executives pointed out the Department already has studios, technicians, and hundreds of employees. Apparently they don't want anything to do with Assistant Secretary Benton's pay-rollers.

The proponents of this propaganda scheme will no doubt represent the testimony of the network men as proof that the State Department must be given the $34,000,000 that it is asking for these activities, on the ground that no one else can carry it on. They argue, however, on two false grounds.

To begin with, everyone who knows anything about radio knows that the chain broadcasting executives were testifying with guns at their backs. Of all the elements in the radio industry, the chains are most vulnerable to the regulations of the Federal Communications Commission. As long as the same New Deal bureaucracy controls the FCC and the State Department propaganda division, the chain people are going to agree with them in whatever they say. Their testimony, accordingly, can be discounted 100 percent.

Further, the idea that the State Department ought to carry on this propaganda because no one else can, rests on the false assumption that the propaganda ought to be carried on.

There are numerous minor objections to the Voice of America propaganda. Mr. Benton's outfit is honeycombed with Communists and fellow travelers, who, if they oughtn't to be in jail, certainly oughtn't to be working for the Government. The broadcasts lack the technical competence to present a true picture of America or happenings in America. It is also objected, quite properly, that the broadcasts, regardless of content, are valueless because most of the people to whom they are beamed either have no radios or are prevented by the police states under which they live from listening to foreign broadcasts on what sets they have.

Kent Cooper, of the Associated Press, stripped the problem down to its bare essentials, however, in a recent speech in Chicago. The major objection, as he said, to the Voice of America is that it puts the Government of the United States into the propaganda business and our Government oughtn't to be in the propaganda business. That is not a proper or a feasible activity for a responsible republican government.

Backers of Benton's silly plan have been beaten back in Congress until they are willing to compromise on a $6,000,000 appropriation instead of the thirty-four millions asked first, with some restrictions on the type of programs. Whether it spends six millions or thirty-four, the project is as vicious as any that has ever been presented to Congress. The money will be poured down a rat hole. It should be rejected in its entirety.

Facts About Appropriations for Soil Conservation Service

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, much false propaganda has been sent out about the 1948 Soil Conservation Service appropriations. What are the facts? There are at least six appropriations made each year in the name of soil conservation. What are they?

First. Federal appropriations to agricultural experiment stations: These funds are partially used for soil experiments and research. This appropriation was not reduced.

Second. The Extension Service: The Extension Service, with its soil specialists, have for 30 years carried the soil facts from the experiment station to the farm. This agency in 1948 has a $24,000,000 appropriation for general educational work, including not only for soils but for home economics, 4-H Club work, and other projects. This appropriation was not reduced.

Third. Forestry Service: In some areas the farm forestry is the first step to soil conservation. The farm forestry project is retained in full. This appropriation was not reduced.

Fourth. The TVA has distributed free fertilizer: This was distributed largely in the South. A few pounds have been given to one farmer and a carload to another.

Fifth. The AAA program: Part of the appropriation for the AAA has been used to cooperate with the farmer in the purchase of lime and fertilizers. In 1947 this

averaged less than $15 per farm in the United States. President Truman asked in his message to Congress that the educational part of the AAA be added to the Extension Service. This appropriation of some $300,000,000 in 1947 was cut nearly in half. The cut in this appropriation will reduce the amount of fertilizer distributed unless other activities of the program are curtailed. The Senate is being asked to restore some or all of these funds.

Sixth. The Soil Conservation Service appropriations which are $38,437,000 for 1948: This $38,437,000 appropriation for 1948 is the largest appropriation ever made for any year except for 1947. The appropriation for 1940 was twenty-one million; for 1941, sixteen million; 1942, twenty-three million; 1943, twenty-one million, the 1944 appropriation was twenty-two million, the 1945 appropriation was twenty-eight million, the 1946 appropriation was thirty-three million, and the 1947 appropriation was thirty-nine million plus four million for the 1946 Pay Act or a total of forty-three million, and the 1948 appropriation by the House was thirty-eight million.

Then the thirty-eight million appropriated for 1948 is over sixteen million, or 74 percent more than the 1943 appropriation; the 1948 is $15,591,000 more, or over 70 percent more than the 1944 appropriation; the 1948 appropriation is $10,097,000, or 35 percent more than the 1945 appropriation; the 1948 appropriation is $5,226,000, or 18 percent more than the 1946 appropriation, and the 1948 appropriation is $853,000, or 2 percent less than the 1947 appropriation, and including the pay act of $4,000,000 it really makes a cut of 12 percent below the 1947 appropriation.

The thirty-eight million for the Soil Conservation Service was contended by many to be out of line with the twenty-four million for agricultural extension. There is a very strong feeling in Washington to advance the 4–H Club work. Some four million for this purpose have been authorized, though not yet appropriated.

Seventh. Personally, I did not approve of the conclusions of the Agricultural Appropriations Committee. However, if this bill had been recommitted, what would have been the result? It would have gone back to the same Appropriations Committee, would it not? The July 1 dead line might have found all the agricultural agencies in the same position the Maritime Commission now finds itself, with no funds whatsoever.

The sheepmen of America have a soil-conservation program in connection with their industry. On June 16, 1947, nearly all the New Dealers voted to put them out of the sheep business. One-third of the sheep have been liquidated the past 5 years, and the other two-thirds are in danger of being liquidated altogether. On one hand we see livestock farming that is synonymous to soil conservation liquidated, at the very time that we hear so much about soil conservation. Since the New Dealers voted nearly unanimously to put livestock farming on the rocks, we will not hear so much about their interest in the soils of America. Their soil interest is evidently political.

Stassen Opposes Labor Bill Veto

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. MacKINNON. Mr. Speaker, because of the national prominence which former Governor Stassen, of Minnesota, has attained for his sound, progressive views on labor matters, I include, under leave to extend my remarks, the following newspaper article which appeared in the Minneapolis Morning Tribune of June 21, 1947, reporting his remarks in opposition to President Truman's veto of the labor-management relations bill:

STASSEN LASHES VETO—TERMS LABOR BILL GOOD LEGISLATION

Harold E. Stassen lashed out Friday at President Truman's veto of the Taft-Hartley labor bill, declaring there was plainly a need for a new national labor policy.

The 1948 GOP Presidential aspirant, speaking during a question-and-answer period at a Republican workshop meeting at the Radisson Hotel, charged that the bill would not have done some of the extreme things claimed by its opponents.

OPINION STAYS

"I feel that the Taft-Hartley bill was good legislation," Stassen said, "and there was nothing in the President's veto message to change my opinion. His suggestion that Congress draft a new labor bill is impractical at this time."

The former Minnesota Governor said also that Mr. Truman should have indicated earlier this year his displeasure with the bill, instead of waiting to express his feelings by the veto.

President Truman's Tax Doctrine

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. MASON. Mr. Speaker, Uncle Sam has extended aid to 59 different countries since the fighting ended. A total of $20,000,000,000 has been handed out in loans, grants, relief, lend-lease, surplus-property credits, and cultural cooperation projects—all to come out of the American taxpayers' pockets. General Marshall, our Secretary of State, now says that it will require at least $6,000,000,000 more per year for the next 3 years to put European countries back upon their feet, economically and politically. This is a staggering load to place upon the American taxpayers' back. It requires some explaining by those responsible for doing it.

In the break-down of the $20,000,000,000 handed out since VJ-day, we learn that France has received $2,000,000,000, plus credit on the purchase of 75 Liberty ships; Great Britain, $4,400,000,000, plus 800 fixed war installations we built there; Italy, $530,000,000, plus her share in the $350,000,000 new European Relief Fund. We begin to realize now what the rehabilitation of Europe is going to cost us before we are through, because these three countries are again seeking more aid.

When we consider the $50,000,000,000 lend-lease hand-out we made during the war—eleven billion of which went to Russia—the $20,000,000,000 hand-out since VJ-day, and the $20,000,000,000 that General Marshall estimates we must yet hand out to rehabilitate Europe, one can easily see that our American tax burden will be a heavy one during the next 100 years.

Mr. Speaker, in connection with tax revision the Congress must take into account and decide upon: First, the Federal budget; second, reduction of Government expenditures; third, substantial and regular payments upon the national debt.

The President's budget estimate is based upon the present national income of $166,000,000,000. That is the highest national income in our history. As recently as 1940 our national income was only seventy-seven and six-tenths billions. The President' budget estimate is also based upon the most burdensome tax rates ever known in peacetime. His budget therefore presupposes the continuation of an inflated national income and oppressive war tax rates, neither of which can be expected to continue. The Federal budget must be drastically cut before tax revision can be accomplished.

The first steps in expenditure reduction are now being taken. When the Congress gets through with the appropriations for the next fiscal year there will be a reduction of about $5,000,000,000. An estimated surplus for this year of three of four billion dollars, plus the expected reduction in next year's expenditures, should provide ample funds to balance the budget, to make a substantial payment on the national debt, and to take care of a tax-reduction program.

Mr. Speaker, under leave to extend my remarks, I include the following article by David Lawrence, entitled "The Wrong Kind of a President at the Wrong Time":

THE WRONG KIND OF A PRESIDENT AT THE WRONG TIME

(By David Lawrence)

(Left-wing doctrine of leveling all incomes embodied in veto of tax bill. Percentages cited do not give true picture of tax burden. Individual initiative penalized by high rates.)

President Truman in vetoing the tax bill last week said it offered the wrong kind of tax reduction at the wrong time.

This can only mean that to encourage individual initiative and thrift by a downward revision of tax rates from their high level of wartime is, according to the Truman tax doctrine, wrong in principle.

This principle, however, is more important to America than the dollar amounts involved either as savings to the taxpayer or in Government revenues.

Mr. Truman in his message said it was wrong to make a reduction of 30 percent in the lower brackets, 20 percent in the middle brackets, and 10 percent on the taxes paid in the highest brackets. He chose the $2,500-a-year income as an example and said that the taxpayer's take-home pay would be increased under the Republican bill by only 1.2 percent; that is, by only $30 whereas the take-home pay of the man with a $50,000-a-year income would be increased by $5,000, or 18.6 percent. If the Republican bill had be-

come law, Mr. Truman said, "the inequity of these provisions would be frozen into the tax structure."

Mr. Truman juggled his percentages. He did not refer to the fact that a $30 tax saving out of a $90 tax bill is still a saving of about 30 percent for the taxpayer. He chose instead to discuss take-home pay, and he omitted to give the percentages of income retained.

"LEFT-WING" DOCTRINE

Why not be candid and forthright, Mr. President? Why not say what any courageous "left winger" like Henry Wallace or the late Huey Long would say, namely, that the "inequity" stems from the fact that under our economic system some men actually earn $50,000 a year? Why not come out frankly for the abolition of high incomes and the leveling of all incomes? That's the Moscow doctrine and that's what the CIO's "left wing" has been preaching and that's a much quicker way to demolish the American economic system than draining the United States Treasury of billions of dollars to be spent abroad to stop communism there.

The basic premise of communism is that the individual must be submerged and that the State must rule all—that it must fix the incomes and redistribute the ownership of property.

ONE-MAN TAX LAWS

Under the historic American system, ever since the days of the Revolution when a British king fixed the taxes, the American people have submitted to taxation through their representatives in Congress. Never in all our history until 1944 has a tax bill, passed by both Houses of Congress, been vetoed by a President, and in that instance Congress passed it over the veto. Mr. Truman's veto last week was sustained in the House by a narrow margin. The Republicans voted 233 to 2 to override, while the Democratic Party voted 134 to 35 to sustain Mr. Truman. The Democrats who voted to sustain the veto come largely from Northern States where in 1948 the people must decide whether these Democrats shall be replaced by Republicans.

The whole incident will arouse America because it means that tax rates are to be fixed by one man unless the majority party can elect two-thirds of the Members of each House. This means that majority rule on tax matters has been discarded in favor of a two-thirds vote in both Houses. This is the letter but not the spirit of the Constitution, which specifically gives Congress the sole right to levy taxes.

Entirely apart from the vicious precedent thus created which nullifies the expression of the will of the people through a majority in a biennial election, the episode must inevitably lead to demands for a constitutional amendment to change Presidential tenure to 2 years so that when a Congress is elected, a President of the same majority will be elected. "Four years," wrote President-elect Woodrow Wilson to Congress in February 1913, "is too long a term for a President who is not the true spokesman of the people, who is imposed upon and does not lead."

Since the will of the people can be thwarted by a 4-year Presidential tenure, the time has come for change. In Britain, in Canada, in parliamentary governments throughout the world, the people can change their executive overnight. This is a system that is responsive to the people's will. Ours is a rigid system which can give us the wrong kind of a President at the wrong time.

It is, of course, not desirable to have the wrong kind of a President at any time, though there are occasions when the damage is relatively slight. To have the wrong kind of a President at this of all times in our history is a tragedy.

If the Democratic Party does not mean to turn to the left, and if it wishes really to serve the best interests of this country, it will avoid defeat in 1948 by beginning now to plan the nomination of someone else. There is an unwritten law in politics that a President is entitled to renomination for a second term, but this rule should be waived when the future of the party and the country is at stake.

What is needed above all, moreover, is someone with a sense of fairness.

Mr. Truman did not tell the people in his message that the man with a $50,000 income took the deepest kind of cut during wartime. He didn't reveal that the man with the $2,500 income took the least cut.

UNDISTORTED FACTS

Fair play demands that the facts be given without distortion, especially in a Presidential message.

The facts are that in 1939 the man with the $2,500-a-year income, married and with two dependents, had 100 percent "take home pay" and paid no taxes at all, while under existing rates he takes home 96.2 cents out of every dollar.

As for the $50,000-a-year income, figured the same way, the "take home pay" in 1939 was 82.8 cents out of every dollar, and this was cut during the war so that under present rates the "take home pay" is only 51.8 cents out of every dollar.

Under the proposed Republican bill, the $50,000 man would have been able to retain 61.4 cents out of every dollar, whereas the $2,500 man would retain 97.3 cents out of every dollar of income. Is that really an inequity for the $2,500-a-year man?

What it means is that America's most successful, most thrifty, most creative and ingenious minds—the men who managed the war on the industrial front and have the responsibility of maintaining and creating jobs for nearly 60,000,000 persons—are penalized by their President. The more successful you are, the more taxes you have to pay. Why try to earn more?

INDIVIDUAL INCENTIVE

To place a penalty on leadership is to kill initiative. Mr. Truman completely misstated the problem of incentive. He pointed to the billions of dollars in corporation reserves as affording plenty of capital so that there was no need of tax reduction as an incentive to investment. This is misleading. The problem is not corporate incentive but individual incentive. Most of those who earn $50,000 in America do not have an ownership stake in any business. Their capital is their brains and their service at the top level is limited to only a few years. Most of them have worked up through the years from the lowest wages at the workbench.

These men do not work just a 40-hour week. They do not get paid overtime for the long hours of work in their offices and at night at home. They do not go on strike for higher take-home pay. They have worked hard to earn more and more because heretofore the American way of life has been opened to them to accumulate money for old age and for their widows and children if high-blood pressure and strain should suddenly end their usefulness.

Maybe persuasive reasons can be given to support the vetoing of a tax bill at this time but they were not disclosed in the President's message.

Mr. Truman, just after the election last November, publicly promised cooperation with the Republican majority. He said:

"The people have elected a Republican majority to the Senate and to the House of Representatives. Under our Constitution the Congress is the law-making body. The people have chosen to entrust the controlling voice in this branch of our Government to the Republican Party. I accept this verdict in the spirit in which all good citizens accept the result of any fair election."

Mr. Truman has been faithless to that pledge.

We now have a stalemate in Government brought on by the vetoes of a President who is no longer the true spokesman of the people.

A New Era in Public Relations as to Labor

EXTENSION OF REMARKS
OF
HON. CLARENCE F. LEA
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. LEA. Mr. Speaker, I place in the RECORD an editorial of the Washington News of today, which expresses the hope that we are now at the beginning of a new and better era in the relations between management-labor and the public. We have gone through a period of years in which there have been manifested abuses under irresponsible, arrogant labor leadership which all classes of Americans could hope are to be improved for the future by the enactment of the Taft-Hartley labor bill.

The action of the Supreme Court in sustaining the constitutionality of the so-called Anti-Petrillo Act gives additional assurance of the right and ability of the Congress to protect the public against the excesses of management-labor controversies.

This editorial in my judgment gives some advice that may well be soberly regarded by both sides to management-labor controversies, and particularly by the public, who are the principal sufferers of the unrestrained excesses that have been imposed upon the Nation in recent years.

The editorial is as follows:

THE NEW LABOR LAW

The Senate, overriding President Truman's veto, made law of the Taft-Hartley labor bill. And the Supreme Court upheld the so-called Anti-Petrillo Act.

Thus one day brought two events of profound significance to the future of labor relations in the United States.

It marked, we think, the end of a long era in which organized labor, pampered, protected, and made powerful by an indulgent Government, has had the upper hand and has behaved with far too little consideration for public welfare and its own best interests.

It marked, we hope, the beginning of a new and better area.

The union leaders who are breathing fire and threatening defiance of the new Taft-Hartley Act would do well to pause, think, and ask themselves whether it is not time to change the tactics that brought about the inevitable passage of this law.

If they want a timely example of the lack of wisdom in those tactics, there is James C. Petrillo, boss of the musicians' union. He is an outstanding symbol of arrogance, of dictatorial methods, of restrictive practices, of abuse of power. Eminent labor lawyers advised him to defy a law intended to curb his activities. The Supreme Court, they said, would never let Congress do that to him.

But the Supreme Court spoke for itself, Mr. Petrillo now must face trial, and the authority of Congress is sustained. That's thought food for the union attorneys who—just as the Liberty League's 58 famous lawyers did with the Wagner Act in 1935—are taking it upon themselves to declare the Taft-Hartley Act unconstitutional.

Employers, too, would do well to think soberly today. There should be no gloating over the enactment of this new law. Above all, there should be no effort to take undue advantage of its provisions. Any who try to use it as a union-busting instrument will learn quickly that the American people—strongly as they demanded corrective labor legislation—will rally with equal strength in defense of labor's essential rights and demand new restraints on the power of predatory managements.

Congress must be vigilant in watching the operation of the law, and prompt to correct defects, injustices, and wrongs if they appear. The promise has been made that responsible, conscientious unionism is not to be hurt or weakened. That promise must be kept.

Upon President Truman, who found no good in it and who called it unworkable, falls chief responsibility for enforcement and administration of this law. He could insure its failure, if he were so disposed. We trust and believe he will seek to give it a fair trial and a fair opportunity to succeed in its asserted purposes. That is his duty, now that his judgment of the Taft-Hartley bill has been overruled by majorities of 68 to 25 in the Senate and 331 to 83 in the House.

If management, labor, and Government accept in good faith the proclaimed intention of the law, it can be made to work as a program for industrial peace and sound, continuing national prosperity.

Controversy Rages Over Japan's Economic Purge

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an article by Mr. Ralph Donaldson, of the Cleveland Plain Dealer:

CONTROVERSY RAGES OVER JAPAN'S ECONOMIC PURGE

(Article 20)

The liquidation of the Zaibatsu should not be confused with the Japanese economic purge, around which rages a furious controversy. General MacArthur's first purge directive, issued January 4, 1946, directed the arbitrary removal and exclusion from public office of persons who were instrumental in formulating plans for aggressive war. The directive has been complied with. It resulted in a beneficial political house cleaning and was carried out without much fuss.

Since then, however, MacArthur has extended the purge to exclude from positions of important responsibility or influence in industry, commerce, finance, and agriculture "all persons who have been active exponents of militant nationalism or aggression."

Inasmuch as virtually every business in Japan was geared to the Japanese war effort, and all businessmen supported the war either voluntarily or were required to do so, this order has the effect of discharging all the top executives and members of the boards of directors of nearly every Japanese corporation and business enterprise.

Moreover, this order affects not only the businessmen themselves, but excludes members of their immediate families from holding such positions and their relatives to the third degree.

TECHNICIANS NOT AFFECTED

MacArthur himself claims that this order does not affect the technicians and men with the know-how, but only the owners and managers. He believes the businesses can be run just as well without the owners and managers, and that the purge will not have an adverse effect on Japanese production, which he is trying to stimulate.

There are many economists who will argue with him on that score. Not all technicians have managerial ability, the incentive to plan for the future or the versatility to shape their operations in conformity with changing conditions.

While our party was in Japan, Newsweek came out with a blast at the economic purge, claiming that it removed the brains of the entire Japanese business structure and that it struck at the most active, efficient, experienced, cultured, and cosmopolitan section of the nation—the very section that has always been most disposed toward cooperation with the United States.

Newsweek pointed out that a similar purge in the United States would have the effect of retiring all the businessmen who contributed to the American war effort and were members of the National Association of Manufacturers.

MAC ARTHUR DEFENDS POLICY

MacArthur replied immediately and vigorously to the magazine article. He said the purge was ordered in conformity with the directions he was given at the outset of the occupation—whether these came from the War Department or the Far Eastern Commission, he did not say.

He said his action was taken "because any other course would be to ignore the very causes which led the world into war, and by so doing to invite the recurrence of war."

"It was these very persons, born and bred as feudalistic overlords, who held the lives and destiny of the majority of Japan's people in virtual slavery and who, working in closest affiliation with its military, geared the country with both the tools and the will to wage aggressive war," he said.

MacArthur said the press of Japan had been practically unanimous in applauding the purpose of the purge, but he overlooked the fact that a large part of the Japanese press is Communist-controlled.

ORDINARY BUSINESSES UNDISTURBED

"The details of the purge," he added, "have been carefully evolved so as not to disturb the ordinary businessman, nor the technicians whose skill and brains did not influence formulation of the policy which directed Japan's course toward aggressive war. It is fantastic that this action should be interpreted or opposed as antagonistic to the American ideal of capitalistic economy. In my opinion, and, I believe, in the opinion of truly responsible Japanese as well, the action will not unduly disturb the development of a future peaceful industrial economy."

MacArthur went on to say that even if this were the case, even if Japanese industrial revival were impossible without the services of those who are to be purged, the interests of the rest of the world "leave no alternative than that Japan must bear and sustain the consequences, even at the expense of a new economy geared down to the capabilities remaining."

The voice was the voice of MacArthur, but I would be willing to bet a certain gaudy shirt that the words were those of Brig. Gen. Courtney Whitney, head of the government section of SCAP, in whose section the purge directive was initiated.

NEWS CORPS CRITICAL

Whitney is a devout worshiper of MacArthur. Moreover, he is as sensitive to criticism of the supreme commander as a Geiger counter is to radiation waves. In recent months there has been a lot of criticism of the occupation policies from the newspaper corps in Tokyo which has a generous sprinkling of leftists among its members. They complain that the purge has not gone deep enough; that Japanese who directed the war effort are still prominent and influential.

If the economic purge was designed to silence that criticism, which comes from leftists and Communists, it has stirred up a hornet's nest of criticism from the right. Even members of MacArthur's staff are skeptical. Some of them think the purge has gone too deep, that it will result in industrial stagnation and that it will block one of the objectives of the occupation, which is to make Japan self-sufficient to meet its peacetime needs at the earliest possible moment, in order that American financial support may no longer be necessary.

Legislation on TVA Appropriation Bill Amending Section 26 Strongly Opposed

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include an editorial of the Nashville Tennesseean of June 9, 1947, and one of the Chattanooga Times of June 13, 1947. These editorials have to do with legislation written in the Government corporations appropriations bill which amends section 26 of the TVA act. The people of the Tennessee Valley are tremendously concerned with any attempted changes in the basic law of the TVA. These editorials are typical of the attitude of the power distributors and the people of the Tennessee Valley.

The Nashville Tennesseean editorial is as follows:

NOT IN MIDDLE OF THE GAME

Changing the rules in the middle of the game is not cricket any time. Yet that is what a subcommittee of the House Appropriations Committee is attempting to do with respect to TVA's repayment of its power investment to the Federal Government.

The proposal to compel the TVA to devote 50 percent of its net revenue every 10 years to the repayment of almost $350,000,000 to the Treasury Department seriously affects the future of the Nashville electric service and 138 other distributors of power purchased from the TVA.

The contract which the city's distributing agency signed with the TVA is based on the assumption that the TVA will make its repayments to the Federal Government under the terms of section 26 of the act establishing the authority. This section gives the directors considerable freedom in choosing how much and when repayments are to be made. The advantage is obvious. The Federal agency is still young, still expanding, still working out sound relationships with the people of the valley. It needs all the elasticity and independence which belong to any other business corporation if it is to succeed to the fullest degree.

The Federal Government put risk money into TVA. For that reason, it did not stipulate any hard and fast basis of repayment. Since it was a new venture, there existed the possibility that the Government might never reclaim its investment in power development. The terms of the act frankly recognized the possibility.

The proposal of the subcommittee is clearly a violation of contract. It puts the TVA in a financial strait-jacket. In so doing, it seriously affects the future of the 139 com-

munity distributors of Federal electric power.

We are convinced that this 40-year strait-jacket should not be applied. The TVA, it is true, is already returning funds to the Government, having paid more than $20,000,000 into the Treasury Department in the past 2 years. There may be times, however, when it is not to the best interest of the TVA or the area served to make more than nominal payments. At times in the next 20 years, for example, it is entirely possible that the development of atomic energy may make it much more advisable from a business point of view to reinvest the earnings and postpone repayment.

Free enterprise, in some respects, applies as fully to a great, decentralized Government corporation as it does to a private business. The Republican committee members are striking at the very principle they so vocally defend in trying to alter the agency's financial program. Friends of TVA in Congress should kill this proposal if it finds its way to the floor.

The Chattanooga Times editorial is as follows:

ANOTHER BATTLE LOOMS

The House bill requiring TVA to repay the United States Treasury a total of $348,000,000 for the Government's investment in TVA power facilities carried in it a not-too-apparent stinger to which supporters of the agency are justifiably opposed.

The bill, sent to the Senate over the unalterable opposition of Representative ESTES KEFAUVER (for which we congratulate him), deprives the TVA of essential flexibility in meeting its payments and saddles upon it the necessity of devoting not less than 40 percent of its net earnings each year to the debt.

Mr. L. J. Wilhoite, chairman of the local electric power board, says that as originally announced the measure would have allowed TVA to take credit in any one year for any previous overpayment of the annual pro rata amount due. In other words, the agency would have been permitted to make overpayments in good years and underpayments, if necessary, in slack periods.

There seems to be no sound reason for this restriction. Certainly, the board of directors of any private concern would not want to hobble its management with any such program extending over 4 decades.

Mr. KEFAUVER also is quick to point out that the bill, although it amends the original TVA Act, is actually an appropriations measure. "This is a poor way to make Federal laws," he says. We agree with him.

TVA's adherents are going to protest any legislation which would hamper it in an orderly process of expansion necessary for the continued development of the region.

A group of TVA distributors, which has carried the fight successfully in the past against crippling legislation, will meet in Nashville June 20 to discuss his newest threat.

The valley is headed into another bitter fight; it is not of the valley's choice, but forces hostile to TVA must learn the region will never fail to join battle for the protection of one of its principal assets.

Fair Play for GI Joe

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein an editorial written by Cecil R. Warren, of the Hollywood Herald, one of the leading newspapers of Broward County, Fla., dated June 20, 1947:

FAIR PLAY FOR GI JOE

Ever since demobilization of World War II forces, many have regretted that GI Joe, the man called upon to do the actual fighting and dying, didn't get a deal on a parity with his officers.

When his officers were released from duty, they automatically received pay for leave they were unable to take during the days of conflict. But no such provision had been made for little GI Joe. He had lost his furloughs, too, and it appeared he wouldn't get paid for them.

One of the first to decry this injustice is United States Representative DWIGHT L. ROGERS, a resident of this county, who took the enlisted man's cause before Congress. ROGERS introduced in the House of Representatives, on September 13, 1945, a measure to provide that enlisted men receive lump-sum cash payments for unused terminal leave.

This measure passed the House unanimously. It was amended in the Senate to provide the men be given 5-year bonds, bearing two and a half per cent interest, instead of the lump-sum cash payments, and further providing the bonds should be non-negotiable. Of course, the Senate had good reason for such an action. It was considered that such payments as lump cash would upset the national budget.

This was late in the Seventy-ninth Congress. There was no time for another proposal, and it was necessary for the House to accept the plan if there was to be any curative legislation adopted in the session.

So the enlisted man was handed his rightfully due recompense, but useless to him for 5 years. At no other time in his life, perhaps, would he need his pay so badly. He stepped from the armed forces into an era of readjustment, of mounting unemployment and living costs.

The period of readjustment, of mounting living costs and unemployment is not yet ended. GI Joe still badly needs his pay.

Representative ROGERS now has another bill before Congress. It is one which would permit the enlisted man to cash his bonds now, perhaps at a premium, and yet will place no burden on the Public Treasury until the bonds mature. This measure will permit the enlisted man to sell his bonds, but not for less than the principal and accrued interest up to the end of the month in which the bond is sold. The Government would not redeem them until the maturity date, 5 years from the date of discharge.

The bonds are good investments, it is believed, and will appeal to bankers and other investors—perhaps be so appealing they may be bought at a premium, since Treasury bonds are now bearing only 2 percent interest.

By its approval of the Rogers measure, it appears, the Congress may right a gross discrimination against the enlisted man, particularly patent because there is no other bond issued by the Government on which the owner cannot obtain cash in from 60 to 90 days.

There still appears to be some opposition to the bill on the part of the Treasury and the Bureau of the Budget, just why it is hard to discern. This may account for its being stalled in the Armed Services Committee, less than a third of whose members have signed it.

It is to be hoped that the gentlemen who have so far failed to see the merits of the bill, from the standpoint of justice and fair play, as well as timely aid to the enlisted men, will soon give it their sanction.

International Good Will Through the Voice of America

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. MURDOCK. Mr. Speaker, on May 21, 1946, when the United Nations Educational, Scientific, and Cultural Organization, ordinarily known as UNESCO was before the House, I took occasion to express approval of the work of the committee in bringing the bill before us, and I particularly appreciated the work by the gentleman from South Dakota, Congressman MUNDT, who did good work in that instant while a Member of the minority. Now that we are today passing H. R. 3342, generally known as the Voice of America bill, which Congressman MUNDT has sponsored even to a greater extent than the educational bill of last year, I want again to congratulate him and express my appreciation for good work well done. This present bill has had a hectic career in the House, and I feel that it has received far more condemnation and criticism than it should have. Some may feel that Chairman MUNDT's views as to the importance of the bill may be somewhat exaggerated, but I myself feel that this is a very important bill, dealing with intangibles of such a value as cannot readily be computed.

In spite of what anybody says to the contrary, this is one world, and if the human family is not yet ripe for one-world political organization, it is highly imperative that all mankind prepare for such unity, politically as well as culturally. Anything else will mean more devastating war, utter chaos, and destruction. The steps toward one-world political organization may be difficult, and even cultural unity may be exceedingly difficult, but the need to travel in that direction is very great, and such measures as the bill before us today and the measure before us a year ago, known as UNESCO, are proper and important legislative steps in the right direction.

Some have wished to limit this State Department effort solely to broadcast American radio programs, and others have ridiculed the very thought of any radio voice from America penetrating behind the iron curtain. For my own part, I feel that it is imperative that the Voice of America reach around the world and throughout all continents. I cannot understand how level-headed men who recognize the worth of good will in the business world can be so careless and indifferent about political good will among the nations. We have spent an awful price to win this war and to help the victims of tyranny and oppression. Shall we now quibble about any reasonable sum to tell these people about America and about the part that America has played as a savior of distressed peoples, first from tyranny and later from hunger? Is it not wise to spend moderate sums to promote activities aimed at

broader understanding between our own and every other nation? If we do not capitalize on good will, we will have gained less than victory. If we gain good will on the part of the world's millions, as we rightfully should, that is a greater victory than is the military success of our Armies. Long ago a great man said, "The pen is mightier than the sword," and we would do well to remember the importance of the printed—as well as the spoken—word in the history of nations.

On June 9 I had something to say about the exchange of students, calling particular attention to the great bond of friendship between the United States of America and the teeming millions of China, through the education of so many Chinese students in our schools. No one can estimate in mere dollars and cents the value of that international good will through such a wise use of the Boxer Fund. As I see this measure before us today, it would multiply the good will effects between our own and many other nations and thus be a powerful movement toward peace.

Somebody has said, "Battles are but ideas, butting their hard heads together." In this struggle, it may be assumed that good ideas, right ideas, are more powerful and will usually prove to be victors. We sincerely believe that the American ideas of liberty and representative government are right ideas and that they will prevail in a clash of ideologies, but they cannot prevail unless we in America speak so that in all lands they may know of American political ideas. This may be done not only from day to day by broadcasts of the right kind, but it may also be made more lasting in its effects through the proper exchange of instructors and students and the widespread use of the printed word.

Withdrawal of the Federal Supervision Over Indian Affairs

EXTENSION OF REMARKS
OF
HON. GEORGIA L. LUSK
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mrs. LUSK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the president of the State Welfare Board of New Mexico on Navajo administration:

WITHDRAWAL OF THE FEDERAL SUPERVISION OVER INDIAN AFFAIRS

(A paper delivered before the National Conference of Indian Workers, May 28, 1947, by Mrs. John J. Kirk, of Gallup, N. Mex. Mrs. Kirk is an authority on Indian affairs, the wife of a prominent Indian trader, and she is chairman of the State Board, New Mexico Department of Public Welfare.)

In making plans for the termination of the trust of the Indian Office, the first consideration and always the basic touchstone must be "What is best for the Indians? What will lead them most quickly and most successfully into contact with and adjustment to our national life?" Every phase of any plan should be scrutinized from that point of view. The past history of our relations with Indian tribes shows many blunders—serious, soul-searing blunders. We already have made enough mistakes, perpetrated enough injustices.

The second consideration is the matter of Federal responsibility. There are solemn treaties. There is national honor, and our nation ability to meet the needs of the Indian people. There should be a fulfillment of our obligations, then a termination of our trust.

Finally we must consider the position of the States involved. There are Western States who have had Indian burdens imposed upon them, and who should not be expected to assume solely on a State basis the problems of those Indians. There are many States with an already sufficient burden, as in my own New Mexico where almost half the population is of Spanish-American origin, many of whom live on a submarginal basis, without opportunity to better themselves.

Any plan to abolish the Indian Office must be the right plan.

It is not a right policy to keep Indians isolated from the advantages and opportunities, or from the responsibilities of their fellow Americans. Nor is it a right policy to force Indians who are unprepared to meet the competition of modern life off the reservations into the stream of national activities. To find the right plan, it is helpful to see what we have done in the past and wherein we have failed.

POLICY

An early Indian affairs policy was education of Indian children in off-reservation boarding schools. It was believed that three generations at the most would see the Indians educated for and absorbed into American life. The program failed because, among other things, Indians were not prepared in any way for assimilation, and returned students found too little opportunity to make use of their newly learned vocational skills, which seldom were related to the demands of reservation life, or to such opportunities for employment as existed for them off the reservations. Many students returned to the blanket.

A policy of land allotment proved disastrous, as the Indians too readily disposed of their allotments and spent the money, impoverishing themselves and forever losing lands which they needed for a subsistence. In 1871 something like 155,000,000 acres of land belonged to Indians. By 1900 it had shrunk to 75,000,000 and today only a little over 50,000,000 acres of land are owned by Indians, either tribally or in allotments. That land loss is one of the factors responsible for the present woeful condition of many of the Indians of the United States, and pressures still persist which would deprive Indians of lands.

In 1927 the Meriam report exposed shockingly bad conditions among Indians, with an Indian Service too starved for appropriations to do the work assigned to them. As a result of that report, some improvements were achieved, and there was talk of "working the Indian Office out of a job within 25 years." But during the short period of time available to the Wilbur-Rhoads administration little was accomplished along that line.

With the change of administration, some phases of the Rhoads policy were retained, but a new basic philosophy was introduced, i. e., to revive and encourage native Indian cultures and to keep the Indians on reservations with a land-based economy.

I have always considered those premises fallacious. All Indians cannot be supported on a land-based economy, because there is not sufficient land available. And it was a policy of segregation, of keeping the Indians aloof from the currents of modern America, a turning back. For the most part, Indians have not participated in our national economic progress and prosperity nor in our social advances, especially Indians of the Southwest.

There were, of course, elements of good in the policy. Indians regained pride in their heritage and new dignity in the eyes of the American public. Under the Indian Reorganization Act, financial aid was available to tribes who accepted the new law, and a House of Representatives Indian Affairs Committee reported that many tribes have advanced themselves satisfactorily under this arrangement.

From the point of observation of the writer, there were two phases of the new administration's policy. First there were impressive construction of reservation day schools and hospitals, inauguration of much-needed land-conservation and stock-reduction programs, and efforts to obtain additional land looking toward support of Indians on a land-based economy.

Later there was preoccupation with aboriginal culture patterns, which apparently became a detriment to progress of the Indians toward health, education, economic betterment, or assimilation. The program of field and school nurses on the Navajo ceased and opportunities to build new roads were rejected. Many day schools were not successful because the children lived too far away to walk and there were too few roads for bus transportation. So they were closed and money was not allocated to reopen them or to turn them into boarding schools. The Navajos have been discriminated against for many years in apportionment of Indian Office expenditures—although they number about one-sixth of the total Indian population of the United States, only about one-twelfth of Indian Office moneys has been spent on this tribe. The stock-reduction program left them without support and little effort was made to assure alternate means of livelihood. The condition of the Navajos has steadily deteriorated until today they are far worse off than at the time of the Meriam report.

There has been considerable publicity regarding lack of any schools at all for more than 14,000 Navajo children. This is serious, particularly in view of the fact that an elementary education is considered the right of every American child, and further because the Navajos were promised education in a treaty ratified by the United States Senate, the provisions of which have never been kept. But the public generally does not know that even more critical than the educational needs of the Navajos, these Indians must have jobs. They are the poorest, sickest, most neglected, and most hopeless people in America and starvation will not wait. If Indian Office policies had been better, I feel sure that at least some of the ills of the Navajo Tribe could have been prevented or alleviated.

It is difficult to determine what the present policy of the Office of Indian Affairs is or what the basic philosophies are. There should be a concise and inclusive affirmation of policy; reestablishment of a forward-looking program which will help American Indians to become Indian-Americans; this will regain the progress toward assimilation which I feel has been lost in the past few years. Such a policy definition is the first requirement for reform of the Indian Office.

Reforms are indicated because certain Federal functions must continue for a considerable period of time, even though Federal supervision over Indians is withdrawn as quickly as feasible. Indian Office operation in the interim should be efficient and economical. Our Indians deserve a competent agency. They are worth saving. The Navajo contribution to the war effort alone justifies all the expense involved in proposed rehabilitation of that tribe. America cannot permit Indians to be further impoverished or to be released prematurely from Federal supervision to be forced onto dump heaps or into slums.

ADMINISTRATION

Another requirement for reform is improvement of Indian Office organization, administration, financial systems, and of the entire operation. Exactly what those reforms should be it is not possible for an outsider like myself to say. Lines of authority seem fuzzy. Administrative processes have slowed up since the district offices were opened, perhaps because sufficient authority has not been relinquished by the Indian Office or because procedures have not been set up. There seems little liaison at any level between the various divisions. There often appears to be considerable difference between the ideas of the head staff and those of men in the field; and there is too little personal contact between policy makers and those for whom the policies are made. Field staffs are overburdened with demands for voluminous reports, such as the cost estimates. Too many people are required to perform certain work, as handling the heirships of land allotments that have been fractionalized by inheritance. Another defect is that there is no definite budget on the field level for any division or agency.

In order to make a thorough overhaul of the Indian Office administration it is urgently recommended that Congress, through a joint resolution, should hire outside experts, some firm that specializes in industrial-administrative research, to come into the Office of Indian Affairs to make studies of procedures and organization; to have power to subpena witnesses and examine reports; make their findings and then report back for action to the proper committee of the Congress.

Undoubtedly there should be decentralization of the Indian Office, with authority and responsibility placed on the shoulders of agency superintendents. District offices could exercise a supervisory function, and a small staff in Washington should confine itself to policy making, budgeting, and legislative effort. The Chicago office should be eliminated. A broad national policy should be defined, then details of local policy matters left to the agencies, each of whom should make a plan of operation, subject to approval of the Washington staff. Budgets should be set up for each agency and deficiency appropriations should not be necessary unless a real emergency developed. These or similar reforms would do much to solve administrative defects and point out ways to do a better and quicker job with the least money.

It is absolutely necessary that reforms be accomplished. The public lacks confidence in the Indian Office, and the Indians lack confidence. If that confidence is not restored, the Indians will be the main sufferers. They are the ones who need the schools, hospitals, resource development, and other services which they can obtain only from the Office of Indian Affairs, and which an angry Congress may refuse to an inept, archaic Indian Service.

OTHER REFORMS

It is recommended that educational policies of the Indian Office should be examined. There is considerable criticism of the educational system—that it is reservation centered and that on a long-time basis achievements are not satisfactory. Curriculum should be adjusted so all Indian children will be offered the courses of training which will most quickly prepare them for success on or off the reservation. Teachers should not be required to neglect their training duties to fill out innumerable reports or to attend to nonclassroom work.

All resource development that is feasible on reservations, to raise the standard of living for Indians, should be vigorously undertaken; and Indians should be protected and assisted in ownership and use of their lands and resources.

All future developments should include collaboration between the Federal and State Governments. Many States are inclined to be indifferent to unsolved Indian problems because they do not feel responsible. The full possibilities of the Johnson-O'Malley Act should be evoked to achieve State cooperation in all possible efforts and States should be encouraged to assume increasing responsibilities for Indians as rapidly as possible.

Some States extend public assistance benefits to Indians. Others do so on a restricted basis. The two States in which there is the greatest need refuse to aid Indians who live on reservations. I believe New Mexico and Arizona should extend benefits if they are legally responsible, because refusal constitutes a plain case of racial discrimination. But the financial situation of New Mexico is so poor, and relief burdens are so high, that it has been necessary already for the Welfare Department to restrict intake, so little practical good would accrue to Indians even if the State assumes that obligation. If New Mexico and Arizona are not forced to extend assistance to Indians, undoubtedly other States will discontinue doing so.

Solution of this problem could come from (a) variable Federal grants in aid to low income States, so uniform standards of public assistance would apply in all parts of the country for all needy people, including Indians; or (b) special appropriations to the Indian Office to provide adequate assistance to Indians, either through cooperation with State welfare departments under the provisions of the Johnson-O'Malley Act, or directly under the Indian Office. The latter is not recommended because it tends to further segregation of Indians and because the standards of the Indian Office on welfare relief are below those of the Social Security Administration.

It is recommended that the Congress explore the advantages which might be gained for Indians by transfer of the Indian Office divisions of health, welfare, and education from Interior Department into the Federal Security Agency. As of last July, all the major health, welfare, and education activities of the Nation, excepting for Indians, were put under the Federal Security Agency and it would appear discriminatory that Indians are excluded. The criterion for transfer of agencies to Federal Security control is whether the agency is more concerned with human or with other problems. It would be a proper question to ask if the Indian Office is more concerned with Indians as people, or with the land which the Indians own. If the human problems are primary, there seems little reason for objecting to the transfer. If it is impossible to dissociate human needs from land matters, then perhaps the entire Indian Office should be transferred from Interior into the Federal Security Agency, where higher standards for health, welfare, and education prevail than the Indians have ever known.

In any cases where Indian Office functions could be administered as well, and with less expense, by other Federal agencies, transfer should be considered. But if the agency to whom a transfer is contemplated would find it necessary to set up any separate or special unit for such Indian work, care should be taken to determine the potential cost and whether it would truly prove less expensive or more efficient than operation by the Indian Office.

TERMINATION OF THE TRUST

It should be the goal of every citizen that the Indian Office work itself out of a job in the shortest possible time. Definite plans to abolish the Indian Office have seldom progressed beyond rudimentary, over-simplified, bare beginnings. Mr. F. A. Vogel, executive assistant to the Senate Civil Service Committee, outlined some suggestions to me last winter, as follows:

1. Freeing of "ready" tribes at once.

2. Selection of committees to appraise the size of the Indian job in each State and estimate cost of doing it.

3. Passage of legislation and appropriations, based on such committee findings, the money, and the job then to be turned over to the States.

4. Appropriations to be on a diminishing basis, so the States gradually would take over the entire burden.

5. Reservation lands to be owned by the tribe under State corporations, with each tribal member holding shares of stock in the corporation.

There are good points to this plan and there are defects. The Indians must be protected from land sharks. Committees making appraisals of costs should have well-defined standards, else some of them might grossly overestimate probable costs, while others might underestimate and leave the State with huge, unfinanced and unsolved Indian problems. It is a good plan to have committees make studies and recommendations as a basis for further action.

Many States would disapprove accepting Indian burdens with diminishing Federal aid; some States might have political regimes which would ignore or even exploit the Indians. It should be assured that States would not seek funds in excess of those which would be needed by the Federal Government for the same task; and also that States would make a success of any Indian obligations they assume.

Under a resolution (S. Con. Res. 15), now in the hands of the Senate Indian Affairs Subcommittee, it is provided that a joint committee of Congress make plans "to hasten the time of complete emancipation of the Indians" and "for the complete withdrawal of Federal restrictions over Indians."

The committee is especially instructed to ascertain effect of withdrawal upon claims which the Indians have against the Government; methods of distribution of money and lands held in trust for Indians; disposition of agency buildings and property; and dissolution of organizations formed under the Indian Reorganization Act. The committee is also to determine what State legislation would be needed and how much money States would require in Federal contributions, pending the placing of Indian lands on the State tax rolls.

This resolution would be more acceptable if it included specific instructions that Indians are to be protected in their land holdings; that they should be prepared economically and socially before being released; to ascertain the ability and willingness of States to assume Indian responsibilities; and to define when and under what circumstances Indian land should be placed on tax rolls. Also the committee is obliged to report at the beginning of the second session of the Eightieth Congress. It would seem impossible for a committee to make competent studies and plans covering these extensive and difficult problems in the short period of time specified.

Some general premises for a broader plan have been formulated by Mr. J. M. Stewart, superintendent of the Navajo Agency, Window Rock, Ariz., in a paper prepared for the Postwar Resources Institute of the Interior Department. Mr. Stewart presents 6 general premises: (1) Need to change Indian Office policy of land-based economy because of land limitation; (2) Indians who do stay on the land should have economic sized land units; (3) Indians must assume the responsibilities of the Nation; (4) there should be a legislative determination of degree of blood necessary for enrollment on Indian Office census; (5) minimum standards of health, education, economic base, et cetera (based on rural standards of the area) should be defined, these standards to be focal points at which Federal supervision could justifiably be withdrawn; and (6) the right program is the one that eventually will cost the least. Mr. Stewart should be invited to submit a prospectus for a program he believes would accomplish those objectives.

Other pertinent suggestions, particularly analyses of the difficulties of the problem, are contained in a paper read before the National Conference of Social Work last month by Dr. John Provinse, Assistant Commissioner of Indian Affairs; and Acting Commissioner William Zimmerman, Jr., recently made recommendations to a congressional committee which incorporate the Indian Office ideas for what they consider a satisfactory approach to the problem. Amplification of their ideas into a workable plan should be sought.

In fact, suggestions should be invited from all competent sources, then all the best ideas combined into a satisfactory plan for termination of the trust of the Federal Government over Indian affairs. The completed plan should be comprehensive and sound; with a time schedule for its accomplishment in a manner that will be reasonable and fair to the Indians concerned, as well as to both State and Federal Governments.

It cannot be emphasized too strongly that it is imperative to find the right plan. There must not be hasty, ill-advised legislation. We must not make more mistakes. Nowhere is our national honor more at stake than in our treatment of the Indian peoples we have conquered and whose continent we have possessed. In our efforts to help downtrodden peoples of the world, we cannot appear before other nations with clean hands when at home dire Indian distress is ignored and urgent Indian problems are unsolved.

Land Reform Program Brings Japanese Upheaval

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith the following article by Mr. Ralph Donaldson from the Cleveland Plain Dealer:

LAND REFORM PROGRAM BRINGS JAPANESE UPHEAVAL

(Article 21)

Rural land reform constitutes one of the most drastic upheavals in Japanese society that has been brought about by the American occupation. The story of it can best be told by quoting the original directive to the Japanese government and describing the results which followed. On December 9, 1945, a memorandum was issued by SCAP which stated, in part, the following:

"1. In order that the Imperial Japanese Government shall remove economic obstacles to the revival and strengthening of democratic tendencies, establish respect for the dignity of man, and destroy the economic bondage which has enslaved the Japanese farmers to centuries of feudal oppression, the Japanese Imperial Government is directed to take measures to insure that those who till the soil of Japan shall have a more equal opportunity to enjoy the fruits of their labor.

"2. The purpose of this order is to exterminate those pernicious ills which have long blighted the agrarian structure of a land where almost half the total population is engaged in husbandry. The more malevolent of these ills include:

"ABUSES, OPPRESSIONS LISTED

"(a) Intense overcrowding of land. Almost half the farm households in Japan till less than one and one-half acres each.

"(b) Widespread tenancy under conditions highly unfavorable to tenants. More than three-fourths of the farmers in Japan are either partially or totally tenants, paying rentals amounting to half or more of their annual crops.

"(c) A heavy burden of farm indebtedness combined with high rates of interest on farm loans. Less than half the farm households are able to support themselves on their agricultural income.

"(d) Government fiscal policies which discriminate against agriculture in favor of industry and trade.

"(e) Authoritative Government control over farmers and farm organizations without regard for farmer interests.

"3. The Japanese Imperial Government is therefore ordered to submit on or before March 15, 1946, a program of rural land reform."

The directive then listed in general terms what the program should include.

DIET ENACTS PROGRAM

On December 28, 1946, appropriate legislation was enacted by the Diet. It established local rural land commissions in each farm village, the members of which were to be elected by the farmers and to consist of five tenant farmers, two owner-cultivators and three owners.

Local commissions are to be supervised by prefectural commissions, which in turn are to be supervised by a national commission under the minister of agriculture and forestry. But American military government teams also will be on the job to advise the farmers and see that the reform is carried out.

Under the land reform act, the lands subject to purchase include all tillable land owned by absentee landlords, all tenant-farmed lands in excess of 1 cho (2.45 acres) in Kyushu, Shikoku, and Honshu and 4 cho in Hokkaido, all owner-cultivator lands in excess of 3 cho in the three southern Japanese islands, and 12 cho in Hokkaido, and all tillable lands owned by corporations which do not relate directly to the principal objective of that corporation.

GOVERNMENT BUYS LAND

Lands subject to transfer are to be purchased by the Government and resold to eligible buyers. Tenants on the land as of November 23, 1945, other tenants and persons who wish to cultivate the land have priority to purchase in that order.

The practical effect of this measure is that eventually no farmer on the three southern islands will own more than 7.35 acres of land, while the limit on the northern island of Hokkaido will be 29.4 acres.

The purchase prices are subject to variation within legal limits fixed by the land commissions. The owners will receive part of the purchase price in cash and the balance in bonds bearing 3.65 percent interest and redeemable in 24 annual installments.

Tenants may pay for all or any part of the land at the time of purchase and the balance in 24 annual installments with interest at 3.2 percent. In case of crop failures or low farm prices the Government will either reduce, postpone, or cancel the annual payment.

Other provisions of the law require cash payment of rent for farms which are still operated by tenants and rent ceilings of 25 percent of the value of the production from paddy and 15 percent from upland fields.

EDITORS VISIT FIELD

This is about as thoroughgoing a reform as anyone could imagine.

Our party of editors and publishers made a field trip to a locality near Tokyo where this program is being carried out. On the program it says that we went to Shiki Machi, Kitadachi Gun, Saitama Prefecture, Honshu, Japan, which means that we went for a drive out in the country and wound up in a rural schoolhouse where various American and Japanese officials, interpreters and members of the local rural land commission were waiting to receive us.

Japanese girls served hot tea, which was very welcome because the schoolhouse, like all Japanese buildings, was unheated. A lot of speeches were made, the conclusions of which were (a) the tenants liked the new program and intended to buy the land they were farming and pay for it as soon as possible, (b) the tenants agreed they would be better off financially under the new program than the old, (c) the landlords didn't like the new program and figured they would not be as well off under the new program as they were under the old.

All of which goes to show that human nature in Japan is about the same as it is in the United States.

Filipino Soldiers

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. DINGELL. Mr. Speaker, my attention was centered upon a communication by Vicente Villamin, internationally known journalist, recognized as an authority in matters affecting the welfare of the Filipino people and the friendly relations between the Philippine Government and the United States. His writings command the attention and respect of well-informed people here and abroad because they are factual, forceful, and eminently fair.

I am deeply concerned about the injustice suffered by the Filipino soldiers who served in the American Army with all the fervor and energy of the traditional American soldier. They fought side by side with their American buddies. They served, suffered, bled, and died together for the flag they loved. They were our soldiers then; they should be treated without discrimination as our soldiers to the day when the Commonwealth became the Republic of the Philippines. They are entitled to all of the beneficial provisions of American law and should be recognized as soldiers of the United States Army. But let me read to the committee the eloquent and irrefutable plea of Mr. Villamin in behalf of his people. It is set forth in more detail and reasonableness than I could express in an offhand, impromptu manner. I am in entire accord with his outline and appeal, and I respectfully call to the attention of the proper committees of the House the urgent need for corrective legislation. American justice and honor demand fair play and the earliest possible action in the solution of this problem. Now, lend me attention while I read the communication which appeared in the Washington Post on June 22, 1947:

FILIPINO SOLDIERS

A COMMUNICATION

The Filipinos who fought under General MacArthur have a story to tell to the American people.

In the last war there were 116,000 foreigners who joined the American Army in the

United States or elsewhere. They are considered veterans and are enjoying veterans' benefits under the law. There were 400,000 Filipinos in that army in the Philippines, but they are not considered veterans and, therefore, not entitled to veterans' benefits, except insurance and pensions for death or disability which are enjoyed by only a small percentage of that number.

Thus a Filipino soldier who was lucky enough to come out of the war unscathed gets nothing except the glory of having fought under the American flag made poignant by the chagrin of being read out as a veteran by postwar legalistic interpretation of his status. He is denied the benefits of the GI bill of rights, the Mustering-Out Payment Act, the Terminal-Leave Act, the Six Months Death Gratuity Act, and other acts.

The claim of the Filipino to recognition as a veteran rests on the fact that on July 26, 1941, the President of the United States, as Commander in Chief of the Army and Navy, and acting under the act of Congress of March 24, 1934, ordered the Philippine Army inducted into the American Army, and it was not until June 30, 1946, that it was released from under American military authority by another order of the President.

On April 27, 1942, the Attorney General held that the Philippine Army was thereby placed in the active service in the land and naval forces of the United States. This was the law until Congress, on February 18, 1946, passed the First Rescission Act, declaring that that army was not in such active service and, therefore, not entitled to veterans' benefits, with the two exceptions noted above. Since then the War Department has recommended to Congress a bill extending to Filipinos the benefits of the Missing Persons Act, which will give them their back pay.

On the induction of the Philippine Army 4 months before Pearl Harbor, the American Government assumed its expenses, development, and direction. There was no statement at that time by the President of the United States or law of Congress that suggested even faintly that they were other than soldiers in the American Army. On the contrary, they were made to understand that they were such soldiers. They were proud of it and they fought with more zest.

When they were ordered by the President of the United States, the Filipino soldiers who by law owed allegiance to the United States, could not have refused to comply. The order was as obligatory on them as the conscription act was on American citizens.

The Filipino soldiers were not mercenaries or mere hired workers in uniform to be discharged summarily without benefit of veterans' rights after their combat usefulness had ceased with the war's ending, which they helped to hasten. They had acquired rights, both inherent and derivative, while serving under the American flag, even as the 116,000 foreigners in the American Army had acquired veterans' benefits in full.

The Philippine Army lost its organic identity when it was merged in the American forces and the Philippine Government, which under the law then in force was merely a creature of the American Congress, was in temporary legal vacuum itself. These two facts were made patent at the Japanese surrender ceremonies in Tokyo Bay, where no Filipino representative was invited to sign the surrender instrument.

But the Filipinos were partly reconciled to that symbolic exclusion because their friend, General MacArthur, signed for Americans and for them. They were attached to America by ribbons of service and affection—an attachment so pathetic in its sincerity. And so it is hard for them to realize that the legalists in Washington should now hold that they were not in the active service of the American forces when they ask, as they now do, for veterans' recognition.

It is a fact that recognizing the Filipinos as veterans in these postwar times would cost the American Government money. But the Filipinos had saved America much more money than the cost. Let the two following considerations be taken into account in this connection:

First, General MacArthur has stated that the participation of the Filipinos in the war had shortened it considerably and saved many American lives. If it shortened the war by 50 days, it had saved the United States some $15,000,000,000 at the rate of $300,000,000 of expenditures a day.

Second, if the Philippine Army had not been inducted into the American Army 4 months before Pearl Harbor, the Philippine Government, ever loyal to the United States, would have prepared and waged the war as a separate entity and as such it would have received billions of dollars worth of lend-lease assistance from the United States. As it was, it received no such assistance.

The Filipinos deserve to be considered veterans of the American armed forces. Strict technicality may militate against it, but equity is in its favor and fundamental policy fortifies it.

VINCENTE VILLAMIN.

WASHINGTON.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

COMMERCE AND INDUSTRY
ASSOCIATION OF NEW YORK,
New York, N. Y., June 23, 1947.

Hon. EMANUEL CELLER,
House Office Building,
Washington, D. C.

DEAR MR. CELLER: It seemed really good to again hear from you, this time in connection with the St. Lawrence seaway, to which project we are opposed.

In the CONGRESSIONAL RECORD of May 8 1947, letters from the executive officials of 31 steamship companies are reproduced, and not a single steamship company among them says it would navigate the St. Lawrence route if this project is adopted. Indeed, they almost unanimously clearly indicate their opposition to the project. Neither General Marshall nor anyone else has offered convincing evidence of the possibility of making the proposed canal self-liquidating by the imposition of tolls, or in any other manner.

We believe our members have not only been informed but misinformed as well concerning the claimed benefits of this proposed waterway to our national defense. Bearing in mind that for nine-tenths of its course from the Great Lakes to the Atlantic Ocean the St. Lawrence River flows entirely within Canadian territory and at no point is it entirely within the territory of the United States, one question seems to need a satisfactory answer if our national safety is to be maintained. What would prevent Canada or the British Empire from voluntarily closing the canal to preserve their neutrality should the United States become a participant in a war in which either Canada or the British Empire occupied the status of a neutral power? Remember, please, it is proposed to have the United States heavily participate in the construction of this canal without the formality of executing a treaty either with the Dominion or with the Crown.

Again, with the canal and locks, dams, etc., being located in such sparsely settled territory, it would seem relatively easy for an enemy nation, by the proper placing and discharging of one or more charges of high explosives, to put the canal out of commission and effectively bottle up whatever vessels and war materials we might have located above that point at any given time. Not a very comforting thought when considering national defense.

The remaining points raised in your letter were adequately treated by our witnesses, Colonel McCaffrey and Mr. Mace, in the committee hearings of the Seventy-seventh and Seventy-ninth Congresses, respectively.

It is always a pleasure for me to hear from you; and even though we do not now see eye to eye on this particular matter, I am hopeful that the world is being kind to you and that you will realize the error of your position before it is too late.

Sincerely yours,

THOMAS JEFFERSON MILEY,
Secretary.

Soil Conservation Service

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1947

Mr. STEVENSON. Mr. Speaker, I have recently received the attached letter and resolution adopted by the Badger State Sportsmen's Club of La Crosse, Wis.

Inasmuch as the agriculture appropriation bill is now being considered by the Agriculture Appropriation Committee of the Senate, and the appropriation for the Soil Conservation Service and research will be included therein, and because I am personally much interested in the good work the Soil Conservation Service has done and is doing in Wisconsin, I include the attached letter and resolution of the Badger State Sportsmen's Club in the CONGRESSIONAL RECORD:

BADGER STATE SPORTSMEN'S CLUB, INC.,
La Crosse, Wis., June 10, 1947.

Hon. W. H. STEVENSON,
House Office Building,
Washington, D. C.

DEAR SIR: The Badger State Sportsmen's Club of La Crosse adopted the following resolution at its June 5 meeting:

"Whereas committees of the United States Congress have reduced the 1948 budget of the United States Soil Conservation Service research department from $1,423,000, which was allocated in 1947, to $673,000 for the next fiscal year; and

"Whereas these funds are used for research work throughout the Nation for the improvement of the soil producing agricultural crops as well as grass and other vegetation as cover for the prevention of disastrous dust storms; and

"Whereas it is recognized by conservation authorities that the basis for all wealth of the Nation, as well as our natural resources, is traced to the soil and water; and

"Whereas it is to the best interests of the Nation, especially to those with agricultural pursuits and conservation generally, that budgets allocated to those agencies having to do with the improvement of soil and the furthering of conservation activity be not impaired: Therefore be it

"*Resolved*, That Badger State Sportmen's Club, Inc., this 5th day of June 1947 severely criticize the Congress of the United States for slashing the budgets of soil improving agencies and those branches of the United States Government dealing with conservation; be it further

"*Resolved*, That Badger State Sportsmen's Club, Inc., impress upon its members in the United States Congress that it maintains that conservation has no part in the political picture and have refrained up to the present from becoming involved in politics."

Respectfully submitted.

RICHARD SCHNELL,
Recording Secretary.

Will Sweden Yield Again?

EXTENSION OF REMARKS
OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to call attention to legislators and the public generally, to the following letter of the Honorable Kaarel R. Pusta, Sr., former Minister of the Estonian Republic to Sweden, and the enclosed article from the Baltic Review.

Eyewitness information of this kind is again of the utmost importance in evaluating the results of such aggressions as took place last week in Hungary; just as a few years ago, we needed reports of this kind to inform us accurately as to the full meaning of the Nazi concentration camps.

The letter and article follow:

APRIL 28, 1947.

There was a considerable emotion in Sweden, in November 1945, when the Swedish Parliament and people heard of a secret agreement between their Government and Moscow concerning the extradition of 167 citizens of Lithuania, Latvia, and Estonia, who had taken refuge in Sweden, in May 1945. The Swedes then resented that their free country had been compelled to repudiate its humanitarian conception of the right to asylum under pressure of a foreign power. The government was attacked in the Parliament, protest meetings were held all over Sweden and a flood of protest resolutions reached the King and Government. Nevertheless, the extradition of 147 Balts was performed "for political reasons" as the Foreign Minister, Dr. Oesten Undén, acknowledged in an interview. At the same time Mr. Undén disclosed to the Parliament that already on January 1, 1941, the Swedish Government had recognized the annexation by Russia of the three Baltic republics.

After that event, painful both to the Swedish prestige and some 30,000 Baltic refugees who felt themselves in momentary danger of being delivered to the Russian NKVD, the Balts recovered a certain, however diminished, sense of security in Sweden. Now, it is revealed that the Swedish Foreign Ministry advised, on January 1, 1945, the Swedish pastorate, that all the Baltic citizens who left their countries after August 5, 1940, are to be considered and registered in church books as Soviet citizens. And, on April 20, 1947, an official communiqué was published in Swedish papers saying that since the Soviet law lay under an interdict marriages between Soviet citizens and foreigners, this disposition of Soviet law must be considered as relevant to the "former" Baltic citizens. Furthermore, according to well-informed sources, the Swedish civil registrars and police authorities have received order that from May 1, this year, the Baltic refugees be styled in all the documents issued to them as Soviet citizens.

Although the Swedish press—except the Communist and other pro-Soviet papers—unanimously criticize especially the marriage ban as a challenge to human rights and ethics, the Balts are thinking with sorrow of the experience with the 167 in winter 1946.

The arbitrary sovietization of Baltic citizens in Sweden may have henceforth fatal consequences, as there is no more security against further aims of the Soviet Government and the eventual compliance of the Swedish Ministry with these aims. What if the U. S. S. R. will now remind Sweden that, according to the Soviet Penal Code of 1943, paragraph 58, Soviet citizens who have fled abroad are to be tried and punished (shot) for high treason?

It has been the policy of the western democracies, and understood to be the policies of all the members of the United Nations—except the U. S. S. R. and her satellites— that the Baltic refugees shall not be considered as Soviet citizens, to say nothing of their submitting to Soviet laws in a free foreign country, which granted them sanctuary. Will Sweden, a new member of the UN but an ancient land of freedom, charity, and political decency, be the first to swerve?

KAAREL R. PUSTA, Sr.,
Former Estonian Envoy to Sweden.

[From the Baltic Review, Stockholm, Sweden]

LIFE IN A SOVIET CONCENTRATION CAMP—THE STORY OF AN ESCAPED PRISONER OF WAR

A well-known Estonian patriot who during the last years of the war had fought as a guerrilla both against the Germans and the Russians was compelled to flee from Estonia in the autumn of 1944. Fate threw him into Tchekoslovackia, but, unfortunately, he did not manage to reach the occupation zone of some western power before the armistice. As an Estonian, he was threatened, if not with instant death, at least with certain deportation to Siberia, if he fell into the hands of the Red Army, a destiny which has befallen countless Estonian patriots. In order to have at least a chance, he decided to give himself out as a German, but this did not save him, as he was, after all, sent to penal servitude in Russia along with other German prisoners of war.

Thanks to his excellent health, he was able to bear the life that awaited him for a year and a half, until an opportunity to escape presented itself. The following is the tale of his experiences:

In May 1945 the Tcheks delivered me, along with all the other Estonian refugees, to the Russians. From Prague we were sent to a POW camp in Teplitz-Schönau. Knowing what awaited the Estonians at the hands of the Russians, I decided to give myself out as a German. This was not difficult, as I have sufficient command of the language.

In the Teplitz-Schönau camp, the Russians, first of all, searched the prisoners of war very thoroughly. This was done under the pretext of looking for arms, but, nevertheless, the prisoners were deprived of their watches, knives, forks, spoons, and everything of value they happened to have on them. Even good boots and decent linen they had on were taken from them—altogether, everything that took the fancy of the Russians. While we stood in rows for the search, one of the Russians dropped a revolver amongst us. The provocation was clearly evident. None of the prisoners could have been in possession of a weapon, for the simple reason that to be found with one would have meant certain death to the man in question. When all denied the ownership of the Browning, some chance men from among us were called out and given a thorough beating.

The searching of the prisoners and all sorts of preliminary investigations took several weeks. When this work was finished the Russians began to despatch the prisoners to an unknown destination. In the middle of August 1945 a transport of 1200 was to go off with me among them. We were packed in absolutely dark cattle-vans, 60 men into each, and the vans carefully locked after us. The long journey toward the East had begun. Two Germans managed to escape on the way and could not be apprehended. As, however, the Russian guards accompanying us were responsible for it that the number of men loaded on the train in Teplitz-Schönau should on arrival be complete, they accordingly completed it in a very simple way; on the next station after the disappearance of the fugitives had become known, they seized two German railway workers and locked them into one of the vans to make up for the escaped prisoners.

The food we got on the journey was extremely insufficient: the supply of bread was soon exhausted and we were fed on a kind of liquid porridge, consisting of uncooked flour and water. The men were soon prostrated with weakness, also the weather was very hot and the air in the closed vans absolutely poisonous. We were constantly tormented by thirst as the rations of drinking water were very small. All the men were covered with lice and looked very unkempt and savage. With the arrival on Russian territory the progress of our train became slower with every day as all the stations were crammed with trains.

In addition to prisoner of war transports a great many trains with booty and reparation goods were slowly moving inland. Their platforms were heaped with all sorts of things beginning with cattle and ending with bicycles, sewing-machines, and broken baby-carriages. Our train sometimes stopped for 2 or 3 days at some station and arrived in Moscow at the end of September. The journey had taken a month and a half.

In Moscow we heard that we were immediately to be delivered to some new authorities. But this transfer did not take place before 3 days as both our guards and our new masters had first decided to celebrate and had all got exceedingly drunk. These 3 days of waiting we spent in a yard in the open and without food. It rained all the time, our clothes were wet through and we trembled miserably in our light summer suits.

At last the representatives of some institution appeared in search of labor. Our yard took on the appearance of a slave market. We were treated precisely like inanimate objects and delivered to the officials who had come for us not by name or profession, nor did any documents appear during the transaction—a hundred or 200 men were simply counted out and that was all.

One night a group of 100 men, to which I belonged, was sent on its way from Moscow in the direction of Smolensk. We were to build a public highway across a morass 200 kilometers from Moscow. The first 2 nights were spent in tents under which we sank deep into the mire. Every fourth man got inflammation of the bladder and became unfit for work. Female doctors were appointed to ascertain the fitness of the prisoners and their technique of examination reminded one of the way butchers on cattle fairs handle a cow they buy for slaughtering. The prisoners were handled in the same way by being pinched in the buttocks and then grouped into various categories of fitness. The completely emaciated were sent to another camp to recuperate a little before being sent to work.

The prisoners had to build their own barracks. To encourage them the administrators constantly repeated that if the barracks

are not ready by the beginning of winter, the men will have to freeze to death. All the necessary material was to be provided by the prisoners themselves. At the end of the working day at road building we cut down trees in a neighboring forest and lugged the timber on our backs a distance of 8 kilometers to the spot assigned for the barracks. The men collected barbed wire from wartime trenches nearby and made nails of it. As there was no glass, the windows were covered with thin chips of wood which let in a little light. The keeping of accounts in the office of the camp was also done on such wooden chips as no paper was available. Discarded petrol casks did duty for stoves in the barracks. When they were being heated special fire watchers had to be on the lookout all the time in order to see that the building did not catch fire. When these fire watchers neglected their office heating was forbidden from 24 to 48 hours. The men's clothes often got wet through at work, but there were no facilities to dry them. There was no light in the barracks—after hours the prisoners sat in complete darkness, at the same time suffering from hunger and frost. There were even no matches in the camp. To make fire one had to use fire irons.

The daily ration was 600 grams of bread and half a liter of soup three times a day. This soup consisted of water and frozen potatoes, sometimes with a bit of intestine in it. Almost all the prisoners were swollen all over the body. Every month roughly 200 men in the camp became absolutely unfit for work; the daily death rate was two on an average.

The incredibly undernourished prisoners were constantly hunting for food and even ransacked the refuse heaps looking for fishbones and heads among the dirt and filth. The rummaging in refuse heaps was, however, strictly forbidden as one often caught dysentery eating scraps found there. But with the advent of darkness the prisoners were nevertheless irresistibly drawn toward the heaps and the camp police had to beat them away with sticks.

Rather gruesome was also the recurring trouble with the pig's food. The Russian command of the camp were rearing a pig for themselves and its fodder was naturally taken from the meager rations of the prisoners. Two guards from among the prisoners were detailed to watch the pig day and night. Their duty, however, was not to frighten away possible thieves of the animal—this was unthinkable as the culprits would have paid for it with their lives—but to keep its fodder from disappearing as the hunger-maddened prisoners constantly tried to raid the pig's trough. One of the guards was once severely punished, as he had not only eaten some of the pig's fodder himself but even abstracted a little of it for a comrade.

In the winter of 1945–46 the temperature through the winter was on an average 12° below zero. The clothes of the prisoners were in rags, their boots worn out completely. They were given some wooden shoes, but had no socks, no rags even to wrap round their feet, and no gloves. They stuffed hay into the wooden shoes but that was not much use. Thirty percent of the prisoners had their fingers and toes frozen off.

The prisoners had no facilities whatever for washing. There was a building in the camp which was called a bathinghouse, but it had been constructed in a great hurry, the walls were full of gaps and chinks and it was impossible to get it warm. Moreover, there was absolutely no soap. Every man was allowed two liters of warm water and this was rationed out with the greatest care as if it had been something precious. There was even no well in the camp, water had to be fetched from a long way off or snow melted.

In spite of this inhuman treatment the Russians tried even to make some sort of propaganda among the prisoners. A propaganda-sheet, "News for the POW's," was published in Moscow specially for this purpose. Owing to the shortage of paper every camp got only two copies of it and these were pasted on a board and set up in the middle of the camp for the prisoners to read. The sheet contained intentionally selected information about the misery in the German zones controlled by the Western allies and the great prosperity in the Eastern zone. It stated that Russia had given back to Germany those factories which according to the Potsdam treaty had fallen to her lot. Then followed as a rule news of famine strikes and collisions between the police and the people in England and the USA, as well as reports on the collaboration of the Western Allies with Fascists. The prisoners' paper sometimes also contained some news on the activity of the German military organization "Freis Deutschland," led by Field Marshal Paulus and General Seidlitz.

Even attempts of political reeducation of the prisoners were made. For this purpose a number of prisoners were sent somewhere in the neighborhood of Moscow to be trained into politruks at some political courses. The men destined for this office had to be of radical views and as an enticement they were promised a more comfortable life.

The condition of the German prisoners of war employed as slave labor in Russia is truly catastrophic. Even the fittest cannot survive for more than 3 years under such misery and privation. Of the 3,000,000 prisoners of war now in Russia's forced labour camps only a very few can hope ever to get back home. The lot of civilian prisoners is not better, perhaps even worse, as they have in most cases been deported to Russia with the express intention to let them die a slow death there.

International Issue

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1947

Mr. REED of New York. Mr. Speaker, where does the money come from which a wild and reckless irresponsible group of spenders continue to pour into the sinkhole of Europe?

Who then is he who provides it all? Go and find him and you will have once more before you the forgotten man. * * * The forgotten man is delving away in patient industry, supporting his family, paying his taxes, casting his vote, supporting the church and the school, reading his newspaper, and cheering for the politician of his admiration, but he is the only one for whom there is no provision in the great scramble and the big divide. (William Graham Sumner.)

A large proportion of the daily wage of the forgotten man is being taken from his pocket and sent overseas to benefit not our taxpayers but our exporters. The foreigners are buying our exports with our taxpayers' hard-earned money. "Heads I win, tails you lose" is the game the forgotten man in the United States is forced to play.

The internationalists permit the exporter to flip the coin; our taxpayers foot the bill. I suggest that our great international spenders reflect that "A little debt makes a debtor, but a great one an enemy."

Under unanimous consent, I am inserting the following article by Westbrook Pegler:

AS PEGLER SEES IT—ASSAILS SPENDING OF TAX FUNDS ON GREEK LOAN

(By Westbrook Pegler)

As most of us citizens and our Government seldom remember, the United States was established for the selfish purpose of promoting the general welfare of her people and securing the blessings of liberty to them and their posterity.

To accomplish these purposes and to defend our Nation, Congress was authorized to levy taxes. The original method of taxation was naive by the standards of this day, but the purpose of taxation never has been changed. It was then and it still is to pay the expenses of the operation of our Government and of the defense of our country.

We never had any intention to promote the general welfare of Greece, Turkey, or Great Britain, or to defend them against communism or any other enemy. Our people have never authorized Congress or any President from Washington down to Truman to spend our earned money for this purpose.

No amendment to the Constitution has been adopted which, by any stretch of the imagination or distortion of truth, could justify the collection of income taxes from American citizens for the governments of other nations. Such a proposal would flout the very intent stated in the preamble. The Greek and Turkish Governments may be momentary, as soon to be forgotten and their debts with them, as any of the thousands of June-bug lunchwagons and petty retail stores whose casual and unnoticed failures account for an enormous proportion of our bankruptcy roll, year by year.

Since the start of this century we have seen eight monarchies fall throughout the Balkans, like the bosses of our own underworld. Not half of our own people can remember when Servia, later to be called Serbia, then to be absorbed in Yugoslavia, was a Balkan kingdom, and Montenegro was another. The Balkan borders are elastic, stretching this way and that like battle lines, and the border peoples have no sense of nationality or loyalty. They have seen many occasions when they were on one side at the start of a war and shooting at their own comrades at the finish.

In the last one, the Greeks hailed the poor, luckless English tommies who were sent down to help delay the Nazis, but many of the same Greeks were shooting up other tommies when the Germans had been driven out.

The American people don't know anything about their minute politics and the scurrying changes, so like the frantic rushing about of microbes on a slide, and we never will. These peoples themselves know very little more than that they hate the dirty dogs in yonder valley because of something that happened sometime.

The British nation has been permanent as we reckon permanence among nations, but that mere fact gives Britain no more right to impose taxes on George Spelvin, American, than Greece has. If an American citizen defaults his income tax today and the Treasury gets a judgment and sells him out on the courthouse steps, after the manner of a not-so-olden day, we then have the spectacle of Uncle Sam forcibly taking a citizen's property which he has earned by work and saved by denial and handing it over to some unidentified Englishman.

The Englishman may be one of those sullen miners who decided they would rather see their country die than give an honest day's work to save her. Or he may be a very fine fellow, a hero of the war, a worker and all of that. But, whatever his identity and character, the American citizen has no obligation under our Constitution and our laws to work to earn taxes to support him.

Most of our people have absolutely no recollection of the original debates on the income-tax law and the income-tax amendment. Some were wonderfully prophetic, although the men who warned us then were scoffed at like those later stalwarts who stood red-faced to warn us against the Communist treachery and to commend the Dies committee for its revelations.

These men predicted that, given this great power to practice extravagance and to make the people pay for it by income taxes, future Congresses and Presidents would throw our earnings to the breeze like Saturday night sports in a roaring camp. They warned us that 10,000 spies and catchpolls would be turned loose among us to ask questions about our private affairs which, up to that time, no American citizen had ever had to answer to anybody except when he was sent to prison for a felony.

They predicted that we would become a card-index people listed in data showing how much we gave to support our aged parents, how much to the church, and how much, if any, to maintain a mistress, and this has come true. And they told us, but we would not listen, that for every dollar of tax that we paid under this amendment, we would have to work a length of time at our jobs.

Today a dollar's worth of work is about 45 minutes for most of us, so a man who pays $200 a year in income tax works 150 hours to pay his share. That is almost four 40-hour weeks every year. Now, without any consultation of his wishes, a certain proportion of it is earmarked for foreign governments.

Let us assume that out of his particular income tax our Government gives foreign governments $12.50. That means almost 10 hours, or 1¼ days a year, which is quite a large power to free, involuntary labor when you multiply it by 60,000,000.

In some ways the Americans are very shrewd. In other ways other peoples are shrewder. Nobody ever heard of the people of any other nation being put to involuntary labor for an average of 10 hours a year, unpaid, for the benefit of the people of the United States.

War! War! War!

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the June 1947 issue of the National Hibernian, official organ of the Ancient Order of Hibernians, entitled "War! War! War!":

WAR! WAR! WAR!

In St. Paul at the national convention of 1941—1941, mind you—the then national president, Joseph E. Kerrigan, in one of his deeply solemn, scholarly speeches, referred to the "dark clouds lowering in the skies and obscuring the bright sunshine that for more than a quarter of a century has illumined this fair land—the dark clouds of war threatening to descend upon the American continent as upon the rest of the globe." Before 1941 had become 1942, Brother Kerrigan's bold poetic flight had been proved to be prophetic. The clouds had descended. We were at war.

We are not at war now. But the dark clouds are lowering just as in 1941. It was Germany then, and Japan; it is Russia now.

If the war should occur now—or ever—we confidently believe that the outcome would be what it has always been when this righteous democracy has taken up arms in its own defense. God would bless our arms with victory.

We have known war, and we have known victory. Is not victory in modern war a delusion? Millions of Russian men and women—and children—would die; millions of American men—and probably women and children—would die. We should then be burdened with the senseless task of policing Moscow and Leningrad, of feeding a conquered people unable and unwilling to feed itself. And out of the ashes of hate would spring a new enemy—Germany, England, China.

We can outwit war only by following Christ's path. That means turning the other cheek. That means hating Stalinism while we love the benighted mortal souls of the peoples whom Stalin misleads. That means, in modern terms, carrying on diplomatic, ideological, economic war, but not shooting war.

"Everything will depend upon the strength of the nerves of the two opponents," says Dr. Waldemar Gurian of the University of Notre Dame. "One cannot deny the possibility that explosives may go off by mistake, but the necessity of reconstruction may force Russia to postpone her political aims and try for an attempt at economic understanding with the United States.

"We must be more intelligent than the Soviet leaders. To their policy of distrust and isolation we must oppose a policy of patience and responsibility for the world. We must be firm and strong. We must not exclude Russia's return to the world after she has understood that her policies of delay and aggression are of no use to herself. Only the United States is strong enough to teach Russia this lesson."

Truman at His Poorest

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, the Milwaukee (Wis.) Journal has always been very considerate of Mr. Truman. Its editorial department, however, lambasted him on June 23 because of his veto of the labor bill, in fact, they smacked him twice on the same day. I include the editorials as part of my remarks:

MR. TRUMAN AT HIS POOREST

Careful reading of President Truman's lengthy veto message on the labor bill suggests that he made up his mind to veto the bill for reasons best known to himself and then set out to devise a tortured defense of his action.

He says the bill would reverse the basic direction of our national labor policy by injecting government into private economic affairs. He chooses to forget that we have been injecting government into our private economic affairs ever since we started to regulate the hours of labor, the wages, and the safety and health conditions in factories.

We hit a new high in such intervention with the Wagner Act. What the labor bill seeks to accomplish is to correct some of the abuses that have arisen, many of them because of the one-sided Wagner law.

When the President says that the labor bill moves dangerously toward a totally managed economy, he is talking sheer bunk. And it comes from a man who has long advocated, and associated politically with those who advocate, a managed economy.

The President does not believe that the labor bill would improve relations between employer and employee, but would encourage suspicion and distrust. It will seem to many that such a condition now exists and that the labor bill could hardly heighten it.

Mr. Truman expresses the fear that the bill would weaken the rights of workers to organize and to bargain, and that weakened unions would weaken the country and make it more vulnerable to totalitarianism. This view is hard to follow. First, the labor bill would not weaken true unionism, but would only curb excesses. Second, it would seem that there is more danger of totalitarianism from monopolistic use of unrestricted union power over both members and the public than there is from this bill.

The President fears that the bill would invite long and costly litigation between employer and employee. Well, we have had a pretty good dose of altercations under the NLRB. One wonders whether more or less would result from the labor bill. That would depend on how employees and employers chose to act. The bill wouldn't force litigation.

As to Mr. Truman's statement that the bill contains a consistent pattern of inequality, we can only point out that it may seem to contain unequal restrictions because it is correcting excesses now existing.

The President's logic is sadly lacking when he says the bill would encourage jurisdictional strikes. How? Unions wishing to avoid jurisdictional troubles could settle their difficulties by any sort of arbitration or conciliation they wished to employ. They would still be free to do the right thing.

Mr. Truman says the bill only seems to protect the union shop and security, but actually cancels it. This is such a gross exaggeration that it scarcely deserves reply. And when the President says that the "feather bedding" clauses would keep employer and employee from agreeing on desirable safety provisions, rest periods, etc., he is simply reaching to the moon for an argument.

The charge is made that unions would be less able to discipline members, hence more instability would occur in production. This is cause for a good laugh when one examines the record of work stoppages in plants where unions supposedly did have the power to discipline if they chose. Has the absence of a law promoted stability?

Fear is expressed by the President that the public might be bitterly disappointed in the bill if it failed to stop strikes against public welfare and generally proved unworkable. In other words, the President says it may not work, so let's not try it. Most Americans think it may work, so they want to try it.

The President does not want to see complex labor questions turned over to courts to decide, instead of to the Labor Board. The answer is that the Board so abused its power and acted in so biased a way for years that a little objective court approach might be a great improvement.

When the President says that parts of the bill are contrary to the basic purposes of the Wagner Act, he exaggerates. But, in any case, the Wagner Act is not perfect and unchangeable. It is not even the Constitution. The Wagner Act is an imperfect law with many good points and a number of imperfections which have long needed correction. Mr. Truman erroneously implies that the act is untouchable.

Again and again Mr. Truman stresses his theory that labor disputes should be left to the free agreement of the two parties. We have tried that these many years, and the public usually gets hurt. Labor can have this freedom again any time it can handle the responsibility.

The argument of the President that the press and radio and the labor press would be

stopped from expressing political opinions is ridiculous. Surely the Chief Executive knows that no law, or part of one, can deprive the press of its fundamental liberty. The hundreds of American newspapers favoring this bill are not trying to cut their own heads off.

The President talks as though such a labor law would determine the destinies of this country for decades to come. How could it? If it proved faulty, it could be amended or repealed. America is not so helpless or so weak as he thinks.

AND WORSE, IF POSSIBLE

Mr. Truman, on the radio to justify his rejection of the labor bill, was even worse, if possible, than he was in his veto message.

When the President got through, about the only thing left that would not be interfered with under the bill was the rising and the setting of the sun. We are not sure the President would not have charged interference there—if he had thought of it.

It was a deplorably demagogic effort to arouse fears, without basis in fact, against a measure that was passed in all good faith to protect democracy and make it work. It was a saddening performance from the White House.

What President Truman did with this bill can be done with any bill that ever was proposed or any law that ever was passed. You can torture it if you want to stoop to that.

Should we have laws against murder, arson, and robbery? No. These cause us to build prisons, and the prisons may burn down, involving a loss. Not all the offenders will be convicted, so the laws are unworkable. There will be more court cases, and that is bad. Through a miscarriage of justice, some man may be convicted who is not guilty, so we'll have to call the whole law unfair.

Sounds foolish, doesn't it? Well, that was the level of the President's argument.

The pattern ought to be familiar by this time, for it has been repeated in several instances. When Mr. Truman tries to justify his veto of a bill he ought to have signed, he strikes a low note, indeed.

A Bright Note for the Taxpayers

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1947

Mr. WILSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Bedford Daily Times-Mail of June 20, 1947:

A BRIGHT NOTE FOR THE TAXPAYERS

The picture of governmental costs and the national debt has been painted as all black in most accounts given since the peak of inflation. But a bright spot has been found by the United States Chamber of Commerce.

It's a small bright spot on a very large picture, but at least it's a start.

The national debt at its peak on February 28, 1946, stood at $279,200,000,000. Since that time, however, it has been trimmed by approximately $22,000,000,000.

The $22,000,000,000 cut, however, didn't come from taxpayers' payments on the debt. It came, according to the Chamber, from the Treasury's cash balance which totaled $26,000,000,000 when the debt peak was reached. On June 5, 1947, the Treasury balance amounted to only $2,500,000,000. So, in reality, we have slipped by a billion and a half during that period.

Nevertheless, curtailment of the public debt is going forward at a much more rapid rate than was anticipated at the time of the President's annual budget message in January. The gross debt stood at $257,200,000,000 on June 5 this year or $3,200,000,000 less than was estimated in January for the end of the current 1947 fiscal year on June 30.

The June 5 total was $1,200,000,000 less than the most favorable estimate in the budget message for June 30, 1948, and $3,000,000,000 less than the total for that date, which did not take account of recommended legislation for continuance of wartime excise taxes and increased postal rates.

Although some might take issue with this statement, it is estimated that veto of the tax reduction bill this week by President Truman likely will enable a substantial further reduction of the national debt during the fiscal year of 1948.

Opposed to this idea are those who believe that a reduction in taxes would have stepped up business and buying power, thereby speeding up the circulation of currency from which the Government would take less per dollar, but more in the over-all picture because more dollars would be spent. But that's a subject for an entire article in itself, and we'll confine ourselves to a discussion of the national debt.

The Senate Finance Committee has estimated that a total of $5,000,000,000 could be applied on the national debt even if the tax reduction had been approved. Add to this the $3.3 billion now killed tax cut and you have a total debt reduction of $8,300,000,000 in 1 year. If this rate of annual payment were maintained for a sufficient period, the national debt could be retired in roughly 31 years. This is not at all likely, however, in view of the fact that these are abnormal times and that all business is due for leveling off, which, of course, will reduce Federal revenues.

The United States Chamber takes the view that a tax reduction now is more urgent than a debt reduction. While not qualifying this belief, it apparently feels that a cut in taxes is necessary to bolster purchasing power of the consumer to meet the much-heralded threat of a recession this year.

A tax cut for the individual would be the equivalent to an increase in pay so far as take-home pay is concerned. A tax cut for business might have paved the way for reductions in prices, thereby further aiding the lot of the consumer and enabling him to buy more of the things he wants.

But talk of a tax cut now is water over the dam.

While the national debt is huge, it does not seem to be the obstacle now that it was sometime ago when it was still on its way up. But dragging it down will be difficult. Strict governmental economy of the kind Congress is presently striving for will be essential for years and years to come.

Farmers Home Administration

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1947

Mr. STEVENSON. Mr. Speaker, inasmuch as the agriculture appropriation bill is now being considered by the Agricultural Appropriation Committee of the Senate, and inasmuch as the Farmers Home Administration appropriation will be included in the bill, and because I am personally much interested in the good work the Farmers Home Administration is doing and has done in Wisconsin, I include the attached letter, which I received from the Farmers Home Administration supervisor of Richland County, Wis., telling of the type of work being done in Richland County, be inserted in the CONGRESSIONAL RECORD:

RICHLAND CENTER, WIS., *June 11, 1947.*

Hon. WILLIAM STEVENSON,
House of Representatives,
Washington, D. C.

DEAR MR. STEVENSON: From the rumors that I hear I have a feeling that much that the Farmers Home Administration and what it has stood for, supervised Goverment chattel loans, is about to be so badly curtailed that it will virtually be dropped.

Some time ago when we were talking about our county you indicated a desire to be kept informed about some of our families. For some time I have been collecting data to send to you, and now before my appointment is canceled I want to let you know some of the nice things that have happened to borrower families in Richland County.

The task of the Farmers Home Administration has been one of education. We have taken the families who do not get to county-extension or 4–H groups. As they progress in household equipment and community activity, many of them become interested in and then members of their local group. The major problem is explaining the advantages after creating a desire within the members of the family for the benefits of these groups. Sometimes this is a slow process, but when it does happen the good is lasting.

We have helped a total of 919 borrower families in Richland County. Some of them have needed more than one loan to completely rehabilitate the family. Five hundred and sixty-three loans have been repaid in full. Of this number, 438 have paid from normal flow of income, 27 have paid from bank refinancing, 23 have paid from PCA refinancing, and 75 have held sales and gone into other fields of labor. Incidentally, many of the last group are now returning to FHA to be financed in a second farming venture.

The total amount loaned for chattels since the beginning of the program in Richland County is $1,709,785. Of this amount there is an outstanding principal balance at the present time of $242,646. The total amount loaned for tenant-purchase loans is $191,365, of which $81,404.66 is outstanding at present.

Of the 563 paid-up borrowers, 265 are still farming in Richland County and the others have moved on to other locations. We have 144 chattel loans and 18 tenant-purchase loans at the present time. We ran out of funds in March, but could have made 30 or more additional loans to start families from nothing. Approximately one-half of these were veterans with no other source of available help.

Recently one of the bankers in the county made this statement: "For years we have needed just such a program as you have going. You can start off the low-income family who needs supervision. Many are willing but lack the knowledge of what to do at the right time. Your program helps both the homemaker and the farmer and inasmuch as the wife is a really important point in the success of the family, she needs your help."

A few days ago as I sat in the Richland Center High School gymnasium watching the graduation exercises (incidentally our son, Jack, graduated), 4 in the group of 127 were from borrower families. These families could never have sent their children to high school without the help of FHA. There are a total of 12 high-school, 27 grade-school, and 4 normal-school graduates from Richland County borrower families in 1947.

I wish I might give you a picture of the M family. Ten years ago they were living

way back on a hill—no passable road leading to the farm—a good barn—poor house—few furnishings (not nearly adequate for bare existence) and a family of five small children. They were referred to the Farmers Home Administration (then Farm Security Administration) by a neighbor who heard of our work and who could no longer stand the haunting of the hungry, undernourished little faces.

As Mrs. M came to the door she appeared to be seeing an apparition. She was thin, pale, definitely undernourished, and, worse still, utterly discouraged. As we visited and I gradually gained her confidence, I found that except for her mother, I was the first woman she had seen for nearly a year. They had no way to go and too few clothes to appear in, if she went. I found that although she had filled every available jar, the supply of food, inadequate to start with, was completely exhausted. She very hesitantly listed the food in the house and finally admitted that many nights the family went to bed hungry. Like most parents, the children were fed first, then they ate.

As I talked to her and told her of the advantage of the FSA, it was like telling a fairy story to a small child. Her eyes grew brighter and at times she semed lost in another world. Finally she said, "Oh, but they wouldn't consider us. We haven't even clothes enough to cover us." Then she added, "But would you just tell my husband about it anyway?"

I can't express to you the joy that comes from being able to completely set up a family like this. To have the tools to follow through in the home, with the family and on the farm.

They received their loan that year and the next year they purchased a pressure cooker and started and cared for one of the finest gardens I have ever seen. By winter their basement was bulging with 1,200 quarts of canned food, barrels of home produced apples, bins of vegetables and potatoes, and there were six well-nourished little children. Another year a new white kitchen range was added to replace a smoky, worn-out range. As the income permitted, they added other pieces of furniture, beds and bedding, so that only two people occupied a bed, a washing machine, linoleum rugs, and even more important, adequate medical and dental care were included in the budget.

The checking account, established by the family themselves, was an important step. By now there was income, wisely budgeted to include shoes, warm clothes, and overshoes as the need arose. Many of the garments were remodeled from clothing given to them. In 5 years the loan was repaid in full and 2 years later Mr. M. arranged for the purchase of the farm where they lived when they first got their loan and where they continued to live.

In time the oldest daughter graduated from rural school, then high school, and this year from county normal. Mr. Stoffel, the principal, says she has promise of being an excellent teacher. The other evening, as Helen, the second daughter to finish high school, walked across the platform to get her diploma, the lump in my throat wouldn't be swallowed as I recalled the circumstances of my first visit to the family.

Today, respected in their community, paying members of a church, contributors to the better education of families like themselves, this family claims the Farmers Home Administration as their benefactor and continues to praise a program that will give families the things which make living a real pleasure.

Still another family I visited yesterday are showing the benefits of supervision. There were three little girls, also undernourished, when I first visited the family. Today, after 5 years, the picture is different. Their home is better, the house has been covered with asbestos shingles, lights have been added, storage space improved. The barn has been cemented and the dairy herd improved, but if you were to ask this family what has been most helpful to them, I am sure they would tell you as they did me, "those two little girls."

We were able through our health program to set up a plan for Jean to enter the State hospital to receive treatment for rheumatic fever, later to have her transferred to the convalescent home. Today she is home, after nearly 2 years of treatment, leading a nearly normal life.

The second child was ill and the effects were visible in her face. We talked of this and the mother began to study her diet. As she improved somewhat there were still signs of trouble and finally one night the climax came. The child was taken to the hospital with a ruptured appendix. Had the mother been ignorant of the symptoms, the child could easily have died before help could be had.

The Farmers Home Administration has prided itself on its educational help for all members of the family and Mrs. P. said, "You came when everything was dark. Today I am a better wife and mother because of the help I received in all phases of our home life. I came from a poor family, we had few advantages as small children, and went to work, for folks of our own kind, as soon as we were able. Our children can do better than that because we have an improved standard of living. We hope to educate our four little girls so they can be of service in their community wherever they go."

During the war, many of our boys and girls were found to be undernourished. Many who were sound were from homes where the Farmers Home Administration had already made an impression. At one time there were 91 boys and girls from active and paid-up borrower families in service from Richland County.

America needs to be strong, the home life needs to be improved, and made more desirable for farm families. Not always do we find poor living conditions among the lowest income family bracket. Neither is it always lack of income. To make better homes, the desire must arise within the family and not be superimposed. How can a family desire a better standard unless they have a chance to learn what constitutes the important phases of better living?

The Farmers Home Administration encourages adequate income, then as income was available, some of the improvements which would give the children a desire to remain on the farm where they could live as some of their urban friends lived rather than migrating to the city where the glitter of bright lights is only a surface gloss.

America needs to teach people to play and enjoy their homes and we were doing that, too. Recreation was planned, participation in community activities was encouraged. Many of our families were proud to invite homemakers and 4-H clubs to their home for the next meeting.

I found the veterans' wives, in some cases foreign wives, timid in the new communities. There were so many things to learn in this new but desirable land. We talked of many things which might help her to become more satisfied with conditions in and about her new home.

I could go on for hours about the good that has come from this program as it has been set up and working, but I must stop.

By the time you receive this letter I will no longer be with FHA because of the curtailment of the program. However, I do want to express my thanks for the fine support the folks in Washington have given FHA. It is wonderful. Never have I worked at a job which required so much effort to make it a success; likewise, never have I had so much satisfaction or opportunity to help in building a better home life.

I realize that as income goes down, folks are clamoring for less taxes and that Congress has many problems, but before I leave I did want you to know of a few more of the fine things, Washington, through FHA, has been able to do for farm families.

It is possible that some other way is being planned to continue the help to those families already started by FHA and to help those who need and desire the help we have been able to give in the past If this hasn't been done, please give it thought, since there are so many rural families who need help and guidance within their homes, the natural environment in which women work and children are reared.

Kindest regards to yourself and family.

Sincerely yours,

MRS. JOHN PUTTKAMMER,
FHA Home Supervisor.

The Decision of the Supreme Court in the Petrillo Case

EXTENSION OF REMARKS
OF

HON. CLARENCE F. LEA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1947

Mr. LEA. Mr. Speaker, pursuant to consent given me by the House, I present for the RECORD the opinion of the Supreme Court in the case of the United States against Petrillo.

The defense in this case was based on alleged constitutional grounds. It was particularly claimed that the information was uncertain to a degree that made it unconstitutional. Among other things the right of Congress to pass this legislation was questioned.

This decision is No. 954, delivered on the 23d of June 1947.

Significant quotations from the decision are as follows:

Here Congress aimed its law directly against one practice, compelling a broadcasting company to hire unneeded workers. There is nothing novel about laws to prohibit some persons from compelling other persons to act contrary to their desires. Whatever may be the limits of the power of Congress that do not apply equally to all classes, groups, and persons, we are satisfied that Congress has not transgressed those limits in the provisions of this statute which are here attacked. * * *

Clearer and more precise language might have been framed by Congress to express what it meant by "number of employees needed." But none occurs to us, nor has any better language been suggested, effectively to carry out what appears to have been the congressional purpose. The argument really seems to be that it is impossible for a jury or court ever to determine how many employees a business needs, and that, therefore, no statutory language could meet the problem Congress had in mind. If this argument should be accepted, the result would be that no legislature could make it an offense for a person to compel another to hire employees, no matter how unnecessary they were, and however desirable a legislature might consider suppression of the practice to be.

The Constitution presents no such insuperable obstacle to legislation. We think that the language Congress used provides an adequate warning as to what conduct falls under its ban, and marks boundaries sufficiently distinct for judges and juries

fairly to administer the law in accordance with the will of Congress. * * *

It would strain the requirement for certainty in criminal law standards too near the breaking point to say that it was impossible judicially to determine whether a person knew when he was willfully attempting to compel another to hire unneeded employees. * * *

But it is not within our province to say that because Congress has prohibited some practices within its power to prohibit, it must prohibit all within its power. Consequently, if Congress believes that there are employee practices in the radio industry which injuriously affect interstate commerce, and directs its prohibitions against those practices, we could not set aside its legislation even if we were persuaded that employer practices also required regulation.

In a concurring opinion, Mr. Justice Frankfurter stated:

I agree with the Court's judgment and opinion because it holds that the Lea Act is not beyond the power of Congress to regulate commerce. I desire, however, to add a few words.

The constitutional basis for the legislation is the same as that upon which the validity of the Sherman law rests. It is too late in the day to require argument or citation of cases in support of the right of Congress to free interstate commerce from obstruction that the exertion of monopolistic power may entail or from interference that may reasonably be deemed to promote monopoly. * * *

It would be a usurpation of the legislative authority for us to find that there was no basis in reason for the judgment of Congress that the public interest called for legislation to deal with what is colloquially called "feather bedding" in connection with the broadcasting business. Beyond that, it is not our province to go.

Referring to the opinion of the lower court, Justice Frankfurter said:

The court conjures up difficulties which I do not entertain. * * *

The District court found constitutional defects in the statute "as it was written by Congress." We find the contrary.

Mr. Justice Reed filed a dissenting opinion, in which Justices Murphy and Rutledge joined.

The dissenting opinion was based solely upon the statement that the information was "too indefinite in its description of the prohibited acts."

The decision of the Court in full is as follows:

SUPREME COURT OF THE UNITED STATES

(No. 954—October term, 1946)

THE UNITED STATES OF AMERICA, APPELLANT, v. JAMES C. PETRILLO—APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF ILLINOIS

(June 23, 1947)

Mr. Justice Black delivered the opinion of the Court.

The district court dismissed a criminal information filed against the respondent, James C. Petrillo, on the ground that the statute on which the information was founded was unconstitutional (68 F. Supp. 845). The case is here on direct appeal by the Government as authorized by the Criminal Appeals Act (18 U. S. C. Supp. V, sec. 682). The information charged a violation of the Communications Act of 1934 (48 Stat. 1064, 1102), as amended by an act of April 16, 1946 (— Stat. —). The specific provisions of the amendment charged to have been violated read:

"Sec. 506. (a) It shall be unlawful, by the use or express or implied threat of the use of force, violence, intimidation, or duress, or by the use or express or implied threat of the use of other means, to coerce, compel, or constrain, or attempt to coerce, compel, or constrain a licensee—

"(1) to employ or agree to employ, in connection with the conduct of the broadcasting business of such licensee, any person or persons in excess of the number of employees needed by such licensee to perform actual services; or

* * * * *

"(d) Whoever willfully violates any provision of subsection (a) or (b) of this section shall, upon conviction thereof, be punished by imprisonment for not more than 1 year or by a fine of not more than $1,000, or both." (Public Law 344, 79th Cong., 2d sess.)

The information alleged that a radio-broadcasting company, holding a Federal license, had, for several years immediately preceding, employed "certain persons who were sufficient and adequate in number to perform all of the actual services needed * * * in connection with the conduct of its broadcasting business." The information further charged that the respondent, Petrillo, "willfully, by the use of force, intimidation, duress, and by the use of other means, did attempt to coerce, compel, and constrain said licensee to employ and agree to employ, in connection with the conduct of its radio-broadcasting business, three additional persons not needed by said licensee to perform actual services. * * *"

The coercion was allegedly accomplished in the following manner:

"(1) By directing and causing three musicians, members of the Chicago Federation of Musicians, theretofore employed by the said licensee in connection with the conduct of its broadcasting business, to discontinue their employment with said licensee;

"(2) By directing and causing said three employees and other persons, members of the Chicago Federation of Musicians, not to accept employment by said licensee; and

"(3) By placing and causing to be placed a person as a picket in front of the place of business of said licensee."

The only challenge to the information was a motion to dismiss on the ground that the act on which the information was based (a) abridges freedom of speech in contravention of the first amendment; (b) is repugnant to the fifth amendment because it defines a crime in terms that are excessively vague, and denies equal protection of the law and liberty of contract; (c) imposes involuntary servitude in violation of the thirteenth amendment.[1] The district court dismissed the information, holding that the 1946 amendment on which it was based violates the first, fifth, and thirteenth amendments.

Two general principles which concern our disposition of appeals involving constitutional questions have special application to this case: We have consistently refrained from passing on the constitutionality of a statute until a case involving it has reached a stage where the decision of a precise constitutional issue is a necessity. The reasons underlying this principle and illustrations of the strictness with which it has been applied appear in the opinion of the Court in *The Rescue Army* v. *Municipal Court* (331 U. S. —, —) and cases there collected. And in reviewing a direct appeal from a district court under the Criminal Appeals Act, supra, our review is limited to the validity or construction of the contested statute. For "The Government's appeal does not open the whole case" (*United States* v. *Borden Co.* (308 U. S. 188, 193)).

First. One holding of the district court was that, as contended here, the statute is repugnant to the due process clause of the fifth amendment because its words, "number of employees needed by such licensee," are so vague, indefinite, and uncertain that "persons of ordinary intelligence cannot in advance tell whether a certain action or course of action would be within its prohibition. * * *" The information here, up to the place where it specifically charges the particular means used to coerce the licensee, substantially employs this statutory language. And the motion to dismiss on the ground of vagueness and indefiniteness squarely raises the question of whether the section invoked in the indictment is void in toto, barring all further actions under it, in this, and every other case. (Cf. *United States* v. *Thompson* (251 U. S. 407, 412).) Many questions of a statute's constitutionality as applied can best wait the refinement of the issues by pleading, construction of the challenged statute and pleadings, and, sometimes, proof (*The Rescue Army* v. *Municipal Court*, supra; *Watson* v. *Buck* (313 U. S. 387, 402); *Borden's Company* v. *Baldwin* (293 U. S. 194, 204, 210), and concurring opinion at p. 213). But no refinement or clarification of issues which we can reasonably anticipate would bring into better focus the question of whether the contested section is written so vaguely and indefinitely that one whose conduct it affected could only guess what it meant. Consequently, since this phase of the appeal raises a question of validity of a statute within our jurisdiction under the Criminal Appeals Act, supra, and is ripe for our decision, we turn to the merits of the contention.

We could not sustain this provision of the act if we agreed with the contention that persons of ordinary intelligence would be unable to know when their compulsive actions would force a person against his will to hire employees he did not need (*Connally* v. *General Construction Co.* (269 U. S. 385, 391); *Lanzetta* v. *New Jersey* (306 U. S. 451)). But we do not agree. Of course, as respondent points out, there are many factors that might be considered in determining how many employees are needed on a job. But the same thing may be said about most questions which must be submitted to a fact-finding tribunal in order to enforce statutes. Certainly, an employer's statements as to the number of employees needed is not conclusive as to that question. It, like the alleged wilfullness of a defendant, must be decided in the light of all the evidence.

Clearer and more precise language might have been framed by Congress to express what it meant by "number of employees needed." But none occurs to us, nor has any better language been suggested, effectively to carry out what appears to have been the congressional purpose. The argument really seems to be that it is impossible for a jury or court ever to determine how many employees a business needs, and that, therefore, no statutory language could meet the problem Congress had in mind. If this argument should be accepted, the result would be that no legislature could make it an offense for a person to compel another to hire employees, no matter how unnecessary they were, and however desirable a legislature might consider suppression of the practice to be.

The Constitution presents no such insuperable obstacle to legislation. We think that the language Congress used provides an adequate warning as to what conduct falls under its ban, and marks boundaries sufficiently distinct for judges and juries fairly to administer the law in accordance with the will of Congress. That there may be marginal cases in which it is difficult to determine the side of the line on which a particular fact situation falls is no sufficient reason to hold the language too ambiguous to define a criminal offense (*Robinson* v. *United States* (324 U. S. 282, 285–286)). It would strain the requirement for certainty in criminal law standards too near the breaking point to say that it was impossible judicially to determine whether a person knew

[1] Another ground, not argued here, was that the act represents an exercise of power by Congress not delegated to the United States.

when he was willfully attempting to compel another to hire unneeded employees. (See *Screws* v. *United States* (325 U. S. 91); *United States* v. *Ragen* (314 U. S. 513, 522, 524, 525).) The Constitution has erected procedural safeguards to protect against conviction for crime except for violation of laws which have clearly defined conduct thereafter to be punished; but the Constitution does not require impossible standards. The language here challenged conveys sufficiently definite warning as to the proscribed conduct when measured by common understanding and practices. The Constitution requires no more.

Second. It is contended that the statute denies equal protection of the laws to radio-broadcasting employees as a class, and, for this reason, violates the due process clause of the fifth amendment. This contention, raised by the motion to dismiss, and sustained by the district court as a ground for holding the statute unconstitutional as written, is properly before us, and we reach this equal protection ground, for the same reason that we decided the question of whether the section was unconstitutionally vague and indefinite.

In support of this contention it is first argued that if Congress concluded that employment by broadcasting companies of unneeded workers was detrimental to interstate commerce, in order to be consistent, it should have provided for the punishment of employers, as well as employees, who violate that policy.[2] Secondly, it is argued, the act violates due process because it singles out broadcasting employees for regulation while leaving other classes of employees free to engage in the very practices forbidden to radio workers. But it is not within our province to say that because Congress has prohibited some practices within its power to prohibit, it must prohibit all within its power. Consequently, if Congress believes that there are employee practices in the radio industry which injuriously affect interstate commerce, and directs its prohibitions against those practices, we could not set aside its legislation even if we were persuaded that employer practices also required regulation. (See *Labor Board* v. *Jones & Laughlin Steel Corp.* (301 U. S. 1, 46).) Nor could we strike down such legislation, even if we believed that as a matter of policy it would have been wiser not to enact the legislation or to extend the prohibitions over a wider or narrower area. Here Congress aimed its law directly against one practice—compelling a broadcasting company to hire unneeded workers. There is nothing novel about laws to prohibit some persons from compelling other persons to act contrary to their desires. Whatever may be the limits of the power of Congress that do not apply equally to all classes, groups, and persons (see *Steward Machine Co.* v. *Davis* (301 U. S. 548, 584)), we are satisfied that Congress has not transgressed those limits in the provisions of this statute which are here attacked.

Third. Respondent contends here, and the district court has held, that the statute abridges freedom of speech by making peaceful picketing a crime. It is important to note that the statute does not mention picketing, peaceful or violent. The proposed application of the statute to picketing, therefore, does not derive from any specific prohibition written into the statute against peaceful picketing. Rather it comes from the information's charge that respondent attempted to compel the licensee to hire unneeded employees by placing "a picket in front of the place of business of (the) * * * licensee." Yet the respondent's motion to dismiss was made only on the ground that the statute, as written, contravenes the first amendment. In ruling on this motion, the district court assumed that because "there was no charge of violence * * * the placing of a picket must be regarded * * * as peaceful picketing." From this assumption, it concluded that "the application [of the statute] here sought to be made violates the first amendment by its restriction upon freedom of speech by peaceful picketing." Thus, rather than holding the statute as written to be an unconstitutional violation of the first amendment, the district court ruled on the statute as it was proposed to be applied by the information as it then read.

We consider it inappropriate to reach the merits of this constitutional question now. As we have pointed out, we have consistently said that we would refrain from passing on the constitutionality of statutes in advance of the necessity to do so. And the provisions for direct appeal from district courts of certain criminal cases do not require us to pass on constitutional questions prematurely decided by a district court's dismissal of an information.

The information here, up to the place where it alleges the use of particular coercive means, charges in substantially the language of the statute that respondent coerced the licensee. The information's charges up to this point constitute a sufficient basis for a challenge to the statute on the ground that it contravenes the Constitution. Whether this part of the information, or the information as a whole, was adequate definitely to inform the respondent of the nature of the charge against him is another question. (See *United States* v. *Lepowitch* (318 U. S. 702, 704); *Potter* v. *United States* (155 U. S. 438); cf. *United States* v. *Hess* (124 U. S. 483).) Had the district court postponed ruling on the first amendment question raised by the motion to dismiss, or had it denied the motion, respondent could have sought a bill of particulars, apart from attacking the constitutionality of the act. (See *Husty* v. *United States* (282 U. S. 694, 702); *Bartell* v. *United States* (227 U. S. 427, 433-434); *Dunbar* v. *United States* (156 U. S. 185, 192).) So also, if the additional allegations describing the means used to accomplish the proscribed purpose were not definite enough for the court to determine whether they were sufficient in law to charge an offense, and if such allegations were not mere surplusage (see *United States* v. *Socony-Vacuum Oil Co.* (310 U. S. 150, 222)) a challenge could have been made to the information (see *United States* v. *Hess*, supra, at 487–488) as distinguished from a challenge to the statute on which it rested. In that event, and upon a holding of insufficiency of the information, appeal by the United States would have properly gone, under the Criminal Appeals Act supra, to the Circuit Court of Appeals, and if inappropriately brought here, that act, as amended, 56 Statutes 271, would have required us to transfer the cause to the circuit court of appeals. But no such challenge was made to the information.

We therefore have a situation in which we are urged to strike down a statute as violative of the constitutional guaranties of free speech when the statute has not been, and might never be, applied in such manner as to raise the question respondent asks us to decide. For the gist of the offense here charged in the statute and in the information is that respondent "willfully, by the use of force, intimidation, duress and by the use of other means, did attempt to coerce, compel, and constrain" the licensee to hire unneeded employees. If the allegations that this prohibited result was attempted to be accomplished by picketing are so broad as to include action which either is not coercive, compelling, or constraining, within the statute's meaning, or could not be constitutionally held to be, the trial court would be free, on motion of the respondent, to strike the particular allegations if they are surplusage. Rules of Criminal Procedure, section 7 (d). Or the Government might amend the information "at any time before verdict or finding if no additional or different offense is charged and if substantial rights of the defendant are not prejudiced" (ibid. sec. 7 (e)).

The foregoing analysis shows that we are asked to rule on constitutional questions that are not yet precisely in issue. The question as it was decided by the district court, was not the question raised by the motion to dismiss—whether the statute is invalid on its face—but whether it is invalid as it is proposed to be applied. And even if our decision could be evoked upon a showing that the statute certainly, but for our intervention, would have punished respondent for peaceful picketing, there is no such certainty here. No final issue had been drawn. The information was still subject to amendment to fit, within the permissible area of amendments, the type of coercive means developed by further pleading or proof. (See *Borden's Co. v. Baldwin*, supra, at 213.) Further pleadings and proof might well draw the issues into sharper focus making it unnecessary for us to decide questions not relevant to determination of the constitutionality of the statute as actually applied. Thus this case had not reached a stage where the decision of a precise constitutional issue was a necessity. Consequently, we refrain from considering any constitutional questions except those concerning the act as written. We do not decide whether the allegations of the information, whatever shape they might eventually take, would constitute an application of the statute in such manner as to controvene the first amendment. We only pass on the statute on its face; it is not in conflict with the first amendment.

Fourth. The district court held, and it is argued here, that the statute, as sought to be applied in the information, violates the thirteenth amendment which prohibits slavery and involuntary servitude. This contention is also rooted in that part of the information which particularizes the means by which respondent attempted to compel action by the licensee, i. e., by causing three musicians to discontinue, and three musicians not to accept, employment. The argument is that employees have a constitutional right to leave employment singly (see *Pollock* v. *Williams* (322 U. S. 4, 17, 18)), or in concert, and consequently that respondent cannot be guilty of a crime for directing or causing them to do so. For the reasons given with reference to the picketing specification, therefore, we consider the thirteenth amendment question only with reference to the statute on its face. Thus considered, it plainly does not violate the thirteenth amendment. Whether some possible attempted application of it to particular persons in particular sets of circumstances would violate the thirteenth amendment is a question we shall not pass upon until it is appropriately presented.

Reversed and remanded.

Mr. Justice Douglas took no part in the consideration or decision of this case.

[2] The act does not prohibit radio broadcasters from voluntarily hiring more employees than they need.

Federal Employment Drops, But Still Far Above 1939

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. WILSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Bedford Daily Times-Mail of June 16, 1947:

FEDERAL EMPLOYMENT DROPS, BUT STILL FAR ABOVE 1939

The Nation's taxpayers have been hearing quite a lot recently about reduced governmental budgets, lay-offs of Federal employees here and there. The reduction has taken a toll in Federal Governmental offices here and elsewhere in the State and Nation.

We hear also of Congress' attempt to trim $6,000,000,000 from President Truman's budget estimates for the fiscal year beginning July 1. Many reductions have been made. Others are in the air. In other words, a real battle is on in the Nation's Capital as lawmakers wield the axe.

It might be well, at this stage, to consider what is happening in the Federal Government from the standpoint of employment cuts.

Federal employment during the past 6 years of prewar, actual war, and postwar Government activity was summed up recently by Senator HARRY F. BYRD'S Joint Committee on Reduction of Nonessential Federal Expenditures.

The report shows that as of January this year the number of Federal employees on the Government pay roll is nearly two-thirds of the wartime peak—still two and a half times as great as it was in 1939, the last normal prewar year.

The total was 919,776 on June 30, 1939. On June 30, 1945, the total stood at 3,737,896, and in January this year it was 2,261,459. Of course, the January total has been reduced considerably as agencies streamline their operations in preparation for budget slashes next year.

From the wartime peak and January 1947, the War and Navy Departments and war emergency agencies reduced personnel by a total of 1,794,604, but this reduction was partially offset by a net increase of 318,167 in nonwar departments and agencies. Notable among those showing increases in this period were Reclamation Service, which more than doubled; Bonneville Power Administration; Federal prison system; Division of Labor Standards; Office of Secretary of Labor; Office of First Assistant Postmaster General; Office of Fourth Assistant Postmaster General; State Department's Foreign Service; Office of Foreign Liquidation and Prencinradio, Inc.; Federal Security Agency; Public Buildings Administration; Public Roads Administration; and Veterans' Administration.

BYRD'S report also showed that the Washington metropolitan area in January had 221,288 employees. The State of California ran close second, with 212,912 Federal employees; New York had 192,592. The Federal Government in that month had 300,000 employees outside continental United States.

Proof that governmental agencies can slash personnel is shown in BYRD'S study of personnel ceilings imposed on various units. In an effort to check mounting pay rolls, ceilings were applied on the number of personnel in a great many agencies. Between July 1, 1945, and September 30, 1946, no penalties were applied for ceiling violations. During that period, there were 271 violations and 47,278 employees were paid in violation of ceiling limits.

During the last quarter of 1946, however, penalties were invoked for violations—and there were no violations.

Obviously, Washington responds only to pressure, whether that pressure be by some individual or group of individuals seeking some special privilege, or by lawmakers exerting pressure to get some particular job done. Personnel ceilings without penalties are a perfect example of trying to get something done the easy way. And, of course, what happened after penalties were imposed shows the opposing picture.

We cannot expect the Government to reduce its personnel to levels of 1939 or before. We ourselves have supported moves toward greater Government service which requires more personnel. The Veterans' Administration is a perfect example. Before the war, a handful of persons could do the work that now is required by thousands. To cut this personnel item back to prewar would to be wipe out benefits under the GI bill of rights.

And it could easily be fatal to trim the State Department's personnel to prewar levels. World political and economical conditions demand the utmost attention. We are on thin ice internationally. We are fighting communism all over the world to keep that communism from forcing itself upon us.

But a lot of explanation will be required to show the average taxpayer why we need two and one-half times as many people on the Federal pay roll—excluding men in the armed forces—than we had in 1939.

Address of Dr. Charles A. Lory

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. HILL. Mr. Speaker, on Monday, June 23, 1947, a dedication celebration was held at the mouth of the Alva B. Adams Tunnel of the Colorado-Big Thompson project, at which time the first water from the Pacific slope of the Rocky Mountains flowed through the backbone of the Continental Divide to the Atlantic side to be used as supplementary water for irrigation and power-producing purposes.

At this ceremony an address was made by Dr. Charles A. Lory, former president of the Colorado A. & M. College, at Fort Collins, Colo., which I wish to include as part of my remarks. Dr. Lory has lived in the neighborhood of this project during his entire life. Without a doubt Dr. Lory qualifies as an expert on irrigation and reclamation.

The address follows:

The people living in the valleys of the South Platte, Caché la Poudre, Big Thompson and Little Thompson Rivers, the St. Vrain and Boulder Creeks during the devastating drought of the early 30's were certain more water must be gotten for irrigation to prevent diastrous crop losses, but were not generally agreed how more water could be obtained.

For half a century the region had enlarged its supplies for irrigation through additional storage reservoirs and some transmountain diversions, so it was natural to find many seriously advocating construction of more reservoirs. Surveys showed three excellent sites on the Poudre and possibility of enlargement of storage systems on the Thompson and St. Vrain.

However, the region was faced with the fact that its storage systems were empty, and experience showed heavy losses in carrying reservoir water from one irrigation season to another. There was much speculation over probable changes in the climate—whether droughts like the present one had occurred in the past or would occur again in the future. If so, where would the water come from to fill additional reservoirs?

Fortunately, these questions were answered through an investigation by Dr. Arthur D. Moinat, a graduate of Colorado State College A. and M., with a doctor's degree from the University of Illinois. Using the method developed by Dr. A. E. Douglass, of the University of Arizona, in determining the relation of tree growth to precipitation, Dr. Moinat found the growth rings of trees on the water shed of the Caché la Poudre and Big Thompson Rivers correlated well with the weather records of precipitation and of river flow, and that the method of Dr. Douglass so thoroughly tested in Arizona and southwestern Colorado, could be followed with assurance. Using carefully selected pinus ponderosa trees almost exclusively, ranging in age from less than 100 years to more than 360 years, he found 34 years unfavorable to tree growth, hence deficient in rainfall, in the period from 1711 to 1932, and 30 years especially favorable—good water years we would call them now.

The 250-year record of tree growth on the Poudre water shed and in Estes Park showed the average length of a period of successive favorable or unfavorable years—that is above or below average—has been about 2 years. The maximum average period of lean or fat years does not exceed 8 years. During a period of subnormal precipitation, usually only a few years are exceedingly unfavorable.

Interpreting the data on the annual growth of tree rings according to the Douglass method for determining climatic history, Dr. Moinat found no appreciable change in the climate of northern Colorado for the past 300 years.

This information became available when the men at the college were debating the probable value of more storage reservoirs compared with probable diversion from the Colorado River, and turned the final decision strongly in favor of diversion, and the conviction that water from "Grand Lake" was absolutely necessary to stabilize the water supplies of northeastern Colorado and prevent the recurrence of disastrous crop losses due to water shortage.

You know the rest of the story—how the Institution worked for the "Grand Lake Diversion", cooperated with the Northern Colorado Water Users Association, gathered information for our Representatives in Congress, and for the Secretary of the Interior, carried on a vigorous educational campaign, and cooperated in securing the legislation authorizing the Northern Colorado Water Conservancy District. It participated in the celebration of starting construction of the keystone feature of the Colorado Big Thompson project, and rejoices with you and all Colorado on this happy day when water is first diverted through the Alva B. Adams Tunnel, the longest irrigation tunnel in the world.

New Labor Law

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. DONDERO. Mr. Speaker, I offer for the RECORD an editorial from the Washington Star of June 24, 1947, which presents a moderate and sane view of the labor bill just passed by Congress.

It presents the exact view that I took of this measure when it was before the House for consideration; namely, it is not a drastic law nor will it crush or destroy labor unions.

The editorial follows:

NEW LABOR LAW

The most impressive thing about the bill which now becomes a new labor law is the extent of its popular support. President

Truman fought the bill with every means at his command. He brought every conceivable argument, both sound and unsound, to bear against it. Nevertheless, the bill was passed over his veto—in the Senate by a vote of 68 to 25, and in the House by 331 to 83.

On this record, only those whose minds are closed will deny that a new deal in labor legislation is desired by the people. And there is need for such a new deal. For years the legislative trend was in the direction of protecting and strengthening organized labor. Nor can there be any real doubt that there was need for legislation designed to bolster labor. But as always seems to happen in this country, Congress went too far. Very soon after enactment of the Wagner Act, it became apparent that the scales were weighted too heavily in labor's favor, and that something was needed to redress the balance. This new law is the first significant step in that direction.

It is not a drastic law. It will neither crush labor nor destroy unions. While a few of its provisions are of doubtful wisdom and may prove unworkable, the law as a whole is moderate and is aimed at correcting abuses which the unions could not or would not correct of their own accord.

There has been some reckless talk to the effect that the law will meet with widespread union defiance. And it is unfortunate that the President has said some things in criticism of the law which may tend to encourage defiance. But responsible union leaders will be extremely ill-advised if they take the position that the law is not to be obeyed. If they want to work for repeal of the law by seeking the defeat of the Members of Congress who voted for it, that is their privilege. It would be quite another thing, however, to undertake to defy the law because they do not like it. The chances are that such an attitude would result only in the adoption of drastic, punitive legislation, and that, in turn, might well produce some of the evils which the President mistakenly believes will flow out of the present law.

The most urgent need now is for an awareness by all concerned that ours is a democratic system and that this new law has come into being through an impressive functioning of the democratic process. For labor leaders, the President or anyone else to overlook this central fact could easily be productive of a real threat to our democratic system.

Truman Blocks a Pay Increase

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. WILSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Bedford Daily Times-Mail of June 18, 1947:

TRUMAN BLOCKS A PAY INCREASE

President Truman took a pay increase away from every worker in America when he vetoed the tax bill. The President said, "It represents the wrong kind of tax reduction, at the wrong time." What he actually meant is that the bill was the product of a Republican Congress, and that next year is election year.

While President Truman has moved quite a way from the New Deal, he did learn the lesson of maintaining a perpetual emergency. It is quite significant that there has been an emergency every single minute since March 4, 1933, when Franklin Roosevelt was inaugurated. There was an emergency then, and the spectacular appeal of closing the banks worked such amazing political success, that we have been saddled with an emergency ever since.

Right now, the emergency seems to be great responsibilities for international relief and rehabilitation. This means the purchasing of large amounts of grain, at the highest prices in history, and indulging in what is becoming popularly known as Operation Rat Hole.

Mr. Truman decries the rising spiral of inflation, yet the policy of the Federal Government in buying food for Europe is right now the most important factor in high prices. The President also overlooks the fact that taxes are one of the biggest expenses of business today, and that high prices always go hand in hand with high taxes. Somebody has to pay taxes, and all through history, the ultimate taxpayer has been the consumer—the little fellow Mr. Truman wants to protect.

Also overlooked in the President's message is the fact that tax reduction brings in increased revenue. The last time there was a reduction in Federal taxes was during the administrations of Presidents Harding and Coolidge, when Andrew Mellon was Secretary of the Treasury. Tax collections were higher at the lower rates than had been before the reduction. The reason is obvious. Taxes responded to the same law as other items of mass production. When prices are reduced, more buyers enter the field, sales and profits go up. It has been more than 20 years since the Nation has had a chance to prove that well-established economic fact. The Congress presented such an opportunity to Mr. Truman, but evidently he thought more of New Deal financial theory than he did of proven economic policies.

It is true that taxpayers in the higher brackets would get a greater relief in dollars, but the percentage would be exactly the same. It is grossly unfair to make the statement about take-home pay. In the $2,500 bracket, which the President mentions, the increase in take-home pay would depend entirely upon the family status of the taxpayer. The single persons would save $67 a year; the married man $48; the man with a wife and child would save $29; and the family with two children would save only $10. Thus the percentage savings run from 2.9 percent for the single man to one-half of 1 percent for the family of four. It would be just as dishonest to talk about the saving of 2.9 percent as to stress the one-half of 1 percent.

The significant feature of the vetoed bill is that it was equitable. All taxpayers got some relief. In fact, it was a straight 20-percent cut across the board. Very few workers get less than $1,000 a year today, and very few get more than $300,000. The bill would have given relief to everyone. It would have stimulated business, the vital turn-over of money from which taxes are derived.

The President has not been reading recent financial news when he says there is no shortage of funds to expand industry. The absence of new financial issues is the best evidence of his error. Even such a financial giant as the American Telephone & Telegraph Co. withdrew a sale of its securities from the market because of poor public support. The best index to business prosperity is the amount of new financing, most of which is spent for plant expansion. That index is pointing down.

One thing is sure—a very important issue of the 1948 Presidential campaign has been created. The Republican Congress was elected by a majority of the voters. It kept its word. It had promised tax reduction, and provided the means to achieve the promise. The President elected to follow the plan of "tax and tax, spend and spend."

Colorado-Big Thompson Project

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. HILL. Mr. Speaker, the Colorado-Big Thompson project is almost one-half completed. The first water from the Pacific slope of the Rocky Mountains flowed through the 13-mile Alva B. Adams Tunnel, which pierces the backbone of the Rocky Mountains, on June 23, 1947. The celebration of this event was a historic affair. Mr. Michael W. Straus, United States Commissioner of Reclamation, delivered the principal address at the dedication ceremony held at Loveland, Colo., June 23, 1947, and as part of my remarks I wish to include his address:

THE LONG TRAIL AHEAD

That historic ceremony at the tunnel portal today when the first Pacific slope irrigation water came through the backbone of the continent to the Atlantic side was just the beginning and not the end. In reclamation when you put a tunnel to use or dedicate a dam, you have only reached the turn of the race—the finish is still ahead. The Colorado-Big Thompson project is less than half completed. Today's jubilee is but a symbol of things to come. But it's a good start and it's a good race. The Bureau of Reclamation is glad to be in partnership here with the Northern Colorado Conservancy District.

I have been here often before in the past 10 years, and I hope to be here again. Last time, less than a month ago, the snow was deep. We flew over the Divide to see both sides of the project. There were flooded areas along the Colorado over on the western slope then. That snow and water went down the river to the sea unconserved this year. But when we get done with our job, we will be saving that snow for the long dry summer months for the irrigation farmer here in this valley and for thousands of miles all the way down the river, which should be our first great western river that becomes fully utilized.

You are particularly fortunate today as the first water came through the Divide, making a dream of half a century come true. You are fortunate because you got started early and established your plan and your rights. The Bureau of Reclamation has been building this project for 9—almost 10—years during which we have had a depression, a boom, and the greatest war the world has ever seen. But always through it all, the project was kept going and moving forward. Nothing can stop its completion now.

But if it had not started when it did—a child of the depression of the early 30's, and I well remember that day in 1935 when I made the announcement of the first Federal Public Works Administration allotment of funds for surveys and plannings—you would not be able to start it now. You would not now be able to start it because you could not get the water of the Colorado. Since you began this work, the world has found out that it needs many more projects that depend on Colorado River water than there is water in that mighty stream. Twenty-five years ago Colorado and her sister States of the

Colorado Basin undertook to divide the waters by compact among themselves. In this year of 1947 we have the silver jubilee of that undertaking, and the task is not yet done. Colorado, together with her six sister States of the Basin, has a responsibility to complete that compact. You have recognized this responsibility and even now are seeking to discharge that duty. Please hurry the task so that other projects may be built in other valleys bringing them new food, new wealth, and new comfort and so that they may have the joy and happiness that comes to you with new water today.

Please lean back and take a broad view of what we are celebrating here today. Around the world people are hungry—hungrier than anybody has ever been in the South Platte River Valley or anybody ever will be in this valley. Around the world men are putting their water works in order, getting the water on the land to raise the crops that stay hunger. To the Bureau of Reclamation pour in demands for aid and counsel from India, from Morocco, from China, from New Zealand, from Egypt, from Europe, from Asia, from Tunisia, from Afghanistan, from all quarters of the globe. If you look, you can see the technicians of those lands studying their problems most any day in the world's reclamation headquarters in Denver. In this postwar world awakening to the needs for land and water, I regret to report that at the moment the effort to achieve is more determined in other lands than in the United States—probably because they have made less progress in the past and their awakening is therefore ruder than ours. In order to bring water to the land, and food and power to the people, nations that we consider poor and backward are investing, at the moment and in proportion to their ability, more determinedly than this the richest land in all the world. But our concern, great as it is about what happens in the rest of the world, is principally about what happens in the arid and semiarid sections of the United States.

Tonight we are in the Missouri Basin profiting from water brought there from the Colorado Basin. In the Missouri Basin—one-sixth of the whole Nation—you are going forward with the coordinated and integrated Missouri Basin plan—a plan that you have developed to meet your vital needs, the first such great basin-wide plan that has ever been generated anywhere in this world. It is a plan thought out in advance, inspected, corrected, and tailored to meet local requirements. It is intended to avoid the pitfalls of waste and ruination and to get the uttermost out of your resources. Part of that plan is being carried forward by your Bureau of Reclamation—your service agency to do your work.

The Missouri Basin is an integral part of this Nation that the whole world is talking about and looking to for guidance. Just to bring it down to fact and relate it to those hungry peoples, each year the Missouri Basin has supplied enough bread to fill half the Nation's bread basket, butter enough for one slice out of every five slices of bread eaten in the United States, a slice of beef for one sandwich out of every five, about one-quarter of all the lamb, one-sixth of all the pork, and nearly half of all the poultry meat. That among other things is what the Missouri Basin is to the United States.

Let's get still closer to home. Colorado is but one of the many States of the Missouri Basin, and Colorado is no novice in irrigation. You have had it before; you have it now. You sampled reclamation back in 1860 and found that it pays dividends. You in the South Platte Valley can find that there is proof of that in the North Platte Federal Reclamation project, not far from here, which has grown in population at a rate three times as great as that of the surrounding areas. Even during the drought decade, the population there increased while in other high plains areas it declined. They know what reclamation means in the North Platte Valley. That is why 53 percent of the lands in the one county there are now irrigated and the agricultural production in 1940 was six times that of 1908, when irrigation was started.

Uncle Sam also knows what irrigation means. He put about $16,000,000 into the North Platte project, and the water users there are paying back that $16,000,000 in fine style through repayment contracts with the Secretary of the Interior. But that is only a part of what Uncle Sam is getting back. Not only are the citizens on the North Platte project paying back the $16,000,000 but Uncle Sam's tax collector has gone in there. I have been peeping over his shoulder and notice that that project has already yielded to the United States Treasury more than seventeen million additional dollars in Federal individual income taxes alone. That is one of the best investments Uncle Sam ever made, and we don't expect any less in the North Platte Valley for which Uncle Sam is laying out far more cash.

Now, to get to the Adams tunnel and the Colorado-Big Thompson project and fit them into the world's mosaic. Right here today we have celebrated as fine an example as there is anywhere of the wedding of land and water, citizens and their Government, the State and the United States. It is only by such projects as the Colorado-Big Thompson and by the intelligent and full use of the resources with which we are blessed and which are the source of all our true wealth, that we are going forward in strength and happiness. That is what you have embarked upon here today.

I am not going to attempt to recite the detail, the glory, and the statistics of the Colorado-Big Thompson project or decorate it with description and adjectives. But, remember, this is only the beginning. The proof of the worthiness of this effect still lies ahead. It is always a happy day when the first water comes through. But it is a long, long road down which the Government, in partnership with its citizens, must go before there is new water in the ditch and new production in the fields. Also, there is a still longer road down which we must go together to protect and to guard this project until all the promises are made good and we win our final reward.

The Colorado-Big Thompson project is costing a lot of money to a lot of people. Taxpayers from all over the Nation will pay for it under the reclamation laws until the immediate beneficiaries pay back what they must pay back. It is going to cost a lot more than we figured 10 years ago, but it is also going to be a better project and it is going to be worth a lot more than it would have been 10 years ago. Today it is worth more to you in dollars and cents for your increased farm products—worth more in the benefits it brings to you. It is going to cost more because there has been a war and we have moved from a prewar depression economy into a postwar economy. It is going to cost more because the cost of blasting a yard of rock, moving a yard of earth, or setting a yard of concrete to build the project has gone up just as the price of building a barn or the price of the extra tons of sugar beets and alfalfa, the extra bushels of barley, or the extra hundredweight of beef that Colorado-Big Thompson will bring you has gone up. It is going to cost you more under the reclamation law, but it is still a bargain—a better bargain than if Uncle Sam waited and if you waited, as you wisely decided not to do, until construction costs come down, if they ever come down. If we had waited, this community, for want of water, would be losing an annual increase of $21,000,000 in farm production plus cheaper power bills and other benefits. That loss would go on year after year until the project was built and you got the water. It is such facts as that which, when folks back East doubt if Uncle Sam can afford to go ahead with these western works, cause reclamation to respond that we can't afford not to drive forward.

The agricultural economists figure that a full supply of Colorado-Big Thompson water to the district lands will yield an additional $21.01 gross crop production for each of the 615,000 acres benefited. Likewise, they figure land values will increase, depending on their present water status, up to as high as rises of $100 per acre and for the whole district some $18,732,000 accompanied by increases in population, assessed valuation, and new wealth. All of their calculations, both those of the conservatives and of the optimists, are that this valley cannot lose on this water project.

Even with all that, you people in the irrigated area will never be repaying the major part of the interest-free Federal irrigation funds used on this project. Owing to the magic of the Colorado River waters flowing through the Rocky Mountain backbone of the continent and then tumbling 2,900 feet down the eastern slope, power will be your real paying partner. Coming down those mountainsides, it will be working for you before it even gets to your irrigation canals and ditches. It will be turning turbines hitched to great generators from which lead transmission lines to Denver and many places in Colorado and on for hundreds of miles into Nebraska and Wyoming, where your neighbors cry for kilowatts. So, in this multiple-purpose project, protect and cherish those transmission lines. They not only will carry electrical energy to yourselves and to your neighbors, cheaper power than can be had anywhere else hereabouts, but will also carry back to the Colorado-Big Thompson Project the revenues without which this magnificent project and your irrigation water would never have been possible.

A lot of people will be watching because this is one of the great water projects of the world. If it fares well and fulfills its promise, the rest of the plans—the plans that will move forward for almost a century in both the Missouri Basin and the Colorado Basin—will proceed. If it fails, the plans will falter and the hopes of many of your neighbors will be dashed.

Cherish and preserve this project. It is a project of all the people—all the people of the valley and all the people of the Nation. Let no man abuse it. Watch your property, keep up your canals and ditches, maintain your gates and drains, guard and protect it, and, in turn, in dry seasons and in times of drought and dust, it will guard and protect you.

Tonight we are in a troubled world. There are storm clouds of international affairs around the world, and in Washington there is talk of curtailing vital western resource development. Here in Colorado we are looking far forward toward new horizons—horizons beyond which you have had the courage and the foresight to see new comforts, new wealth, and a better life. The horizons of all must widen. One horizon that I hope will widen is that of what constitutes extravagance and what constitutes economy. I hope that horizon widens so far that we, all over this country, can recognize that the greatest waste in this Nation—a waste so great that it cannot be measured in dollars and cents—is the extravagance of water wasting to the sea in a land that cries for food and power.

As we talk of far horizons, let our horizons be broad enough to realize that what we celebrate today is only the start—the start of a good partnership down a long, long trail toward the final success of this project—a long trail on which reclamation is happy to be embarking as a partner with the citizens of Colorado.

Enforcement of New Labor Law

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. LeFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan from the New York Herald Tribune of June 25, 1947:

HAMSTRINGING OF NEW LABOR LAW BY OFFICIALS AND UNIONS DOUBTED—MARK SULLIVAN SAYS ENFORCEMENT OFFICERS KNOW IT IS WILL OF PEOPLE, WHILE UNION LEADERS REALIZE OWN RECALCITRANCY BROUGHT IT ON

(By Mark Sullivan)

WASHINGTON, June 24.—In the atmosphere of Washington, following enactment of the labor law, the principal characteristic has been talk of controversy and bitterness. Much of this dwelt upon the idea that the new law might be hamstrung. One innuendo said that labor leaders and unions would make the law difficult to enforce. A parallel innuendo said that enforcement of the law by officials now in the Truman administration, and others to be appointed by him, might be lukewarm.

Both innuendoes arises largely from possibly the most unfortunate of several unhappy characteristics of Mr. Truman's course in his veto of the bill and subsequently. Not only did he say the law was bad and say it in many forms and in emotional words. He declared also that the bill was unworkable. This, it was said, would give justification to labor leaders to prove that the law was in fact what the President said it was. Further, it was said that the President's characterization would give color to the attitude of enforcement officials under him.

An objective judgment might doubt all this. As to enforcement officials whom the President is yet to appoint under provisions of the law, these must be confirmed by a Senate which already has strongly expressed its support of the law. As to enforcement officials already in office, here are good reasons why they should enforce the law in good faith. One is the character of the most important enforcement officials. Some of the most highly placed are conscientious men, determined to enforce the law in the spirit of conformity to high standards of practice. Another reason is realization that the law expresses the overwhelming will of a Congress which will be in existence for another year and a half. Added to this is an assumption of the possibility that the Republican Party, which controls Congress and is responsible for the law, may also control the executive department of Government after the 1948 elections. The new labor law is the expression of a settled determination by a large majority of the people. It has almost the force of a quiet revolution. Any calm judgment must expect the law to be permanent, with only such modifications as may appear necessary.

ATTITUDE OF LABOR LEADERS

As to the attitude of labor leaders and unions, there is a condition not taken into account in the current excitement. Some labor leaders are undoubtedly men of recalcitrant temperament. But others realize that the new law is a result of a recalcitrancy in the past on the part of some labor leaders which other leaders already deplored. A majority of the more seasoned labor leaders, while carrying provisions of the new law to orderly judicial tests, will discountenance any suggestion of hamstringing the law in operation.

Besides, there are the workers, the union members, as distinguished from the union leaders. Running through the new law is a spirit which gives to workers and members of unions greater immunity from dominance by their leaders than they formerly had.

When Republican leaders and other proponents of the labor legislation called it a "bill of rights for workers" they were not using that term as a mere slogan. It was their earnest purpose that workers should be free from domination by leaders. The labor committees of the House and Senate, through weeks of patient hearings, learned that some of the most flagrant examples of unreasonable strikes and intolerable practices took place against the wish of a great majority of the workers involved. Protection for these assurances to workers of a larger opportunity to act upon their own wishes and judgments is a central purpose running through the new law and specifically assured by many provisions. Any policy of leaders to harass industries for the purpose of proving the new law unworkable, if such a policy should be attempted, would be checked by the new power of workers to control their unions and their relations with management.

CONTROVERSY EXAGGERATED

The whole spirit of controversy that exists now in the closing days of enactment of the labor bill is much exaggerated and rests on an incorrect assumption. This was no controversy between large groups evenly matched. It was resistance by a small group against an overwhelmingly large one. Determination to write new labor legislation was held firmly by an immense majority of Congress. The determination was the more firm because Congress felt that its own prerogative was at stake, as against the comparatively small section of the national community represented by the labor leaders, and also as against the executive department. What took place was the protest of a recalcitrant minority, some of them adept in stirring up emotion. That kind of resistance can make much noise, and this one was very raucous.

If there is a wave of demands by labor during the coming year, they will not arise from the new labor law nor be incited to prove the new law unworkable nor to influence the election next year. They will be caused, if they come, by rising prices and cost of living. That is a condition calling for more attention right now than the aftermath of a concluded controversy over labor legislation.

Air Safety

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include herein a recent very thoughtful and timely article on air safety which appeared in the Boston Traveler of June 16, 1947.

The air editor of this publication has made long, careful studies of air-safety measures and related subjects, and his commentary recommending more careful check of pilots is deserving of consideration in connection with the efforts of Congress to reduce accidents in the air. The article follows.

AVIATION CHANGES URGED FOR AIR SAFETY—STANDARDIZED EMERGENCY PROCEDURES, STRICT PILOT CHECKS SEEN NEEDED

(By George Akerson and Bob Sibley)

(George Akerson, assistant to the publisher of the Herald and Traveler, is a former lieutenant colonel with the Twentieth Air Force and an expert on multiengine aircraft and their operation, including emergency procedures. Bob Sibley is aviation editor of the Traveler and chairman of the board of governors of the Aviation Writers Association. This is one of a series on this important subject.—EDITOR.)

The time has come—and the conclusion is unmistakable from recent events—for the establishment of standardized emergency procedures and strict, periodic checks for airline pilots.

These standard procedures for emergency situations, and the frequent testing of pilots in successful usage, are needed so that there will be no further incidents in which a pilot, with only a limited number of seconds in which to make the right moves at a critical moment, fumbles his way into a tragic error or series of errors.

CHECK OF PILOTS

It may be asserted without hesitation that there are pilots operating aircraft on some United States air lines whose ability to cope with an emergency situation is open to question.

It may be asserted without reservation that there are pilots flying commercial planes today who have failed in tests, at one time or another, designed to determine the pilots' capabilities in an emergency.

There should be standardized procedures and pilots' checks to determine proficiency, and this matter should have the immediate attention, to this end, of the Civil Aeronautics Board, the Civil Aeronautics Administration, the Air Transport Association of America, and the presidents and operating heads of all United States air lines.

How many thousands of hours an air-line pilot may have is a matter secondary to the question of how capable he is when one or more engines cut out, especially on take-off; when he is running out of runway, or when he gets a fire warning in a nacelle, or when there is need for a quick decision on a "go-around" problem, whether to feather or some other crisis.

ARMY'S METHOD

During the war the Army Air Forces, as part of its training program for pilots of multiengined aircraft, put into effect a detailed set of procedures for emergencies, conducted strict training, and required pilot checks from time to time to make sure that the men handling large aircraft were competent to meet emergencies.

The procedure, the moves to be made under a given set of circumstances, were standardized. Pilots were required to be able to follow through on these moves swiftly and surely.

An amazing and significant fact in connection with these procedures is the fact that some pilots who entered the AAF from the airlines were unable to pass these tests sufficiently well to qualify them for instructors, although some of them were excellent instrument pilots and became instrument instructors.

And an added fact, fully as amazing and thoroughly disturbing, is that some of these airline pilots who failed to pass the emergency procedure tests are now back flying airline routes.

These facts are matters of record.

AIRMAN FOR 27 YEARS

The man who developed and designed the emergency procedures program for the AAF during the war was Brig. Gen. Carl B. McDaniel, one of the Army's outstanding fliers,

a command pilot and veteran of more than 27 years as an airman.

What is obviously needed is a standardized program, the McDaniel plan or something similar to it, for use by the airlines.

Some of the airlines have excellent training programs covering emergencies. The programs differ in detail. On the record, from time to time, is evidence that such training has been neglected by other airlines.

What this lack of a standardized plan has meant in the past, and may continue to mean in the future, will be shown in subsequent articles in the Boston Traveler.

Address of Dr. Joseph F. Thorning

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. McCORMACK. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I herewith insert an address delivered by Dr. Joseph F. Thorning, rector of St. Joseph's Church, Carrollton Manor, Md., and associate editor of the Americas and World Affairs. Dr. Thorning treats a timely topic in scholarly fashion. His studies in the field of sociology and economics qualify him to discuss some of our important problems. Fortunately, this Maryland educator, author, and lecturer offers constructive solutions in complete harmony with our democratic liberties.

The address follows:

Fifteen years ago today, in the Oxford Union at Oxford University, England, I heard a young undergraduate student, with no little mixture of eloquence and humor, describe the United States of America in the following terms:

"There is this that is unique about America: the people of the United States are passing from the stage of adolescence to that of decadence,—without the intervening period of civilization."

The remark, of course, was meant to be humorous. And yet, it carried enough sting, if not truth, to suggest that we examine our consciences, on a patriotic occasion such as this, asking ourselves to what extent, if at all, the jibe can be justified.

One of the obvious replies to the former Oxford student, if he lives today, would be to remind him that, some years after his prophecy of disaster for America, he himself and his fellow citizens in Great Britain are able to survive, in a starving world, at least in part, because of the bounty of the 'uncivilized' American people.

Would not the assembly here tonight of the Elks and their Frederick County friends constitute another commentary on our country's state of civilization? Are not benevolence and fraternal charity, two conspicuous marks of the order, signs of civilized wisdom, foresight and generosity?

Turning to domestic critics of American civilization, we find ourselves face to face with the angry denunciations of Mr. Henry A. Wallace and other Soviet sympathizers. According to these dissatisfied patriots, the United States is now riding high on the tide of reaction, monopoly capitalism, interracial injustice, and atomic-age imperialism.

Each of these criticisms, it seems to me, ought to be considered separately. And, in our discussion, both sides can agree that it is a wonderful blessing of providence that Mr. Wallace and all the rest of us reside in a part of the globe where the give and take of free speech is something more than a window dressing, theoretical right, good only upon paper. There has been no more heartening display of the basic principles of American democracy than the Nation-wide crusade of Henry A. Wallace to present views on foreign policy that conflict with the administration's line of action. As one who thinks that Mr. Wallace is wrong and that President Harry S. Truman is right in trying to meet the challenge of world Marxism, I am happy to be free to uphold opinions that do not coincide with the pro-Soviet apologies of the editor of the New Republic. To protest or to disagree does not mean consignment to prison or a concentration camp. Wherever ideas are free to circulate, men are free. To that extent, at least, we are not slaves to reaction.

On the other hand, it must be acknowledged that the tendency in the United States toward monopoly capitalism is both real and dangerous. In upholding the individual's right to own a home, a shop, a farm or factory, we are not obliged to close our eyes to the production and price-fixing practices of giant corporations. Big business, in many cases, has yielded to the temptation to swallow little businesses. In Senate Document No. 17 (80th Cong., 1st sess.), the acting chairman of the Federal Trade Commission, Mr. R. E. Freer, reports that there have been 1,800 corporate mergers in 7 years. This averages out as a ratio of one for every working day. Year by year, month by month, and day by day, independent firms are being merged into, or acquired by, industrial giants. The greatest number of acquisitions took place in the food and beverage, textile and apparel, chemicals, farm machinery, and air transportation equipment industries. If this trend continues, it means that two or three companies will produce and price all the clothing for 140,000,000 people.

The same report indicates that a new wave of mergers is under way in the dairy industry. This development bears a striking resemblance to that of the late twenties, which witnessed the emergence of giant corporations and the elimination of hundreds of small dairy companies. Since 1940, acting Chairman Freer reports "the Borden Co., the second largest firm in the industry, has acquired 14 different concerns." In fact, most of the recent acquisitions in this field have been made by Nation-wide firms, which not only purchased other concerns in the dairy industry, such as creameries and ice-cream plants, but also expanded into such unrelated fields as fisheries, sardine canneries, and breweries.

In meat packing, acquisitions consisted of the purchase by large packers of small, strategically located meat-packing houses, as well as the absorption of firms in such divergent lines as poultry and eggs, creamery products, coffee, macaroni, and canned goods.

These are commodities, it should be observed, that have a direct relationship to the economy of Frederick County, whose meat and dairy products are justly famous. Every producer and every merchant in the community, as well as the consuming public, should be concerned about a concentration of economic power that, increasingly, is getting a strangle hold on mines, mills, building materials, fuel, publishing houses, and drug supplies. Unless the trend is reversed, most markets, whether for buying or selling, will be controlled by a handful of big corporations.

If all good citizens agree that political supergovernment is to be halted and corrected, how important it is to curb the rapid growth of private supergovernment in industry. Otherwise, what will happen to honest competition, "the American way of life," and "freedom of economic enterprise"? Everybody talks about free enterprise; it is time to do something about it.

With respect to interracial justice, Mr. Wallace is an echo of the Soviet propagandist, Ilya Ehrenburg. The latter, as a guest of the United States Department of State, toured the United States. Upon his return to the U. S. S. R., he singled out two features of the railway station in Atlanta, Ga., for special attention—the "marvelous invention of a luggage locker, where, for 10 cents, you could store goods"; and the nearby "waiting room for Negroes, squalid, dirty, and small."

To be sure, good Americanism and good Christian principles alike teach the hideousness of discrimination. All citizens, according to the Constitution, have equal rights before the law. Whenever an issue in this sphere has reached the Supreme Court of the United States, it has been decided on the broad grounds of humanity and fairness. Influential groups of people, in every part of the United States, including the South, are engaged in the task of intercultural education. No small progress has been made. Mr. Wallace knows this, as should Mr. Ehrenburg. To overlook the positive, constructive contributions that have been made with respect to interracial justice in the past 20 years is to perpetrate a libel, more apt to injure than to promote equity.

The charges of oil-scented imperialism, alleged by Mr. Wallace, are likewise subject to analysis. It is true—and I believe every administration official may as well admit it—that the people of the United States have an interest in the oil of the Near East. Iran and Iraq and Saudi Arabia contain almost 66 percent of the known reserves of petroleum in the world. It is the richest stake of unexploited oil on the face of the globe.

Our own supplies have a verifiable limit. For that reason, we are concerned about the fate of Turkey, Greece, and Italy—three countries that command the Mediterranean. What was once simply the "life line of the British Empire" is today a vital artery in the corporate life of nations. Every patriotic citizen wants to keep that artery intact. If it is cut or choked off, by totalitarian Red Fascists, it may mean stagnation or death for America.

The issue is not academic. The crisis is here. Either the lives of 300,000 American boys were sacrificed in vain and tax moneys to the amount of $300,000,000 were wasted, or a dictator, worse than Hitler, has to be stopped.

At home we can do the job by maintaining civil liberties, by enacting laws to eliminate the present trend of corporate mergers and acquisitions, by practicing the divine command to love one another, and by supporting Secretary of State George C. Marshall in his gallant effort to seize the initiative in world affairs.

We can strengthen democracy in the United States by rooting out abuses in the economic and social order; we can promote democracy abroad by making it abundantly clear to the Nazi-minded followers of Karl Marx that if ever again our sacred heritage of freedom be imperiled, we Americans of all races, nationalities, and creeds pledge to the Nation and to our flag our lives, our fortunes, and our sacred honor.

A Reply to Mr. David Lawrence

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. HART. Mr. Speaker, under permission to extend my remarks, I am

including herewith a statement of Rev. Philip S. Dodson, S. J., director of the Institute of Industrial Relations of St. Peter's College, Jersey City, N. J., replying to an article by Mr. David Lawrence, which appeared in the Jersey Journal and many other newspapers throughout the country on June 16 last. The statement of Father Dobson taken from the New Jersey Journal of Friday, June 20, follows:

LAWRENCE VIEW OF CHURCH GROUP STAND HIT BY FATHER DOBSON

Rev. Philip S. Dobson, S. J., director of the Institute of Industrial Relations of St. Peter's College, today issued a statement replying to an article by David Lawrence in the Jersey Journal, June 16. Father Dobson wrote:

"David Lawrence, in his syndicated column of June 16, says: 'Some time ago this writer took occasion to protest against the statements on current issues expressed by a Protestant group—the social research department of the Federal Council of Churches of Christ in America—because it appeared to be going beyond the application of moral influence to economic questions.'

"In the same column of June 12, Mr. Lawrence singles out for attack the statement of the Social Action Department of the National Catholic Welfare Conference on the Taft-Hartley bill, saying: 'Now a Catholic agency comes in for criticism because the principle in both cases is the same.' Later, in the same column, Mr. Lawrence says: '* * * for any church unit, functioning as an institution, to mix in as a pressure group on specific laws in the economic or political field is to involve America in unfortunate controversies * * *.'

"From these and other passages in Mr. Lawrence's article, we can sum up his position as follows: No church group should pronounce publicly on the morality of issues involved in economic legislation."

CONCERNED WITH ARTICLE

"It is not my purpose here to discuss the statement of any particular church group. I am concerned with Mr. Lawrence's statement that it is not the function of any church unit to discuss legislation of this nature in terms of moral issues. In effect, he tells the church: 'Mind your own business.' Then he proceeds to tell the church just what its business is. He goes on to say that morality should no longer be discussed in the field of technical economic legislation.

"Herein, Mr. Lawrence indulges in the very practice for which he chides, 'any church unit.' Allegedly, any church group is so inexpert in the technicalities of political economy that it is not qualified to decide upon the morality of the issues involved. Yet he, a layman, sets himself up as an arbiter in the field of public morals. Morals come down to a question of what is right and wrong. Obviously, the question of right and wrong enters into the field of economics and laws. While basically simple, the science of morals requires study and research, as does any other branch of knowledge. Mr. Lawrence, apparently, considers himself sufficiently proficient in the science of morals to outline for church groups how far they should go in applying the principles of morality to legislation."

SPEAKS AS INDIVIDUAL PRIEST

"In no sense do I take it upon myself to assume the role of official spokesman for the Social Action Department of the National Catholic Welfare Conference, or for any other group. I am speaking as an individual priest, a role which Mr. Lawrence, in his column, has conceded as proper. I am speaking, however, on the point which Mr. Lawrence raises, i. e., the right of a church group to offer moral guidance on subjects that concern, in some way or other, the spritual welfare of our people.

"Of course, if a church group is to pass judgment on the moral aspects of the Taft-Hartley bill, for instance, the members of that group should have read the bill carefully. They should have an adequate knowledge of the basic economics involved—in order that they may know adequately the impact of the bill on the rights of the people and the consequences in store for our industrial relations.

"I am acquainted with a few of such church groups. They have among their number, men with doctorates in economics. These groups have been in consultation with lawyers and professors with broad experience in this field. It seems to me that these church groups are armed with technical economic knowledge, sufficient to enable them to judge the moral issues involved, and in degree, this is probably greater than the knowledge Mr. Lawrence could claim in the field of morals."

NOT PRESSURE GROUP

"Further, I deny that pronouncements on moral issues by a church group in this field must lead to the conclusion that it is a pressure group. Admittedly, the teaching of correct applications of moral principles is designed to lead men to the truth. Truth is independent of and above the political fortunes of any particular party. No church group, which has moral guidance to offer to people, must be stifled into neglect of duty by the too ready application of tags of vote-getting or pressure group.

"Mr. Lawrence's position is not a new one. From time immemorial attempts have been made to circumscribe the activities of the clergy on moral issues by those who would restrict religion to Sunday and to the pulpit. Some of these people have been sincere but misguided, others have desired to be free as pagans in their business and recreational life.

"The question has been bandied about under such labels as separation of church and state, business is business, religion and science do not mix, the church should stay out of politics. It would take a whole series of articles to point out the half truths and the whole heresies in this jargon."

SMOKE SCREEN

"Suffice it to say that God, the maker of man, has commanded not only clergymen but all mankind to do good and avoid evil in every sphere of life. In the sense that the first amendment to our Constitution specifies that there shall be no official church in our country, we have—and we are glad that we have—a separation of church and state. From the time of our founding fathers to the present day, however, with hardly an exception, our statesmen have repudiated any separation of God and His laws from the state and its government. It is not the function of the church to advise nuclear physicists on the technical questions of the splitting of the atom. It is the function of the church to pass upon the morality of the use of the atom bomb as it affects human life. Religion and business do not mix in the sense that it is not the function of the church to advise Henry Ford II on the type of axle he should use in a new model. It is the function of the church to pass upon the general moral question of a living wage for his workers and a fair profit for himself. So we could go on to disperse the smoke screen raised by this litany of superficial slogans.

"A pronouncement by a church unit does not enjoy the same authority as would a pronouncement representing the official thought of the church as a whole. However, when a church unit, composed of men, who by the very nature of their calling have made a special study of the science of morals, makes a pronouncement on moral issues, that church unit should be regarded as a more reliable source of moral guidance."

SOCIAL STRUCTURE COMPLEX

"Mr. Lawrence is correct when he says the clergy should strive to foster in individual citizens personal sanctity and high ideals. He errs when he bids the church to stop there. I believe Mr. Lawrence is sincere in saying this, but he has been misled by his philosophy of individualism. With the passing of the years our social structure becomes more and more complex. At the same time, the social question remains basically a moral problem, i. e., the basic question remains—what is right and what is wrong. The people are clamoring for moral guidance on these basic moral problems. Individual clergymen, church units, and churches as institutions would be failing in their calling, if they did not go beyond the question of personal sanctity, and offer moral guidance on these problems, as did Christ our Lord.

"The limits of this article precludes a discussion of the Taft-Hartley bill, section by section. I have not been impressed by the caliber of organized labor's opposition. For the most part, it has been too emotional and not sufficiently specific. It seems to me that a more convincing refutation of the bill would have consisted in taking the bill, section by section, and pointing out the consequences of each section."

BILL HAS SEEDS OF TROUBLE

"I have discussed the sections of the bill with lawyers experienced in industrial relations. We have come to the conclusion that the bill contains the seeds of industrial warfare which might last for several years. We hope that we are wrong, but can we afford to take the chance? At this crucial period of our country's relations with a sick world, neither we nor the rest of the world can afford such turmoil. Our labor-relations problem cannot be divorced from the problem of world peace and the salvation of other nations.

"To oppose this bill is in no way tantamount to one's being blind to the abuses of some of the sections of labor and management in the past. The recognition of such abuses, on the other hand, in no way binds one to canonize any piece of legislation that may come out of the congressional hopper, as being a suitable remedy for such abuses.

"The whole problem calls for more light and less heat, more study and less invective, more honesty and less greed. All church groups, operating within the province of morals, have the duty of leading both labor and management toward the practice of these higher ideals, that we and the rest of the world may enjoy more fully the blessings of God."

Dividing the Nation on Labor

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1947

Mr. ANGELL. Mr. Speaker, apropos to the labor bill which was recently passed over the President's veto and is now the law of the land, I include herewith two editorials, one from the Portland Oregonian and the other from the Oregon Daily Journal, both published June 21, 1947, which are worthy of consideration in connection with this important legislation. The editorials are as follows:

[From the Oregonian, Portland, Oreg, of June 21, 1947]

DIVIDING THE NATION ON LABOR

The Republicans in Congress who insisted that corrective labor legislation should be bundled into one omnibus package invited

the veto which President Truman accorded it Friday. This may have been good political strategy for the 1948 campaign, but it is not the best way to make laws. It was not difficult for Mr. Truman to find fault with some parts of the Taft-Hartley bill, and to reject the entire measure on that account.

The veto irrevocably makes labor legislation a No. 1 issue in the 1948 presidential campaign. Though Mr. Truman himself requested, and renewed the request in his veto message, certain mild labor law reforms, the political result of the veto is to put him in the position of a defender of organized labor. This is a role he must assume, politically, though not long ago he was asking Congress to draft strikers into the Army.

The decision to veto was made easier by the conduct of the big unions, which have been on their good behavior this year. The public concern which brought widespread demand for protection of the whole public against paralyzing strikes in transportation, steel, coal and utilities has been lulled somewhat. But the Republican majority in Congress, much criticized for not producing labor legislation at the drop of a hat, worked carefully and deliberately to enact legislation which was not simply retaliatory but which would lay down a solid, long-time basis for employer-employee relations.

The determination of Congress to put its program into effect, as represented by the substantial House vote to override the veto, points the direction of the next campaign. Though Democrats joined in enacting it, the Taft-Hartley bill is the Republicans' baby—and it faces a rugged childhood. The 5,000 words of the President's veto message were not expected to change votes in Congress, but to establish his position with the public.

It has been the opinion of this page that Congress erred in subscribing to the demand of Senator Taft and others for an omnibus bill, and refusing to consider each major change in the labor statutes, such as outlawing the closed shop, cooling off national strikes, and preventing jurisdictional strikes and secondary boycotts, on its individual merits. Had the legislation been separated, the President would not have been given the opportunity to knock it all on the head and to emerge in the unfamiliar role of the champion of labor.

Additionally, while this page has approved the intentions and a good share of the omnibus program, it has entertained serious doubts as to the practical effects of other portions. One can see no justification for a political maneuver which unfairly establishes the Republican Party in the minds of many working men as the enemy of labor, and the Democratic Party as its friend. The need for improvement in labor relations is so important to the national welfare that a political division on those lines, wholly artificial, establishes us as a Nation of dunderheads.

[From the Oregon Daily Journal, Portland, Oreg., of June 21, 1947]

POLITICS SUPREME

To the political Taft-Hartley labor bill President Truman has applied a political veto. Yesterday the House voted, 331 to 83, to override the veto, thereby leaving the issue in the hands of the Senate.

But in overriding the veto the Congress will not take itself from the spot on which the President's veto message placed it. The message was so well constructed that, political as it was, the President can expect more popularity, and more votes, as public reaction to the overriding of the veto, than if the Congress had sustained him. His decisiveness in handling both this and the tax bill add to his political stature.

It was not a good bill. Its flaws were dispassionately recognizable. Otherwise, everything else about the passing of the bill, its veto and the House vote to override, was passionate and at high pressure almost without precedent.

The President acknowledged the labor abuses which he said the Taft-Hartley bill would increase rather than solve. He said there is still time at the present session of the Congress to pass a bill that will win his signature.

Therefore, if law can solve labor-management problems wholly or in part the Congress should have the President's aid rather than his silence as to the specific provisions the law should contain.

It is unfortunate that the merits and demerits of the labor control bill have been lost to sight in political controversy. It is unfortunate that political considerations must trespass upon economic situations and human relations. It is unhappy that the essential spirit of cooperation has not been brought more to the fore as to the ultimate solution of what's wrong between labor and management.

Assume that the Senate will also vote to override. For a while, at least, there will be untold confusion and unmeasured bitterness. There will be thousands of lawsuits. So much red tape will wind about and through the fabric of labor relations that good collective bargaining will have short shrift.

It is for this situation that the Republicans, in overriding the veto, make themselves responsible. Since unrest and economic consequences are bound to be serious, the usual impact of contending elements in 1948 becomes the more certain. Strongest statements in the President's message are these:

"I share with Congress the conviction that legislation dealing with the relations between management and labor is necessary. * * * But this bill is far from a solution of those problems.

"The bill taken as a whole would reverse the basic direction of our national labor policy, inject the Government into private economic affairs on an unprecedented scale and conflict with important principles of our democratic society. Its provisions would cause more strikes, not fewer. It would be a dangerous stride in the direction of a totally managed economy. It contains seeds of discord which would plague this Nation for years to come."

Every life every day in this Nation, now and in the future, is affected for the worse by labor relations that create pandemonium and by legislation that increases it. America's millions call for a solution that will rise from the low of politics to the high of public security.

Government Economy

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1947

Mr. COTTON. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include herein the following editorial on the subject of Government economy from the Nashua Telegraph, of Nashua, N. H., of June 23, entitled "Congress Represents the People":

Recently the governors of most of the far-Western States met and jointly denounced the action of the House in heavily reducing appropriations for the Reclamation Bureau which would have largely been used for the construction of tax-exempt Government electric-generating plants and related facilities. The governors announced that they would make a concerted demand on Congress to restore the funds to their original figure on the grounds that the future welfare and industrial development of the West is at stake.

Here is a perfect example of why economy in government has become so difficult a goal to achieve. The plain and ominous fact is that we have come to look on the Federal Treasury as a bottomless pit which may be raided at will for any region's pet projects. All of us are strongly in favor of a reduced budget—so long as budget reductions don't affect us. Governors, Senators, Representatives, mayors, and a host of minor officials shriek to high heaven whenever a nickel is sliced from an appropriation for their States and towns.

Another plain and ominous fact is that we have lost local independence and local self-reliance. We want the Federal Government to spend billions for purposes which are clearly within the provinces of local government or of private business enterprises. And thus, we are surely and swiftly building a supergovernment with all the threats to freedom and independence that supergovernment inevitably implies.

It is senseless to blame Congress for waste and prodigality when the people at home who cast the votes demand a continuation of unnecessary spending. Congress simply represents a distillation of the voice of the people. In the long run, the people are given what they ask for—and it is the people who must choose between supergovernment, whose end is always some form of dictatorship, or our constitutional government of limited powers with its firm guaranties of maximum freedom for all.

Outlook for Success of Taft-Hartley Labor Plan

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1947

Mr. DEVITT. Mr. Speaker, under leave to extend my remarks, I wish to include a very interesting analysis of the new labor bill recently made by Gustaf A. Nordin, a Washington correspondent of the St. Paul Pioneer Press, in the June 15, 1947, edition of that paper. Mr. Nordin is a seasoned reporter with much experience in the field of labor-management relations. His analysis of the operation of the law and the probable difficulties to be avoided should, therefore, be of interest to the Members of the Congress. The article entitled "Outlook for Success of Taft-Hartley Labor Plan" follows:

WASHINGTON.—The success or failure of the Taft-Hartley bill to bring about industrial peace in this country will rest in the hands of two groups currently taking opposite positions on the measure.

Most important of these two groups is the executive branch of the Government. Poor administration of the law could discredit it in the eyes of the public.

Of secondary importance, but a distinct factor, is the employer group. Failure on the part of employers to recognize the responsibilities which must be assumed by them along with the greater freedom of action offered business by the Labor Relations Act could do much to tear down its effectiveness.

There is always present, of course, a third group. That is organized labor. At present, labor union leaders are doing everything possible to break down administration approval

of the law, and are applying the squeeze on every legislator, including some of the authors of the act.

At first, labor unions will buck the law. Resistance is bound to be strong for months as various provisions are tested. If the courts uphold Congress the labor resistance may die out. It will, that is, if in administering the law the executive branch of the Government demonstrates that the law, in the right hands, need not be harmful to labor.

It is at this point that the measure enters the field of politics. With 1948 a presidential year, some Government leaders may see the value of showing that the Taft-Hartley Act is unworkable. Should that happen, legitimately or otherwise, it would help discredit the Republican leadership which fostered the act.

It is unlikely that such a thing will happen, but with proper prodding from groups deathly opposed to the act, it is a possibility.

Employers could help this situation along, too, by being arbitrary and unreasonable—feeling their oats after a period under the Wagner Act when they feared to open up against organized labor.

There are freedoms in this act which the employer now inherits and, if misused, would help destroy the very instrument management has been clamoring for. For instance:

An employer hereafter decides the terms of employment in his plant or office. He may grant the union shop, but not the closed shop, and he need not dismiss a man who is not acceptable to a union as long as that man pays his union dues.

The employer will be able to sue the union for damages and through the National Labor Relations Board can tie a union into knots with injunctive powers. If carried too far, this procedure could boomerang on business just as the failure of some unions to live up to bona fide contracts hurt labor.

Likewise, the employer need not bargain on an industry-wide basis; he need not bargain with his foremen, even though they may be organized; he need not consider any union demands not written into a contract during the life of that contract.

If he can show that there is a Communist holding office, either in the local or international with which he must deal, the employer can refuse to bargain collectively and be perfectly within his rights. Some employers may try to use this wedge by seeing Communists where they are not.

The employer will receive the right to talk to his employees without being accused of an unfair-labor practice. He can talk against unionization of his plant, but to carry this too far, because of personal dislike of unions, could result in future trouble.

Secondary boycotts, jurisdictional strikes between two unions, and attempts to organize a plant by calling a strike are all illegal and thus remove from management problems which weighed heavily upon its shoulders. As the burden is lifted, the danger is that some may try to play one union off against another and thus stir up interplant friction which might break both unions, even though it meant temporary trouble for the industry.

There are dozens of ways in which unions could be hamstrung temporarily. But to do so, an employer risks peaceful relations and, worst of all, he risks the loss of public opinion.

The Taft-Hartley bill creates a check against such an eventuality—the failure of either the administration, business, or labor to give the act a chance. It establishes a joint committee to study and report on basic problems affecting friendly labor relations and productivity. An appropriation of $150,000 is set up. The first report is due February 15, 1948, a final report, January 2, 1949.

Minnesota's Senator JOSEPH H. BALL is talked of as chairman for that committee. Any attempt, by any side, to wreck the law which he helped write will not be gently handled by BALL, of the committee.

Tax-Reduction Bill

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Daily Ardmoreite, Ardmore, Okla., of Sunday, June 22, 1947:

MR. TRUMAN DOES DUTY

If President Truman had been seeking popularity he would have approved the tax-reduction bill.

It is a lot easier to give than to take. The Republicans were elected to office on a tax-reduction platform and they want to make their promise good although they know the people ought to be required to sit steady in the boat and keep earning and keep paying until a dent is made in the huge indebtedness of the country.

Business does not need money. Business, for 5 years, has had all it could do. The greatest earning period in the world's history was through the days of this world war. The war brought these profits, the war brought the spending that made the profits possible and the business of today ought to bear the principal part of the burden of the heavy taxes.

Mr. Truman's entire cabinet had advised him to veto the tax measure. The war giveth and the war taketh away. These heavy taxes should not be allowed to stand at peak for the boys to pay off when profits are lean and business is poor. Sure it would be pleasant to have taxes reduced but the burdens of Government must be borne.

If we had not had money to spend as we did then victory could not have been ours and after all that is said and done the money we owe saved business all it has and business must pay whether it wants to or not.

Aviation Research and National Security

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. DORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gen. George C. Kenney at Massachusetts Institute of Technology alumni day symposium, at Massachusetts Institute of Technology, Cambridge, Mass.:

At the conclusion of any operation, whether it be the building of a bridge, manufacturing a lot of 1947 model automobiles, or fighting a war, it has become standard procedure to sit down and study the reports, analyze the events that occurred, see what mistakes were made, why they were made, and how much they cost. From this analysis we are supposed to find out how to do the job better next time. In the case of the bridge builder and the automobile manufacturer, the scheme works quite well. The bridge builder keeps right on building bridges and the automobile manufacturer starts on his 1948 model as soon as he has finished with the 1947 line. The conditions of the problem do not change much from one operation to the other.

In warfare, on the other hand, a period of 20 years or more elapses between wars. New weapons are developed which in turn influence tactics and strategy and even dictate the location of battles and campaigns. If military men do not keep abreast of such development and correctly evaluate their influence, they are liable to be accused of trying to fight the last war instead of the present one. The losers in most wars, as a matter of fact, have done this very thing. Napoleon defeated a lot of generals who were still thinking in the past. In World War I, the stalemate and the continual slugging match that won or lost a few yards of ground, can be attributed to the fact that both sides were merely continuing their previous wars. The blitz warfare of the Second World War with its use of air power and mechanized forces smashing through the strongest defensive positions and quickly gaining the decision, almost gave Germany world dominion. Hitler was finally defeated only after the Allies had learned how to outblitz him.

After 6 years of struggle and the subsequent analysis of events, there are certain definite conclusions that we can make—certain methods and weapons which should be further developed—others that should be modified to meet changed conditions and still others that should be discarded as obsolete and no longer worth spending our national defense appropriations on.

Air power has become the decisive element in warfare. The conflict is opened by air power and the first action is an air action. Air power is the only means of defense against air attack and the battle for control of the air must be settled before the surface forces of the winner can get under way. In fact, the winning of the air battle has become so decisive that in the future the role of surface forces may very well be that of mopping up die-hard detachments and guerrillas and completing the victory by occupation and administration of the enemy country. The world today is at the mercy of the airplane.

Air-borne operations, with the flying of troops, supplies, and reinforcements to the scene of operations and the evacuation of casualties, will bring us up to date on an age-old basic principle of war illustrated so picturesquely by Gen. Nathan Forrest, when he said, "Git thar fustest with the mostest."

Our analysis of past battles and campaigns, however, must be more than cultural. To analyze Pearl Harbor simply as a sneak attack would be wrong. To simply conclude that aircraft could sink or damage naval vessels would be insufficient. Actually we had known that for years. The real lesson was that our national defense organization was wrong. We had plenty of warning. We had had enough fighter defense to defeat the Jap air attack. We had everything necessary except the appreciation of what air power could do and the organization to insure that something was done.

We are now in the throes of trying to correct that defect, by unifying the Army, Navy, and Air Forces under a single head. As a matter of fact that will give us the organization we had to come to in both the European theater and the Pacific before the war was over.

In February 1945 Corregidor, the Gibraltar of the East, stood blocking the utilization of Manila Bay and the docks and harbor facilities of Manila itself. Corregidor was bristling with coast artillery, antiaircraft guns, and machine guns, and machine-gun positions. It had ample supplies of food and ammunition and was manned by a garrison

of around 8,000 fanatical soldiers, ordered to stay there and hold the position at all costs for the glory of the Emperor and greater east Asia.

Four thousand tons of heavy bombs in 10 days reduced the defenses to rubble, a parachute regiment of 1,800 men descended on the parade ground on the western end of the rock and 2,000 more men rowed across the harbor entrance from Bataan and landed on the beach. A few scattered rifle shots and Corregidor was again American territory. Mopping-up operations to dig the Jap survivors of the bombardment out of their caves took a little longer, but the so-called impregnable fortress had fallen to the bomb.

The lesson went beyond the facts that this operation was brilliantly executed, and that it was successful. It settled for all time the question as to whether or not we should spend our national defense appropriation on fortresses. It sounded the death knell of the fortress.

An analysis of World War II also brings out the tremendous advantage that superior equipment carries with it. With anywhere near equal forces, that force with the superior equipment wins. This was particularly true in aviation. Neither the Germans nor the Japanese could match our bombers. They had more range, carried bigger bomb loads, were faster, and were better defended than anything produced by our enemies. While at times both the Germans and the Japs produced fighter aircraft that excelled ours in some particular characteristic, ours had more range, better bullet-proof tanks, better armor, more structural strength, and were better all around combat weapons. The record of victories bears this out in both theaters.

The lesson here is to keep ahead of any possible enemy in technical development of aviation. If we maintain a lead in technical development of aviation, we will have gone a long way toward insuring that we win the air battle in any future war. If we win the air battle, we cannot lose the war.

In planning for that air battle we must visualize the weapons we and the enemy will have at that time and keep modifying our tactics and strategy accordingly.

We must constantly look ahead 5 to 10 years. Nine years from the time we began planning for an airplane like the B–29 it began flying over Japan. It was actually 5 years from the drawing board to its first operational mission. Even under the drive of wartime effort and with unlimited funds we were unable to get a new airplane into operation between December 7, 1941, and August 14, 1945. We fought that whole war period with aircraft types already in production when the Japs hit us at Pearl Harbor. Today we must be developing the aircraft and the weapons with which to defend the United States in 1952 and 1956. If we stop development today, it will not necessarily plunge us into war in 1948 or 1949, but it will leave us wide open to attack in 1952 if other nations go ahead with their development while we stand still.

In a few years our existing equipment will be obsolete. Others besides ourselves will have atomic bombs. Jet and possibly rocket-driven aircraft will be standard equipment everywhere for air combat and bombing. There seems to be no practical limit in sight for speeds and ranges, particularly if atomic-energy power plants are developed for aircraft. The time elapsing between the decision by some future aggressor to attack us and the actual attack itself is rapidly becoming a matter of a few hours. Unless we can find a way of defeating that attack or can show so devastating a power of retaliation that no one will dare to risk the consequences of war against us, we may suffer so appalling a casualty list in the first 24 hours that, coupled with the accompanying destruction of our industry, the Nation may be unwilling to endure further punishment and decide on capitulation.

We need a warning service extending as far out from our centers of industry and population as possible. We need fighters, constantly on station to take off on receipt of warning that strange aircraft are headed in our direction, challenge such aircraft and force them down, or shoot them down, if they cannot identify themselves as friendly. We already do this with surface vessels. That is what we have the Coast Guard for. No ship steams into our harbors without getting the proper clearances before they leave their home ports. We will have to do the same thing with aircraft.

Our primary insurance, however, will be our long-range striking force of bombers and their accompanying fighters capable of striking any target anywhere in the world at a moment's notice. This force should be capable of matching bomb tonnage with any possible enemy. No would-be Hitler of the future is going to attack us if we cannot only defend ourselves but by retaliatory action can destroy him. No future aggressor would even hesitate to attack us if we are defenseless or cannot trade punches with him.

This brings us to the part to be played by science and industry, both of which you represent. We need a lot of things that only you can produce. I will mention a few as illustrations. There are many more and the chemists, the physicists, and the engineers of the world are looking for the answers.

We need lighter, tougher, and more heat-resisting metals. Suppose that our pistons could stand a few hundred degrees more heat and let us utilize 50 percent of the power in our aviation engine fuel instead of about half that amount as at present. Our B–29 bomber would then go twice as far as it does now or achieve its present range with a saving in fuel weight alone, of over 9 tons. In the structure of the airplane itself, lighter and tougher metals will save us a lot more weight which can be put into more fuel, more bombs, more people, or more freight.

With greatly increased speeds, we need much higher rates of fire and much higher muzzle velocities in our aircraft machine guns that we have at present. Before these increases can be made we must have metals that will stand up under the terrific heats generated by pushing bullets through the machine-gun barrels at the rates we want.

The development of our ordnance is already far behind the development of our aircraft. We need metals of better conductivity to save weight in our electric wiring systems and our generators. When you consider that the wiring in the modern airplane is measured in miles, you can see that there is a substantial saving possible in this field alone.

There are thousands of such examples of the application of lighter and tougher metals which are more resistant to heat. Whether such alloys can be made or whether we have to get into the ceramics, I don't know. That is your problem.

The miracle of radar and its possibilities is continuing opening our eyes, but we must utilize it still more and get rid of some of its present limitations. It needs to be smaller, lighter, have a lot more range, and a whole lot better definition. At present, the early pick-up of an airplane approaching at low altitude is impossible. We need to cure that situation. We want to watch the whole world and see what it is doing. If our ground stations can't see far enough, we will have to carry our radar eyes on patrolling aircraft. The speeds of tomorrow will make our present warning service not only obsolete but useless. As a matter of fact, when every nation can see day and night what the rest of the world is doing, it may be impracticable to plan on a war, and we may have peace. However, just to counter to many hopes along that line, we need a camouflage against the radar. It's all right for us to pick up the approach of enemy aircraft, but we want him to be unable to pick ours up. We want to know what he is doing, but surprise is still a powerful ally to have on your side.

Our airdromes are getting too big, and it takes the engineers too long to build them for us. We need devices to launch and lend aircraft in shorter distances. We need faster means of making an airdrome or to be able to utilize any reasonably level piece of ground that is reasonably dry without first compacting it and then covering it with concrete or steel mat.

Our radio is still too big, too heavy, and not sufficiently reliable. It cannot be tuned close enough, and the static still knocks it out. The frequency bands are so crowded now that it is often difficult to get a message through at any distance. Finer tuning will help immensely, but progress along this line is disappointingly slow.

The big hazard of flying today is from fire. In peacetime the crash too often results in the loss of the entire passenger list and the crew by fire. Our military aircraft cover their fuel tanks with rubber to keep enemy bullets from setting the tanks on fire in air combat. While of inestimable value in air combat, this covering does not help much in a crash and the weight is a serious penalty. In a B–29, for example, the bulletproof covering of its fuel tanks weigh over 6 tons.

We need a fuel that does not burn except in the engine—something like coal. It only burns in the stove. No one ever heard of the coal in a coal truck catching on fire just because the driver ran into a tree or a telephone pole. You can even shoot a bullet through a bomb without detonating the TNT and releasing the power contained in it. We desperately need an aircraft engine fuel solid or liquid that does not constitute the combat and crash fire hazard that we have now.

We need better and more efficient fuels with more energy per pound for reciprocating engines, jet engines, and for rockets. There must be room for still more progress along these lines in spite of the tremendous advances made in the last 20 years.

We hear a lot of talk about engines driven by atomic energy. There is some work being done along that line now, but I wonder if we are moving fast enough to insure that someone else does not outstrip us in the race. If we are second in this race, we should realize that in a future conflict it is going to be a case of the winner takes all.

The long-range radio-controlled missile of tomorrow must be countered. We not only must be able to detect the fact that it is on the way but quickly find the frequencies on which it is being operated and then cut in with our own radio control and prevent it from reaching us—the target. We may have to intercept it with a type of target-seeking antiaircraft kind of guided missile of our own.

We need an automatic position finder giving our guided missiles a continuous position fix and hooked into the controls so that the explosive charge will be detonated at the exact latitude and longitude of the target. The lack of accuracy at long ranges today makes it impractical to even approach precision bombing unless the bombardier can actually see the target and direct the bombing from his own airplane or from a mother ship for one or more "drones."

Aircraft speeds are about to pierce the so-called sonic barrier. Actually we know about as much about this new field as the Wright brothers knew about what they were getting into in 1903 just before they took off on that December morning down at Kitty Hawk, N. C. We need a lot of research on airfoil sections and fuselage shapes which are to fly at velocities above the speed of sound. What happens to our aircraft controls at these speeds? Can we even trust the human being to operate controls manually and hope that the pilot will not black-out every

time he touches them? Where are our instruments for the supersonic airplanes? What will happen if you shoot a gun out of an airplane traveling at, let us say, 2,000 miles an hour? Can you open bomb-bay doors and drop bombs from a bomber traveling at that speed? The list of questions is endless but the answers are still to be worked out.

What about the use of sound as a weapon? I mean sounds that are not picked up by the human ear but which may have a serious effect on the human system. The familiar dog whistle may give us an example. This sound, inaudible to you, is heard by the dog but it does not make him happy. His reaction is a nervous one, he is startled into attention. It may be just another newspaper story, but I read the other day of a man who is now being checked over by the British medical people after working in a laboratory testing new jet engines. The story was that his nervous system was out of gear from exposure to sound waves above the range of perception by the human ear. An airplane equipped with a sort of super dog whistle, conceivably could fly around a city for a while and upset the nervous systems of the whole population. I believe we need to do some research along this line. It may be just a fantastic dream. It may not.

Light waves offer a similar field. Above the infrareds and below the ultraviolets there may be weapons of future warfare as devastating as the atomic bomb. Other nations may find them. We must keep pace in order to be able to counter or defend against such threats.

Weather is a field of research that offers tremendous possibilities. On a limited scale we can already break up clouds and start rainfall where and when we want it. Instead of allowing rain clouds to drive past arid and semiarid sections, we should be able to shoot them down and put the rain where we need it. If we can extend this process, we can stop rain from falling where it has been falling for ages. It is not inconceivable that the Nation that first learns to plot the paths of air masses accurately and learns to control the time and place of precipitation will dominate the globe.

The change of a few inches of rainfall a year in many parts of the world would mean the difference between normal crops and starvation. We must not fall behind in this line of research.

While I have covered a lot of points that may seem to imply that our brains should be harnessed to the problem of how to obliterate the whole human race, you will note that practically every one of them can be utilized to benefit humanity and give us greater civilization.

If mankind is determined to exterminate himself, he probably will succeed. If he tries hard enough, he may even turn this globe of ours into a cinder some day.

If the weapons of warfare become too terrible, that fact may drive some sense into the brain of what we are pleased to call "homo sapiens" and induce him to find a way of settling his disputes without exterminating his opponents. Gas warfare has not been used since 1918 primarily because it was too easy for both sides to use it and neither combatant dared to risk retaliation in kind. Perhaps when every nation possesses all the diabolical weapons that can be devised they will be afraid to start the slaughter. There is no profit in winning a war if in the process you also are destroyed. If the world ever wakes up to the fact that in modern warfare both sides lose, we may have peace.

In the meantime we cannot let down in research. The laboratories of the world are burning the midnight oil these days searching for newer and more deadly weapons. If we fall behind in this race, we will some day find ourselves defenseless.

If we neglect our defenses and are unable to protect ourselves and the ideals and principles for which we stand, those ideals and principles will perish and we will perish with them.

In the councils of nations the strong are listened to, the weak are ignored. Weakness will not give us peace. It will invite the four horsemen—war, pestilence, famine, and death.

Robert Stoltz

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1947

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein two recent articles concerning my friend, the distinguished and eminent composer, conductor, and musical genius, Mr. Robert Stoltz:

[From Stars and Stripes for May 1947]

ROBERT STOLTZ, THE VIENNESE COMPOSER OF "TWO HEARTS IN THREE-QUARTER TIME," IS EN ROUTE TO THE STATES TO WRITE MUSIC FOR THE AUDIENCES HE LOVES

(By Julia Edwards)

In Soldier's Field, Chicago, at New York's Lewisohn Stadium, around the Hollywood Bowl, GI whistles and stamping feet greeted the soft melodies of Vienna. Back in Vienna, Robert Stoltz admits he loved it. "American audiences are the best in the world," he said, "especially when there are some soldiers on hand."

Conductor, composer, pianist, and discoverer of stars, Stoltz is a success because he likes what the people like and still can make the highbrows bow to his art. He works hard, 18 hours a day, according to his wife. You don't compose 1,200 songs, 53 operettas, and the music for 15 films between 9 and 5.

Long before he became the GI's favorite conductor, Stoltz made a jittery world laugh by announcing that he had written Hitler's funeral march. What's more, he told the Austrian press, he would be only too glad to play the dirge at the fuehrer's funeral. Then came the night of March 12, 1938. It didn't look much like Hitler's funeral. As his radio blared the news of the Anschluss, Stoltz pulled suitcases out of a closet. Downstairs his automobile waited, the engine heated and running.

Stoltz took a final, unhappy look about him. On this trip, you couldn't take along the best piano in Vienna. You couldn't carry a Tyrolean breakfast nook. You could take the music, but not Spring in Vienna. He turned, locked the door and left.

The guards at the Swiss border knew him. To the north, the Germans were marching into Austria.

"What are you doing here, Mr. Stoltz?"

"A concert in Zurich. Back in a week."

But Stoltz didn't return—not that way. His music verboten, Europe nevertheless continued to hear familiar Viennese tunes, such as Two Hearts in Three-Quarter Time, attributed to composer unknown. The next Europe heard of Robert Stoltz came from Nazi propaganda, which claimed the French had jailed him, the British treated him badly, and America ignored him.

Meantime, Stoltz was creating a sensation with his OWI broadcasts from New York City. Even without Vienna to inspire him, he worked on. He composed Let Freedom Ring, wrote the score for White Horse Inn, and even did a song of the range: My Thoughts Are Roaming Tonight. While Stoltz stresses that he remained true to his own style, America crept into his music. After all, he had writen Salome, the first European foxtrot, and in 1913 the score for the first European musical film. He never wrote jazz, though.

Johann Strauss, like many another composer, flopped as a conductor. In the States, Stoltz drew less than only Toscanini and Stokowski for a concert, more than Bruno Walter. His agent and best promoter, the dark-eyed Austrian beauty Stoltz married in France, explains that the paying customers crowd in to hear music that appeals to a broader public played with the perfection only the best symphony orchestration can give it.

As soon as he could, Stoltz returned to Vienna. On a chill day last November, he knocked at the door of his apartment. A Russian major opened it, invited him in to tea. There were the grand piano, the Tyrolean paneling, and the French antiques. Only one change startled him. The cuckoo clock whistled. The Nazi proprietor had altered its voice because the cuckoo sounded too much like the radio signal for an air raid. Stoltz moved in with the Russian. Later Soviet authorities ordered the major to move.

"I see Vienna as she always was," said Stoltz. "I prefer not to see the ruins of the buildings or the ruins of the Viennese people."

But was it the same? Not for music. "Music must keep up. Serious things have happened. Light music of the past seems dated. Even when writing of long ago you have to appeal to the understanding and feeling of today's audience."

The composer's latest operetta, Three From the Danube, will have its premier in Vienna next fall. It will reopen the bombed Gärtner Platz Theater in Munich, rebuilt with military government help, and the damaged Metropole Theater in Berlin. The story tells of learning trades along the Danube.

Stoltz learned his music from his father, who conducted the first performance in Vienna of Tannhauser. At the age of 12 he traveled from his home in Groz to Berlin and studied under Humperdinck, the composer of Hansel and Gretel.

When Stoltz returned to Austria his home town christened a street Robertstoltzgasse. The first named after a living composer, it links Franzschubertstrasse with Richardwagnerplatz. Vienna made him an honorary citizen. The University of Vienna gave him the title of professor. The four Allied Powers invited him to Germany. But Stoltz is returning to Hollywood to do the music for the film, "Reunion in Vienna," and to become an American citizen. This time, though, he is taking his piano and his breakfast nook along.

Europe used to send talent to America, but American artists now are coming to Europe, Stoltz noted. The Nazi era stifled talent in Europe, he said, while the United States began climbing toward her golden era of music. When European directors ask him to recommend talent he names Americans, and the directors have learned to take his word on an artist. From a little Jewish theater in Berlin he picked Hans Moser for his first big role as a comedian in a Stoltz production. Maria Jeritza and Ilona Massey are feminine discoveries of his.

Invited to a wedding in a New York synagogue, Stoltz heard a golden tenor. Today the voice of Mario Bernini is heard at the Metropolitan Opera. A St. Louis girl, Helena Bliss, heard he gave others a start and rang the doorbell of the Stoltz apartment on Central Park West.

"This is my last try," she said. "Either I commit suicide or I start raising babies." She didn't commit suicide, and she hasn't had a baby yet. A reporter dropped in later that day, and Stoltz introduced the girl as a future star. She got her chance in the musical, "Song of Norway."

Usually Stoltz likes to let his wife talk for him. After 7 years in the States he still has trouble with English and prefers the international language of music. But his eyes light up and the words flow rapidly when he brags about his discoveries. He has known more than one generation of music. His reminiscences run to 400 pages in a book soon to be published. And he likes young people, new talent, and fresh music.

[From the magazine Variety of April 9, 1947]

STOLTZ, SET FOR NEW METRO MUSICAL, NAMED HONORARY VIENNA CITIZEN

VIENNA, April 1.—Robert Stoltz, called by Viennese the Johann Strauss of the present century, has received the rarely bestowed honorary citizenship of the city of Vienna. It is only the third time since the war ended that the award has been made. First recipients were Albert Basserman, veteran German stage star, also making a postwar comeback in Europe, and Gen. Mark Clark. On the same day that Stoltz won the award, he was granted the title of professor by the Austrian president.

Stoltz leaves soon for Paris where he will score the French film Bal Tabarin before going back to Hollywood where he reports to Metro for musical version of Reunion in Vienna. Full import of the professor title is realized when known that such titles are granted usually only after a lifetime of teaching. Burgomaster General Koerner in presenting the honorary citizenship complimented the composer of Two Hearts in Three Quarter Time and scores of other Viennese hits for having brought the laughter and spirit of Vienna to the world, especially through Stoltz' conducting of Night in Vienna concerts with top United States orchestras from coast to coast.

Stoltz took a well-advised powder from this part of the world shortly after the 1938 anschluss. Although Aryan, he had little hope of anything better than concentration camp from the Nazis, after publicity throughout the world for composing Hitler's funeral march for Hitler. After a stay in England, Stoltz went to New York and Hollywood. He will receive final United States citizenship papers this year.

Stoltz returned here last fall and has been active in rounding up loose ends. He also presented and personally conducted a new operetta, Fate With Music, at Apollo Theater. Production folded without expected prospects of later United States presentation. Another Stoltz operetta is set for world premiere at Vienna's Stadttheater in September. It is titled "Three on the Danube." The composer is scheduled to return here in August for rehearsals, and will make some outdoor concert appearances in July.

Housing Shortage

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. D'EWART. Mr. Speaker, the various housing authorities established by the President, or by the Congress at the request of the President, have spent millions of dollars and consumed tons of paper in the preparation and distribution of countless orders designed by the daydreamers downtown to lick the housing shortage and provide homes for veterans. So far as we have been able to notice in Montana, their accomplishments have been practically nil. It is refreshing, therefore, to find occasionally that the good old American spirit of resourcefulness and enterprise is still with us and accomplishing results. I would like to quote from a Dillon, Mont., newspaper the story of how one young veteran whipped the housing shortage which, incidentally, is just as serious in the small cities and towns of Montana as it is anywhere in the Nation:

Last Thursday, County Attorney W. G. Gilbert, Jr., was an active member of the local chapter of frustrated home builders. Sunday evening—3 days later—Mr. and Mrs. Gilbert had a handsome and brand new brick house virtually completed, and neighbors still hardly believe their eyes.

Months ago Attorney Gilbert acquired the building lots. With perseverance the concrete foundation, basement, and first-floor covering were achieved. Then scarcity of labor, scarcity of materials.

Mrs. Gilbert recently visited her home in Great Falls, where she told the family of their predicament. To a man the Murphy brothers stepped into the breach—six of them. "Just get the materials," they told her, "and some week end we will come down and build the house."

Last week piles of brick, tiles, cement, window and door casings appeared on the lot. Friday morning the Murphy brothers descended on the job with three helpers and went to work. Soon passersby were stopping and staring. Brick walls grew. A power cement mixer turned out the mortar. When the others stopped for lunch the mortar man had a chance to catch up. On Saturday showers slowed up the work at intervals, but the walls reached up and over window and door frames and two fireplaces took shape and were completed. Sunday morning the last courses of brick and tile were being laid and partitions were erected. By Sunday evening the walls and chimney were completed and it was ready for the roof.

This was the sight that excited the neighborhood last week end. The Murphy brothers? Well, Owen is a Great Falls architect who has not lost his skill with brick and trowel; Joe, John, and Vincent are journeyman bricklayers; Pat, who is a clothing salesman, is an A–1 hod carrier when necessary; Frank is a master carpenter. W. G. Gilbert, Jr., and his brother Bruce, who is a Helena attorney, were general helpers. Bill Tayne, local man who has had building construction experience, was the "guest star" and wheels a mean wheelbarrow full of mortar. Two others who carried hods the first day had to give up. Such was the cast—and it was solid World War II. The job would have been finished sooner but Mr. Murphy, the father, who is an expert bricklayer and his sons' mentor, caught a cold and couldn't come.

Let's Have Florida Time

EXTENSION OF REMARKS
OF
HON. EMORY H. PRICE
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. PRICE of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article entitled "Let's Have Florida Time."

Mr. Speaker, it is a well-known and accepted fact that the State of Florida is known as the Sunshine State, and perhaps it would be appropriate to introduce a bill in Congress which would have for its purpose the establishment of an official Florida time. However, such action on my part would probably call for the immediate introduction of about 47 other bills calling for "Maine time" all across the country until someone even may suggest California time, all of which would probably cause so much confusion that the citizens of our country would have to spend most of their time trying to figure out what time it was.

Nevertheless, I believe that the best time anyone could have would be Florida time—all of which reminds me that my time must be about up.

The article follows:

LET'S HAVE FLORIDA TIME

Florida, the Sunshine State, is primarily interested in merchandising sunlight.

Sunlit hours are of such a premium that in many States, even during the longest days of the year, time is advanced 1 hour.

We Floridians, engaged in the business of selling sunshine and its accompanying advantages, should, in my opinion, create our own year-round Florida time by permanently advancing our time by 1 hour.

Such action by the citizens of Florida would create an invaluable promotional aid for the merchandising of our year-round recreational advantages of fun in the sun. Our customers and ourselves could have greater utility from our sunlit hours.

Permanently advanced Florida time would eliminate the seasonal controversy and confusion of moving from one time to another. It would simply establish Florida time in the same recognized categories as Eastern time, Central time, Mountain time, and the Pacific time.

Promotionally acute Floridians insist that Florida must lead the Nation with its State promotional program. Our partnership with the sun suggests to me that Florida should be the first to greet it each day of the year.

The advantages of Florida time justify the temporary inconveniences of adjusting ourselves to its schedule.

JAMES T. LARIMORE.

Reply to the President's Tax Bill Veto

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. ROBERTSON. Mr. Speaker, on January 6, in his annual message to Congress, President Harry S. Truman stated:

The Congress and the President, during the next 2 years, must work together. * * * We shall be risking the Nation's safety and destroying our opportunities for progress if we do not settle any disagreements in this spirit, without thought of partisan advantage.

Despite the fact that the President's entire political program has been in the field of foreign affairs, and the Republican Congress has backed him to the *n*th degree in this program, the President has broken his pledge of cooperation, for purely partisan advantage. Into the tax-reduction program of the Republican Party, Mr. Truman has

injected the false issue of class discrimination.

Mr. Truman based his veto on two grounds. He said this is, first, the wrong time; and, second, the wrong kind of a tax reduction. To substantiate his position, he advanced no new arguments, presented no new or convincing evidence, but resorted to the political trick employed by his party of making the issue one of class, thereby avoiding and clouding the true issue of whether the tax bill is timely and meritorious.

I. THE WRONG TIME

In summary the President's argument stressed the possibilities of increased inflation if the tax cut was effected. He argued that employment is on the increase; that national income is higher than it has ever been. From this he argued that there is "no evidence that a recession is imminent" and that tax reduction would increase "inflationary pressures." Disregarding basic laws of economics the President argued that there was no need for tax reduction to permit necessary investment and business expansion, for he stated there are in the hands of corporations and individuals nearly $200,000,000,000 in liquid funds which could be used for these purposes. He argues that unemployment is now at a peacetime low of 2,000,000. The President expressed a fear that the tax bill would not conform to sound fiscal policy of economy, and indicated that the additional revenue is needed to meet necessary obligations of government arising out of the war and present foreign commitments. He expressed the thought that it was imperative that we reduce the national debt.

II. THE RIGHT TIME

If employment is on the increase and the national income is higher than it has been, then under a program of tax reduction, revenue will not decrease, but might well increase, for the tax base will be broadened. The fear of further inflation is less than the fear of recession. Businessmen recognize that the best cushion against recession is investment in new enterprise and that tax reduction is one of the most effective means of providing investment incentive.

The President makes much of the fact that there exists $200,000,000,000 idle and available for investment and business expansion. Why is this $200,000,000,000 idle? Because this $200,000,000,000 in liquid funds will not be used for investment so long as there is risk involved in every business enterprise or expansion, and so long as there is no reward under present confiscatory tax laws to warrant business investment and expansion. It would be better for the Nation if this $200,000,000,000 were invested and was creating additional businesses and goods and employment and wealth.

The President proudly points to the small number of unemployed. If this $200,000,000,000 were invested in new or expanding businesses, that would allow $100,000 per unemployed person. Certainly with the investment of $100,000 there should be employment for one individual.

We have high prices and are worried about inflation. We have inflation today. High prices alone are not undesirable. They are a boon to an expanding economy but disastrous to a static or declining economy. Greater production, through business expansion, will bring a lowering of prices, normally, and not by mild recession or violent depression. The President is worried because the $2,500 wage earner will take home 1.2 percent more of his pay. Costs of living for this earner can well absorb this percentage increase. The family with an income of $500,000 would take home an increase of 62.3 percent. But, remember, there are less than 1,000 who earn more than $302,396. These families' increases will not add to inflationary tendencies. Despite confiscatory taxes, their needs are met and there is little they desire that would add to inflationary pressures. In fact, their take-home pay increase will not be buried in the mattress at home, but will be turned into investment and expansion of business, creating more jobs and more wealth for our Nation.

Our public debt is tremendous; even the interest each year is so great that it is impossible to conceive of its magnitude. Obligations of our Government can only be met under an expanding economy. This debt can only be reduced if national wealth increases, and our Government gets out of business and does not continue its policy of throttling business investment and expansion through excessive taxation. If we return to low prices and low wages, our debt proportionately increases in magnitude. The alarm the President expresses over the national debt is not convincing. His Budget Bureau requested $37,500,000,000 for 1948. Congress has set a goal of reducing his budget by more than the tax bill H. R. 1 would reduce Federal income. The Senate Finance Committee made the determination that in 1948 there would exist a surplus sufficiently large for both tax reduction and a very substantial cut in the national debt. It is difficult to believe that the President is sincere when he warns us to cut our national debt. Every department under him has come in asking for more funds than it ever received in a peacetime year—departments which were not directly concerned with the war, and whose obligations do not arise out of the war.

No; Mr. President, this is not the wrong time for this tax bill. It is not the wrong time to start economy in Federal expenditures; it is not the wrong time to release our free economy from a strangling yoke; it is not the wrong time for business and employment and production to expand and increase; it is not the wrong time to add to our national wealth both in dollars and goods. It was, Mr. President, the wrong time to veto a good, fair, and equitable tax bill.

III. THE WRONG BILL

In summary, the President stated that H. R. 1 reduced taxes in the high brackets to a grossly disproportionate extent as compared to the reduction in the low brackets. He has set forth figures showing that the savings of the $2,500 family would be less than $30, whereas the $50,000 family would receive a $5,000 reduction, and the $500,000 family would receive nearly $60,000 decrease. The President shows how the take-home pay of the $2,500 family would increase by 1.2 percent; of the $50,000, by 18.6 percent; and of the $500,000, by 62.3 percent.

In fact, the President is not arguing, but is injecting a false issue of class discrimination, in an attempt to stir up the enmity of the low-salaried employee against his boss. Politically this is effective; but it is dishonest. The President did not make a fair appraisal of the facts, but distorted them with "thought of partisan advantage," contrary to his pledge of January 6.

IV. THE RIGHT BILL

The President's veto message showed a premeditated desire to inject class consciousness into tax issue. The President neglected to point out that at the present the $2,500 earner takes home 96.8 percent of his earnings while the $50,000 earner takes home only 52 percent of his. If you are going to afford any tax relief at all to all taxpayers, it will necessarily be true that the big taxpayer will take home a bigger percentage of his pay because taxes on the high-income earner today are confiscatory; they are so high that any reduction will look big on a percentage basis. Under H. R. 1 the $50,000 earner will take home $5,000 more but he will still pay over $20,000 into the Treasury, or more than 40 percent of his income. The $2,500 earner would pay but 2.6 percent to the Government instead of 3.8 percent as he does now.

Mr. Truman's party, under his predecessor, the champion of the common man, instituted the present tax program, which reaches down into the pockets of the small wage earner. In 1932, a single man had an exemption of $1,000 and a married couple an exemption of $2,500. This exemption was reduced several times until in 1941, still before the war and war taxes, the exemption of a single man was lowered to $750 and that of a married couple was $1,200; further the exemptions of other dependents were lowered. It was the Democratic Party which resorted to taxing the man in the low-income group. Now why all this emotion for the common man the Democrats first decided to tax? To complete this brief history look at the Democratic tax reduction in 1945. That was a straight, pure and simple, across-the-board cut of 5 percent. This bill increased the take-home pay of the $2,500 earner 2.8 percent; the $50,000 earner, 11.9 percent, and the $1,000,000 earner, 61.2 percent. Yet, this was only a 5-percent reduction. This 1945 bill did not allow a greater cut to the low-income brackets—31,000,000 taxpayers; it did not remove 1,400,000 persons over 65 years from the tax rolls; it did not provide 71 percent of the reduction to go to those making less than $3,000 per year. But H. R. 1 would do all these things.

If the cuts proposed in H. R. 1 by the Republicans were unfair and discriminatory, it is because the Democrats were unfair in their tax program before, for the Republicans simply applied the tax cut to the Democrats' table of graduation and made additional cuts for low-salaried and aged taxpayers, and allowed

less of a cut for those earning fabulous salaries over $302,396.

The President declared that H. R. 1 was risky from the standpoint of Government finances. In 1945 he recommended that Congress repeal the excise-tax rates bringing over $1,000,000,000 in revenue. Congress rejected this proposal. Less than 2 years ago he accepted a $6,000,000,000 tax-relief bill for corporations. Chairman KNUTSON, of the Ways and Means Committee, asked, "Why is it equitable to vote tax relief for corporations one year and not equitable to give individuals some consideration in another year?" The entire reduction would amount to $4,000,000,000 spread among 49,000,000 individual taxpayers.

There can be only one of two conclusions from all this argument. Either the Democrats do not wish to cut taxes, but wish to keep the Treasury swelled with your dollars and mine to perpetuate the tremendous spending program which has threatened the economic stability of the Nation, or else President Truman wants to be on the band wagon when a tax cut is made. If it is the former, the President is to be condemned for misleading the public in his veto message, deploring the huge public debt, professing the need of sound practices of economy in government. If it is the latter, the President is breaking faith with the Congress in his pledge to work together with them "without thought of partisan advantage." For this he should be condemned. In either event, under either conclusion, the President is using his high office and revered position as President of these United States to create ill-will between the rich and the poor. He is inciting class consciousness when that is not an issue. This is outright dishonesty and is contemptible.

No, Mr. President; this is not the wrong bill. It is the right bill. It provides relief for all. It gives the greatest relief to those who by your words, but not by deed, you profess to protect. H. R. 1 was a bill which would provide tax relief when tax relief is direly needed. It would not hinder but would enhance our economy. Mr. President, it was the wrong time to veto the right bill.

Government Should Get Out, and Stay Out, of Business

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I have received many communications recently from the secretaries of chambers of commerce throughout the State of Oklahoma. In nearly every instance they have been accompanied by resolutions adopted by their respective chambers of commerce, or by the boards of directors of such chambers. All have expressed themselves as being in favor of the free-enterprise system and opposed to Government ownership and operation of business in competition with private capital.

In each and all of these resolutions there has been expressed an emphatic opposition and protest to the making of appropriations of Federal funds by Congress for the use of the Southwestern Power Administration for the purposes for which it is seeking an appropriation at the hands of this Congress.

Among the many such letters and resolutions, which I have received, I am happy to give my colleagues the benefit of the views expressed by the Nowata, Okla., Chamber of Commerce, for it is typical of the views that have been expressed in all these letters and resolutions.

The following is the letter I received from Mr. Chester V. Fleming, secretary-treasurer of the Nowata Chamber of Commerce of Nowata, Okla.

NOWATA, OKLA., *June 16, 1947.*

Hon. GEORGE B. SCHWABE,
House of Representatives,
Washington, D. C.

DEAR MR. SCHWABE: Inclosed is a resolution passed by the board of directors of the Nowata Chamber of Commerce in session Tuesday, June 10, 1947.

Each one of the nine members present at this meeting urgently request that you give this resolution your careful consideration.

The writer of this letter wishes that you could have attended this meeting and heard what the average businessman thinks of free enterprise and goverment ownership. For an hour and a half this thing was discussed. I can tell you that each man present was very emphatic in his opinion that the Government should get out and stay out of business, stop using taxes to engage in business, and cut taxes at once.

Everyone present seemed to be heartily in favor of the grand old American system of free enterprise.

Thanking you and asking you to come and visit with the Nowata Chamber of Commerce anytime that you are in this neighborhood, I am

Yours respectfully,
CHESTER V. FLEMING,
Secretary-Treasurer.

The following is the resolution adopted by the board of directors of the Chamber of Commerce of Nowata, Okla., June 4, 1947, and referred to in Mr. Fleming's letter:

"Whereas the Chamber of Commerce of Nowata, Okla., favors private enterprise as opposed to Government ownership; and

"Whereas electric energy is being produced and distributed successfully and efficiently, at rates established and regulated by State and Federal agencies, fully protecting consumers in the use and enjoyment thereof; and

"Whereas the Southwestern Power Administration, a Federal agency, was created by executive order of the President of the United States during the late war as an emergency measure, but now proposes in times of peace to construct many thousands of miles of transmission lines and numerous large, gas or coal-burning, steam-driven electric generating plants in areas in Oklahoma and adjoining States, which areas are now adequately served by privately owned electric systems; and said Southwestern Power Administration has requested, and the Congress of the United States has under consideration, appropriations of public funds to carry out the proposed plans of said Commission, which proposed plans, if put into effect would duplicate, interfere with, and obstruct electric power service now being adequately, economically, and efficiently supplied by private industry: Now, therefore, be it

"Resolved by the Nowata Chamber of Commerce, That it favors private enterprise and opposes nationalization of industry; that it opposes and protests the making of appropriations of Federal funds by the Congress of the United States for the use of the Southwestern Power Administration for the purposes proposed by it, and urges that such funds, if appropriated as requested by said Administration, will result in encroachment upon private industry in a field now adequately and efficiently served by privately owned electric systems; and be it further

"Resolved, That the officers of this organization be and they are hereby authorized and directed to mail copies of this resolution to all United States Senators and Congressmen of Oklahoma, and to the proper Senate and House Appropriation Committees.

"Dated at Nowata, Okla., on the 4th day of June 1947."

The undersigned, L. F. Merrill, president, and Chester Fleming, secretary, hereby certify that the above resolution was formulated and passed by the Nowata Chamber of Commerce on the 4th day of June 1947.

L. F. MERRILL,
President.

Attest:

CHESTER FLEMING,
Secretary.

Address by Hon. Bernard M. Baruch Before Industrial College of the Armed Forces

EXTENSION OF REMARKS
OF
HON. ALBEN W. BARKLEY
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Thursday, June 26 (legislative day of Monday, April 21), 1947

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and thoughtful address delivered today before the Industrial College of the Armed Forces by Hon. Bernard M. Baruch.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My experience in two world wars, the aftermaths, and the endeavors to make a lasting peace, make me marvel at the regularity with which errors are repeated. One of the errors that most frequently recurs is failure to study and understand the records of past experience. It seems as if my hearing aid is out of kilter—the voices and arguments are the same.

At my first meeting with the then Under Secretary of War, Robert Patterson, he asked, "Why is it that we don't start off where we finished in the last war? Why don't we adopt what was learned?" Later, the Under Secretary of Navy and others propounded the same question.

They may have had in mind, among other things, an outline of action that we drew up at the War Industries Board, covering America's participation in the First World War. I sent it to President Wilson, and he accepted it as the mandate for our existence. It is as true today as it was on November 10, 1918—30 years ago. Time has tested the formula and found it good. It will be equally true of our next war, which the fates forbid.

I read it:

"Wars are fought and won—or lost—on the land, on the water, in the air, and on those

battle lines behind the front where the civilian forces stand.

"It is not enough to mobilize the Nation's military strength. There must be a mobilization of her full economic resources—industrial, agricultural, and financial. These must be organized, coordinated, and directed with the same strategy that governs the operations of the purely military arms of service.

"The prodigious strain upon the world's productive capacity must be met and balanced to provide the means of warfare and to maintain the civilian population as well as to preserve the economic fabric.

"To control and regulate industry in all its direct and indirect relations to the war and to the Nation, the President has created the War Industries Board and placed the responsibility for its operation in the hands of the chairman. * * *

"It is not only the duty of the War Industries Board to stimulate and expand production in those industries making war essentials; it is equally the Board's duty to protect, as far as may be, those industries not immediately essential to the war program.

"The War Industries Board is a method of control devised by the President to equalize the strain placed upon the American industrial structure by the war.

"Further, the Board regulates all and controls certain other industries of first-rate war importance, it fixes prices through the price-fixing committee, it creates new and converts old facilities, it clears the national business requirements, and it leads to conservation, which is needed to bridge the gap between the extraordinary demand and the available supply, a gap which exists in almost all the great commercial staples.

"The War Industries Board embraces all and each of the Nation. Food and fuel are separately administered, but with every other article of military need and of ordinary life the Board has a direct connection, and it has a basic relationship with food and fuel, too, for both require in production and distribution the materials that the War Industries Board provides. Its strength lies in the full and patriotic cooperation that American business, including both the employers and employees, gives in working out the problems common to us all.

"The abnormal conditions of the war demand sacrifices. It is the price of victory.

"Only actual needs, not fancied wants, should and can be satisfied.

"To save heavy and long privation, temporary deprivation must be the rule.

"America's willingness to accept these conditions marks her ability to quicken the end of the conflict."

Despite all of the foregoing learned in World War I, many of the same mistakes were made over again in World War II. Faltering step by faltering step we moved toward controls, but those controls were never sufficient and far-reaching enough. If they had been applied immediately many lives would have been saved, our casualties lowered, and billions saved. Despite warnings of graver danger, the English and French made even more mistakes.

Also, as a result of piecemeal price control we are now faced with inflation which, next to human slaughter, maiming, and destruction, is the worst consequence of war. It creates lack of confidence of men in themselves and in their government. If from the beginning there had been an effective, over-all price-control law including everything—regulation and control of all prices, wages, rents, and food—there would have been a quicker ending of the war, a lessened cost, and less dissatisfaction among all classes. But after having granted favors to one class, group after group fought for favors, until we found ourselves upon economic stilts. Then restrictions were removed while peace was still distant. Although the shooting war is over, we are in the midst of a cold war.

The armed forces had an M-day plan which would have saved precious lives and the wasted wealth, but they were not permitted to put it into effect. We were told this was a different kind of war and none of that "Old World War stuff" was wanted.

We must not again make the mistake of not being properly organized in case another war is thrust upon us.

You are now making plans again. You have studied the results of the last two wars. I would like to see definite plans—blueprints—ready to draw out, as you were ready before, with a public better educated as to what total war needs are. With the new instrumentalities of mass destruction, we will not have time to improvise. Bravery or resources will not overcome an enemy who has destroyed us.

War preparations must be governed by a desire for peace and security. The armed services today have to be versed not alone in war but in government, politics, the humanities—economic, social, and spiritual—necessary to work constantly for peace. We know our country has no will for war. It has the will for peace. Thus, preparedness takes on the symbol of peace.

Here is the minimum program that should be placed on the statute books, ready to function, should war come:

1. Mobilize the full might of America—militarily, economically, and spiritually.

2. Have universal military training.

3. All men and women subject to mobilization with a work-or-fight clause. The same applies to all professions, science, callings, crafts, industrial and agricultural efforts, including labor of all kinds. In other words, there should be a pool of all our manpower—brains and brawn—ready to be tapped at any moment for war purposes.

4. An industrial plan ready to go into effect with full control of production, distribution, and prices, with the power of allocation, priority, and even exclusion for everything. The wisdom with which we organize our resources, men, money, and materials will make for the greatest of all—winning morale.

5. Taking unfair profits out of war and preventing inflation through an over-all price regulation, tax, and savings program. There must be only enough profit to keep our economy and production going. That cannot be done by favoring any one segment of our society.

6. While we must keep our civilian structure alive, skeletonize by restricting materials and manpower for unnecessary wants. In the last war too much went for wants rather than needs.

7. An organization to export materials in demand by other nations and to buy the things our Nation needs or desires to keep from enemy hands.

8. Accumulation of critical imports.

9. Retention of war plants, particularly synthetic rubber plants.

10. Intensified scientific research.

11. A standard form of contract set up now.

12. An Intelligence Service enlarged far beyond what now exists.

13. Information and propaganda organized, gone over, and continually improved to be ready when action demands.

14. Until some effective international guarantee of security has been established or resort to war eliminated, we cannot disregard the dangers inherent in developing mass housing in cities. Surveys must be made of underground industrial establishments, refuge for civilians, and dispersal of populations.

15. These organizations should be planned in considerable detail and gone over every 3 or 6 months by the National Resources Board. Competent men should be trained to fill the key positions. The Chiefs of Staff should make recommendations to the Resources Board for such changes as they deem wise and necessary. Setting up of industrial and social machinery should not be left to M-day.

16. All organizations continually exposed to the proper congressional committees, keeping them in touch with defense plans. The American people must be taken into the fullest confidence. They will do anything required of them if they are told why. Do not try to fool them.

Universal military training must be regarded as the apex of a pyramid grounded upon the broad bases I have outlined above. It has neither purpose nor effect except as part of such a structure. To believe that our national security can be assured through universal military training alone is to deceive ourselves and to waste the precious time of our youth. Only if combined with a sound and comprehensive program for our national security can it be really effective.

And I stand with the Secretaries of State, War and Navy and the Chiefs of Staff of both services, in favoring uniform hemispheric training and armament. We should make South, Central, and North America a complete unit.

Just a few words about the utilitarian aspects of your training which has brought you in touch with government, production and distribution, management and labor, and widened your horizons. It has equally widened the horizons of civilians. This gives added value to your future work. Daily, men are claimed from the Army, Navy, and Air Forces for the highest posts in our political, educational, industrial and social life. This is evidence we train a nation for war and peace, and that soldiers and sailors are trained as much for peace as for war.

The armed forces' horizons must be as deep and as wide as the problems they have to meet. It is time and energy well spent. That is what you, of this graduating class, get here.

In spite of my name, I am no son of a prophet. But there are certain phases of the time immediately before us which I see with eyes sharpened by years of experience.

We face a future that is unrestful but not alarming.

I see no war with Russia as an immediate threat. With others of my countrymen, I feel deep irritations, but I do not fear explosions.

We have been just and generous, but there has been a lack of cooperation on the part of those whose friendship we solicit.

Perhaps they expect our economic collapse. If so, they will be disappointed. We shall continue long after their experiment has failed.

We dedicate ourselves to the individual. The others elevate the state into a god head.

But in the cold war that is being waged against us we must always remember that their objective is our unrest. We can guard against that by a firm belief in ourselves under the magnificent flowering of our century and a half of national life.

We resent the continued efforts of Russian sympathizers to change our system of government and life. But we can make ourselves secure against their machinations by bettering our conditions. That we are doing slowly but surely.

Let us watch England. She is conducting a great experiment. I do not believe she can be successful, but I maintain that she has the right to pursue any course she elects.

Can Britain go on with her collectivism, her socialism, her regimentation without imperiling those great democratic principles for which Britain, and this country, too, fought so long and so devotedly, and to which Britain and this country are wholly dedicated?

"Ancient Right unnoticed
As the breath we draw,
Leave to live by no man's leave,
Underneath the law."

However convinced we may be by our vision of peace—and General Eisenhower would not be quitting if peace were threatened—it should not be permitted to affect the need to be ready for the worst.

We should be well prepared for any contingency we may have to face.

To that purpose this class, this institution, are devoted.

You are the protectors of our safety. You are the guardians of our security.

My congratulations and best wishes to you all.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Thursday, June 26 (legislative day of Monday, April 21), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an address on labor legislation, delivered by Joe A. Wilson, general representative of the International Printing Pressmen and Assistants' Union of North America, at the Southwest Conference of Printing Pressmen and Assistants, at Galveston, Tex., on June 16, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, officers and delegates of the southwest conference, greetings: I bring to this ninth annual southwest conference of Printing Pressmen and Assistants' Union the greetings and felicitations from the office of the president and board of directors of the International Printing Pressmen and Assistants' Union of North America.

It was my privilege to have had the opportunity to address this convention 1 year ago in Fort Worth, Tex. The eighth annual conference was a wonderful gathering of the members of our craft. Much knowledge was exchanged and it is hoped that during the course of this convention a constructive and workable program will be planned and that the delegates upon return to their respective homes will proceed to place into effect the programs that are worked out here for the ensuing year.

Since your last convention, many National and State legislators have drafted vicious antilabor legislation and many of these bills have become laws. These antilabor laws have restricted our rights as workers. The process of collective bargaining is being usurped by greedy antilabor forces whose sole ambition is to destroy the rights of the workers. These antilabor forces are a threat to our democracy. It is the sole intent of these antilabor laws to threaten, coerce, and browbeat the workers of America. The rights of the workers, that were once protected by law, become the mere servant of the feudal masters. Labor has a long history of hardships, the workers have toiled, suffered, struggled for an existence to survive; his only tools have been his hands, body and mind, and his hands have forged the mechanical devices so that his labor would become more practical in a simplified manner. The workers have advanced and by the same token those who hired him have advanced in knowledge and wealth.

We are all interested in carrying on our democratic way of life in America. It is the duty of our elected representatives to the various State and national legislative bodies to be more tolerant in the type of laws that they pass, since the restrictions placed upon the workers will in the due course of time backfire on those who wrote laws so vicious in nature and character.

We all remember World War II. That war was fought, we are told, for the freedom of the people of the world—was it? In World War II it was our hope to destroy the "isms" and to keep the world free from "ismized" false leaders. Two large governments "ismized" their people. They started out just as we are doing now in America—first, by destroying labor and its rights, and by placing restrictions upon the masses. I think that we should have learned much from this last war—why should we repeat the mistakes of the past? If we hold our way of life, we will have to revert to the proposition that all people are created equal and that our Government is run by the people, for the people, and of the people, it being operated by the Constitution of the United States of America which holds that man has an inalienable right.

President Van Buren in 1840 promoted a law establishing the 10-hour day—prior to that, workers had been compelled to work 16 hours a day without overtime pay. Wages in those days were small and factories ran 6 days a week. In 1932, President Franklin D. Roosevelt further reduced the hours of work to 40 hours per week, by the establishment of the wages-and-hours law, and for the first time a national minimum wage scale was established for all the workers coming within the interstate commerce provisions. The law covers all plants engaged in commerce among the various States and Territories of the United States of America.

Many people, often including professional men and women, have the idea that unions are organized to destroy capital, but this is not true. The object of the union is to make working conditions better, to keep wages at a standard that will permit a man or woman to give his family a comfortable living, and to raise their children in a decent and honorable manner.

We have three important obligations in life that we must fulfill: First, we must establish our religious standing in the community; second, when men and women reach maturity they must become associated with some type of fraternal organization to enhance their social standing in the community; and, third, they should join a trade union of their craft in order to earn a standard wage so that they can finance these latter two organizations in the community in which they live. Wage standards have been set in various industries by labor unions through collective bargaining. No nonunion man or woman can set wage standards, since they are not in the family of collective bargaining. They have no way to speak for themselves—the union is the instrument for collective bargaining; it has long been recognized as such.

Doctors of medicine have their medical societies, businessmen and women have their organizations, lawyers have their associations; every known trade or profession is organized through some form of club—association, league, union, or what not. Man has organized his activities from the beginning of time and will continue to do so until time is no more. Without organization, governments would fall and destruction would prevail.

My firm advice to the politicians is that they give consideration to the people whom they represent and not legislate against certain groups or classes of people and business. If we are going to operate our Government on the basis of the Constitution, we will have to turn to that document for advice and counsel before we make our laws against certain groups. Today the politicians are driving labor and the workers to underground methods. The same was done to their people by the "ismized" governments of Europe. First they destroyed labor, then controlled capital, and placed the people under government regulation and full government control. We, as Americans, do not want this to happen here; but don't be fooled—it can happen here, so let's be on guard.

The open shop is supposed to be open to both union and nonunion labor, but it never is. Why? The open-shop idea is part of a program of the Manufacturers Association, known as the American plan, to have and not to have. The union shop is job security, and those who elect labor representatives should have the right to require those who want to float on the tail end of the coat to become members of their particular craft organization. If a majority of the members pay dues, the minority should be required to do likewise, since this is a country run on the majority rule, rather than the minority rule; therefore, the minority is duty-bound to become a part of the majority organization and to abide by its rules and regulations.

All of us, regardless of sex, color, or creed, have a big job to perform in seeing that we secure an everlasting peace. It is the voice of the people of the world that must impress upon the governments of the world the need of the brotherhood of man. With a complete understanding of the causes of war, we can by universal thinking abolish the causes of war. It is the duty of our people not to harbor superstition, which is the basis of fear and distrust of one's fellow man. The people of the world are duty-bound to live and let live, to aid and assist those in want. It devolves upon each and every one of us to be brothers of good will, to see that mankind is not destroyed by the greed of just a few selfish leaders. The people of many lands should select honest leadership among themselves. The leaders are placed in office by the mandate of the people. If the leaders fail to carry out that mandate, it then becomes the duty of the electorate to remove from office those who do not carry out the will of the people.

We would have a splendid world to live in if we could abolish the word "fear." When that word is abolished from the minds of men, then we will have the answer to the question, "Am I my brother's keeper?" We can then walk through the valley of life and expect an everlasting life of tranquillity for us all.

The Labor-Management Relations Act of 1947

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, June 26 (legislative day of Monday, April 21), 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of an open letter which I have addressed to the workers of my own State of Wisconsin and to all of the other working men and women of America.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO AMERICAN WORKERS ON THE PRO-AMERICAN LABOR LAW

DEAR FRIEND: I am writing this letter to the American laboring man, in particular, to the working people of my own State of Wisconsin. My purpose is to present my views on the labor legislation which has been enacted by the Congress. My constituents are entitled to know my views.

May I first point out the labor legislation was enacted only after the most thorough consideration by both the Senate and House of Representatives. During the extensive hearings, every opportunity was given to the representatives of organized labor, of business, of agriculture, to present their views on it. A comprehensive bill was prepared and after the President vetoed it, the veto was overridden by the House by a vote of 338 to 83 and by the Senate by a vote of 68 to 25.

MAIL ON LABOR BILL

I received a very large volume of mail on both sides of this issue from laboring men—affiliated with the CIO, the A. F. of L., the railroads, independent unions and others. I was glad to get the benefit of the judgment of the people of our State, although, in some cases, I did not agree with certain individuals' conclusions. That is, however, a part of our American way of life—that we can talk things over or write to one another from different points of view, while still respecting one another's viewpoints.

NAME CALLING ON BILL

The law, Public Law 101, has been smeared as a slave-labor law, as reactionary, as designed to destroy the rights of labor, to bust unions, and many other attempts have been made to besmirch it. Probably it is more properly called a bill to free labor—to free it from racketeer exploitation. But the workingmen of Wisconsin are interested in the issues of the bill and not in mere generalities or name calling. Our workers want to learn the truth on this bill—the truth that sets men free, free from doubts, free from misrepresentation, from misinformation and lack of information.

MY SUPPORT OF LAW

I personally voted for the law with the interest of American workingmen in mind and with the interest, too, of American management, American agriculture, and most important of all, the American public.

This bill is propublic, pro-American, not for any one segment alone of our population. What is it against? It is against the concentration of power in a few hands which always makes for violation of the rights of the public, whether it is in industry or labor. This law helps to restore the checks and balances of the American system of private enterprise.

It is a forward-looking law, designed to protect America from industrial warfare in the atomic age.

I know that Wisconsin labor and all American labor is concerned about the strike situation as well as about high prices, about inadequate housing, and about other problems. I can understand their feelings, for I have been a laboring man myself. I have worked in the sawmills of northern Wisconsin for 15 cents an hour, 11 hours a day. Today, I am a workingman myself and am proud of it, for I work 60 hours or more a week, Sundays and holidays.

STRIKE DAMAGE

America's workers deserve a fair labor law, and I believe they now have the best one that could be obtained under present conditions—a law that will help repair the terrific damage done by years and years of labor boss dictatorship which should now come to an end.

Our State's working men knew that last year alone 116,000,000 man days were lost directly in ruinous strikes. What a staggering loss this was to the community in terms of lost pay rolls, dissipated savings, doomed dividends, lost profits, injured public confidence, diminished supply of goods. Yes, America's workingmen have suffered terrifically from inflation brought about by underproduction.

QUESTIONS TO OPPONENTS OF LAW

To those who opposed this law, let me ask a few questions. Do you believe that the Congress should have remained motionless and permitted another disastrous railroad strike to paralyze the Nation; another terrible steel strike, coal strike, auto strike, electrical strike, farm machinery strike? Do you believe that Congress should have remained motionless while Communists and labor boss racketeers used unions for their own notorious ends? Do you believe that the Congress should have done nothing in the face of brutal assault upon workers by union thugs? Do you believe laboring men should be denied the right to go to work and earn their daily bread because they are not a member of the union because they cannot pay an outrageously high initiation fee?

FAILURE OF LABOR LEADERS TO ACT

Let us remember that for years and years the Congress has solicited from the leaders of American labor their suggestions as to ways and means of improving labor-management relations. But the labor leaders offered no constructive suggestions whatsoever. They refused to clean their house of crooks and Reds. They took a stand-pat position that nothing was wrong and that nothing could be done to improve conditions. As a consequence, Congress had no alternative but to write its own law.

PROVISIONS OF LAW

What are the major provisions, then, of the new law? Here they are: I have suggested many of them myself during my years in the Senate and have introduced legislation along these lines. You might ask yourself as you read these sections whether you are opposed to them or whether you favor them.

(1) No union may now be certified or may enjoy National Labor Relations Board assistance unless all its officers swear that they are not Communists or Communist sympathizers.

(2) Absurd jurisdictional strikes and secondary boycotts which have wrought such tremendous havoc in American labor are outlawed. Injunctions against them may now be sought by the NLRB.

(3) Unions may now be sued for breach of contract and for damages which they inflict in jurisdictional strikes and boycotts, just as corporations may now be sued. This merely makes for equality before the law.

(4) The closed shop is forbidden. Let me point out that every poll of American public opinion shows that the American people are overwhelmingly opposed to the closed shop which requires that a man be a member of a union before he can get into a job. A poll in January 1947 showed that only 8 percent of our people favored the closed shop, 18 percent the union shop, while 66 percent favored the open shop, and 8 percent expressed no opinion. The law does allow the union shop, but it and other compulsory union membership devices are permitted only if the majority of workers vote in favor of them in a secret ballot. That is in the spirit of American democracy.

(5) Unions are required to render financial accounts. Here again the American people, by popular opinion polls, have overwhelmingly endorsed this provision. In December 1946, 84 percent of the general public stated its endorsement of unions' financial accountability, while 80 percent of union members favored it. Why should not unions' finances be open just as corporation finances are public?

UNFAIR PRACTICES

(6) Unions' unfair labor practices are, for the first time, defined just as heretofore management's unfair labor practices have been defined. Among these union unfair practices are refusal to bargain, attempts to coerce workers, excessive union fees, featherbedding (or made work), and coercion of employers into industry-wide bargaining. Here let us note that the American people have always been opposed to certain feather-bed practices of unions—that is, requirements to hire extra workers that aren't needed on a given job. In 1946, three out of every five Americans stated their endorsement of legislation prohibiting feather-bedding.

(7) Any threatened strike which might endanger the national health or safety may now be enjoined for a period of 80 days. During that period a Board of Inquiry would investigate the facts and the workers would vote on acceptance or refusal of their employer's last offer for settlement. This waiting or so-called cooling-off period has been endorsed in public opinion polls. It is necessary in the public interest.

(8) The Labor Department's Conciliation Service functions are removed from that Department and are vested in a new, independent agency—the Federal Mediation and Conciliation Service.

(9) Employers are released from any obligation to bargain collectively with foremen who have the authority to hire and fire workers. Obviously, were foremen unionized, it would make for chaos and confusion in labor-management differences.

(10) Strikes by Federal employees are forbidden. We remember the wise words of President Calvin Coolidge: "There is no right to strike against the public safety by anyone, anywhere, any time." America endorses the concept of no strikes by Government workers.

JOINT HANDLING OF WELFARE

(11) Welfare funds may be set up with employer contributions but only if the employer has an equal voice with the union in their management. This is in the principle of fair play and control.

(12) Unions are barred from making expenditures in connection with political campaigns, just as corporations are barred.

(13) New procedures and democratic organization are prescribed for the NLRB.

What reasonable man can say that any of these provisions is unwise or uncalled for in the public interest?

(14) The NLRB is expanded by two members to a total of five. Its review division is abolished. Its general counsel becomes autonomous and is in charge of all field work such as investigating complaints and initiating prosecutions. He alone decides what cases are taken up. This is in full accordance with the American principle that the same organization cannot be both the judge and the jury at the same time.

SUMMARY OF PROVISIONS

That in sum constitutes this amendment of the Wagner Act. What reasonable man can say that any of these provisions is unwise or uncalled for in the public interest?

How can these provisions be possibly construed by reasonable persons as "anti labor?" They are only propublic, I repeat.

WHAT THE LAW DOES NOT DO

What doesn't this law do?

First. None of the provisions impairs the original intent of the Wagner Act or infringe upon any of labor's legitimate rights thereunder.

Second. None of these provisions establishes standards on unions which are not already established on management. These provisions simply make for equality before the law—a basic American principle for labor and management. After all, we are proud of the fact that we are a Nation of laws.

Third. None of these provisions interferes unduly with union affairs, except to the extent necessary to protect the individual rights of employees.

Fourth. None of these provisions repeals the Norris-LaGuardia Anti-Injunction Act or restores the abuses which prevailed prior to the establishment of that act.

Fifth. None of these provisions destroys the right of collective bargaining or the right to peaceful picketing or any other

peaceful or lawful persuasion. I fervently endorse these rights of labor.

Sixth. None destroys the right to strike but merely makes it consistent with the public interest and the rights of the individual employees.

Seventh. None of these provisions permits the interstate transportation of strike breakers or any other condition which existed prior to the Byrnes Act.

CONCLUSION

The law itself will not cure all of America's labor problems. It will not bring about a millennium overnight. It will, however, be a major step toward the solution of industrial problems if labor and management will cooperate. With the aid of all of us, it can be a dynamic instrumentality for stabilizing our economic difficulties in the field of labor.

This is particularly true if the administration of the law by Government is fair, efficient and adequate. We know that the Wagner Act was mal-administered in a one-sided fashion, thus bringing about the chaotic conditions which the present law seeks to cure.

It is the prayer of 140,000,000 American people, including 58,000,000 workers, that this fair, pro-American law will be administered in a pro-American way to protect the rights of all of us. If this is done, it will mean full pay envelopes for American workers and full production for American industry.

Sincerely yours,

ALEXANDER WILEY.

Price Reduction With Increased Wages

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, June 26 (legislative day of Monday, April 21), 1947

Mr. O'MAHONEY. Mr. President, a most illuminating statement was made this morning before the Joint Committee on the Economic Report, by Mr. Fowler McCormick, chairman of the Board of the International Harvester Co.

The testimony is significant in many respects. Of great importance at the moment was the declaration by Mr. McCormick that the International Harvester Co., which now enjoys satisfactory bargaining relationships with a number of international unions, including both AFL and CIO, contemplates no change whatever in its dealings with these unions as a result of the recently enacted amendment of the National Labor Relations Act.

The burden of Mr. McCormick's testimony has to do with the policy of the company of reducing prices to its customers and increasing wages of its employees. This highly salutary result, he explained, has been obtained by greatly increased production.

The full text of Mr. McCormick's statement is of such value that I feel it should be incorporated in the RECORD. I therefore ask unanimous consent that his testimony on how to reduce prices and increase wages be printed in full in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

My name is Fowler McCormick. I am chairman of the board of the International Harvester Co., whose main offices are in Chicago. I am appearing at the request of the committee for the purpose of discussing some recent actions by our company which may be of interest to the committee in connection with its inquiries into economic matters.

I do not appear before you as an economist, nor with specific suggestions as to legislation. It will rather be my purpose to review with you what our own company has done this year in regard to prices and wages and our reasons for taking the actions we did.

With your permission, I should like to give you a few facts about our company and the scope of its operations, so that the committee will have that information as a background against which to consider our actions.

Our company now consists of 23 factories and raw materials operations in the United States, as well as more than 100 sales branch houses. We are a manufacturing company and our selling activities are largely in the field of wholesale selling although we have a number of retail establishments to sell our motor trucks. Most of our equipment is sold to users by approximately 9,000 International Harvester dealers and distributors.

We are engaged in several different industries and our company is therefore organized into several operating divisions. Our sales for the first 6 months of this year were as follows:

	1947	Percent of total
Sales of regular products in the United States:		
Motortrucks, service and service parts	$128,034,000	37.4
Farm implements and service parts	59,419,000	17.4
Farm tractors and service parts	59,711,000	17.4
Industrial equipment and service parts	25,809,000	7.5
Steel, pig iron, and coke by-products	13,272,000	3.9
Binder and baler twine	3,979,000	1.2
Refrigeration equipment	1,452,000	.4
Miscellaneous	893,000	.3
Total	292,569,000	85.5
Sales to subsidiary companies:		
To International Harvester Co. of Canada, Ltd	9,880,000	2.9
To International Harvester Export Co. (for export)	39,762,000	11.6
Total	49,642,000	14.5
Grand total	342,211,000	100.0

We have at the present time about 40,000 stockholders. We have about 87,000 employees in the United States, most of whom work in our manufacturing plants. The great majority of our employees are members of one or another of a large group of labor unions with whom we bargain collectively. At present we have a bargaining relationship with more than a dozen international unions represented through more than 170 locals. The unions with which we deal include CIO unions, A. F. of L. unions, and a few independent unions.

It has been suggested that you would be interested in hearing from me about our price reductions of last March, with special reference to the reasons for them and the factors that made them possible.

These price reductions were announced on March 8 and affected 163 basic models of tractors, farm machines, industrial power equipment, and motortrucks. We estimate they will save the users of our products approximately $20,000,000 a year. The price reductions covered 12 models of farm tractors, 123 models of farm machines, 16 models of industrial tractors and engines, and 12 models of motortrucks as well as certain motortruck attachments.

Individual reductions ranged from $2.50 to $300 and from 1 to 23.8 percent. We could not reduce our products uniformly and some we could not reduce at all, for some products were making money, others were breaking even, and a few were losing money.

So we reduced prices where we could and as much as we felt we could. For example, on our largest selling farm tractor, the Farmall-H, the price reduction was $125, or 10.6 percent. The automatic pick-up hay baler was reduced $75, or 4.1 percent. The self-propelled combine was reduced $122.50, or 3.4 percent.

To explain how we were able to reduce prices and why we did so requires an examination of our postwar planning on the one hand, and of our fundamental policy on the other.

Our postwar planning began in 1943, as soon as we found that we could carry on our war work satisfactorily and still devote some time to consideration of the future.

One of the first results of our planning was to reorganize completely the management set-up of our company from the old functional basis to a divisional basis. That reorganization was carried out both to improve our war production and to improve our postwar production. It has been highly effective in both respects.

Toward the end of 1943 we made a complete review of the engineering design of all our products. We laid plans to make modifications and improvements in our existing products to bring them fully up to date. We then turned our attention to totally new products upon which our engineers had been working and we found that engineering had progressed to a point which made it practical to plan the manufacture of important new machines at the war's end.

Among these were the Farmall Cub tractor, now in production, which is the smallest real farm tractor ever made; the mechanical cotton picker; the one-man automatic hay baler; the sugar beet harvester; the self-propelled combine; six new models of motortrucks designed for west coast and mountain use; and our new TD-24 crawler type tractor, which is the largest tractor of its kind yet built.

Having listed these products as ready to go, we studied the estimated demand for both our revised products and our totally new products. We projected that into estimates of manufacturing space and equipment that would be required. It was immediately apparent that our capacity was entirely inadequate to fulfill the requirements.

We acquired additional plant sites. Having previously purchased a site at Memphis, we next bought sites at Wood River, Ill., and Fort Madison, Iowa. We planned a building program. With the end of the war, however, we found that our building program had largely become a buying program, for several reasons. First, scarcities of building materials and other factors made it evident that building new plants would be a long process. Second, the level of building costs made it financially desirable to buy existing space if possible. Third, customer demand was extremely urgent.

We therefore purchased from the Government an airplane plant at Evansville, Ind., which became our refrigeration factory; an airplane plant at Louisville which became our cub tractor factory; an airplane engine plant at Melrose Park, Ill., which became part of our industrial power division; and a gear plant in Chicago which we have converted into a manufacturing research center. In addition we bought from private owners a small malleable iron foundry at Waukesha, Wis., and a small plant at Stockton, Calif.,

for use in west coast farm implement production. We leased a small factory at Emeryville, Calif., for motortruck production and we have proceeded with construction of our large new Memphis works, which we expect to occupy this summer, and which will produce the cotton picker, the hay baler, and a line of southern implements.

In connection with this program we sold a small farm implement factory at Chattanooga and discontinued operations in a small implement factory at Huntington Park, Calif. So we have a net addition of six plants. The planned total employment of these new plants is approximately 21,000 men and at present they employ about 10,000.

In addition to the new plants, we have made sizable investments to improve and reequip our existing plants.

This whole program of organization changes, product engineering and acquisition of new plants, incomplete as it is, is the thing that has made it possible to produce in far greater volume than before the war.

The greatly increased production resulting from this program has brought with it an increase in our profits which made it possible to undertake our program of price reduction and wage increases of last spring.

The other factor underlying our price and wage action was a policy which is the cornerstone of all our other policies and procedures. We have held for many years that when a company attains a certain size, he becomes in a sense a social institution, and should be operated not in the interest of any single group, but equally in the interests of the three groups most vitally concerned in our business—our stockholders, our employees, and our customers. As will be readily recognized, this is not new as a concept for it has been expressed from time to time by businessmen and others. The novelty lies in the fact of a company openly proclaiming this to be its basic policy and endeavoring to carry it out to the best of the management's ability.

Examined in the light of this policy, our actions in the months from February to April of this year form a rounded picture of execution of that basic policy.

When we became aware in February of the levels at which our sales were running and made estimates of our earnings for the first quarter, we raised the quarterly dividend on the common stock to a rate of $4 a share yearly. The payment in the previous 3 years had been $3 a share.

Following this action, we reduced our prices in March on those products on which it was possible to do so, and in April our negotiations with the unions terminated in wage increases which followed in general the pattern of the electrical and automotive industries.

Stated in dollars on an annual basis, the three groups benefited from our increased production as follows:

Ratio of profits to sales dollar values

Stockholders	$4,000,000
Customers	20,000,000
Employees	25,000,000

We thus, by virtue of our increased sales and earnings, have been able to act in the interests of stockholders, customers, and employees, and in doing so we were carrying out our well-established policy.

It is not particularly unusual for a company with rising earnings to increase its dividend rate to stockholders. It is also quite common for a company with rising earnings to consider increasing the wages of its employees. It is unusual, however, for a company with rising earnings to reduce prices when it is not compelled to do so by competitive conditions or a decline in demand.

Prices are ordinarily reduced if they have risen too rapidly or too much. But that was not our situation. From January 1941 to March 1947 our prices had not gone up so much or so fast as many other prices. For example, the average price increase for all manufactured products during that period was 63.7 percent, and for metals and metal products the increase was 41.2 percent. Yet our motortruck prices had risen an average of 35 percent, our industrial power prices an average of 34 percent, and our farm machine prices an average of only 25 percent.

Prices ordinarily are reduced, too, if they are out of line with competitive prices or if they encounter resistance by customers. That was not our situation. Our prices were comparable to those of competitors and the demand for our goods was such that we could expect to sell all we could make this year and for a considerable time in the future.

In addition to these factors, there were important uncertainties in our picture. One of these was the size of the possible increase in our wage and salary bill. At the time we reduced prices, there was no established national pattern on wages and we did not know what our ultimate wage settlement would be. Similarly, we were in a period of considerable uncertainty as to the prices of materials and purchased components.

There was one thing, however, that was very clear to us. That was that industry seemed to be caught in a vicious upward spiral of wages and prices. Businessmen hesitated to reduce prices because they could not be certain what the future held as to wage rates or business volume. Yet the increasing of prices or failure to reduce them necessarily had a tendency to limit volume and to encourage further wage demands. To us, the only way out of such a vicious circle of higher prices appeared to be to break through.

A few months earlier, the American people had insisted that the Government withdraw from its attempts to control prices in peacetime. That restored to business and industry its historic share of responsibility in the establishment of prices. We recognized fully that not all business could reduce prices. We knew that not all business could reduce prices by the same amount.

But our company felt a duty to act as promptly as possible and in our case, the business outlook made it possible to move toward the goal of lower prices. We took what the Army calls a calculated risk in the hope of accomplishing something worth while.

Summing up, I would say that our price reductions were the result of two factors: First, our long-time policy of operating in the interests of customers, employees, and stockholders; second, our desire to contribute whatever we could toward checking the upward movement of prices.

In discussing our action at the time, we stated that it was our view that "Any price is too high if it can be reduced." That is still our belief and our continuing policy.

The Interstate Oil Compact

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, June 26 (legislative day of Monday, April 21), 1947

Mr. HATCH. Mr. President, Mr. Hiram M. Dow, one of New Mexico's leading lawyers, and, for that matter, one of the outstanding attorneys of the entire Southwest, recently addressed the Producers' and Royalty Owners' Association, at Amarillo, Tex. In his address Mr. Dow discussed something of the petroleum industry in general, its service to the American people, and the extremely important part that industry plays in the Nation's economic life. But, particularly, Mr. Dow discussed the interstate oil compact and the work and authority of the Interstate Oil Compact Commission. He is especially fitted to discuss this subject, for Mr. Dow has been a member of the Interstate Oil Compact Commission since it was first authorized, a little more than 12 years ago, and is its present chairman. He was one of those who first conceived the idea and helped to bring into existence an interstate compact to conserve oil and gas and to prevent physical waste thereof from any cause.

Today, when so much is being said about oil and gas and the possible exhaustion of these great natural resources, the remarks of Mr. Dow are timely and appropriate.

I ask unanimous consent that Mr. Dow's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OIL

The petroleum industry in America today is a peculiarly American industry, founded and discovered by Americans, and making progress by typically American methods. With persistence and self-reliance, it has contributed so much to the progress and welfare of the United States and so much to the happiness and comfort of all the world, that, though having some shortcomings as is inevitable in all human effort, its record of accomplishments is one of the proudest in the world today.

The oil business has experienced glorious years of early discoveries, of sudden riches, endless supply, and magnificent waste; and has now grown to maturity and to the realization for the need for conservation. It has reached a position of settled dignity with far less speculation involved in its operations. Today it is the best example of industrial service to the American people in that its products are so closely allied with the American way of life. The American petroleum industry contributes more than any other industry in the way of useful commodities so necessary to the progress of the American people and bears a direct relation to the incomparable high standards of living enjoyed by our people. To this the American public must agree, for only the automobile, meat packing, and steel industries exceed it in volume of sales. The demonstrated efficiency of this industry in providing for adequate production of petroleum supplies has enabled the United States Government to defend itself against all enemies; its war record being publicly cited by Senator O'MAHONEY, chairman of the Senate Oil Committee. O'MAHONEY's statement in a report to Secretary of the Interior Krug, stated: "It was the production of petroleum in the United States that made possible the victory of the United Nations."

American oil wells have supplied the peoples of the earth with 30,000,000,000 barrels of oil, yet proved reserves amount to 21,000,000,000 barrels, and geologists estimate we can find in this country at least another 50,000,000,000 barrels.

This means that, although the United States owns only one-eighth of the number of acres of potential oil lands in the world, it has, under its system of free enterprise, produced two-thirds of the world's oil. And Americans, American methods, and Ameri-

can tools, have found almost all of the other oil fields in the world.

This country's annual oil output can do the work of 4,500,000,000 men toiling 8 hours a day, 6 days a week; that is to say, it provides the equivalent of 32 able-bodied servants for each person in the United States.

Ten thousand persons are employed and $50,000,000 is spent annually by United States companies for research in their never-ending quest for new and improved products. Work now being done in petroleum research laboratories will be reflected in more and better products to be used tomorrow in agriculture, industry, and in the home.

Industry experts believe that American oil reserves will last for generations. Synthetic fuels from natural gas, coal, and oil shale can be produced whenever necessary. Gasoline will be produced commercially from natural gas this year, and other synthetic liquid fuels being developed in company laboratories assure the Nation of a virtually inexhaustible supply of such fuels.

Research has made vast strides not only in the art of finding oil, but also in the extraction of oil already found. A few decades ago it was not unusual to recover only about 20 percent of the oil in a new field. Today as high as 80 percent is recovered and supposedly worked-out fields are again in production.

COMPACT

Just a little more than 12 years ago, I sat with Colonel Thompson and the representatives of seven States in a meeting in Dallas, Tex.

We were engaged in charting a course specially sanctioned by the Constitution of the United States, which provides in effect that one or more of the sovereign States may enter into agreements, which agreements or compacts become binding when approved by Congress. The meeting lasted 2 days. Out of it came the interstate compact to conserve oil and gas, which now has been approved by legislatures of 20 States and the Congress of the United States. The purpose of the compact is stated in understandable English as follows:

"The purpose of this compact is to conserve oil and gas by the prevention of physical waste thereof from any cause."

Each State bound itself to enact statutes, or if such statutes had been theretofore enacted, to continue same in force, providing in effect that oil or gas produced in violation of its valid oil or gas conservation laws or any valid rule, order, or regulation promulgated thereunder, shall be denied access to commerce, and providing for stringent penalties for the waste of either oil or gas.

The compact specifically provided: "It is not the purpose of this compact to authorize the States joining herein to limit the production of oil or gas for the purpose of stabilizing or fixing the price thereof, or create or perpetuate monopoly, or to promote regimentation, but is limited to the purpose of conserving oil and gas and preventing the avoidable waste thereof within reasonable limitations."

And further provided: "Each State joining herein shall appoint one representative to a commission hereby constituted and designated as the Interstate Oil Compact Commission, the duty of which said commission shall be to make inquiry and ascertain from time to time such methods, practices, circumstances, and conditions as may be disclosed for bringing about conservation and the prevention of physical waste of oil and gas, and at such intervals as said commission deems beneficial it shall report its findings and recommendations to the several States for adoption or rejection.

"The Commission shall have power to recommend the coordination of the exercise of the police powers of the several States within their several jurisdictions to promote the maximum ultimate recovery from the petroleum reserves of said States, and to recommend measures for the maximum ultimate recovery of oil and gas. Said commission shall organize and adopt suitable rules and regulations for the conduct of its business."

The great oil- and gas-producing State of Texas played the most important part in the formation of the compact and it has, since the formation of the compact, had a continuing and lively interest therein. It has been my good fortune to have remained New Mexico's representative on the compact commission from its inception to now. Throughout the years, I have come to know and respect the men who have represented Texas on the compact commission. Colonel Thompson was the first. In my opinion, there is no other man in the world who, as a public official, has had more to do with problems concerning conservation of oil and gas than Colonel Thompson. His record on the Railroad Commission of Texas is what we lawyers would describe as res ipsa loquitur (it speaks for itself) and it speaks loud and long. The next member from Texas was Judge J. C. Hunter, from Abilene, respected and loved by every man in the oil industry. Then, Sydney Latham, a former secretary of state of Texas; and today, your Governor, Beauford Jester.

The success and accomplishments of the Interstate Oil Compact Commission clearly demonstrate the practicability of voluntary cooperation between the States in the solution of mutual problems.

Formed and existing for the sole purpose of conserving and protecting irreplaceable natural resources—oil and gas—the compact has grow and expanded without precedent in the Nation's history. The compact commission is founded upon the premise that those closest to a situation can best understand and control it. The officials of the individual States know more about the oil and gas industry than any Federal official. The power of enlightened public opinion is the commission's sole weapon. It forms the basis of an educational program. The compact commission used the combined experience and talents of States and industry. It has no powers of compulsion. It seeks none. Its strength lies in its ability to weld the bands of cooperation. The States work together in the solution of mutual problems.

The Interstate Oil Compact Commission is a voluntary cooperative association of oil- and gas-producing States. It had been aptly called a "bulwark against Federal control" and referred to as "an example in self-rule." It is strictly an interstate agency, operated by and for the 20 member States. The member States produce 90 percent of the Nation's natural gas and 80 percent of the Nation's oil.

The functions of the commission are:

1. To prepare, recommend, and distribute the best forms of oil- and gas-conservation laws, rules, and regulations for the information of the governors, legislatures, regulatory officials, and the industry.

2. To accumulate, analyze, and distribute the best available engineering and other scientific information and data concerning natural gas to prevent waste and obtain the greatest ultimate recovery.

3. To conduct an educational program on conservation.

4. To provide a forum or round table where all National and State officials and the industry may meet to discuss common problems.

5. To encourage and assist oil- and gas-producing States to adopt efficient rules and regulations for conservation.

6. To impress upon all citizens the importance of conservation.

7. To provide a headquarters office where all pertinent information concerning oil and gas may be available to all concerned.

8. To point out the need for a general program and at the same time to show that variations are necessary in the various States and even in individual pools which require the attention of local authorities.

9. To promote a conservation program by State agencies with the assistance and cooperation of the industry that will clearly demonstrate the generally accepted principle of American democracy that the best government is by cooperation rather than by coercion.

10. To accomplish this program under the authority of individual States and eliminate any necessity for Federal control or regulation.

Now in its twelfth year, this cooperative advisory body is still without power of compulsion or the need of it and has demonstrated clearly the practicability of voluntary action among States in the solution of mutual problems.

To the commission's quarterly meetings are brought the Nation's top-notch scientists and engineers. They discuss the latest developments in waste prevention. The commission's standing committees make continuous studies of more advanced conservation practices.

I read an editorial from Chicago Journal of Commerce, April 23, 1947:

"OIL—THE COMPACT VINDICATED

"(By Keith Fanshier)

"Down at Birmingham, Ala., tomorrow the petroleum industry again gives the world an example of the peculiarly successful functioning of the American idea as it is expressed in application to a great natural resource industry.

"That idea could be defined as enlightened self-interest, cooperation, the minimizing of dependence on centralized bureaucratic regulation, and a consciousness of the implications of sound conservation.

"The occasion is the quarterly meeting of the Interstate Oil Compact Commission, now a healthy 12 years old despite the fact traducers of individual and State powers and rights in petroleum plotted constantly against the compact plan in its infancy.

"The compact and the organization which gives effect to it today are so well established that they have virtually driven the Federal control advocates under cover and it no longer is popular, even in Washington, to espouse views of strong Government control of petroleum.

"The enemies of an industry and State partnership in the service of the public were extreme in their vituperation at the start and grew more agitated as it flourished early. A Secretary of the Interior readily given to unlovely excesses of language tried repeatedly in the public prints to convince the country the compact could not possibly succeed.

"But the petroleum industry and the oil States refused to be intimidated. They went ahead. By now, working in harmony, they have demonstrated fully how needless and how potentially mischievous is strong, concentrated regulatory design. They have shown, by contrast, how it is possible to progress in serving industry and public alike through a loosely knit but effective entity that comes about the nearest thing to being an embodiment of the Golden Rule that any industry affords today.

"Nineteen States are now working together in the compact, or shortly will be. These include virtually all the oil-producing States and by far the great bulk of the Nation's oil production.

"The petroleum industry has been kept out of the hands of power-hungry, ambitious Government officials. American principles of individual initiative have been affirmed.

"Sitting as an unseen guest at Birmingham will be the spirit of a man who would have approved thoroughly the compact and its commission, Thomas Jefferson, whose one-hundred-and-fourth birthday has just been

celebrated. He is the man who said the best government is the least government."

All commission members and members of numerous committees, drawn from State regulatory bodies, the oil and gas industry, and the public, are exerting themselves to the utmost in this great conservation work directed to the prevention of waste of oil and gas.

Under the compact method, the individual States are trustees of their own natural resources. Thus the authority is placed where it can be best administered; cooperating through the compact commission, the States are safeguarding that sacred trust.

Clark Hill Dam

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1947

Mr. DORN. Mr. Speaker, under leave to extend my remarks, I include the following statement made by me before the House Committee on Appropriations:

Mr. Chairman and gentlemen of the committee, I appreciate this opportunity of being permitted to appear in behalf of continued Government construction of the Clark Hill dam, and I compliment the committee on its fair, impartial, nonpartisan hearihg.

To begin with, may I say that the part of this project which is located in South Carolina is entirely in the district it is my honor to represent in this Congress. I can sincerely and truthfully say that at least 90 percent of the people in this valley area are in favor of Government construction of this dam. These same people whom I represent are in favor of economy, against Government interference in business, and for the return of our Government to the people. At the same time, they believe, and I believe, that the waterways and principal rivers of this country by nature are for the benefit of all the people, and the various uses to which these rivers can be put, and has been so held by the courts.

This controversy that has arisen over the construction of this dam by the Government is not a new one in this country. In the development of our inland waterways since the adoption of the Constitution in 1787, this difference of opinion has been expressed from time to time. Many of the great leaders in the early history of our country advocated Government improvement of inland waterways and trade routes. Many canals were constructed by State governments, principally in Ohio, Illinois, and New York, though these were sometimes aided by Federal grants. Many canals were constructed by private enterprise.

Consequently, we have had the same controversy all through the history of this country that we are having today over this dam except that today it is principally a controversy of power rather than navigation. Fundamentally, the principle is the same. Many of these great leaders of both parties advocated inland waterways as a means of equalizing and bringing down railroad rates.

The United States Senate, under President Grant's administration in 1872, adopted a resolution calling for the appointment of a committee to investigate the subject of transportation routes to the seaboard in order that the people and industry might have cheaper facilities to reach the tidewater. This committee reported that water routes were not only the cheapest and best known means of transportation for heavy commodities but they were natural competitors and effective regulators of railway transportation.

A controversy which stirred up a great deal of bitterness, and a long struggle between private enterprise and the state, was when DeWitt Clinton in 1815, in New York, advocated immediate construction of a canal from Lake Erie to the Hudson River. An act was finally passed providing for the construction of this project, and this waterway was completed and formally opened in 1825.

In 1899, Governor Roosevelt, of New York State, appointed a commission on canals. This commission recommended the construction of a 12-foot barge canal between Buffalo and the Hudson River. The New York Legislature in 1903 finally passed an act appropriating $101,000,000 for this project, and it was completed and opened to traffic in 1918. This project was constructed by the government of New York State but it did much to lower and equalize freight rates and benefited industry and the people generally.

My argument today for the Clark Hill Dam, the same as it has been for generations, is to give the people of the Savannah River Valley and the southeastern section of the country cheaper power rates than they could otherwise obtain. The courts have upheld the validity of this type of Government enterprise and the power companies have been given ample opportunity to construct this dam but they did not, and at one time even advocated Government construction of the dam.

Mr. Chairman, this project is not interference with private enterprise. In fact, Government construction of this dam, and the making of this power available, will greatly stimulate private enterprise in various small industries in the Savannah River Valley, which is greatly needed. Not only that but it will help enhance the farm economy of this section of the country, and we are all aware of the individualism and tendency toward private accomplishment of the farmers of this country.

May I say that the great achievements that this Nation has made in water-power developments since the turn of the century have been nonpartisan. Forward-thinking, progressive men of both parties have advocated Government development of inland waterways toward the attainment of better navigation and lower power rates. I do not believe in the squandering of billions of dollars of the taxpayers' money in useless projects and in digging ditches and filling them up again, and have never believed in or supported such a program, but I do believe in the Federal Government developing the resources of this Nation in the form of power, forestry, erosion control, flood control, and things of that nature. It is a function of the Federal Government, and in many cases can only be accomplished by the Federal Government, thus bringing to the people of this country power they could not otherwise get. America must build up its resources to guard against future depressions and possible war.

In this particular Savannah River Valley section, where this dam is now under construction by the Federal Government, there was not 1 hour lost during World War II by strikes in any of its vast network of cotton mills. The foreign-born population in this valley is less than 0.14 percent. In fact, in the very county that gave this dam its name of Clark Hill, the County of McCormick, there are only three foreign-born citizens in its entire population. In this valley we find one of the worst eroded areas of the United States. We find some of the poorest people in America, with less income on the farms than any other section of the country. The boll weevil hit the cotton section of this valley in 1921, and the farm income of its people has steadily declined. They badly need cheaper power, protection from floods, and an effort made to arrest the erosion of its soil. I ask to submit at this point some astounding statistics on the average income per farm in the counties in the Savannah River Valley as compared to some of the other States of the Union. Also, the number of farms being operated today in this valley and the number operated at different periods during the last 20 years. There has been a steady decline in the number of farms and a decrease in annual income, which creates a situation not like any other in America, and consequently, a greater need for the final completion by the Federal Government of this dam already begun.

Gentlemen of the committee, in this long fight between private enterprise and Government development of its rivers and inland waterways, the rights of the people over monopolies and selfish interests has generally prevailed. In fact, in the history of America, the Government's determination to keep its rivers, inland waterways, and trade routes open and free has led to the development of private enterprise, and the greatest free industrial economy that the world has ever known. I sincerely believe in this same principle of continued development of rivers to furnish the people of this country flood control, less erosion, navigation, and, most of all, in making power available to the people. Just as the construction of the Erie Canal lowered railroad rates, so the continued development of Federal power projects, such as Clark Hill, will tend to economize, stabilize, and bring down existing power rates so that all the people of our country can have the benefit of our natural resources, thus promoting a better farm economy and private enterprise.

In my home town, the city of Greenwood, power rates have been reduced five times since the completion and construction by the Federal Government of a dam on the Saluda River a few miles from the city. This dam is furnishing hydroelectric power for Greenwood and many other communities and small towns and private manufacturing enterprises in that entire area. This dam, at the time known as Buzzard's Roost, was a test case before the United States Supreme Court for all Federal power projects, including TVA, Bonneville Dam and Boulder Dam. This reduction of rates in Greenwood is characteristic of the millions and millions of dollars saved by the users of electricity all over the United States of America, not to mention the thousands of farm homes that have been able to secure electricity.

Mr. Chairman and gentlemen of the committee, I hope this subcommittee will see fit to recommend the completion of Clark Hill Dam by an additional appropriation, thereby enabling another section of our Nation to have the benefit of lower power rates, better navigation, less erosion and a more stable economy.

AVERAGE INCOME FROM FARMS IN SAVANNAH RIVER VALLEY SECTION

These figures are from the 1945 census conducted by the Department of Agriculture and cover the year 1944. There were no net income figures but the following represent the average per year per farm of products sold or used at home:

South Carolina counties

Abbeville	$970
McCormick	934
Edgefield	1,647
Anderson	1,346
Greenwood	996
Oconee	1,019

Georgia counties

Franklin	$962
Hart	1,216
Elbert	945
Lincoln	816
Columbia	1,091
Washington	1,388
McDuffie	1,638

The following represents the average per year per farm of products sold or used at home for States listed:

Arkansas	$1,687
Kansas	4,633
Michigan	2,418
North Carolina	2,090
Pennsylvania	2,712
South Dakota	4,557
Texas	2,953

Number of farm operators for specified counties in Georgia and South Carolina (Censuses of Agriculture, 1920 to 1945)

	Jan. 1, 1945	Apr. 1, 1940	Jan. 1, 1935	Apr. 1, 1930	Jan. 1, 1925	Jan. 1, 1920
GEORGIA						
Columbia County	909	1,200	1,394	1,253	1,417	1,914
Elbert County	1,956	1,893	2,276	2,427	2,720	3,316
Franklin County	2,247	2,139	2,355	2,631	3,157	3,378
Hart County	2,413	2,308	2,549	2,593	2,882	3,103
Lincoln County	860	1,032	1,614	1,481	1,239	1,668
McDuffie County	1,002	995	1,312	1,193	1,259	1,735
Washington County	2,980	2,506	3,112	3,288	3,187	4,031
SOUTH CAROLINA						
Anderson County	6,371	6,430	7,887	8,200	8,216	8,910
Edgefield County	2,311	2,151	2,817	2,724	2,928	3,991
Greenwood County	1,995	2,099	2,785	3,084	3,027	4,005
McCormick County	1,270	1,290	1,813	1,812	2,003	2,911
Oconee County	3,722	3,595	3,988	4,438	3,704	4,183

Population in Savannah River section showing number of foreign-born residents (according to 1940 census)

	Number	Foreign born
South Carolina counties:		
Abbeville	22,931	18
McCormick	10,367	3
Edgefield	17,894	15
Anderson	88,712	124
Greenwood	40,083	77
Oconee	36,512	42
Georgia counties:		
Franklin	15,612	7
Hart	15,512	18
Elbert	19,618	98
Lincoln	7,042	4
Columbia	94,333	5
Washington	24,230	14
McDuffie	10,878	17

Total population for area, 319,824; total foreign born, 442; total percentage of foreign born, 0.14 percent.

NAM Promises and the Price of Meat

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. BLATNIK. Mr. Speaker, last summer the National Association of Manufacturers and other selfish lobby groups pressured the Congress into dismantling the OPA law and thus destroyed the price-control program. The NAM promised the American people at that time that if price controls were eliminated, the laws of demand and supply would shortly bring prices down. The present cost of food and clothing exposes the NAM lobbyists as misleaders and false prophets—as men of no integrity who have placed their own selfish interests above the living standards of the American people. In this connection, I wish to include in the RECORD the following editorial from the June 21, 1947, issue of the Trainman News, the official publication of the Brotherhood of Railroad Trainmen:

CONSUMER GETS ANOTHER SOAKING—CURRENT PRICES OF MEAT INDICATE BLACK MARKETEERS WERE PIKERS IN DAYS OF OPA

Railroaders and other workers who must have plenty of strength-giving meat to perform their strenuous labors this week saw it disappearing from their tables and lunch pails—banished by the zooming prices.

Retail meat prices were rising 10 to 20 percent throughout the Nation and it was a sad indication that other food costs will increase soon:

THERE'S TROUBLE AHEAD

Declared a spokesman for Farm Research: "Those soaring prices spell trouble ahead and a terrific squeeze on the consumers."

And Jack Kranis, president of the National Meat Industry Council, admitted that meat prices were "higher than they were in the black market during the days of the OPA."

He pointed out that the cost of beef on the hoof is now 28½ cents a pound, compared with 18 or 19 cents under OPA regulation and 21 cents on the black market.

The price of steak in retail stores this week was 7 cents a pound higher than last week. Lamb chops were up 4 cents, leg of lamb 6 cents and pork loin 6 cents.

The new price boosts put the costs of retail meat way above the OPA ceilings of a year ago and considerably more than the black market prices prevalent at that time.

Here are a few examples:

	June 1946		Last week
	OPA ceilings	Black market	
Porterhouse steak, per pound	$0.56	$0.75	$0.90
Veal cutlets, per pound	.50	.65	.73
Pork loin, per pound	.36	.45	.73

Last year during the battles for abolition of the OPA, labor and consumer spokesmen cautioned that removing the price controls would offer only temporary and artificial relief from a meat shortage which would be followed by a really severe scarcity.

OFFER POOR REASONS

Meat industry and Government officials presented several reasons for the sudden spurt in meat costs and they bore contradiction.

One explanation was that European buyers are more than willing to pay high prices and that has upped the costs.

To counteract this, it was cited that only 2 percent of the country's meat supplies are sold abroad.

Another reason was that meat prices always increase in summer months.

But it was pointed out the current spurt began 3 months ago at the wholesale level.

A third reason was that cattle raisers have been withholding livestock from the market.

This explanation was discounted, too, when it was cited that the supply of cattle on the hoof is no higher than usual.

Despite the reasons offered for the increased prices, the fact that meat costs are out of range again came as disheartening news to the multitudes of American laborers whose wages have not kept pace with high living costs.

BALLYHOO IS RECALLED

And it caused Mr. and Mrs. John Q. Public to recall only too well the ballyhoo that big industry peddled last year when it conducted its successful drive for the death of OPA. Consumers were assured that prices would drop to a normal level once the price regulations were lifted.

Chester Bowles, ex-OPA director, who fought vigorously for continuation of price controls on meat, declared:

"I probably sound like 'I told you so,' but we knew a year ago it was going to happen. The supply simply isn't there."

American Influence Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Edgar Ansel Mowrer:

Not all Moscow's blustering broadcasts about reviving prosperity in the European states can hide the horrible fact—behind the iron curtain terror is supreme.

Nor can the United States quite wash its hands of responsibility for this useless human suffering. No amount of official explanation can eliminate the fact that Washington acquiesced in handing over once-free peoples to a government whose brutality at home boded ill for the fate of other peoples under its control. We have at least a negative responsibility for all the frightfulness that Moscow is labeling "liberation."

For instance in Rumania.

Absolutely authentic information from Rumania makes even this hardened newspaperman feel a little sick.

Terror, inflation, pillage, and one partial crop failure have brought about complete economic ruin and starvation. The aim is to ruin the Rumanian middle classes without precisely installing Soviet communism. That will come later.

In Moldavia, one of the richest food-growing countries of the world, the peasants are eating roots and grass and dying like flies. Swedes who have recently returned consider conditions as horrible as those the Germans introduced at Buchenwald. Anybody who had any wealth or social position before is treated as vermin.

In the capital city of Bucharest there is practically no bread.

The turncoat Foreign Minister, Tartarescu, is being attached by his Communist associates. If you are a Communist or support the party, you eat. If not, you cannot open a shop, teach at the university, plead in the law courts.

Rumania has become to all intents and purposes a Soviet province. A Communist "legal" coup d'etat similar to the one in Hungary is expected at any time.

This situation raises the all-important question, What is the United States going to do about it? Obviously, here is a situation that defies treatment under the Truman doctrine.

Which raises the second question, What could we do?

The answer is, Not much. We are committed to preventing the further spread of

"Soviet democracy." But where Russian rule has been established with our consent, the American people are obviously not going to wage war to eliminate it.

The question should be, therefore, What can we do short of war?

Some Americans believe that ultimately Russia may consent to exchange these victim peoples against a sufficiently big American loan as their ransom.

If so, we must seize the opportunity. But meanwhile?

A seasoned American observer who has just returned from more than 2 years behind the iron curtain offers the following answer:

"First of all, we must not break off diplomatic relations. Not because it would offend the satellite governments. But because it would not help the peoples they are oppressing.

"Our American (and British) aim must be to keep up the courage of our friends. They have been a part of occidental civilization. We should see to it that they remain part of it.

"One instrument could be the attitude of our diplomatic representatives in Warsaw, Bucharest, and so forth. Officially, these diplomats must be accredited to the stooge governments. Actually, they should consider themselves accredited to the opposition parties, who constitute the majority. This does not mean that they should oppose the regular governments. Nothing would be accomplished by this. Still less does it mean that our diplomats should urge the opposition to conspire or revolt.

"But just as Soviet representatives in bourgeois countries always consider themselves really accredited to the Communist opposition, so our diplomats in capitals under Soviet rule must concentrate on preserving the faith of these peoples in us.

"A second instrument of incomparable value is the cultural work of the State Department. American Congressmen obviously do not suspect the mischief they are making in suppressing American cultural attachés, libraries, and broadcasts.

"Assistant Secretary Benton got off on the wrong foot when he tried to set up the Voice of America on a 'talking to Russia' basis. There is little or nothing that we can usefully say to the Russians. These people have been thoroughly conditioned by 30 years of bolshevism. Broadcasts to the Soviet Union could only begin to pay dividends after 10 years.

"Broadcasts to the satellites are necessary now. These are captives to whom we alone can bring the promise of ultimate freedom.

"Freedom to them does not mean the American way of life. Freedom means the recovery of their own way of life which Russians and local Communists have taken from them. Therefore, they do not want American crooning. They want world news which is being withheld from them, news of American policies, of American power. For in this last lies their only hope."

To which this writer adds a fervent "Amen."

Terminal-Leave Pay

EXTENSION OF REMARKS
OF
HON. J. HARDIN PETERSON
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. PETERSON. Mr. Speaker, the Florida Legislature has passed Senate Concurrent Resolution 7, requesting the passage of legislation providing for cash payment to veterans for terminal-leave pay, that is H. R. 4051, introduced and sponsored by my good friend the gentleman from Florida, DWIGHT L. ROGERS.

Mr. ROGERS has been a pioneer in this field of legislation. It has been my pleasure to support his legislation and our colleagues in the Florida delegation are proud of the work he has done on it. The holders of these terminal-leave pay bonds in many instances are badly in need of cash. Homes are to be built and furnished, subsistence allowances need to be supplemented, doctor bills have to be paid, new babies are coming to veterans' families; all of these take cash, and it is rather foolish to say, "All right, hold your bonds and go out and borrow in the money market and pay the interest demanded." It is not sound economically. It is not fair to the veteran. It is a debt we must ultimately pay. The time to pay it is when it will do the veteran the most good.

I would like to urge that the bill be passed promptly, and hope it may be taken up soon and bespeak your support.

Tax Bill Veto

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. HAND. Mr. Speaker, under leave to extend my remarks, I am including a worth-while editorial which appeared in the Bridgeton (N. J.) Evening News entitled "Playing Politics With Family Incomes," which very ably discusses the implications of the President's veto of the tax-reduction bill.

The editorial follows:

PLAYING POLITICS WITH FAMILY INCOMES

President Truman's veto of the Republican income-tax-reduction bill is a slap at every wage earner in America. Playing politics with the family pay envelope is dangerous business. The people won't forget it in 1948, although the Democratic strategy is based upon loss of memory on the voters' part next year.

In the 1946 congressional elections the people's mandate was plain and convincing. They wanted a stabilized administration in Washington. They wanted, economic relief from the staggering burden of taxes saddled on them for a decade or more. So Congress was provided with a Republican majority.

The first duty of the Republicans in Congress was to carry out the wishes of the majority of the people. They devised a bill to reduce the tax on all incomes. It would have been un-American to reduce only certain brackets. It had to be a law that would give everybody relief.

The war ended in August 1945. Nearly 2 years later the enormous levy on every American's wage is practically the same as it was during the conflict. This tax is in addition to the scores of other forms of taxation levied upon the people.

There may be some estimable traits in the cardinal principles of the Democratic Party. Economy has never been one of them. No American wants to evade his fair share of maintaining a free system of government. But the shameful waste of his precious dollars has become a national outrage. He finds his living costs almost beyond reason. Prices of such articles as food, automobiles, shoes, and other things remain shamefully high.

How can President Truman justify the same tremendous levy on his fellow Americans that they were forced to pay in wartime? How can he justify his fattened budget, designed only to keep patronage at the highest peak, and his desire to make the Government a heavy buyer in commodities so that they will remain scarce and therefore expensive?

The Democrats feel that next year when their Presidential hope comes forth with a cry for reduced taxes, the people will forget about relief in 1947. In that they probably will be sadly mistaken. There may be plenty of cash around, but unemployment is increasing. Soon our factories will be producing more than consumers can buy only because their pay is shaved one-fifth weekly to keep the New Deal heavily oiled with money.

In putting his veto to a tax relief bill, Mr. Truman has acted in bad faith with the public. He knows full well that millions of families are desperately in need of relief from wartime taxes. Yet he has actually dared to defy the wishes of the voters expressed so plainly in last year's election.

Little wonder that the resentment expressed in Washington reflects the overwhelming sentiment of the Nation. The President is an astute politician, but this time it seems he has overstepped the mark.

Playing politics, with an eye on 1948, and an apparent desire to be the author of a tax reduction bill of his own, isn't going to help the President. If anything, it will probably doom any chances for another 4 years in the White House.

The people are sick and tired of New Deal expediency, extravagance, and reckless disregard of last November's mandate.

United States Merchant Marine

EXTENSION OF REMARKS
OF
HON. FRANKLIN J. MALONEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. MALONEY. Mr. Speaker, in the past few months many pessimistic pictures have been brought before us concerning our merchant marine. On May 22, at a dinner given by the Propeller Club of the United States, port of Newport News, Harvey Klemmer, economic adviser to the United States Maritime Commission, gave a careful analysis of our merchant marine's future. His views are neither pessimistic nor optimistic but tell a true story of what we are to expect and I believe it would be beneficial to have his speech written in the RECORD, as follows:

The outlook for American shipping, once viewed with too much optimism, is now viewed with too much pessimism.

The pendulum, as pendulums have a habit of doing, has swung from one extreme to the other.

A short time ago we were talking about a merchant marine second to none, of continuing to occupy a dominant position at sea, of an active fleet of 20,000,000 dead-weight tons. Where are the dreams of yesteryear? Today there are few experienced shipping people, either in the Government or without, who believe that we shall be able to salvage more than 10,000,000 or 11,000,000 tons from the wartime fleet. Some of our most

distinguished prophets foresee an even greater shrinkage, while there are not wanting those who believe that the American position is all but hopeless.

Rose glasses have given way to blue glasses; in some cases to black glasses.

Neither type, in my opinion, gives the true picture. The glasses which we formerly wore were too bright; the glasses which some of us are wearing today are too dark.

It was not in the cards that the United States should build and operate the world's ships any more than it was in the cards for Britain to build the world's automobiles. We shall continue to build and operate some ships, and Britain no doubt will continue to build some motor cars, but neither of us is likely to displace the other from positions which are the result of economic forces exerted over a period of many years.

If this were a peaceful world—where there was never any danger of conflict, either military or economic—it might make sense for the United States to concentrate on automobiles and for Britain to concentrate on ships. However, this is not a peaceful world; hence it becomes necessary for us to maintain a merchant marine, and for the British to maintain a motorcar industry. We understand Britain's need for engine-building capacity (she would have been in bad shape during the recent war without it) and we hope that she will attempt to understand our need for ships (without which we would have been in bad shape).

The Postwar Planning Committee of the Maritime Commission, of which I was privileged to serve as executive secretary, projected a seagoing American fleet of 10,500,000 to 11,000,000 dead-weight tons. These figures were based on a number of extremely favorable circumstances, all of which are not likely to materialize. We shall be fortunate, in my opinion, if we are able to operate—on a sound, long-range basis—more than 10,000,000 tons of oceangoing shipping under the American flag.

This figure includes both dry-cargo vessels and tankers, engaged in both domestic and foreign trade.

Ten or eleven million tons of shipping may not seem large in relation to the wartime fleet of 55,000,000 tons. Nevertheless, there is no reason for undue pessimism in the outlook from here on. There was never any reason to assume that we could run all the ships built during the war, any more than we could fly all the planes or use all the equipment built in other categories. The bulk of our ships, like billions of dollars' worth of other materials, must be written off as a war expenditure. The surprising thing, so far as shipping is concerned, is not that we have saved so little but that we have been able to save so much.

The American merchant marine is today in a vastly improved position over that which it occupied prewar.

In the first place, the postwar fleet—regardless of the size at which it is ultimately stabilized—will probably have a carrying capacity considerably greater than that of the prewar fleet. And carrying capacity, not size, is the true measure of shipping effectiveness.

Our fleet, prewar, was largely obsolete. Today we have one of the most efficient fleets in the world.

We have the greatest reserve of vessels ever assembled. Idle vessels are not the equivalent of active vessels, to be sure, but they are a force to be reckoned with in assessing the maritime potential of the United States.

The industry is in a greatly improved position.

The area of shipping know-how, both in the yards and in the offices of shipping companies, has been vastly expanded.

Hundreds of thousands of men and women have gained valuable experience in the building and operation of ships. And there is increasing evidence that those men and women who are still in the industry realize the necessity for some cooperation on their part if American shipping is to endure.

The public understands, as never before, the necessity for a merchant marine of some proportions as part of the machinery of national security.

The leaders of our armed forces saw what merchant ships did in the war; they know that a defense establishment which does not include ships is incomplete, and they ask that the commercial fleet be preserved.

The Congress, although seemingly critical at times, is alive to our problems and anxious to further the legitimate aspirations of the shipping industry.

Our friends abroad admit, much more freely than they formerly did, America's need for ships; it is not too much to hope that they will support—rather than oppose—the moderate program now being followed by the United States.

Low rates in domestic trade, which have all but destroyed some segments of the industry, are in process of being corrected. Domestic services may never recover their former stature but those which survive will probably be on a much sounder basis than they were before the war.

The principal weakness in our present position is, of course, the shipbuilding picture. The building of ships in this country is rapidly coming to a stop. We can hardly go on building ships for which there is no need; on the other hand, we cannot afford to permit the dispersal of trained staffs and the closing of our yards.

Shipbuilding in this country has long been either a feast or a famine. That is not the right way to build a healthy industry. During the next 2 or 3 years, we must fill in certain gaps in our maritime edifice—particularly in the field of passenger vessels—and we must put the existing fleet in first-class condition. After that it behooves us, if we want to preserve a shipbuilding industry worthy of the name, to make replacements in a much more orderly manner than has been the case in the past. Only thus, it appears, shall we be able to preserve an enduring structure to serve as a counterpart of the fine new fleet now sailing the seas.

Planting by Air

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. MURDOCK. Mr. Speaker, on several occasions on the floor of the House and in committee meetings I have called attention to the wonderful work of reseeding our grasslands by airplane distribution of pelletized seed. Especially have I mentioned the work of Dr. Lytle S. Adams during the last few months under contract with the Government to reseed 50,000 acres on Indian reservations in Arizona. I am happy to see that the present Interior appropriation bill contains a fairly generous appropriation to continue this work during the next fiscal year. Knowing the interest of the conferees in this vital work, I have full confidence that the report will assure a continuation of the airplane reseeding work so well started during the past year. Restoring the ranges is very important to our Indian stockmen.

This fruitful idea has attracted great attention. At least a half dozen publications of Nation-wide circulation have had illustrated articles showing the Adams' method of pelletizing the seed and of distributing such pelletized seed rapidly over vast acreage in the minimum of time. Not only have magazines published such articles but movie films have been made and widely shown. One such standard film was recently shown in the auditorium of the Interior Department and witnessed by many Members of Congress. Since Secretary Krug could not be present on the evening of the showing, he was later furnished a private showing of the film, and on that occasion he brought with him the venerable elder statesman, Bernard M. Baruch, who took a great interest in the film, and also in the actual pellet-making machine which was being displayed in the auditorium. This machine Dr. Adams had just been using on the Papago Indian Reservation in southern Arizona, to pelletize the seed used to cover 10,000 acres on that reservation.

Both the pelletizing machine and the mechanical distributor attached to the airplane and used for distributing the seed in a wide swath from the airplanes are interesting inventions. In fact, it is hard to say which is the most significant idea, the machines to make and distribute the pellets or the idea of the pellets containing and protecting the seed. In any case, the combination of these two scientific ideas make it likely that nature will be greatly aided in restoring some of the grasslands which have been overgrazed and are wasting through erosion.

Among the many interesting articles concerning this process, I find one entitled "Planting by Air" in the May 1947 issue of Arizona Highways. This article is accompanied by numerous pictures which are highly instructive. It pertains to the actual work of reseeding done last year on the Papago Reservation in southern Arizona and also on the Hopi Reservation in northern Arizona. The magazine article is as follows:

PLANTING BY AIR

(By Western Ways)

Atop a purple mesa in the land of the Hopi a mounted Indian shaded his eyes and looked into the northern Arizona sky. There in the hot blue a tiny airplane appeared, grew larger. As the roar of its motors increased, he could see that it was dropping something—trailing behind it was a cloud of brownish specks. It swished low past him, raining its hard little bombs in an even swath, and raced onward.

He dismounted, walked over and picked up one of the brown pellets. What was it, this hard little pea? Why was it dropped on his homeland—his reservation? What could it mean?

Simply put, the meaning was this: The United States Government, through the Department of the Interior, was investing an initial $175,000 in an Arizona experiment. If successful, part of the gamble would be taken out of farming. If successful, it would furnish means of replanting denuded lands in the most efficient manner possible. That small pellet, perhaps, would stop the snowball of erosion that threatens our land.

The first seed pellet planting by air was done on Arizona's Papago Indian Reservation at Sells in May of last year. It was a singularly appropriate site for this newest quirk in farming, for this land was one of America's first—and most discouraging—farmlands. Papagos have been tilling the brown, hard

soil of the Arizona desert for centuries, wresting their living from its reluctant yield of beans and pasture. These years of planting and grazing had left little resistance in the land. Several dry years plus an increase in the number of Papago cattle had ruined the Papago land.

When the Government decided to finance Dr. Lytle S. Adams in testing his invention of pellet planting by air, they decided that if he could make the Papago land bloom, he could turn any of the desert country of the United States into a garden.

In May the airplane rained its first pellet bombs down onto the land of the Papago. July saw Dr. Adams reseeding the San Carlos Indian Reservation near Globe. Early fall, and Polacca in northern Arizona was receiving its shower of drought-resistant Lehmanns Lovegrass encased in the brown pills.

In all, some 30,000 acres have been planted in this vast experiment. Another 20,000 are to be bombarded. Indications even now show that planting pellets by air is successful. Whether the wholesale planting of thousands of barren acres will be practical from an economic viewpoint is being tested on the wastelands of Arizona.

If Arizona's land blossoms, much credit will go to stocky, bronzed, white-thatched Dr. Lytle S. Adams. It will not be his first successful invention, for when "Doc" Adams mulls over a problem he is likely to come up with a solution so simple it has been overlooked by experts.

When the resourceful, retired dentist learned that approximately 130,000,000 acres of public land were in an appalling condition, he determined that something should be done. How would it be possible, Dr. Adams wondered, to replant this land, accurately and economically?

Nosing around into the problems of the farmer, the doctor learned something everyone knew but couldn't stop. Of the millions of tons of seeds planted in this country each year, only a small percentage mature and yield a crop. That, he felt, was a difficulty that should—and could—be solved.

Another problem was the lightness of seeds. To plant rapidly, they should be sowed from the air, but they were not heavy enough to insure their dropping in the right place.

A seed pellet was the obvious answer to both problems. A tiny earthen bomb which may revolutionize farming was Dr. Adams' solution.

He had noticed that the most reliable planting was that done by nature. An animal—a rabbit for example—would nibble at a cactus fruit. Later, new cacti popped up wherever there were rabbit droppings.

Obviously, Dr. Adams reasoned, this was because the seeds were stripped of their husks and then replanted, amply surrounded by a fertilizing agent. He could do the same thing artificially: husk the seeds and mix them with a fertilizer. But hundreds of seeds were carried off each year by ants or eaten by rodents. Unfettered by knowledge of what could not be done, Dr. Adams mixed insect-rodent repellent with the seeds.

The first step in making the pellets is performed by a hammer mill which pulverizes to a fine silt the earth for the pellet's coating.

Ingeniously the pellet machine blows the dirt from a hopper in a trough. There jet nozzles squirt enough moisture into the dirt to hold it together while another jet sprays in the insect-rodent repellent. The husked seed, dusted with fungicide drops through a small slot, allotting enough seed to provide each pellet with from three to seven seeds.

After powdered fertilizer is sifted in, the mixture is poured into a funnel, which feeds it slowly to revolving disks which pack the mixture into tiny, uniform balls, pellets, or pills.

Dr. Adams worked with the pellet machine, modifying, improving, changing until the present model turns out 6,000 pounds of pellets each 8 hours. The cost of manufacture of the pellets—exclusive, of course, of the cost of seeds—is less than $2 an acre.

(The seeds, incidentally, which are used in this experiment were imported from Africa by the Department of the Interior. They are Lehmanns lovegrass, which is drought-resistant and provides good forage for cattle. The pellet-process may be applied to other types of seeds to advantage since they space planting.)

The final job of inventing required of Dr. Adams was a seeder to be attached to the airplane which would feed the pellets to the ground. The centrifugal device now used whirls at a uniform speed, flinging the pellets out in a pattern, about one per square foot. Cutting a swath 1,000 feet wide, one acre per second is average for the plane-planting.

On the hard ground the pellets lie, self-contained, unappealing to gophers, birds, and insects. Then one day the Arizona sky will become cloudy and raindrops will fall. One will touch the tiny pellet, and within 2 days a sturdy stalk of Lehmanns lovegrass will sprout.

It will be a quiet process, miles from civilization, in the fastness of the Hopi Reservation. No trumpets will herald the sprouting of these blades of grass. Yet, as the clay splits open and the tender green leaves appear, it may well be a signal of revolution in farming.

The subdued snap may be the doom of eroded land.

Conservation Farming

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Thursday, June 26 (legislative day of Monday, April 21), 1947

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an essay written by Julian Stoutamyer, of the elementary school of Front Royal, Va., on conservation farming. This essay won the award in the contest in the Lord Fairfax soil-conservation district.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

CONSERVATION FARMING, 1947

(By Julian Stoutamyer, elementary school, Front Royal, Va.)

The late war has taught the American people the great need of the conservation of productive soil and natural resources. There seems to be no end to the great demands upon the soil. Our food, clothing, and shelter all come from the soil. People in most parts of the world are asking for food, clothing, and shelter.

There are less than 2 acres of arable land per person in the world. We are told that erosion should not be allowed to destroy any more land anywhere.

Many good farmers have known the value of using and conserving their productive soils. Other farmers did not seem to know about the value of soil conservation. Rains have carried their fields into streams and rivers, filling reservoirs with silt and increasing flood and property damages. Many fields are still losing good soil where conservation practices are not followed. Some still think that nothing can be done about soil erosion, but a good beginning has been made. Many good farmers know that conservation farming is the wise and correct use of the land; using the land for what it is best adapted, then treating the fields, pastures, woodlands, and wildlife areas according to their needs for good production and soil protection.

Growing the right crops, using lime, fertilizers and manure to suit the fields, the crops and pastures, protecting woodlands from fire and grazing, planting trees where needed, using grassed waterways, farm ponds, and a lot of other conservation practices that will give greener fields and woodlands, clearer streams, and lasting security. These practices should spread quickly to all lands.

It has been said that even "America is only 6 inches from becoming a desert—6 inches straight down. The topsoil on which all life depends is only about a half foot thick." Every day we lose enough of these precious soils to cover 200 40-acre farms. Wind steals it, water runs away with it. As we look around we can see where the topsoil, fences, woodlands, buildings, the people, and most of the wildlife have gone from fields that were at one time good. Their real value and beauty have gone too.

Almost 300,000,000 acres of land are already ruined along with the people that were trying to farm it. It has been said there is a lot of science—a knowledge of natural laws—in the correct handling of the land. A combination of the art and science of good farming is needed.

Many good farmers and neighborhoods show what good land will support when the land is farmed correctly—the conservation way. Beautiful homes and happy people, productive fields and woodlands and clearer streams, and an abundance of wildlife, fertile fields producing good crops annually, good schools and good business. This is better than eroded and gullied fields, burnt-over woodlands, muddy streams, poor schools, and poor business. All good things come from good soils. We should be thankful for every effort to protect the land. I am glad to be one of the many boys and girls trying to write an essay on conservation farming in the Lord Fairfax soil conservation district. I believe every farmer must be better satisfied with conservation farming where the rains do not steal his farm away along with the seed, lime, and fertilizer he buys.

Recently over 10,000 farmers reported to the United States Department of Agriculture. They said farming the conservation way had given 35 percent bigger yields of better crops—crops made better food and better feed. They had more money for more needed improvements. They all found farming on the level easier and more profitable. It is mostly called contour farming. Not up-and-down-hill farming. They liked all the conservation practices for saving their good soils.

The correct use and conservation of all our natural resources will help to keep us an independent Nation—a happy people, enjoying so many of the good things of life, but soil erosion has changed all of this for many people.

Will we practice soil conservation now?

Labor Legislation

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Thursday, June 26 (legislative day of Monday, April 21), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD, two telegrams urging the sustaining of the President's veto of the labor bill; one from the Joint Council of Teamsters, No. 37, Phil Brady, president; the other from M. E. Steele.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

PORTLAND, OREG., *June 19, 1947.*

Senator WAYNE MORSE,
Senate Office Building,
Washington, D. C.:

This wire is to refute the statement made by Alvin Wilder over the air, Free American program, 7:45 p. m., June 17, ABC network, that teamster unions in Portland, Oreg., charge $500 initiation fees, that quotation or statement by Alvin Wilder is contrary to fact. In all Oregon, teamster locals range from $5 to $50 and not 1 cent more. Such statements as made by Wilder are ample proof of the propaganda of those who seek to destroy the American labor movement and shackle labor to misery and persecution. In the name of free American labor we plead with you to sustain the President's veto of the Taft-Hartley bill.

JOINT COUNCIL OF TEAMSTERS,
No. 37,
PHIL BRADY, *President.*

PORTLAND, OREG., *June 19, 1947.*

Senator WAYNE MORSE,
Senate Office Building,
Washington, D. C.:

In a broadcast over the ABC network at 7:45 p. m., June 17, Radio Commentator Alvin Wilder made the statement that teamsters union in Portland charged new members a $500 initiation fee, when the facts are that these initiation fees range from $5 to not more than $50. This is another example of how certain interests are propagandizing the public in favor of the Taft-Hartley bill. Urgently request you sustain veto of this bill if the President so acts.

M. E. STEELE.

The Palestine Situation

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Thursday, June 26 (legislative day of Monday, April 21), 1947

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to the President of the United States by Billy Rose, dealing with the statement of Bartley Crum regarding the Palestine situation, which seems to me to merit attention. The letter was published in the Washington Times-Herald of June 25, 1947.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Mr. HARRY S. TRUMAN,
Washington, D. C.

DEAR MR. PRESIDENT: I think you ought to send out for a copy of Bartley Crum's new book, Behind the Silken Curtain. And when you read it, sir, have a cold towel handy. It's going to make your face awfully red. Especially chapter 2—The Secret File in the State Department.

This San Francisco lawyer reports that, shortly after you appointed him in 1945 to the Anglo-American Committee of Inquiry on Palestine, he was handed a document containing confidential communications between our State Department and the Arabian potentates of the Near East. Crum writes: "It was a sorry and bitter record for an American to read. According to this file, since September 15, 1938, each time a promise was made to American Jewry regarding Palestine, the State Department promptly sent messages to the Arab rulers reassuring them, in effect, that regardless of what was promised publicly, nothing would be done to change the situation in Palestine."

Now let me say right here, Mr. President, that I'm not writing this piece to add my 2 cents' worth to the Palestine question. What I want to talk about is secret diplomacy—Honest John talk in high places and skullduggery in the lower echelon.

Crum goes on: "It was clear that the State Department continued playing both ends against the middle under President Truman's administration. On August 16, 1945, President Truman revealed he had discussed Palestine with Mr. Churchill and Mr. Attlee at Potsdam and that they wanted to let as many Jews into Palestine as possible. But on October 23, in a confidential cable to Baghdad, Cairo, Damascus, Beirut and Jidda, the State Department explained that President Truman and the prime ministers 'engaged in exploratory correspondence on this subject * * * but there has been no change in this Government's previously announced attitude on Palestine'."

Not very fragrant, is it, Mr. President? Either you have been guilty of some pretty fancy double talk, or your State Department has been sending these cables without your knowledge—in which event you ought to blush every time you endorse your salary check.

I often wonder what makes you politicos think you have the right to gamble with Joe Citizen's life and fortune without letting him peek over your shoulder at the cards? Is it because you think you're so talented, so smart, so wise? And that 145,000,000 of us are so dumb?

How did you get up there anyway? At some liquored-up convention hall, the boys with the expensive cigars made a guess as to who would bring in the vote. After the nomination came the banners, billposters, beer parties, and buttons. A fellow read some numbers over the radio on a Tuesday night in November and a bit later, a few ordinary human beings found themselves running the country.

O. K., what does that make you? Jefferson, Lincoln, Einstein, Thomas Edison? Not in my book. You've got to prove it first.

Well, what have you done? So far, what single piece of management or administration has come out of the whole kit and kaboodle that any industry boss would pay a decent salary for?

If the State Department has a secret file on Palestine, how are we to know it hasn't similar folders on Greece, Spain, Turkey, and Argentina? And if it has, where do you gents get the gumption to make life and death decisions without first telling us the why's and wherefore's?

When the boys in the silk toppers decide to make up my mind for me, I at least want to know what they know. I'm not much impressed with this business of pointing to a brief case and saying, "Sssh." There are too many little white crosses around the world for me to buy that mumbo jumbo.

Instead of worrying about whether we should recognize the new government of Hungary, isn't it about time you insisted on the State Department's recognizing the old Government of the United States? Isn't it about time you and General Marshall got a couple of fly swatters and went in and cleaned out some of the well-barbered pests who operate the State Department as if it were a private country club?

It sounds like insanity when you put it on paper, but it looks as if there might be another war. I think the kids who will be asked to fight that war would like to know whether they're going to be fighting for their country or for some self-declared experts in the Department of State.

As you may have heard, there's a Presidential election coming up pretty soon. I think a lot of fellows like me are going to sign their campaign checks and mark their ballots according to results, not rhetoric.

From Bartley Crum's books, I gather that you and some of the boys in the inner circles haven't faith in the judgment of the people.

Don't be too surprised in '48 if it works both ways.

Sincerely,

BILLY ROSE.

Labor-Management Relations Act

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, June 26 (legislative day of Monday, April 21), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Labor Reform Bill Becomes Law," published in the Arkansas Democrat of June 24, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LABOR REFORM BILL BECOMES LAW

Your democratic government in Washington lives and functions. In proof of this Congress, which represents the will and majesty of the people, has overridden the President's veto of the labor reform bill.

The Senate, by a vote of 68 to 25, followed the lead of the House in annulling the veto by a vote of 331 to 83. Both of our Arkansas Senators joined the prevailing majority, as all seven of our Representatives did in the House.

Congress thus showed that it has not forgotten, if the President has, events of great seriousness and meaning in our recent experience.

It has not forgotten the railroad strike of May 1946 or that the President, faced with a threat of national paralysis, then asked Congress for a law far more drastic than anything in the bill just passed over his veto—the right to draft workers, which Congress refused to give him.

Congress has not forgotten the coal strike of last fall, when the President was forced into injunction proceedings against John L. Lewis and his miners, to start up the mines, so that homes could be warm, streets lighted, and the necessities of life produced and transported.

Congress has not forgotten that, largely because of those strikes and others which imperiled the Nation's welfare and security, the people voted for an overturn in Congress—sick and disgusted with its previous refusals to check the high-handed course of many unions.

Nor has Congress forgotten the strikes of this year, or the refusal of the unions to cooperate in writing any measure to curb their power.

Now Congress has acted. The new law sets up safeguards for the public. It is impressively fair, in view of the record of so many

unions. It will not prevent all strikes, will not destroy the unions, or "enslave labor."

It is, above all, a reassurance that our democracy is a living force.

The President's Veto of the Labor Bill

EXTENSION OF REMARKS
OF
HON. CARL A. HATCH
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Thursday, June 26 (legislative day of Monday, April 21), 1947

Mr. HATCH. Mr. President, when action is taken by any man in public office on issues about which strong and determined views exist, there is always much speculation and comment concerning incidents, and even motives, which inspired the official. Sometimes such comments are mere guesses, dressed up and proclaimed with an air of authority. Less frequently, but entirely too often, irresponsible misrepresentations are deliberately indulged in by those who have some kind of an ax to grind. Seldom is the truth told; seldom are the actual facts and circumstances revealed.

Many have been the statements and reports about the President's veto of the labor bill and the events leading up to it. Not from any direct contact or information, but from years of service with the President when he was a Member of this body, and especially from association with him on the Special Committee To Investigate the National Defense Program, I believe I am in a somewhat better position to understand and appreciate his actions and motives than are those who have not been so privileged. Therefore, I think I can say that when a statement or news account about the President, the way he has acted, or what has moved him, is published, I believe I can with some accuracy evaluate and judge the correctness of such an article.

In the Sunday issue of the New York Times there appears a news story written by Mr. Cabell Phillips. It sets forth what seems to me to be a fair estimate and truthful report of many of the circumstances surrounding and leading up to the President's veto of the labor bill. Judging it, as I have said, from my own knowledge of the careful, thorough, and painstaking approach the President makes to all problems, I am convinced that the article is remarkably accurate, and comes as near to stating the truth about the situation as any which has been written.

The details given show, at least in part, some of the meticulous care with which the President approached the problem of whether he should sign or veto the so-called Taft-Hartley bill. It should completely refute the unfortunate and entirely unwarranted charge made by Mr. HARTLEY that President Truman had not read the bill when he vetoed it. That accusation had better been left unmade and unsaid.

The truth, Mr. President, as I happen to know, is that President Truman had read the bill, not once but as many as four times. He carefully read and studied the conference report at least twice. No man ever gave more thought and care to a problem than President Truman gave this bill and his subsequent veto message. That is the manner in which the President does things.

No man in public office has entertained or can entertain any more earnest desire to perform his full duty with complete fidelity and integrity than does President Truman. Sometimes I think the President actually goes to an extreme in his conscientious effort to understand the more intricate details of all problems.

It is well known that I disagreed with the President as to his ultimate conclusion on this matter, but I am glad to read an article which fairly recites the true circumstances and conditions. Because I think the article to which I have referred is such a good one, I ask unanimous consent to have it printed in the Appendix of the RECORD.

Mr. LUCAS. Mr. President, will the Senator yield?

Mr. HATCH. I yield.

Mr. LUCAS. In view of what the able Senator has said with respect to Mr. HARTLEY's suggestion that the President of the United States never read the bill, it seems to me, from some of the statements made by Mr. HARTLEY since the bill became law, that perhaps Mr. HARTLEY himself has not read the bill.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRUMAN AND HIS TEAM STAND UP TO CONGRESS—PRESIDENT, HAVING TAKEN COUNSEL WITH ADVISERS, DECIDES TO FIGHT

(By Cabell Phillips)

WASHINGTON, June 21.—The President likes, in his crisp, chipper way, to tell visitors who inquire about his health that he is feeling fine. "I haven't had a crisis in 24 hours," he is likely to remark.

But it is doubtful if he passed this pleasantry with any of his callers this week, for it has been one of the most momentous weeks of his entire term in the White House. He has been faced with two decisions of unparalleled political and economic significance—the tax and labor bills—and the making of those decisions must have taxed his judgment and analytical powers to the limit.

Mr. Truman has developed a defensive mechanism for avoiding discussions in which he does not wish to engage, a somewhat brittle unconcern for the problems with which he is wrestling. Today, for example, as the Senate went into the twenty-sixth hour of continuous wrangling created by his veto of the labor bill, he left the White House with a party of friends to attend a ball game—to see the Senators defeat the St. Louis Browns, 5 to 4. He was apparently in a much calmer frame of mind than the Senators at Capitol Hill, who finally adjourned at 4:30 p. m. after agreeing to vote on the Presidential veto at 3 o'clock Monday afternoon.

But this carefree facade was broken earlier in the week when he snappishly reminded a visiting Democratic politico from Alabama that the latter's gratuitous advice that the Taft-Hartley bill should be signed was unwelcome. To observers this was a clear indication of the stress under which the President was laboring.

LABOR BILL THE HARDER

It is reasonable to assume that the veto of the tax bill earlier in the week took less soul searching on the President's part than did the later rejection of the labor bill. His record on the question of tax reductions is clear and unequivocal and has been reiterated many times both by himself and his appointed spokesmen.

It is interesting to examine the background against which Mr. Truman had to make his decision to veto the omnibus labor bill; the favorable and unfavorable alternatives through which he had cautiously to pick his way. Among the factors influencing him favorably toward the measure were these:

(1) There is indisputable evidenece that the country as a whole wants some remedial labor legislation. If any one fact was proved conclusively by last November's elections, it was this. Abuses of power by organized labor have offended large segments of the population, including many liberal and normally prolabor groups. The President is acutely aware, moreover, that a continued high level of prosperity is dependent upon labor-management peace, and that this peace is not likely of achievement unless some reforms are brought about—and soon—by legislative means.

PRESSURE APPLIED

(2) The pressure for the Taft-Hartley bill was just as insistent, if not as voluminous, from the middle and right-wing segments of his own party as it was from the Republicans and from industry generally. One of his most trusted Texas lieutenants warned him that a veto would stir up the same sort of revolt in Texas, and possibly other Southern States, as split the Democratic Party at the time of the last Chicago convention.

(3) Mr. Truman has demonstrated his own inclination to place some new restraints on labor. At the time that a railroad strike threatened the Nation a little over a year ago, he hastily urged upon Congress one of the most drastic and punitive labor bills of recent history. More recently, he has enunciated his extreme distaste for the dictatorial power of such labor leaders as John L. Lewis, and he has condemned such wasteful labor practices as the jurisdictional strike. Close observers agree that the President is imbued with an innate conservatism in such matters which makes him more akin spiritually to the GEORGES and CONNALLYS of his party than to the PEPPERS and KILGORES.

ON THE OTHER SIDE

These were the major factors influencing the President to accept the bill. Working in the other direction, and, as it develops, with greater weight, were these:

(1) His honest and reasoned conviction that the bill as passed threatened more labor disunity than labor harmony. Aides state that no measure yet presented to the President has received the elaborate and minute analysis that this bill has. On the basis of the views of nearly a dozen of his closest advisers and upon his own conclusion, he believes it to be harmful and administratively unworkable; that it is worse than no bill at all.

(2) To have accepted the bill would have completed the incipient revolt of labor against the Democratic Party. The thread now holding the two groups together is already frayed and is incapable of withstanding any such strain as the passage of this bill would have placed on it. And the labor vote is as essential to Democratic success at the polls in 1948 as is the solid South.

(3) To have signed the bill would have given approximately the same impetus to the third party movement around the country as the recent speaking tour of Henry Wallace. It would have given these dissidents a clear-cut domestic issue as challenging as the foreign policy issue which is now their major support. Aid and comfort to the third party advocates is one boon the Democrats wish most to avoid.

SNAP JUDGMENTS

Early in his career as President Mr. Truman evidenced an unhappy weakness for rendering snap judgments. Spot decisions and hasty remarks led him into some embarrassing difficulties. As he fought to get his eyes above the morass of confusion that encompassed him when he was catapulted into the White House he became more temperate and cautious. He also began to exercise his considerable administrative talents to get an organization together that would prepare the ground work for future judgments he would have to make. The performance of this White House team is well demonstrated by the evolution of the veto message.

When the completed bill was placed on his desk on June 6, President Truman turned it over to his ebullient, ruddy-cheeked principal aide, John Steelman, who bears the unique title the Assistant to the President. Steelman was asked to get not only the routine commentary on the measure from the Bureau of the Budget and the various interested departments, but to comb every phrase and sentence with the finest analytical comb he could devise. The President then set off for a round of visits that took him to the sickbed of his mother in Grandview, Mo., the reunion of his World War I buddies in Kansas City, a state visit to Ottawa, and to the commencement exercises at Princeton.

ADVISERS CALLED IN

Mr. Steelman called in for a series of conferences the principal Cabinet officers concerned with the bill, along with their lawyers and technical advisers. Secretary of Labor Schwellenbach received a major job of over-all analysis to do. The Attorney General was asked to examine all the legal aspects and to assess the possibilities for litigation. The Secretary of Commerce was asked for his views on the industrial implications. Secretary Krug, whose Interior Department is the unhappy custodian at the moment of most of the Nation's coal mines, was asked what effect the bill would have in thwarting another coal strike. (The answer, it is reported, was an emphatic "None.")

Chairman Herzog of the National Labor Relations Board was asked to study the administrative problems. Presidential Counsel Clark Clifford helped guide these conferences and devoted himself particularly to a study of the bill's legislative history and the voluminous committee reports.

Days and nights of conferences ensued, most of them in the Cabinet room adjacent to the President's oval office. Reams of comment and memoranda were gradually reduced to a series of relatively concise reports on each separate provision of the bill, the good and bad points of each being cited and weighed.

When the President returned from Princeton on Tuesday evening the end product of this elaborate spadework was placed on his desk—a tan leather briefcase bulging with these boiled-down reports. They were so organized and segregated, it is understood, that had the President decided to approve the bill instead of vetoing it, he would have had at his fingertips the documentation to explain his stand.

DECISION IS MADE

But with all the evidence in, and with the unanimous agreement of his Cabinet, he elected to veto. Wednesday and Thursday were devoted to the writing of this message, with Mr. Clifford and Press Secretary Charles Ross applying the last finishing touches shortly before 10 o'clock Thursday night.

While Mr. Truman already has explained his action in considerable detail, it is understood that one of the most compelling arguments affecting his decision was that presented by Mr. Herzog and Mr. Clifford on the difficulties of administering the new Labor Board which the bill provided. The responsibilities assigned to this Board would, the argument ran, necessitate a personnel of such gigantic proportions that the economy-minded Republican Congress would refuse to appropriate adequately for it.

The Board would thus have not only an "impossible" task to perform but would be constantly "over the barrel" for failing to perform it.

None but the most intemperate prophets are attempting at this early stage to tell how the President's political balance sheet has been affected by the week's events. All that is certain is that a number of brittle arteries have come perilously close to bursting and that the city has been treated to one of those dizzy, dramatic week-ends reminiscent of the more tumultuous days of the New Deal.

Communist Infiltration in Countries South of the Rio Grande

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Thursday, June 26 (legislative day of Monday, April 21), 1947

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I received from a Mr. Samuel E. Giudici, of Lima, Peru, regarding plans for preventive measures taken by the American Legion against Communist infiltration in the countries south of the Rio Grande. Included with the letter are resolutions adopted by Peru Post No. 1, American Legion, of Lima, Peru.

I wish to commend the American Legion for its constructive work in establishing American Legion Posts in Latin America and the Caribbean area, and circulating the true gospel of American democracy.

There being no objection, the letter and resolutions were ordered to be printed in the RECORD as follows:

DEAR SENATOR BREWSTER: You may remember that I spoke to you relative to a plan I had developed to hold a conference of the posts of the American Legion located in Latin America and the Caribbean, in order to implement in that part of the world our fight against communism. That conference took place under the personal guidance of Mr. Paul H. Griffiths, the national commander. The date was June 1 and 2, at Ancon, Canal Zone. You will be interested to know that after prolonged discussions it was unanimously decided that a committee be appointed by the chairman to prepare a plan of action for posts of the Legion located in our territory to combat communism and a method of liaison and cooperation with the interested agencies of the Government of the United States. Each of the members of this committee has had a great deal of experience in matters of this kind. Their services were used in similar capacities during the recent war.

An important resolution was passed by the conference of Latin-American posts of the American Legion, dealing with the danger from Communist infiltration into this hemisphere generally and into the United States specifically.

Whereas the membership of the American Legion is made up of over 3,300,000 veterans of World War I and World War II, who have pledged themselves to uphold and defend the Constitution of the United States of America, to maintain law and order, to foster and perpetuate a one hundred percent Americanism; and

Whereas the principles of justice, freedom, and democracy are in jeopardy due to the infiltration of communism in our country and elsewhere, and, as these Communists are undermining the prestige of the United States of America by a constant attack in the press and other public means of propaganda: Therefore be it

Resolved, That the here assembled posts of the American Legion, situated in Latin America and the Caribbean area do hereby: 1. Constitute themselves into a conference, in order to more efficiently combat communistic ideologies and propaganda, and, 2. that these posts of the American Legion prepare a program looking toward closer cooperation with the duly constituted agencies of the Government of the United States of America and the governments of the various countries in which they are located, subject to the laws of those countries, and to offer all cooperation possible to the above-mentioned entities to combat communism; and be it further

Resolved; That copies of this resolution be forwarded to the 1947 Annual Convention of the American Legion for action, and to the Department of State, and that copies be distributed to the press.

Whereas the House of Representatives has refused to renew the appropriation to continue the informational and cultural program of the State Department; and

Whereas we believe that this program is essential and important in the political and commercial interests of the United States; and

Whereas the dissemination of information on various phases of American life, the maintenance of libraries, the exchange of students, and other features all materially help to promote better understanding of democratic ideals and attainment; and

Whereas this recommendation represents an extensian of our Legion Americanism program to an international level; Therefore be it

Resolved, That our position be referred to the national headquarters, the American Legion, for appropriate action; be it further

Resolved, That American tourists visiting foreign countries be provided with instructions in methods of how to conduct themselves so they will make friends for the United States of America in the foreign countries visited: and be it further

Resolved, That this be handled through the national headquarters, the American Legion.

No Loafers, They

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Thursday, June 26 (legislative day of Monday, April 21), 1947

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a brief editorial appearing in the Journal-Every Evening of Wilmington, Del., on Friday,

June 20, 1947, relative to membership in the "52–20 Club."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO LOAFERS, THEY

Ever since this State was founded, Delawareans have been an independent lot, proud to stand on their own two feet. We are glad to see the same spirit coming out in the latest generation like an outcropping of granite in the Brandywine hills.

For the past year or so there has been a lot of talk about the "52–20 Club"—the veterans who decided to take it easy for a year on the $20 a week furnished by the Government instead of looking for a job. In the country as a whole, 3 out of every 100 veterans who filed claims were full-fledged members of the club; that is to say, they drew compensation for the full 52 weeks.

As can be seen from this, the percentage of veterans who preferred loafing on Government pay to working was not actually very high anywhere. But Delaware's record puts the national average to shame. In this State, according to Albert Stetser, chairman-executive director of the Unemployment Compensation Commission, only 287 out of the 14,978 veterans who have filed claims under the GI bill of rights since September 1944, or about 1.9 percent, qualify as full-fledged members of the 52–20 Club. The great majority of this State's 30,000 veterans lost no time getting back to their old jobs or finding new ones.

In peace, as in war, these young men of Delaware have proved themselves a good, sound lot.

To the Boards of Directors of American Business

EXTENSION OF REMARKS
OF
HON. CARL A. HATCH
OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, June 26 (legislative day of Monday, April 21), 1947

Mr. HATCH. Mr. President, in the June issue of Fortune magazine appears an unusual and challenging editorial. it is addressed to the boards of directors of American business. The suggestions made in this editorial invite the thoughtful consideration of all American citizens, as well as the American businessmen to whom it is addressed.

Every American who comprehends anything of today's tremendous issues and the evils which they may portend, should be spurred to clearer and broader thinking by the daring and venturesome thoughts expressed by the editors of Fortune magazine.

The first paragraph of the editorial is:

If peace could be purchased, what would you give for it? Suppose peace, like a great mill that had fallen on evil days, was actually for sale by the tired and inadequate men who had inherited it and could not make it go. How many hours would it take you on the long-distance telephone to organize a syndicate to buy t in? Again: What would you give for it?

What would we pay for peace? Any price, Mr. President, is my answer. No sum could be too great for us or other nations to pay to avoid the catastrophic horror of another war. No sum paid for peace could compare with the total destruction of life and property which another war would cost all of us.

An unemotional, straightforward, businesslike approach to peace is the subject with which the editorial in Fortune magazine deals so vigorously and with such courage and vision. In the hope that it may have wider distribution, and that intelligent thought may be provoked, I ask unanimous consent to have the entire editorial printed in the Appendix of the CONGRESSIONAL RECORD.

Mr. President, I have had an estimate made of the cost of printing the manuscript in the RECORD. It will be $159.75.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

To the Boards of Directors of American Business:

Greeting: If peace could be purchased, what would you give for it? Suppose peace, like a great mill that had fallen on evil days, was actually for sale by the tired and inadequate men who had inherited it and could not make it go. How many hours would it take you on the long distance telephone to organize a syndicate to buy it in? Again: what would you give for it?

Let us start the bidding ourselves. We will offer $100,000,000,000 for peace. This is not for outright purchase, you understand; we have no illusion that anyone can take perpetual title to peace for that or any other sum. Instead, we will put up our $100,000,000,000 for a 50-year lease on peace, and an option to renew at a negotiated figure for a further half century.

You have just finished buying a war. The Federal Treasury estimates that you paid $341,000,000,000 for 3½ years of it, or about $100,000,000,000 a year, against the minuscule $2,000,000,000 a year that is our present proposal for peace. There is no need to discuss the return on your war investment. But even as you shudder at the desolation and chaos of that terrible forced loan to Moloch, there is talk of a preferred issue in something with hideous glibness called "World War III." That indeed will be the end of you, and of everything else associated with you, including this small group of editors who have been trying for the last 17½ years, through a tragic depression and an infinitely more tragic war, to act as your historians.

That is why we are writing you this open letter. We think you still have a chance to retrieve, for the future, the fragmented assets of the world and set it on its course again. There never was a larger job attempted in all history, or one calling for greater courage and imagination. It can fail. But we have reached this point, hopeful and terrifying: if the United States businessman does not thrust the weight of his thoughts, his policies, and his dollars, in short, the whole business process as he has developed it over the years, into helping save the world, the world will not be saved. It is as flat as that. Will you accept this challenge?

I

Lawrence Henderson, late professor of chemistry at Harvard, used to speak of the Hippocratic method as the only one so far proved successful in the business of living. Roughly paraphrasing Henderson, let us set down its three elements:

"Hard, persistent, intelligent, responsible, unremitting labor" at the locus of the problem—e. g., for the physician, at the sickbed, not in the library.

"Accurate observation of things and events going on there.

"The judicious construction of a theory concerning them.

"On his point of theory, Professor Henderson was quietly and sweetly eloquent: 'Not a philosophical theory,' he said, 'nor a grand effort of the imagination, nor a quasi-religious dogma, but a modest pedestrian affair—a useful walking stick to help on the way.' "

Thus invited not to vie with the higher Utopians, can the American businessman and his understanding friends feel their judicious way toward a theory about peace: a "modest pedestrian affair," a "walking stick to help on the way?" It would seem that they must have the courage to try.

Such a modest businessman theory of peace might be that if peace were ever to arrive on earth, it might at last make its way riding on the shoulders of plenty. However politically complex the causes of modern wars may be, they are, in part at least, reducible to the proposition that there is not yet enough of anything to go round—not enough food, or shelter, or goods, or energy—and that aggression springs from the fierce, barbaric lust of one nation to wrest from another the plenty it can imagine achieving only at the other's expense. Our theory takes no account of religious wars, or of the elements of psychosis that cause mass murder. It is thus some good to us, but not much, in considering the hundreds in India or the Near East. But it can serve as a starter.

Now, although our theory of the equivalence of peace and plenty is at best partial, it has one good thing in its favor: it has never been given a fair chance and proved wrong. Throughout that part of the nineteenth century that we now understandably call the halcyon days, there was a go at it in terms of British free trade—subject to the heavy limitations of nineteenth-century capacities to produce and transport. The United States in those days was too young and weak to take much part in it. The extremely promising effects of the theory—but not the theory itself—were destroyed by Prussian militarism in 1914. But this tragic end to a promising experiment is not by itself any reason for not trying again with larger scope and greater understanding. If the British, who were the commercial and banking masters of the nineteenth century, had chosen not to invest in the United States, it is hard to imagine what would be the shape of the United States A. D. 1947.

What makes the world situation look so depressing today is that there seems so little achievement of plenty left possible. It is less the destruction of wealth than the blind chaos where once there was economic order. If this remains so, waning Britain and waxing Russia, at their present rates of opposite progress, may meet and pass on some sordid subsistence level in another decade. There remains, the globe over, only the United States of America with a continuing organized capacity to produce and reproduce. The idea of putting that at the service of the world, not for purposes of altruism, but of world policy and for profit—that is what we are talking about in this business magazine. It is not a very radical idea; it is unfamiliar only to people whose sense of dimension has not caught up with modern times and a diminished global diameter.

II

So what do we really mean by this idea of spending money and effort to gain peace? Where does the $100,000,000,000 come in? We have some rough ideas to outline just below. We would confidently predict, however, that if enough United States businessmen were to orient themselves to the outer, unfamiliar world, as all these ideas presuppose they must, they would find it impossible to spend a net $100,000,000,000 because so much of it would insist on coming back to them so quickly. Instead, we believe that $100,000,000,000, invested in peace now, would amortize itself and begin returning net profits long before the first 50 years of our leasehold had run its course.

The first way in which the businessman, in our opinion, should begin his $100,000,000,000 investment in peace is through a 15- to 20-percent reduction in the United States internal price level—a reduction that would admittedly be made, in the beginning, at the expense of profits. It would cost some three-quarters of a billion dollars a month, if it began tomorrow, and that works out to about 5 percent of the national income at present levels. But does anyone think of this as a static 5-percent impost on the businessman's margin? Then let him go back to his primer and remember that as prices decline, purchasing power rises, and, credit conditions being stable at present as they are, the volume of business rises with it—the balance is struck, not at a 5-percent levy on profits, but in an area of actual profit increase—if the businessman's resourcefulness is equal to its task (something he himself seldom denies). Henry Ford proved that equation once and for all, more than 25 years ago.

Are there enough enlightened businessmen to dock their prices tomorrow, and have they the economic power to force reductions beyond their own fields of direct action? Recent weeks have seen a growing concern over the level of prices today, particularly in the light of the size of some corporate profits. There have been some enlightened statements from business leaders that these prices must come down. There have even been some actual reductions, and to the men who have initiated them the American public should offer thanks and congratulations. But none of this is yet enough. A principle is involved here that goes beyond price slashes or bargain offerings.

III

More than 10 years ago, this magazine published an article, The Trouble With Capitalism Is the Capitalists. It was written by Dr. Harold G. Moulton, head of the Brookings Institution, and it stated the basic argument that was later elaborated in such convincing detail in the famous series of Brookings studies that appeared in substantial book form. And what was Dr. Moulton's and Brookings' complaint about what the capitalists had done to capitalism? That they had failed to obey the primary commandment of capitalistic dynamics, which is: constantly expand markets by an orderly, systematic, and slowly continuous passing on of technological improvements to the consumer in the form of lower prices.

How many businessmen are familiar with these monumental Brookings works, whose logic is so clear and presentation so compelling? How many businessmen are aware that in failing to exert a constant downward pressure on prices they are betraying the American way to which they profess such constant devotion? The question has never before arisen in such monumental terms.

We are not talking about Newburyport plans. We are not talking about opportunistic wriggles in the spot price markets. We are not talking about apostrophes to prosperity; we are talking about a long-range price policy that would engender a plenty which has never before been achieved even in the United States; a plenty to be derived by constant money encouragement of research, coupled with a policy of business statesmanship whereby consumers' prices would be set on a slow downward gradient to last for a period of years. Consider the coal industry, about which this magazine has been writing for some months past. Much of the coal industry is full of righteous pride because its productivity is roughly five tons per man-day against the miserable one ton per man-day that the British can produce. This is fine, except that it is the ambition of a few United States engineers of the soundest reputations to devise ways to produce 100 tons per man-day, and not stop there. They are close to success. The resulting reductions in price can be conjured within every home in the land—in terms of extra purchases of other goods.

So long as business, along with Government, permits itself to be chased in a circle of raise-wages-raise-prices we are not on any true course; we are in a hard, dangerous spin. But a reduction of prices, with its corresponding increase in real wages, is another thing altogether; it benefits no one class but diffuses a net gain through all society. And that is why this is our first proposal for the businessman's peace. Domestically, it proposes a conception of plenty to eclipse our best efforts so far. So far as other nations are concerned, it leads us straight to our second point, which is that concurrently with increasing plenty at home we must begin to export it as fast as we can.

In return for what, does someone ask? In return for a franchise to live and do business in peace at a profit is our answer. It is an investment, gentlemen, full of all the risk and venture you used to demand as a right whenever a wartime Government passed an order of restriction. Here is your right, handed to you on a glittering platter. Take your risk and make a trillion.

IV

It was in 1937, year of pretragedy, that Winston Churchill observed that the greatest contribution the United States could make toward world peace was the maintenance and growth of its own prosperity. History must record that the contribution could not have been sufficiently great. We were, after all, in full flower with the WPA that year, in default of more spontaneous economic activity. And we could scarcely export what we did not have.

Although everything we have said above must indicate our belief that Mr. Churchill's conservative judgment still holds good, we no longer believe that it is enough by itself. A 15- to 20-percent reduction in prices will make the purchase of United States goods by foreign markets a shade more possible in the tragic, suffering world outside United States shores, but these goods certainly cannot be bought without aid. And so the next step in our $100,000,000,000 program is a series of massive United States loans or grants abroad. As to which of these alternatives to use, obviously the conditions must fit the circumstances. It might be better to grant money to England than to loan it; the reverse would probably be true in more frontier economic areas like Latin America. Then, too, the amount of governmental money used would depend on the willingness of private capital in the United States to seize boldly on the greatest chance, the greatest venture it has ever faced. We think the sums involved could pile up to $20,000,000,000 without occasioning a flicker of alarm among those who truly believe in the United States and the United States system. Some of this money would come out of the hides of American wage earners, businessmen, and entrepreneurs at first—i. e., the governmental portion would show up, in taxes, on the cost side of everybody's ledgers. But what might show up on the income side as a result? Again, that is as you make it—as in all returns on risk. Here we are quite content to rest our case on one sentence from that brilliant fiscal intelligence, Beardsley Ruml. In discussing the desirability of a generous United States loan policy, Mr. Ruml asserted that nine-tenths of the money loaned would be spent in the United States for United States goods. His simple statement: "It has no place else to go." So we hope we are making it clear that in proposing a generous loan policy, to be underwritten with your resources, we are not indulging in altruism.

V

Instead, we are urging something so simple that the temptation is always to dress it up in more complex terms than it warrants. We are asking the United States businessman to think of Wendell Willkie's "one world" not in fancy geopolitical terms, but merely in market terms. Is there any stovepipe manufacturer in Kokomo who does not really see the point? No; we think we have something on our side here that he knows to be true out of his own experience. His father sold stovepipe to the limits of the horse-and-buggy roads that radiated from his little nineteenth-century establishment; today the son has 10 district sales offices and as many regional sales managers, and he sells stovepipe in strange places indeed. But was this expansion from local ironmonger to national distribution ordained to stop there? The task of extending trade in stovepipe from national to international is a tricky and often exasperating business, but there is money in it. Suppose the globe were as well off as Kokomo. Might it not be a profitable world for a man whose life was in stovepipe?

Manifestly, in thinking of the world as one market, the United States businessman will have to do something else. It will not cost him a penny of the $100,000,000,000 either, although it may cost him a final sentimental wrench. He will have to reject utterly the philosophy of that wing of the Republican Party that would return to the days of high protective tariff philosophy, and instead do everything he can to foster United States imports. Here he will encounter tough, ignorant opposition from the farmers of his own Nation. In his battle to make the farmers' legislative mouthpieces see, he is well buttressed by that spectacularly successful businessman turned statesman, Will Clayton, who recently expressed his documented belief that the United States could bring its import level up to fifteen to twenty billion dollars with nothing but good effect.

But there is a concomitant to these policies that calls for further drafts of venture from United States business. Several weeks ago Dr. Robert P. Russell, president of Standard Oil Development Co., made a stimulating speech in New York on what Jersey Standard was doing, with the plant hormones and selective weed killers that it and fellow industrial concerns have developed, to raise the level of Latin-American agriculture. His topic was, Technology: An American Export, and his over-all theme was that since this country has now a near monopoly on mass industrial and agricultural skills it must, in its own self-interest, share them widely, and still more widely, since it cannot live in a decaying world. As a commentary on Dr. Russell's theme, this magazine expresses the belief that where United States money goes there should go United States engineering and technical missions, to help in the most efficient spending of the sums loaned. Certainly the British, in helping the expansion of American industry in the nineteenth century, acted not merely as bankers collecting a percentage from a remote outpost. Now that the situation is precisely reversed and England needs American money, she should have it, with the friendly collaboration of technical staffs. It is a little too much to hope that she can reconstitute her deplorable coal industry without our help, for example. She may not like this, but those must be the terms. They must be the terms wherever United States money goes. We do not want control of foreign industry; we simply want it productive.

All over the world American dollars, American tools and machines, and American engineers and supervisors have a colossal task to perform in unison—not to exploit but to build up and nurture, and not out of altruism but with an eye to the profits that come from markets made healthy. To perform this task is something much nobler than sitting back and yammering at the State Department about policy, as if we of the business community were not part of that policy and could not develop a policy in our own terms. If the idea of world reconstruction through a

businessman's concept of peace is not sound, then Texans should have left untouched the shattered remains of Texas City.

To cut prices; to encourage loans; to foster imports; to send engineering missions into the far places, that is our specific four-point proposal for applying a businessman's theory of Peace with profit, via Plenty. Might it be tried? It is too much to hope that it would happen spontaneously. It is not too much to hope that it might be organized, conjunctively between business and Government. What is the Department of Commerce for? Is it only to organize statistics, or standardize pipe sizes? Was not the idea behind its belated establishment in 1903 precisely the idea of a concert of policy between business and Government, even in the days before such momentous problems of economic, political, and human survival had arisen in the world? Is the National Association of Manufacturers only a lobby for organized selfishness? Is the International Chamber of Commerce merely a sounding board for stuffed shirts—or could these all together organize this businessman's theory of peace into his practice?

VII

What are the alternatives to the $100,000,000,000 risk-and-venture proposal that we are setting forth? As we see it, there are only two, both final. One is the Last World War—the one that will never get into the history books. The other is that Russia wins the world by default. Neville Chamberlain believed in 1937 that the world could do business with Hitler. Henry Wallace in 1947 believes that we can do business with Stalin. We believe both proposals to be identical fallacies. We believe that a world contest is indeed in progress, but that it need not, and cannot, end in World War III. Yet, as we see it, we have no weapon against this outcome, except Plenty—manufactured and diffused from the United States on a scale never before known. For this, so far as we can see, we have everything except a requisite imagination and a firmly tested courage. These we could acquire from an emulation of the American past.

If we do not take the road to Plenty for ourselves, the best economic thought is that we will instead produce an economic crash. Gentlemen of American Business, ask yourselves: What would enchant Russia more than to see her only adversary suddenly prostrate before the world? An economic collapse in the United States would leave no room for classroom debate as to which system, which way of life was better. We would have met and failed our test so suddenly that Moscow could scarcely have time for glee, and the prewar American isolationist's dream would be fulfilled beyond his most passionate imaginings. But the alternative to this agony could be, and in our opinion would be, the greatest epoch in the world's history. It is the United States businessman who at present holds in his hands an almost everlasting power of choice, in what he does during the next 6 months.

Letter to Lord Inverchapel

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1947

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter I have sent to Lord Inverchapel, Ambassador Extraordinary and Plenipotentiary of Great Britain:

The Right Honorable the Lord INVERCHAPEL,
Ambassador Extraordinary and Plenipotentiary,
Office of the Embassy of Great Britain,
Washington, D. C.

MY DEAR MR. AMBASSADOR: I respectfully draw your attention to the need for you to intercede with your Government to prevent the execution of Meir Nakar, Abshalom Habib, Jacob Weiss.

The sentences of death are awaiting confirmation by the British High Commissioner. The pronouncement of these death sentences occurred the day the United Nations Committee on Palestine arrived in the Holy Land. Although it might be deemed a strange coincidence that such pronouncement took place when it did, it cannot be deemed fortuitous should confirmation of the death sentences ensue. That would impose too much of a burden upon our credulity.

Any interference cannot now be said to be sub judice.

The United Nations Palestine Committee has passed a resolution earnestly requesting the Palestine authorities and your Government not to execute these death sentences. The Palestine Committee has taken this action in the interest of peace, law, and order. Your Government cannot disregard or flout the admonition of the Palestine Committee. To do so would bring the United Nations itself into disrepute. Great Britain may soon find that it cannot with impunity ignore the recommendations or orders of any United Nations committee. Such negative conduct may boomerang. Soon another committee of the United Nations will consider the controversy between your country and Egypt concerning the Sudan. Soon also your country will be called before another United Nations committee concerning the Italian-North Africa colonies. Great Britain may then find herself in the uncomfortable position of having established a precedent in disregarding recommendations of the United Nations committee.

We recall that Sir Alexander Cadogan specifically went out of his way to congratulate the delegate from Norway who urged the resolution that peace and order be maintained in Palestine during the Committee's investigations. Your Government was very quick to interpret this statement by the Norway delegate in unilateral manner as only applying to Jewish activities in the Holy Land and to so-called illegal immigration (immigration which is legal, of course, in accordance with the Balfour Declaration and the mandate which is the only legal instrument that permits your Government's presence in Palestine).

The words, however, of the Norway delegate were meant to cover British activities in Palestine as well as Jewish and Arab activities. Execution of these three youths at this time would not only be a challenge of international authority, but it would clearly indicate that your Government does not want peace in Palestine. It would prevent a just settlement of the question which is wanted and needed by the people of Palestine. The execution of these three lads would be a most provocative act. It would make more difficult the task of the Jewish organizations which are trying with might and main to proscribe and, in their own way, stop the terrorists activities of the Irgun and Stern groups.

We deplore terrorism from any source, be it from the British or the Jews in Palestine. Execution of these boys would only encourage terrorism. Certainly the British should have learned from its experiences in Ireland and India that executions prove nothing and conclude nothing.

It must be noted, too, that these boys were tried by military courts which in their conduct are in effect political courts.

It is hoped you will convey this message to your Government.

I await your reply.

Respectfully yours,

EMANUEL CELLER.

The People Versus the People

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a most penetrating analysis of the peculiar tendency of democratic peoples to evade or even rebel against the kind of government they themselves vote for at free elections. It throws light on the problem presented by those who, for example, demand economy but insist on appropriations for every good cause, thereby preventing economy.

The article was written by Bertrand de Jouvenel, a distinguished French journalist who has specialized in the field of political philosophy. It is reprinted from Human Events.

THE PEOPLE VERSUS THE PEOPLE

(By Bertrand de Jouvenel)

Significant events have taken place in France recently. Enraged chiefly by the dearth of bread, but also by the general inadequacy of supplies, the population has, in several towns, invaded the seat of authority, the prefecture or underprefecture, demanding bread, breaking furniture, making bonfires of files used for the control of distribution. Such was the temper of the crowd that the prefect of the Nievre was held by the Government to deserve the Legion of Honor for standing up to the rioters; while the prefect at Lyon let himself be marched off to the radio station where he had to announce on the air that he rescinded a former decision relating to bread.

Certainly one should not draw an overcolored picture of such incidents, unattended by any serious violence. But the historian cannot fail to liken them to similar events closely preceding the fall of the monarchy at the end of the eighteenth century. Let me remind American readers that the Government of France is strongly centralized, with local government mainly exercised by an administrator known as the prefect, to whom the underprefects in each department are responsible. The prefecture, or underprefecture, is thus the local seat of central authority, to an extent for which American Government has no parallel.

Just prior to the French Revolution, as now, "affameurs" (starvers) was the popular cry. Then, as now, the representative of the central government (the intendant, father to the prefect of today) was taken to task by the crowd. Then, as now, the "papers" were burnt, as a symbol of liberation from distant administrative rule.

If not the King, the King's government was held responsible. It was rumored that there was "a conspiracy to starve the people," a potent psychological factor in the ensuing revolution. Now practically the same mutterings can be heard: "They want to starve us."

II

While the psychologist recognizes the perennial nature of crowd reactions, the constitutional lawyer holds up his hands in horror and dismay. What has been happening is

to him the height of absurdity. How can the people suspect a government which is no longer the king's government, but actually that of the people. How can they treat the prefect, their servant, as they did the intendant, who was the king's servant. How can they revolt against rulings which are not imposed by arbitrary power but made by their own chosen representatives.

Not only is there no conspiracy against the people but the very measures the people revolt against were adopted for their benefit, at their request, with their approval: They are the embodiment of a conspiracy in favor of the people.

The dearth of bread cannot be denied. But it follows from measures which the people demand; they wanted bread to be cheap. It was kept cheap; the price of wheat was kept down. Incidentally the peasants thought it wise, under those conditions, to grow other crops.

Take the clogging regulation of distribution. It was adopted to ensure that, regardless of buying power, each family should get its equal share of foodstuffs and essential goods. Repeatedly the people have stated that they want this regulation preserved. They refused votes to those requesting a return to the free market. They insisted that controlled prices be kept low, even too low to reward the producer.

They saw goods vanishing from the controlled market; shifting to the black market. But the cure they demanded was repression, and they cheered when "free traders" were threatened with the death penalty.

Yet the papers they now burn are the very papers which this policy of planned economy requires. Let us then state it frankly: It is a revolt of the people against the people's decisions.

III

To those who like to deal in abstractions, nothing can be more unpalatable than this statement of the facts. That the people's decisions and the people's representatives should be resented by the people as a tyranny, that the sovereign should revolt against the sovereign, is an utterly unacceptable fact. With relief, one seizes upon a way out: the will of the sovereign has changed.

But there is no such escape. It is not true that the will of the electorate has changed. Very probably an immediate plebiscite would reaffirm the adherence of the electorate to the protected measures.

This situation should not be puzzling to the American student of government. Is it not a fact that the people in the States decided for prohibition, that individually they broke their own law, that this violation was so widespread that it may well be termed general; and that nevertheless, for a long term of years, the people did not go back on the decision they daily flouted?

The present attitude of the French people offers a close similarity with that experience. Two themes of conversation succeed each other in the average modest home. The wickedness of the black market is denounced; it is held responsible for the prevailing shortages; tales are told of scandalous fortunes, of scandalous complicities in governing circles. Then one passes on to exchange of black market addresses; occasionally one will deplore the closing of a source of illegal supply, possibly by the very police action one has strenuously demanded. But such interventions are rare; the black market gets protection.

Condemnation of the black market and resort to the black market are equally universal. The consumer who buys in the illegal free market refuses, as citizen, to legalize the free market. When he is thinking politically, he learns nothing from his own daily behavior.

Thus it is not strange that he should, as man in the street, revolt against the very powers which he votes for, as elector. It all goes back to the fundamental fact that the man who buys in the black market and the man who condemns the black market, the man who demands stringent measures of government and the man who revolts against administrative rule, while they are united in one body, are yet two men.

The member of the sovereign people who pronounces on what should be done learns nothing from his own day-to-day experience as subject of his own laws. When he acts as ruler, his whole disposition of mind is different from his humor as subject. The two qualities pertain to him but are not united and reconciled within him.

Surely there is nothing here to surprise the psychologist. It is a general trait of man to formulate, in the abstract, general laws to which his own conduct gives the lie. The best treatise on the duties to one's children was written by Rousseau, who abandoned his own offspring. Nor should this trait be noted in a spirit of irony and skepticism. When we state what should be done, we legislate for ideal men. When we act, we act as real men; as sinners. It does not disqualify our dreams, except as practical politics.

Much is being said about educating the people for democracy. What is actually done is the proliferation of primers simplifying the monetary problem, the problem of Europe, or something as complicated.

IV

I submit, with all due respect, that this is fallacious education, that sketchy and rash generalizations are substituted for facts. Not only is the knowledge provided inadequate, but it is misleading: the reader gets the impression that social problems are simple and susceptible of simple medication. Nobody believes anatomy can be taught from a doodle drawing of a man with four sticks representing limbs. Yet getting a political education from primers is substantially that.

Primers take as their theme the widest possible subjects. Because they are wide, they have to be treated in sweeping terms: All the details are disregarded; all the living truth is left out. Such so-called education leads the people to hold strong opinions on matters that they have not grasped. Ignorance becomes complacent.

The further away one gets from the individual, the more one deals in millions, the more free one is from the complexities of life and nature, the more contentedly and freely one can move in an unresisting world of pure inadequate notions.

Our great moralist Alain holds that the process of thought unchecked by continuous contact with reality and a daily effort to get positive results, creates a dream-world. Verbal mythology, he says, is the source of all madness; and labor against the concrete, the source of all true knowledge.

It follows that political education is not provided by the statement of wide issues in grossly oversimplified terms. Wisdom comes with the opportunity given to every member of the sovereign to put his opinions on how things should be done into practice, and by the ensuing adaption of his opinions to reality. The answer to the problem is old: it is local self-government. So much self-government and so local that no one is debarred from being a magistrate; on such a minute scale that everyone realizes his rulings are going to apply to himself.

If France is the home of abstract general ideas in politics, it is doubtless because there has been little self-government, and what there has been was lost long ago. If England on the other hand was long blessed with a remarkable sense of political reality, it was because there was much self-government. Germany has not always been politically mad: it went mad with the centralization of government

A world government would of course be the ideal agent for the most sweeping measures, and the least adapted to actual living men. This is not said in criticism of the idea of world government, but as an overdue warning that representative government cannot endure unless John Doe the ruler begins to learn from Joe Doe the ruled.

What Is Americanism?

EXTENSION OF REMARKS
OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1947

Mr. McDONOUGH. Mr. Speaker, I would like to ask the average American citizen these simple questions:

What is Americanism?
Do you know?
Do you believe in it?
Do you practice it every day?
Do you live up to its principles?
Are you proud of it?

You have no greater heritage to be proud of than the fact that you are an American. You should know what Americanism is. You should believe and have faith in it. You should practice it every day. You should live up to its principles. You should be justly proud of it.

If you have any doubt of what Americanism is, or if you want to revive your faith in it, read carefully the following editorial from the Veterans of Foreign Wars magazine, Foreign Service, giving the opinions of prominent citizens of what they think Americanism is. It is well worth your time to read and remember it.

WHAT IS AMERICANISM?

On July 4, 1947, the American people will celebrate the 171st anniversary of the signing of the Declaration of Independence. This is the date on which a radical new form of government was introduced to the world back in 1776 by a courageous group of people who believed that every human being has a God-given right to life, liberty, and the pursuit of happiness. It is the birthday of a way of life we know as Americanism.

To give greater clarity and emphasis to those beliefs and ideals symbolized by Independence Day, Foreign Service asked some of the Nation's most prominent citizens for their own personal definitions of Americanism.

Their answers prove an important point. American leaders disagree on many things but in their concept of Americanism—the fundamental principles governing our way of life—they are in accord.

The group that was asked for definitions of Americanism presents a cross section of American life. It includes men and women prominent in many different fields and representing opposing schools of thought, in many instances, on various economic, political, and social issues. Included in the number are labor leaders, representatives of big business, Government officials, military men, an educator, screen and radio artists, a religious spokesman, and others.

Yet, the personal definitions of Americanism of all these people are remarkably alike, illustrating dramatically the tie of a common belief and a common set of ideals that binds all true Americans.

In defining Americanism, most of these leaders stress the dignity and worth of the individual. They mutually condemn the totalitarian concept that glorifies the State or leader, and subjugates the individual. Americanism, in the opinion of these leading Americans, goes beyond the definition given by Wester—"attachment or loyalty to the United States, its traditions, interests or ideals." They hold Americanism to be not only a way of life guaranteeing the right to live, work, and worship in freedom and happiness, but also a positive, active effort to constantly make that way of life more wholesome and satisfying.

"To me Americanism is founded upon the spiritual dignity of men equal among themselves and before the law. It is a way of life characterized by tolerance and cooperative effort; richly productive for all who share its privileges and responsibilities."—Dwight D. Eisenhower, Chief of Staff, United States Army.

"This country was founded by men who had faith in themselves and the courage to assume their responsibilities, with a love in their hearts for freedom and a knowledge that none of these things could exist in the autocratic state, nor could they survive under hereditary rule. It was clear to them that the processes of freedom must not be to level down the ablest to the mediocre but to establish a system under which the leadership of the ablest would work to the benefit of all. To my mind, therefore, an American is a man with sufficient love of country and sufficient love of freedom to be willing to make the necessary contribution and to assume the responsibilities of life unto himself personally, rather than to want the state to assume them."—M. W. Clement, president, the Pennsylvania Railroad.

"In my judgment, the twelfth Scout law is the basis of Americanism because it emphasizes tolerance for others as well as reverence toward Almighty God. 'A Scout is reverent. He is reverent toward God. He is faithful in his religious duties, and respects the convictions of others in matters of custom and religion.' "—James E. West, Chief Scout, Boy Scouts of America.

"Political democracy and economic private initiative, supplementing each other, form the basis of our existing American social order."—William K. Jackson, past president, United States Chamber of Commerce.

"Americanism is a concept of freedom which upholds the rights and dignity of the individual against any form of dictatorship or oppression. It is government with the consent of the governed, law based upon justice, and rule by the majority without denying to any member of the minority the right to express and to continue fighting for his own views"—William Green, president, American Federation of Labor.

"Americanism is dedication to our liberal national tradition of constantly seeking a better life for all our people. In a world of disordered production, poverty, and fear of spreading totalitarian concepts, America stands as a symbol of hope to all men who would control their own destinies and receive the benefits of their own honest labor. By adherence to our principles, and through ever-increasing productivity, we must fulfill our responsibilities to help the world find peace and security"—W. Averill Harriman, Secretary of Commerce.

"Americanism is equality of opportunity, freedom of thought and action, government by consent of the governed—in short, orderly individual liberty under the law"—JOSEPH W. MARTIN, Jr., Speaker of the House.

"Americanism embodies all those things for which our great Nation stands—tolerance, understanding, loyalty, and freedom"—J. Edgar Hoover, Director, Federal Bureau of Investigation.

"The inalienable right to life, liberty, and the pursuit of happiness is just as important to Americans today as it was 171 years ago when our forefathers declared that all men were created equal. A true American, then as now, can always be distinguished by his irresistible will to translate these precepts into action. The right to work, to choose freely where and under what conditions he shall work, and the expectancy of reasonable economic security in a peaceful and democratic land is the birthright of every American"—Earl Bunting, president, National Association of Manufacturers.

"Americanism is a way of life that stems from the Divine—a way that the founding fathers created that man may live and work and enjoy in freedom the life given him by the Creator of all life. It respects the worth and dignity of human personality as a basic part of true democracy—where the state is the servant of the people. It is the hope of the human race."—Tom Clark, Attorney General of the United States.

"Americanism is covered by the Constitution of the United States of America and right now our Constitution needs a full reading and interpretation. It is being badly mauled by some subversive groups who wish to use it to justify their caprices. Americanism is founded on belief in God. Enemies of the American way of life say this is old-fashioned. Americanism emphasizes the right of every individual. Its opponents would place all in the hands of one individual. They are loud on liberty, freedom, and equality to the point of license to barge in on the liberty, freedom, and equality of others."—Bing Crosby.

"To me, an American is one who says 'How are you?'—not 'Who are you?' An American is a person who believes in and respects the rights of every other human being—without prejudice as to race or color or religious belief. An American is one who is educated and dedicated to world cooperation and kindness and the brotherhood of man—and to him, mutual trust, hope, and helpfulness are as natural as breathing. An American is one who is hard at work building a world in which peace and understanding will predominate—forever."—Kate Smith.

"I do not believe that Americanism is a quality susceptible to easy definition. It is a living force brought into being by our forefathers and gaining vitality with the years. It is best expressed through the actions of those individual citizens who tackle today's problems with determination to find solutions in keeping with our traditions of freedom, respect for the dignity of the individual, equality of opportunity, and a government responsible to the will of the people."—Dean Acheson, former Under Secretary of State.

"To me Americanism means the inalienable rights and inherent freedoms which go to make the American and democratic way of life. We must ever keep watchful to preserve these rights and freedoms for which we have paid so dearly with the very life blood of our youth since 1776."—C. W. Nimitz, Chief of Naval Operations.

"Americanism is the embodiment of the moral and political principles upon which our free society is based; which place primary value upon the dignity of the individual as a creature endowed with God-given rights; which appraise all existing and proposed institutions in the light of their effect upon the individual; and under which society strives constantly to improve the opportunities of its humblest member."—L. B. Schwellenbach, Secretary of Labor.

"The essence of Americanism is the right of each man to define it according to his own conscience. To me it means belief in the democratic process and the dignity of man, regardless of color, race, or creed. Conversely, it means antagonism to repressive legislation, bigotry, and intolerance. Finally it means the willingness to get along with our neighbors."—Philip Murray, president, CIO.

"Americanism is the generating and motivating force which reaches beyond the industrial leadership and military might of our great Nation and makes possible our material supremacy. We may define this spirit as the cherished and inherent desire of men who seek to govern themselves with wisdom and tolerance. The edifice of freedom we have thus constructed points the way for struggling nations to emerge from the tyranny of war and live among men in lasting peace."—James Forrestal, Secretary of the Navy.

"Americanism is often defined as an attitude. However, it is more than flag waving and pledges of loyalty. Americanism is patriotism in action. It means constant, clear-headed defense of our form of government. It means actually working to strengthen our liberties and opportunities. Americanism means helping to build national welfare without thought of reward or profit. True Americanism describes the many ways in which we put our loyalty into action during times of peace as well as in war."—Louis E. Starr, commander in chief, Veterans of Foreign Wars.

"Americanism is the unique combination of social and political ideas developed in the United States which are necessary for a free and harmonious people to operate an economic system based on private ownership and the profit motive but committed to the ideals of social justice and equality of opportunity."—James B. Conant, president, Harvard University.

"Americanism is the spirit of the Sermon on the Mount, the Bill of Rights, and the Declaration of Independence rolled into a single code of conduct which recognizes the dignity and the true worth of every human being."—Robert P. Patterson, Secretary of War.

"Americanism is well expressed by Lincoln: 'As I would not be ruled by others, so I would not rule another. That, I conceive, is democracy.' This dynamic resolution has released untold energy, as we have turned from the conquest of other men to the conquest of nature. Free from designs over others, he has learned to live with others. His house stands on an open lawn, not behind brick walls. The boundaries of his human relations are not too rigidly prescribed. Americanism is this constant effort to probe the true meaning of freedom in human relations."—Everett R. Clinchy, president, National Conference of Christians and Jews.

"Americanism is a way of life in which every man can walk in freedom and dignity. It is a glorious heritage left by our ancestors who struggled and fought to establish a form of government affording all its citizens protection against tyranny, injustice, and intolerance. It is a dynamic spirit directed toward constantly improving our way of life and increasing its benefits for ourselves, our descendants, and all others who seek true freedom."—Sally Cannon, national president, Ladies Auxiliary, Veterans of Foreign Wars.

Annual Memorial Services of Catholic War Veterans

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1947

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address of Maurice Simmons, past national

commander, United Spanish War Veterans, at the annual memorial services of Catholic War Veterans at Father Duffy's Monument, New York City, May 25, 1947:

Father Duffy is an American symbol. He left us an unforgettable spiritual heritage. He is an exemplar of the millions of our Catholic countrymen who have given of their courage, devotion, and generosity to the fulfillment of the American dream. Nor was he unmindful of the links that bound him to his ancestral home. Its tragic history he felt as his personal tragedy. For 800 years Ireland had been drenched in blood. But at long last the Irish underground humbled the Saxon conqueror. The Easter Insurrection of 1921 was the beginning of the end for British intolerance, misrule, and massacre.

Today another persecuted people is being scourged by the Black and Tans whose cruelties scarred the Irish landscape. Palestine is the present battelfront, and again, in the familiar underground, Irishmen are helping in the struggle of the Jewish people to recover their ancient homeland.

In the Bible it is prophesied, "For God will save Zion and will build the cities of Judah; that they may dwell there and have it in possession." That also was the decree of the 55 members of the League of Nations, nullified all too soon by British chicanery. To underpin its colonial imperialism, England is trading Jewish blood for Arab oil, and has become accessory to the not unlikely extinction of the million and a half Jewish survivors of the most horrible mass murder of all time.

Fascism and anti-Semitism were the twin spearheads of Hitler's drive for world power. The Jew was the scapegoat for "Deutschland Uber Alles." Before the butchers were stopped 6,000,000 innocents had perished in furnaces, gas chambers, and concentration prisons. This total is 22 times the casualties of the United States in World War II, which numbered 230,000, and 17 times that of the British Empire, which listed 325,000. In the First World War 116,825 Jews died in the ranks of the Allies, a number double that of our American dead.

The nations pledged their sacred honor that Palestine should become the haven of those who had fled the Nazi persecutors. But men of good will failed to reckon with Hitler's diabolical use of anti-Semitism. He poisoned not only European but American soil. Almost everywhere intolerance has shut the doors to Jewish immigration. They are even being barred from Palestine, the promised land, vouchsafed to them by God's covenant with their forebears. To save its crumbling empire the United Kingdom is using Nazi technique against the wretched exiles. The might of a lawless police state has unloosed tanks, bombers, and ships for use against the unhappy Holy Land. Not even in their destined Biblical abode can the wanderers rest their broken bodies.

The Balfour Declaration, formulated by the British Cabinet in 1917, pledged the Government "To facilitate the establishment of a national home for the Jewish people." In 1919 President Wilson announced that "The allied nations, with the fullest concurrence of our Government and people, are agreed that in Palestine shall be laid the foundations of a Jewish commonwealth." The Allied Supreme Council in 1922 gave Britain the mandate for the express purpose of effectuating the Balfour Declaration. That same year our Congress, by joint resolution, unanimously expressed the approval of the United States. Our major national political parties, in convention assembled, have made the same pronouncements. Every American President, from Woodrow Wilson to Harry S. Truman, have concurred. But the pledges of Great Britain have become a mere rope of sand in the hands of the Government that, as a prelude to World War I, indicted the Kaiser for tearing up, as a scrap of paper, the treaty guaranteeing the inviolability of Belgium.

The cradle of the Prince of Peace is to be made into a war base for obsolete imperialism. All its devious propaganda will not cloak Britain's motives for lavishing money and munitions to bolster up the ugly feudalism of the Arab chieftains—the exploiters of the ragged, illiterate, and diseased tribes of the deserts. Under the pretense of democracy these puppets of the blundering Blimps of Whitehall are demanding that the United States recognize Palestine as an independent Arab state. Never did there exist an independent Palestine nation, except during the long Jewish reign and the brief occupation of the Crusaders.

How can these oriental tools of fascism speak of democracy? At a high crisis of World War II the Government of Iraq fomented the Axis-inspired revolt which, had it succeeded, would have given the Near East to our foes by effecting the junction of the advancing armies of the Japs and the Germans. That encirclement was frustrated by the heroism of British troops and Palestinian Jewish volunteers. When Rommel's tanks thundered across Africa, almost to the locks of the Suez Canal, did Egypt lift a finger in self-defense? Or did its rulers conspire with the then seemingly conquering armies of the Hun, for the betrayal of the Allies? One fourth of Montgomery's Imperial troops in the Egyptian desert were Jewish volunteers. Their flesh helped stop the German bullets at Tobruk and El Alamein. The Jews turned Palestine into an arsenal for the Allies, while the Arab leaders were working with the murderous Mufti of Jerusalem who, in Berlin, was plotting with Hitler the defeat of the Allies and the extermination of Jewry.

In World War I Palestine was taken from the Turks in the campaign spearheaded by the fighting Jewish legion and the famous Zion Mule Corps. The Arabs stood mute. In World War II Palestine sent into the armies of freedom 27,000 Jewish volunteers, while with double the population, less than one-half that number of Arabs joined the ranks.

Today ruthlessness rules British statecraft. In her concentration camps former storm troopers guard the remnants of the Nazi purge. Jews gave treasure, blood, and life to the Allied cause. How has the pledge to house them in their historic homeland been redeemed? Palestine was practically closed to Jewish immigration by the British white paper of 1939. That act of stultification shocked the conscience of mankind and was repudiated by the League of Nations. Winston Churchill, who later denounced Britain's "senseless and squalid war against the Jews," condemned the paper as a violation of solemn obligations. By its enforcement hundreds of thousands of them, trapped in countless European communities or fleeing to the Holy Land for shelter, fell into the clutches of the Nazi fiends. Unseaworthy vessels, laden with refugees, have been driven from the shores of the promised land by British warships, resulting in the drowning of hundreds of men, women, and children. While barring persecuted Jews from entry, the illegal immigration of Arabs has been encouraged. In callous disregard of the bill of rights and the elemental decencies of law, thousands have been exiled to the barbed-wire camps of Cyprus, the fever-ridden islands of the Indian Ocean, and the equatorial hell holes of Africa. Untold scores have been held incommunicado, tortured, and hanged for the crime of daring to protest the despotic rule of the invader.

Jewish books have been burned in the streets of Tel Aviv. A Nazi bonfire beneath the Cross of St. George. The Holy Land is governed by a body of anti-Jewish laws, as drastic as those clamped on Nazi-ravished Europe. In defiance of the law of nations and the guaranties of treaties to accord equal rights to all our citizens without discrimination, the American of Jewish faith is excluded from immigation and forbidden land ownership, even though he may be an Albert Einstein, a Bernard Baruch, or a David Lilienthal.

To keep its alien foothold, Britain has used its traditional device of divide and rule. Before it came, Jew and Arab lived in friendship. Anti-Semitism was as unknown as the platypus. The seeds of hatred were first planted in the Arab's breast by British agents. During the pillage of their villages the Jews were deprived of arms needed for self-defense, but the Arabs were secretly armed for offense. In Tripoli, where both groups had lived as good neighbors, the first anti-Jewish pogrom was instigated under British military rule—this in the perfidious pattern of the czars, who, to divert from themselves the wrath of the exploited masses, unleashed the black hundreds against this ever-martyred minority.

The Arab menace, as a justification for the policy of appeasing Arabs, is the invention of British duplicity. The Arab League was set up as a barrier for the reenforcement of British imperialism. Without consulting the other powers signatory to the mandate, the major portion of Palestine was handed to the Arabs. Trans-Jordania, a British satellite, was organized under its controlled tribal chieftain, a kingdom that encroaches on three-fourths of the mandated area. That amputation left Palestine with an area of 1,800 square miles—less in size than the State of Vermont. The sparsely populated Arab countries have an area of 1,500,000 square miles.

Like our own pioneers, whose plows broke the prairies into fields of wheat and corn, the 600,000 Jewish pioneers have redeemed the soil of their forefathers. Before the Turks came like the locusts, it was a land of milk and honey, of shining pastures and olive trees. For more than a thousand years under Turkish rule it wasted into a barren desert of desolation—a Godforsaken country. Then, fleeing Russian pogroms and Nazi butchery, these exiles flocked to the Promised Land, in quest of their Biblical heritage. Under their touch the desert blossomed as the rose, cities of breath-taking beauty lit up the waste places, modern schools and hospitals opened their portals to Jew and Arab alike. In the remaking of Palestine the Jews spent their treasure without stint. The Arabs' contribution was a minor factor. Although the Jews contributed 75 percent to the cost of government, the British have restricted them to ownership of 5 percent of the land. Despite discrimination, discouragement, and deadlock, the Jews have brought about the highest standard of living in the Middle East. Palestine is the marvel of the Orient. Arabs from all points are attracted to this shrine of plenty. Small wonder that greedy Oriental politicians seek to grab it, under the guise of an independent Arab state. Unmolested by the intrigues of power politics, the Jew can make Palestine a bridge of understanding between East and West, the interpreter of our western civilization to a vast area enslaved by ignorance, poverty, and superstition.

Today 120,000 British soldiers are patrolling Palestine. Their maintenance costs British taxpayers $400,000,000, yet England asks us to relieve her of the burden of maintaining her 30,000 troops in Greece, one of her bastions of empire. If she lifted her armies from the backs of the Jewish pioneers she would have less need for bleeding our taxpayers for more billions of American dollars to relieve her economic ills. No grown-up is fooled by her crocodile tears that chaos will follow the withdrawal of her troops. Seventy-thousand Jewish war veterans in the Palestinian underground know how to defend their sacred soil. They are the spiritual comrades of the patriots who, at Bunker Hill,

did not cringe before the world's mightiest empire. The American, Irish, and Palestinian wars for independence were all waged to break the British yoke. Yesterday it was Nathan Hale; today it is Dov Bela Gruner; both dangling from the British hangman's noose. Gruner is not dead. "His body lies a-moldering in the grave, but his soul goes marching on." In revolting Palestine, as in revolutionary America, "resistance to tyrants is obedience to God."

Not all the might of Britain's armadas on land and sea and her conscripted millions can crush the eternal Jewish soul. Every empire that scourged the Jew has tumbled into the twilight of history. As the heroes of the underground lift the bars to their promised land, they echo the pledge of their ancestors: "If I forget thee, oh Jerusalem, let my right hand forget its cunning and let my tongue cleave to the roof of my mouth."

British Troops, Fliers, Navy, Help in Jap Occupation

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an article by Mr. Ralph Donaldson of the Cleveland Plain Dealer:

BRITISH TROOPS, FLIERS, NAVY, HELP IN JAP OCCUPATION

So far this series has given the impression that all the work of occupying Japan is being done by the American ground forces. Let's hasten to correct that impression. The British Commonwealth Occupation Forces and the American Navy and Air Forces are doing their share.

The British forces are composed mostly of Australians and Indians with some New Zealand and United Kingdom troops. It also includes Royal Air Force and Royal Indian Air Force Spitfire Squadrons, Royal Australian Air Force Mustang squadrons, Royal New Zealand Air Force Corsair squadrons, and various units of the Royal Navy.

The British occupation zone comprises 20,000 square miles of Japan having a population of 11,000,000. It includes five prefectures in southern Honshu and the entire island of Skikoku, on which there are four prefectures.

The British land forces are under the operational command of the American Eighth Army; their air forces form a part of the Fifth United States Air Force and their naval units work in cooperation with the American Navy.

RESPONSIBLE TO MAC ARTHUR

British commander in chief is Lt. Gen. H. C. H. Robertson, who is responsible to Supreme Commander Douglas MacArthur, to whom he has direct access. The British have no responsibility for the military government of Japan because that, by allied agreement, is the sole job of the United States.

The British, however, have the task of cataloging all the Japanese war equipment in their area and supervising the destruction of that which is not required for the occupation. They also patrol southern Honshu by land and sea to prevent illegal entry of Koreans and supervise repatriation centers in their area.

One duty the British share with the Americans is the mounting of ceremonial guards at prominent buildings in Tokyo, including the Imperial Palace, foreign embassies, and legations.

AMERICAN ADMIRAL COMMANDS

Vice Admiral Robert M. Griffin, USN, is in command of all naval units in Japanese waters. He has two forces, one American and one British, consisting of a cruiser and four destroyers each, which patrol Japanese coastal waters, and another force which patrols the straits between Korea and Japan.

The Navy's job is to supervise the Japanese warship-scrapping program and to direct the operations of 145 Japanese mine sweepers which are still looking for stray mines in Japanese waters. It also controls the Japanese merchant marine. One of its biggest jobs, which is now almost completed, was to assist in the repatriation program.

Lt. Gen. Ennis C. Whitehead is commanding general of American Far East air forces. He commands the Fifth Air Force in Japan, the Thirteenth Air Force in the Philippines, the Twentieth Air Force at Guam, the First Air Division at Okinawa, and the Pacific Air Service Command.

Our fighter planes and light bombers have taken over Japanese airfields. Our heavy bombers are based at Guam and other outlying Pacific islands.

NO RUSSIANS SERVING

There are no Russian or Chinese forces in Japan. The Chinese have taken over the island of Formosa, which has been restored to Chinese sovereignty. The Russians made some inquiries about sending troops to Japan, but they wanted the Japanese or somebody else to supply them with uniforms and even with the cost of transportation from Moscow to Tokyo. They were told they would have to supply their own uniforms and pay their own transportation costs and in addition provide food and equipment for any occupation forces. That seemed to discourage them.

The function of the air forces is to be on the job in case any trouble should break out. No trouble is anticipated from the Japs. They have no air force left, not even a single training or commercial plane. But the Russians have airfields and planes in northern Korea, Sakhalin, the Kuriles, Vladivostok, and northeastern Siberia. And so we patrol the air over Japan, just to make sure that nothing does happen.

Our Gasoline and Oil Going to Foreigners

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. WEICHEL. Mr. Speaker, the oil and gasoline situation surely presents a conflicting picture for the citizens of the United States. Here in Washington, we have one agency of the Government telling about petroleum products, that we have sufficient but that there is some need to have additional supplies in the future to preserve our own, and that gasoline and oil should be imported. Today I find that the defense arm of the Government says that beginning now it is necessary to import oil, gasoline, and petroleum products to the eastern seaboard of the United States from the Middle East in an amount of 400,000 barrels last month alone, for national-defense purposes. On the west coast in the Los Angeles area, we have the picture of the Maritime Commission permitting Government-owned tankers of the United States hurrying back and forth from Los Angeles to Vladivostok as fast as they can turn around, taking gasoline and oil from America. Since January 1947 these tankers owned by the United States and loaned to Russia without pay, have taken from the Pacific coast 614,022 barrels of oil and gasoline, to the detriment of our national defense which is obliged to import nearly one-half million barrels of petroleum products a month on the eastern seaboard.

The gasoline and oil taken to Russia from the Los Angeles area is reported to have been loaded at supply stations and refineries of the Sun Set Oil Co., the Standard Oil Co., the Richfield Oil Co., and the General Petroleum Co., all of Los Angeles, Calif.

If that were not a sufficient drain on American gasoline and oil which are now being rationed to the distributors throughout the country, I am informed that there has been exported to foreign countries from the United States since January 1, 1946, down to May 1, 1947, the sum of 191,000,000 barrels of petroleum products, including 56,000,000 barrels of gasoline by the people of the United States. Of course, under our American way of life the citizens of the United States privately own and control the petroleum industry and it seems that there are those engaged in the petroleum industry whose love for the people of the United States is less than its feelings for foreign nations, in that these millions of barrels of oil have been taken away from the citizens of America and the Government of the United States for its defense purposes. With this information and the matter of tankers owned by the United States Government, the Committee on Merchant Marine and Fisheries will commence hearings to investigate the taking away of American gasoline and oil from continental United States to foreign countries in American and foreign-flag ships, with gasoline and oil supplied by the oil and petroleum companies of the United States.

The open hearings will commence Friday at 10 o'clock a. m. in the committee room of the Merchant Marine and Fisheries Committee.

Employment for Veterans

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. SPRINGER. Mr. Speaker, many of our soldiers and sailors are having a most serious problem to secure employment, since they have returned to their homes. One boy, who resides in the city of Washington, who had a rather impressive service in the late war, seeks to secure employment. Recently he wrote

a letter in which he sought to secure a position, whereby he could support himself, and I am including his letter herewith for the information it imparts. It is my hope that this young lad may be able to secure a job, so he may pursue his education, as he indicates.

Mr. Speaker, I ask unanimous consent to include with my own remarks the letter this veteran wrote, which is self-explanatory:

JUNE 26, 1947.

In view of the fact that I am at present a resident of the unrepresented District of Columbia, I am taking the liberty of calling upon you, in the hope that you will intercede in my behalf for an appointment to a doorkeeper's job in the United States Senate or House, which will enable me to complete my education in medical school at George Washington University.

For your information, while a senior in high school I enlisted in the United States Navy at the age of 17, because having two brothers already overseas I was anxious to do my part in the war effort. The day after graduation I left home for Great Lakes, Ill., to begin boot training. Upon completion of boot training I was assigned to the U. S. S. *Boise* and remained aboard this gallant ship for 22 months. Unfortunately, we of the District of Columbia have no Representatives in Congress.

I am proud and happy that I had the privilege and honor to serve on the U. S. S. *Boise* and would like to cite a few of her accomplishments while aboard: Invasion of Halmahara and supporting land operations on Morotai; invasion of Leyte, Philippines; invasion of (Mindoro), invasion of Lingayan Gulf, Luzon, invasion of Corregidor and Bataan (bombarded for 4 days), invasion of Mindanao, invasion of Tarakani, invasion of Brueni Bay, Borneo.

After numerous and unsuccessful attempts by Jap suicide planes to crash-dive the *Boise*, she then proceeded with MacArthur on a tour of the Philippines. After receiving five battle stars we then went into the Atlantic and continued to return our troops back to the United States of America until she was ordered into Reserve Fleet.

Thanking you for any efforts which you are in a position to put forth in my behalf.

Sincerely,

JIMMIE HUNTER.

A Lock-Out of Federal Employees

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1947

Mr. HAVENNER. Mr: Speaker, under date of June 23, 1947, I received a letter from one of my constituents who is employed by the United States Maritime Commission in San Francisco. She informs me that on the above date about 324 employees of the Maritime Commission in the San Francisco Bay area received a form letter notifying them of a payless furlough.

I think that all Members of Congress will be interested in this lady's comment upon the action taken by the Maritime Commission, as follows:

This action is considered by all an incredible injustice. In the lower grades, after deduction of income-tax and retirement-fund money, both of which are necessary, there is barely enough to meet living expenses and pay insurance, now that prices of food have so increased.

Personally, I have always worked with an honest effort to increase efficiency and there are many good workers in the same status. After 22 years of service, 5 at one period and 17 the last period, my salary check every 2 weeks is only $77.62. I have an excellent efficiency rating. All of this I am telling you, not for personal reasons, but that you may be informed of the way many substantial and conscientious workers are made the target for cuts, reductions, et cetera.

We will greatly appreciate your assistance in obtaining a deficiency appropriation to cover our badly needed and hard earned wages. We have been asked to work on this payless furlough and are on the job.

I would also like to direct the attention of the Members of the House to the following excerpt from the column, The Federal Diary by Jerry Kluttz, which appeared in the Washington Post yesterday, June 25:

Lockout: That's exactly what has happened to the 2,800 Maritime Commission employees here.

The employees have been told not to work until July 1, and that they won't be paid if they do. It's a pure and simple lockout by the Congress which refused to okay a last-minute switch in funds to pay the employees, a brutal piece of business.

Any employer who denies his workers the right to strike, like the Government, should also protect them against lock-outs.

Loyalty: What price loyalty and hard work? A lay-off notice.

Remember, last year when a leave contest was conducted by this column? Well, the winner who had turned back the most annual leave was Herman Buchholtz, a 62-year-old Maritime employee, who had forfeited 568 days and 3 hours of leave in his 26½ years of service. Buchholtz had averaged 1 day of annual leave a year. He has an excellent efficiency rating.

Talk about long and faithful service—Buchholtz' record was tops.

Well, Buchholtz got his reward yesterday. He was ordered fired along with 1,100 other Maritime employees. And 800 of the 1,100, like Buchholtz, are career employees.

The mass lay-off was ordered because of a sharp budget cut approved by the House. An appeal will be made to the Senate for more money and more employees.

The Congress can never get the loyalty and confidence of employees of such cruel treatment. There would be cries and demands for congressional investigation if a large private employer would pull a similar trick.

Old-Age Security—H. R. 16

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1947

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the national convention of the Townsend National Recovery Organization at Washington, D. C., June 26, 1947:

Mr. Chairman, ladies and gentlemen of the convention, I join with my colleagues in the Congress in welcoming you here to the Nation's Capital. It is fitting and proper that you are holding this great convention here at the seat of our Government. The outcome of your deliberations and the inspiration and help from your devoted and sincere counsel will materially aid and encourage us in solving our Nation's problems in these crucial times. I deem it a high honor and privilege to participate in your program and to have a part in presenting to the Congress the laudable and worthy objectives you espouse. Before I discuss Social Security so close to your hearts, let us appraise our world of today.

Momentous decisions are being made here. The eyes and hopes of the war-torn world are centered here. The fate of whole nations is at stake. Here in the Capital you will be able to feel the pulsebeat of the last remaining world power dedicated to individual freedom. You will find here your own country in a place of world leadership, which presents a challenge to you and to me and to every citizen of this great Nation. Indeed, we are at the crossroads of history, and you will be able to see history in the making. It is not too much to say that the fate of civilization itself hangs in the balance, and what America does today and tomorrow will, indeed, chart the course of many generations to come.

Twice, in our own generation, we have seen millions of our young men, yes, and women, too, go overseas in the defense of this liberty for which we stand in a vain effort to bring peace to the world. Over 300,000 of them in the last war did not return. We poured over four hundred billions of your money into this effort. The world is sick, bled white by war, bankrupt and torn asunder by aggression, lust for power, clashing ideologies, suspicion, greed, selfishness, and even now the threat of an atomic war and total destruction. The war-devastated nations of the Old World face a coming winter of pestilence, famine, and starvation. The nations of the Old World are depending upon America to lead them out of this wilderness of despair, want, and suffering.

Indeed, Britain's indomitable leader, Winston Churchill, recently said of the Europe of today:

"But what is Europe now? It is a rubble heap, a charnel house, a breeding ground of pestilence and hate. Ancient nationalistic feuds and modern ideological factions distract and infuriate the unhappy, hungry populations.

"Evil teachers urge the paying off of old scores with mathematical precision, and false guides point to unsparing retribution as the path to prosperity.

"Is there then to be no respite? Has Europe's mission come to an end? Has she nothing to give to the world but the contagion of the black death? Are her peoples to go on harrying and tormenting one another by war and vengeance until all that invests human life with dignity and comfort has been obliterated? Are the states of Europe to continue forever to squander the first fruits of their toil upon the erection of new barriers, military fortifications, and tariff walls, and passport networks against one another? Are we Europeans to become incapable, with all our tropical and colonial dependencies, with all our long-created trading connections, with all that modern production and transportation can do, of even averting famine from the mass of our peoples? Are we all, through our poverty and our quarrels, forever to be a burden and a danger to the rest of the world? Do we imagine that we can be carried forward indefinitely upon the shoulders—broad though they be—of the United States? The time has come when these questions must be answered. This is the hour of choice, and surely the choice is plain. If the peoples of Europe resolve to come together and work together for mutual advantage, to exchange blessings instead of curses, they still have it in their power to sweep away the horrors

and miseries which surround them and to allow the streams of freedom and happiness and abundance to begin again their healing flow.

"This is the supreme opportunity, and, if it be cast away, no one can predict that it will ever return or what the resulting catastrophe will be."

Uncle Sam has been more than generous in giving relief to these stricken peoples. The Congress has been more than magnanimous in rushing food, clothing, medicine and credits to these distressed and starving hordes of the war-torn nations. There is a limit, however, to Uncle Sam's largess. He has a public debt of $257,000,000,000 and an immense tax load to carry and his own old folks are in need and pleading in vain. The Congress has just passed bills opening the Public Treasury to send $750,000,000 more overseas which, according to plan, is to be used for developing the resources and economy, for the relief of the peoples of foreign lands, some of whom did not join with us in the recent war. The United States, since the war's end, has made available for world aid, $21,058,422,818, as follows:

Contributions:	
UN	$29,289,349
UNRRA	2,700,000,000
World bank	3,175,000,000
World fund	2,750,000,000
Lend-lease	2,163,000,000
Other advances:	
Surplus property	1,148,000,000
Loans to Great Britain and Philippines	4,390,000,000
War Department grants	1,771,926,293
Export-Import Bank	2,931,209,176
Total	21,058,422,818

Against this background of uncertainty, foreboding, and disaster, it is interesting to note, in the economic report of the President, transmitted to the Congress on January 8, 1947, in accordance with the Employment Act of 1946, an inventory of the blessings and natural resources of this great Nation of ours, so lavishly bestowed upon us by a divine Providence, namely: A fabulous wealth of natural resources; large and efficient industrial plants; ample bank credits and other funds for business expansion; a large and skilled labor force; higher consumer spending power than before the war; a backlog of unsatisfied domestic and foreign demands; unsurpassed high standards of living.

This report states:

"Maximum production and employment this year would allow a substantial increase in the available supply of consumer goods and services, especially in the area of durable goods. This requires higher real purchasing power to take the goods off the market. If price and wage adjustments are not made—and made soon enough—there is a danger that consumer buying will falter. Orders to manufacturers will decline, production will drop and unemployment will grow—unless consumers resort to large additional borrowing and use of past savings to buy the increased supply of goods. These temporary expedients are limited in power and even if available would only postpone the day of reckoning. During this year the underlying favorable factors are strong enough to maintain high prosperity. But this year brings us face to face with maladjustments and unfavorable possibilities which, if not corrected or prevented, could cause a recession in production and employment. The Government will watch the situation and be prepared for action if needed. The race is on—the race against time—to decide whether, over the next few years, we can make these adjustments in our economy that are needed to avert a major depression in the fifties."

Thanks to a divine providence our America is not war-torn and devastated, we are not famine-ridden or dominated by a dictator, our churches are open, we have free speech, free schools, and private property. We are the last great refuge of freedom. The European and Asiatic nations are drifting away from the freedoms of democratic processes and into the troubled waters of dictatorship. However, eternal vigilance is the price of liberty. Our fate is in our hands. It is for us to decide, here in America, whether we have the foresight and the vision and the courage to utilize to the full these great resources and the economic and scientific knowledge and abilities of our people. We face the challenge to keep the Nation on an even keel, off of the rocks of depression, and on the high road of great endeavor and achievement and out of the clutches of devastating war. Civilization cannot survive another world war—an atomic war. Spiritual, moral, and humanitarian forces under divine guidance alone can save it. America can lead the way.

The Advisory Commission on Universal Training says:

"Everything points inescapably to the conclusion that there is no real security for this country or any country unless war is abolished through the establishment of the reign of law among nations."

Why not, then, do something about that, too, and now?

"A strong, united, healthy and informed Nation. This our No. 1 security requirement. It is the bedrock on which all our military preparations depend. The vigor and vitality of our democracy, as expressed in improved health, education, productivity, and morale of the American people, are of paramount importance not only for ourselves but also for millions subject to the deception of totalitarian philosophies abroad."

There are many of us here in the Congress who fervently believe that the opportunity is ours here in America to demonstrate to the world that we can outlaw war and that our democratic processes will work; that we can and will steer the ship of state away from another world-wide depression; that we will utilize to the full our natural and industrial resources, technical and scientific knowledge, and maintain the United States on a high level of production and employment, assuring a stable economy and prosperity.

Those of us who are sponsoring H. R. 16 in the Congress believe that it is a major factor in this whole program to provide full production and employment and adequate security for our elderly citizens. Townsend friends, I want to commend you for your zeal and enthusiasm in such a worthy and righteous cause, and for the outstanding work you and your associates and predecessors have done down through the years in advancing the cause of old-age security. The hopes of thousands of our elderly citizens in need in this great land of plenty are pinned on you. I know that at times you must have been discouraged, as I have been, by reason of the apparent apathy and failure of the Congress to enact long-range legislation providing for adequate annuities for our elders. However, I believe that we can take heart in the knowledge that definite and worth-while advances have been made in this whole field of old-age assistance in the past decade. Much of the social legislation that has been enacted by the National Congress and by the several States for our elderly citizens has been due to the loyal and untiring work you in this organization have displayed. Our undying gratitude is due the great humanitarian leader of this movement, Dr. Francis E. Townsend, the founder of the program for social security for the old folks in America. I know you will be interested in knowing of the esteem and high regard in which Dr. Townsend is held by the friends of the movement here in the Congress. Recently, at a meeting of the sponsors and supporters of the Townsend program in the House of Representatives I proposed a resolution commending Dr. Townsend for his great contribution to the oldsters of our country, and it was adopted unanimously. Let me read it to you:

"Inasmuch as there was no such thing as a Federal old-age pension law 14 years ago when Dr. Francis E. Townsend startled the Nation with the first draft of his Townsend plan; and

"Inasmuch as since that date, with the friends and workers for the Townsend plan constantly keeping their objectives before the Congress, the first Social Security Act was enacted and amendments in two other Congresses have liberalized its provisions;

"Now, therefore, it seems fitting that this group of congressional friends of the Townsend plan here and now go on record as complimenting the 80-year-old father of old-age pensions in America, Dr. Townsend, for his activity and integrity and continuing fight in the cause of America's senior citizens."

The London magazine, Bookshelf, recently said under the caption "A Prophet—Outside His Own Country":

"Dr. Francis E. Townsend is one of the greatest thinkers in the field of economics; * * * it will not be long before the entire United States will recognize the eminence of the father of the Townsend plan."

My friends and coworkers in this great cause, I want you to know that while thus far we here in the Congress have been unable to enact legislation covering the Townsend program, our zeal for it has not wavered or in anywise diminished. We will continue the battle unabated for this worthy cause until we are successful in placing upon the Federal statute books a Nation-wide annuity law for all citizens 60 years of age or over.

It is significant that the basic principles underlying the Townsend national recovery program have now been approved by the Social Security Board. This itself is a long step forward. In the last report of the Board, before its functions were transferred to the Social Security Agency, it recommended amendments to the social security law which, if adopted would put into effect much of the Townsend program.

Federal Social Security Administrator Watson B. Miller is now recommending the following sweeping changes in old-age and survivors' insurance under the social security program:

Liberalize monthly benefits, extending the maximum from the present $44 to $74.25.

Extend coverage to agricultural, domestic, and self-employed workers (the last-named group includes business and professional men).

Extend benefits to cover workers permanently and totally disabled at any age.

Lower the age of female beneficiaries to 60 years from the present 65 years.

At the beginning of the year 1946 nearly half of all civilian jobs were excluded from coverage by social security. The Social Security Board's report for the fiscal year 1946 showed that in June, 6,800,000 persons aged 65 or over were without income from employment. Of these only 1,300,000—about 1 in 5—were beneficiaries of old-age and survivors' insurance or of retirement benefits from special systems for over-age and Government workers. More than 6,600,000 aged persons are not receiving any public assistance or social security retirement, yet the social security fund has accumulated over eight billions and the average monthly retirement benefit was $24.65 per month—$24.15, I am sorry to say, in my State of Oregon. Uncle Sam has collected for old-age pensions and survivors' insurance over $9,000,000,000, yet has paid old folks only a billion and a half. The rest was squandered.

At best, the social security law we now have is a haphazard program which, in effect, is largely financed by the general public, but the benefits of which are shared by only a few selected groups. It encourages inflation by collecting a huge fund currently used for deficit spending. These dif-

ficulties would be overcome by the adoption of H. R. 16, which would cover all citizens 60 years of age or older, and the obligations and benefits of the program would likewise be shared by all. It would be all-inclusive in its provisions and therefore would supplant existing State and Federal relief and old-age assistance, and would, for the first time, set up in our country an old-age security program which would insure all of our elderly citizens against the hazards of old age. It would build up no reservoir for deficit spending, it would not add $1 to the public debt, and the moneys collected would go back into the channels of trade each month, stimulating production, providing local markets for American goods and buying power for our aged citizens. The whole problem of social security, and particularly for the aged, is one of deep concern to all of the citizens of the United States, and the Congress has been dilatory in giving it consideration and making adequate provision for our old people.

It costs a $5,000-a-year income family $12,750 to rear a child to 18 years of age. This forcibly brings to our attention the heavy investment the old people of America have made in rearing their families and providing the Nation with its citizens. The families of yesterday made possible the citizens of today who are fighting our wars, protecting the liberties of America, and maintaining our industries. Unfortunately most of these elderly people, some ten or twelve million of them, in fact, having expended their funds in rearing their families and providing for themselves, are now in want. Some receive assistance averaging $25 a month, most of them receive nothing.

The Census Bureau has just released a report showing that the median income for American families living under one roof rose by $169 during 1945 to a total of $2,378. This means that half of the 40,075,000 family units of America receive an annual income of $2,378 or less. Certainly the heads of such families with children to support with the high cost of living today cannot provide the funds for taking care of their own fathers and mothers who are in need.

I maintain that justice demands that, while making these huge expenditures for the peoples of foreign nations, the Congress should grant some relief to the old folks here in America as well. There are in excess of 10,000,000 American citizens over the age of 60 years, many of them in want and distress, yet the Congress has denied their appeals down through the years. Many of them receive a stipend of old-age assistance of less than $10 per month, and the average, as I have said, is a little more than $25 per month, while living costs are mounting skyward. Do you know that the cost of a market basket of the following essential staple foods in 1933 was $3.26 and the same items now cost $8.50 or more?

Contents of basket: 3 pounds round steak, 2 pounds bacon, 1 quart milk, 1 pound butter, 1 dozen eggs, 1 pound lard, 1 can tomatoes, 1 pound coffee, 1 loaf bread, 1 peck potatoes, 3 pounds cabbage, 1 dozen oranges, 1 can corn, 1 can peas, 5 pounds sugar.

We in America, as a nation, have attained a position of outstanding accomplishment and influence that is the envy of the world. We are a country of great and varied natural resources. More important than that, we possess the scientific knowledge, techniques, and industry, and the know-how to turn these natural endowments into channels of the widest utility for our people's welfare. We have developed an industrial system under free enterprise which is the foundation of our success. Our living standards are the world's highest. If free enterprise is to continue and we, as a free nation, are to survive, we must make sure that the great mass of our people, the men and the women who work with their hands and brains to gain a livelihood, shall have the opportunity for employment and the right to share in the fruits of production. We must make sure that there shall not be a recurrence of the bread lines and the millions of unemployed that existed during the 1930's. We cannot forget the 12,000,000 or more unemployed during those fateful depression years who were unable to find gainful employment sufficient to maintain themselves and their families in decency and health. It was not until World War II was thrust upon us and the demand for increased war production in every line put every able-bodied citizen in our Nation back to work that this unemployment hazard was corrected. In the last full year of the war—1944—Government expenditures amounted to approximately one-half of the total production, namely, $100,000,000,000. This proved conclusively that our free-enterprise system and industrial capitalism here in America has the power to produce sufficiently to supply the needs of all and to keep everyone employed.

However, we must not depend upon a war to keep our people employed. We should be able, in times of peace, to utilize our social and economic forces to maintain ample production to meet the demands of our people. First of all, we must have an expanding market to absorb the output resulting from full production. We here in America have the greatest potential market in all the world. It is only necessary to provide our people with an opportunity for employment to enable them to obtain the buying power to support this increased productivity. The science of production has outrun the science of distribution. The very achievement of our goal—maximum of production with minimum of employment—has undermined our economy by reason of our failure to provide that distribution shall keep pace with production.

It is logical to assume that if any group of our citizens is to be retired from participation in industrial production, the elderly citizens should be the ones entitled to retirement first. This group of oldsters, through no fault of their own, cannot take part in production by reason of the demands of industry for younger men and women. The very industrial system which has profited by their labors and has made it impossible for them to retain their positions, should provide for their retirement in their declining years. This the Townsend recovery program will do. It is recognized by all forward-looking citizens that disability and old age, as well as unemployment, are hazards in our society of free enterprise against which provision must be made if our American way of life is to survive.

My friends, with your help and the loyal support of your coworkers from every State in the Union, we may confidently look forward to the day when such a system will be made a part of the Nation's program when every adult citizen in the United States will have equal basic Federal retirement, insurance and protection against the hazards of disability. Let us not despair nor grow weary in welldoing. In the words of the immortal Lincoln: "Trusting to Him who can go with me, and remain with you, and be everywhere for good, let us confidently hope that all will yet be well."

House Vote on Labor-Bill Veto

EXTENSION OF REMARKS
OF
HON. CHARLES H. ELSTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1947

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit the following editorial from the Cincinnati Times-Star of Saturday, June 21, entitled "The House Was Not Terrified":

THE HOUSE WAS NOT TERRIFIED

It was by a vote of 331 to 83 that the House of Representatives override Mr. Truman's veto of the labor bill.

Keep that figure in mind the next time you go to a play or a movie or listen to a commentator or read a book, the chief purpose of which or whom is to break public confidence in the Government of the United States.

You must have been asleep for some years if you are not aware of the great number of plays and books and commentators of the type that work along that line. Half the shows in New York are built around the idea that Congress is composed chiefly of knaves and fools. They are pictured as venal, pompous, stupid, lacking in human feeling and patriotism. Shows where you can't get a job in the orchestra without carrying a Communist Party card speak in grand tones of their interest in democracy. And audiences which don't know what it's all about applaud enthusiastically.

It took nerve on the part of most of those 331 Congressmen to vote to override the labor-bill veto. Leaders of the AFL and CIO have been spending millions in their campaign to defeat that measure. These leaders make it plain that they do not intend to forget those who supported the bill. There are many close districts in which the taking on of such a burden of settled hostility is not a light matter for the incumbent Congressman.

Congress, being a human institution, is not perfect. But it is the opinion of this newspaper that in patriotism and intelligence and courage the politicians who make up most of the Congress of the United States rank higher than comparable groups in the business, professional, and labor worlds. They trim and play politics, but on matters of principle a surprising number of them put the good of their country above their own political self-interest.

A Better Tax Bill

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial, A Better Tax Bill, which appeared in the Dispatch, Lexington, N. C., on June 23, 1947:

A BETTER TAX BILL

Chairman KNUTSON now says that his Ways and Means Committee will write such a good tax bill that President Truman simply cannot afford to veto it. That is both interesting and encouraging, coming as it does from the committee chairman whose first reaction was that the President was playing politics outrageously when he vetoed the bill that came to him early last week.

We think Mr. KNUTSON was wrong in his judgment of President Truman's action. One just doesn't play good politics by vetoing bills providing for tax cutting. It takes a good deal of courage to veto any bill that cuts taxes, regardless of judgment as to soundness and justice of the provisions of such a bill. The popular thing, some political philosopher has observed, is to cut taxes and raise appropriations.

Mr. KNUTSON's statement is not only encouraging, but it is in part at least a confession that he does not expect it to be very hard to write a better tax bill than the one his committee fashioned at the current session of Congress.

The best tax bill, it would appear from this lay seat, would be one that would bring the most good to the largest number of people. One means to reduction that would affect every taxpayer to the same extent would be to increase the personal exemption back nearer the level of necessary living expenses. A second step might well be the elimination of many of the excise taxes, such as those on soaps, toilet powders, and other articles that are both essential and necessary for personal cleanliness—and particularly needful in bringing to maturity the Nation's most precious output—its babies. The 20-percent tax on motion-picture admissions and on admissions to sports and other recreation events costing a half dollar or less should come off or be reduced. Exemptions were lowered and excise taxes made more numerous as a last resort. They were put on last, more or less as emergency measures, so logically should be first to be reduced or removed.

In fact, it would seem to be good policy for the Federal Government to recede as much as possible from the excise-tax field and leave this to the States. It doesn't set well with us Tar Heels who pay a 3-percent State sales tax on many articles to have the Federal Government come along and put 20 percent more tax on the same articles. That is rather vicious double taxation.

Tax Bill Veto

EXTENSION OF REMARKS
OF
HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Louisville Courier-Journal:

PLAIN LOGIC SUPPORTS VETO OF THE TAX BILL

President Truman's veto of income-tax reduction was no surprise. On the other hand, this newspaper, for one, would have been not only surprised but shocked if the President had acted otherwise, for he would then have abetted a move which was contrary to the principle and practice of sound public husbandry and which, besides, was plainly stamped as a device of vote-catching politics.

Except as to the latter point, Mr. Truman's message to Congress covered the ground completely. His arguments elaborated the statement of his premise, that "this bill represents the wrong kind of tax reduction at the wrong time."

As he put it, there is first the obvious fact that business, employment, and national income are extraordinarily high. The amount of liquid funds in hands of corporations and individuals is nearly $200,000,000,000. Tax reduction is not now needed to provide additional funds for business expansion.

Mr. Truman also rejected the idea that tax reduction is likely to bring lower prices by putting more money in hands of consumers for spending and therefore for inducing higher production. There are too many inflationary pressures which are not altogether natural. The price structure is abnormally unstable because of human as well as economic factors, which are in turn both international and domestic.

There followed the clear statement of a fundamental principle: "A time of high employment and high prices, wages, and profits, such as the present, calls for a surplus in Government revenue over expenditures and the application of all or much of this surplus to the reduction of the public debt." Tax reduction would cut revenues in the face of enormous uncertainties as to our obligation to world readjustment, which means peace.

The President continued: The proposed reductions are not fair and equitable, but give small relief to the low-income taxpayer (the average family man getting $2,500 a year) and large relief to those in high-income brackets. If the bill were to become law, he pointed out, these inequities would be frozen; and this fact brought him naturally to the companion argument. What the country needs now is thorough-going revision of the tax system, not an arbitrary manipulation of tax rates without touching the necessities of complete reforms and adjustments in the entire field of tax revenues.

However, with all this and its undeniable soundness, the President did not attack the crowning defect of the bill. He did not do so because he chose the high ground of reason rather than the shambles of political debate. But he could well have pointed out that the very fact that the tax-reduction bill was H. R. 1 is a betrayal of its purpose. It was the first bill dropped into the hopper when the new Congress convened last January. It came before there was any discussion or examination of the needs of government. It was branded by the very haste of its creation as arbitrary and unsound, the reflection of a dogged intent to cut taxes for the mere sake of cutting and as partisan political play that was all too transparent.

There are some who will suggest that the President is himself looking to the political skies, that he will be heard later on proposing a tax reduction of his own. But we find ourselves going along with him and his veto on the simple logic of his arguments. It is no time to cut taxes when debts are so great, needs so uncertain, and, above all, when taxes are least burdensome.

DAR Immigration Stand

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from today's Washington Daily News:

BISHOP RAPS DAR'S IMMIGRATION STAND

A Catholic bishop said today the Daughters of the American Revolution would find their "patriotism slipping" if they'd "put down their lorgnettes long enough" for a good look.

Bishop James A. Griffin, of Springfield, Ill., chided the DAR and other organizations which oppose legislation to admit Europeans into the United States.

INDIANS ONLY

"The only inhabitant of this country who could, with any grace whatsoever, protest against the proposed immigration of Europe's displaced persons is the American Indian," the bishop said in a statement to a Catholic relief conference here.

"The rest of us," he said, "were either displaced persons ourselves at one time, or else our forefathers were."

Bishop Griffin strongly endorsed a pending bill to allow entry to 400,000 displaced Europeans.

"Those who clamor that America is not large enough to embrace these prospective newcomers are blind to statistics," he said.

"If the members of such organizations as the Daughters of the American Revolution would recall the names of Kosciusko, Von Steuben, and Lafayette, and would put down their lorgnettes long enough to get a good wholesome American look at the suffering of the descendants of those Revolutionary heroes, I'm sure they'd discover their patriotism was slipping."

"If other congressmen of decades past, in utter disregard of Christianity and Americanism, had refused entry to displaced persons of other generations," the bishop continued, "perhaps our foes in this last war might have numbered among their heroes men named Eisenhower, Nimitz, and Patton."

FOLLOW DAR'S SUIT

NEW YORK, June 26.—Delegates to the national convention of the General Federation of Women's Clubs yesterday voted 556-341 to condemn pending legislation to admit displaced persons in this country.

The losers are preparing to offer a substitute resolution approving such legislation. To maintain yesterday's position, they said, will hold up the club members to censure by the "right thinking people of the world."

The Significance in the Action of the Congress in Enacting the Taft-Hartley Labor Bill Over the President's Veto

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. MACY. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following address that I made on Tuesday evening, June 24, before the National Republican Club in New York City:

A month ago I was privileged to address the National Republican Club, and in the course of that address I stated that the general impression in Washington was that the President would sign the labor bill in spite of the temporary estrangement this might cause between the President and the so-called labor leaders. This was, of course, because the signing of the bill would bring to the President strong public support and in anticipation that he would make opportunity, in the way a President can, for renewed good will from the representatives of labor between now and Election Day next year, and that in any event labor would support Mr. Truman, rather than the Republican candidate for President.

This surmise was thrown out in many conversations in Washington between persons considered astute in political matters, because it was believed that such a course would be what might be termed "better politics" than a veto would be, followed by the almost certain passage of the bill, overriding the veto.

The feeling, so far as I have heard it expressed, still is, and stated with even greater emphasis, both by the President's friends and by his critics, that it would have been better politics on the part of Mr. Truman had he signed the labor bill.

Assuredly by his veto of the tax bill and the labor bill the President destroyed the spirit of cooperation which he had promised the Republican Congress, and by the same

token diminished any reasonable expectation of any course on the part of Congress, actuated wholly or partly by a spirit of cordiality toward and cooperation with the President.

However, Washington conversationalists are now saying that one of the impelling motives which actuated the President to veto the labor bill was the dreadful nightmare of a third party led by Henry Wallace, in case the President should sign the bill, believing that a Presidential veto would cut the ground from under the feet of Henry Wallace and his fellow travelers, greatly diminishing, if not annihilating, the likelihood of a Wallace third party.

Some of you may remember that I predicted in my remarks here a month ago that Henry Wallace would form a third party. Others have made the same prediction and some say that it was as much to head off such a movement that the President vetoed the labor bill as it was to strengthen his ties upon organized labor.

Perhaps the President's veto of the labor bill will kill the organization of a third party and doubtless it has insured the articulate support next year of the labor leaders, if not the support of the mass of union membership, which has many and grievous faults to find with the conduct of certain of the leaders of labor.

Of course, it had begun to seem probable that if the President signed the Taft-Hartley bill a third party under the leadership of Henry Agard Wallace would have been formed. Now that the veto of the labor bill, as I said a moment ago, cut the ground from under the feet of Henry Wallace and his fellow travelers, perhaps in referring to Mr. Wallace today we may take the initial of the first name "H," annex that to his middle name "Agard," and call him "Haggard" Wallace. If the nickname "Haggard" Wallace sticks to Mr. Wallace as a result of this suggestion here this evening, I accept the responsibility.

But if one thing could be abundantly clear above all others, it is that the large scale protest strikes of organized labor already in progress because of the passage of the labor bill and the prediction freely made that a large proportion of all organized labor will go on protest strikes within a week, demonstrate beyond question the desirability and even the need for the labor legislation which has been enacted and perhaps for an even stronger control of the conduct of labor unions than the statute which has just become a law now provides. Of this more at a later date.

And we may as well call a spade a spade when we are talking here together. The fact is, the so-called protest strikes, because the Congress of the United States in the exercise of its sworn duty and its constitutional duty to serve the public welfare has enacted legislation of which these pressure groups do not approve, is but a short step removed from anarchy and the destruction of constitutions, laws, and the existing social order.

One would think that the President's face today would be very red indeed as he saw the newspaper reports of these strikes, completely refuting the justification of his veto of the labor law and completely supporting the action of Congress in overriding this veto.

Important developments are under way. Meanwhile, all honor to the 20 Democrats who placed the interests of the Nation in a category superior to that of party and partisan dictation and who disregarded the fetters of party fealty in the interest of the general welfare; and all shame and condemnation for the 22 Democrats in the Senate, who considered party ties and partisan dictation to be superior to the public good.

Finally, it seems to me that the enactment of the Taft-Hartley labor bill by the overriding of the Truman veto and the decision of the United States Supreme Court upholding the Lea Act, intended to curb some of the activities of James Caesar Petrillo, both coming the same day, are events of profound and reassuring significance as affecting the future of labor relations in the United States.

Now, for the judicial enforcement of both the Taft-Hartley law and the Lea law, conditions in the Untied States, industrial, economic, and political, will be observed to be following an upward curve.

I thank you.

Livestock Production in Mississippi

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. WILLIAMS. Mr. Speaker, the State of Mississippi is rapidly coming to the front as one of the greatest beef cattle and livestock-producing States in the Nation. Under leave to extend my remarks in the Appendix of the RECORD, I herewith include an editorial from the McComb (Miss.) Enterprise-Journal of date of June 23, 1947, stating facts that Mississippians have long known, and which are fast becoming known outside of Mississippi:

K. C. STEAKS

There was a time when a person in Mississippi wanting a good stead would ask his butcher or the waiter in a restaurant, "Have you any K. C. steaks?" The K. C. in this instance, of course, means Kansas City, and the idea of a K. C. steak was the suggestion that the meat came from the West. Western meats were then far superior to meats produced in the South, particularly in the case of beef.

But this situation is different today. If you want a good steak you can go to your butcher or your restaurant and say, "I want some good native beef."

The situation has changed. Your best meat today is produced in Mississippi. Once only scrub cows roamed the woodlands of Mississippi. Today Mississippi has beef cattle as good as are produced anywhere. This applies to the cattle right here in Pike, Amite, Franklin, and other nearby counties. Your butcher has learned to say, "I have some good native beef."

So when you want a good steak you do not have to ask for something that came from the West. As a matter of fact we would be giving good counsel to the people of the West, especially the Kansas City area, if we should say to them, "Go to your butcher and ask for a good Mississippi steak." Brother, we don't mean maybe. We mean sho' nuff.

H. R. 2 Provides for Optional Cash Settlement of Terminal-Leave Bonds

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. VAN ZANDT. Mr. Speaker, this morning I appeared before the members of Subcommittee No. 10 of the House Committee on Armed Services and urged favorable consideration of H. R. 2 which I introduced on the first day of the Eightieth Congress and which provides for optional cash settlement of terminal-leave bonds.

My statement in behalf of H. R. 2 is as follows:

STATEMENT OF REPRESENTATIVE JAMES E. VAN ZANDT BEFORE SUBCOMMITTEE NO. 10 OF THE HOUSE COMMITTEE ON ARMED SERVICES IN SUPPORT OF H. R. 2

Mr. Chairman, I am appearing before you in behalf of H. R. 2, which I introduced in Congress on January 3, 1947, to amend the Armed Forces Leave Act of 1946 by providing optional cash payment of terminal-leave bonds and for other purposes. At the time of the passage of the Armed Forces Leave Act of 1946, the majority of the House membership advocated cash payment of terminal-leave benefits. However, the Senate insisted on the bond method of payment, whereupon the House reluctantly agreed in order that the bill would not fail. Thus, the bond method became the first step in the direction of final settlement since it enabled the veteran to obtain a certificate showing his entitlement to a certain amount of terminal-leave pay.

The average size of bonds issued up to date is $208.60. Excluding those veterans entitled to less than $50, and who were paid in cash, the total face value of terminal-leave bonds now outstanding is $1,800,000,000. When all eligibles have received their bonds, the value will amount to approximately $2,800,000,000.

Speaking of the total number of persons eligible for terminal-leave bonds, including those already awarded bonds, the number is approximately 14,500,000, which includes the Army, Navy, Marine Corps, and Coast Guard. While 14,500,000 veterans are eligible for terminal-leave benefits, applications have been received from approximately 10,500,000.

I repeat again that at the time of the passage of the Armed Forces Leave Act of 1946, the majority of the membership of the House favored cash payment in the same manner that officers received terminal leave benefits. The intent was to avoid any discrimination by treating officer and enlisted personnel on the same basis. My bill, H. R. 2, is designed to carry out such an intent. Under existing law, terminal leave bonds earn interest at the rate of 2½ percent, and since the face value of the bonds is part of our national debt, it is evident that cash payment of these bonds will eliminate not only the interest charge, but, in addition, will result in further savings to the American taxpayer by reducing the public debt.

My bill, H. R. 2, provides for optional cash payment of terminal leave bonds. It is difficult to prophesy how many veterans may exercise the option to cash their terminal leave bonds. In this connection it is interesting to observe that following World War I, Congress provided for the optional cashing of adjusted compensation bonds, commonly referred to as the "soldiers' bonus". According to information furnished by the Veterans Administration, of all the bonus bonds issued, 88.2 percent were redeemed prior to maturity, the remaining 11.8 percent being held to maturity. While there were 3,800,000 veterans eligible in World War I, we have 14,500,000 eligible in World War II for terminal leave benefits. Nevertheless, the experience following World War I may be viewed as a good criterion.

It should be kept in mind that under the GI bill, recent figures of the Veterans' Administration discloses that 2,500,000 veterans have received educational benefits, 6,500,000 unemployment insurance benefits and 500,000 loans on real estate and for business purposes. However, many of these veterans have received loans, unemployment insurance and educational benefits with the result

that the total number of veterans receiving assistance under the GI bill approximates 7,000,000, leaving nearly 8,000,000 veterans who have received no benefits except mustering out pay and terminal leave bonds.

There is no denying that the entire veteran population of World War II is in dire need of financial assistance when one considers the cost of living today. The disabled veteran who receives compensation for his wounds is finding the high cost of living a difficult problem, and he needs the cash value of his terminal-leave bonds at this time. Let us not forget that the 8,000,000 veterans who have received no benefits under the GI law will be greatly helped. Who will deny that they have waged a valiant battle in returning to civilian life and in striving to keep their heads above water without Government assistance?

Every Member of Congress knows the sentiment of the veterans of World War II in regard to the cash payment of terminal-leave bonds. The American Legion and the Veterans of Foreign Wars of the United States have heartily endorsed the principles of H. R. 2 as evidenced by letters received from Mr. John Thomas Taylor, director, national legislative committee of the American Legion, and Mr. Omar B. Ketchum, director, national legislative service, Veterans of Foreign Wars of the United States.

My bill (H. R. 2) was the first bill introduced in the Eightieth Congress to provide for the optional payment of terminal-leave bonds. Since its introduction, I have had the opportunity to develop information concerning technical defects in the measure.

In cooperation with the Government agencies concerned, certain changes have been suggested to me which will perfect H. R. 2.

For that reason, I would like to suggest to the committee that changes be made in the language of my bill. On page 2, line 6, subparagraph 4 should be amplified to eliminate administrative difficulty that may develop when a veteran who has already applied for terminal-leave benefits in the form of a bond requests settlement in cash when H. R. 2 becomes law.

In addition, I realize that a definite date should be established allowing ample time for the development of the necessary procedure to effect cash payment of the bonds.

I also believe that H. R. 2 should provide a specific section in regard to the method to be used in cashing the bonds.

Finally, I believe that the necessary language should be added to my bill to strike from the Armed Forces Leave Act of 1946 section 6 (d) (1), which provides for the assignment of terminal-leave bonds for United States Government life insurance. The reason for this recommendation is evident, as there is no longer any need to assign a bond after enactment of H. R. 2.

In regard to the suggestions I have made to perfect my bill, the language necessary to effect these changes is left to the discretion of this committee.

In conclusion, I want to thank the chairman and members of this committee for the opportunity of appearing in behalf of H. R. 2. I respectfully request your approval of the bill.

Address of Hon. William T. McCarthy

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a sound and powerful address made by Hon. William T. McCarthy, United States attorney for the district of Massachusetts, on June 16, 1947, to the graduating class of the Somerville High School, of Somerville, Mass.:

My dear young men and women, on occasions like this it is indeed a rare privilege for us of the older generation to join with you in the happiness of your hour of achievement.

Commencement exercises or, if you will, a graduation program are both distinct terms of art with definite meanings and profound connotations. Their common place in the American educational scheme has bred in us a casualness which is apt to make us forget their true meaning.

It is not my intention to be overserious. Truly, this is an occasion for joy—a time for happiness in accomplishment—a place along the pathway of your careers where we all may pause and rejoice with you.

But as the designation of the occasion tells us, it is not the end, or even the climax, of your educational process. It is the commencement of the next period of your development—your graduation up the ladder of learning to the next stage of training for responsible citizenship.

And in this light this delightful moment should be seized as a time for reflection and stock taking.

Throughout your high-school courses you have had the priceless opportunity to participate actively in what I conceive to be the most precious process in the world today—the program of American training for high privileges and duties of American citizenship.

In your classrooms and under the guidance of your teachers you have acquired skills, memorized facts, knowledge, techniques, ideals, values, and other patterns of conduct as a result of feeling, perceiving, thinking, and doing.

You have been the active agents in your own education. The teachers, your parents, and the spirit of your school and your society have been merely the molders, the directors, the providers of opportunity, and the guideposts for you.

You have educated yourselves by your conscientious participation in all of your school and social activities—by reading textbooks, solving problems, writing themes, asking questions, reciting answers, taking examinations, playing in the orchestra, participating in sports, experimenting in the laboratory, attending entertainments, listening to explanations, observing and describing what goes on about you—and thus gradually coming to the knowledge that learning is a process of growth.

Although you may not have realized it throughout your courses, your opportunity to do all this was planned and arranged for you by the efforts, the sacrifices, and the devotion of your teachers and parents.

Your first debt, then, is one of gratitude to those who have made it possible for you to experience the joy and sense of accomplishment which attends this moment.

In their behalf, however, I can tell you that their primary purpose in affording you the opportunities of education was not to win your thanks. While they do and will appreciate your gratitude, I can assure you that they had a higher motive.

It was simply a purpose, born of their hopes and prayers, that through you they could preserve, improve upon, and perpetuate the glory and the traditions of our American democratic heritage.

You boys and girls—young men and women, are the generation of light. In all history, no other generation has ever witnessed such political upheaval, social catastrophe, and worldwide disturbance.

Within the very space of your high school career, you have seen the climax of the greatest of wars and advent of an atomic age.

It is because of these things that we, going before you, are so anxious that you should succeed in preserving our civilization. Many of your own contemporaries left, or were taken from, the pleasant pursuits of school days to fight in mortal combat the forces of evil that would have destroyed every ideal which you have been taught here and every democratic concept which your country stands for.

In thanks to Almighty God for giving us victory over those evil forces, therefore, what is the duty that is yours and mine?

It is many-fold, and only to the degree that we perform it shall we be able to say that we are worthy of the heritage that has been handed down to us.

We must subscribe wholeheartedly and without reservation to the principle that our salvation lies in belief in the fatherhood of God and the brotherhood of man. Without that faith national harmony, international concord, or peace through a United Nations will never be achieved. Regardless of your religion—whether you be Catholic, Protestant, or Jew—in that principle and in its true practice you will find the strength and the comfort so necessary to withstand the rigors of the adult life upon which you are about to enter.

Secondly, in the civic and political area, you have a bounden duty to exert all your energy and devote al your loyalty to the principles of American democratic and constitutional government. As you probably know, today your beloved America is the greatest and most powerful nation on earth. Unfortunately, in certain lands and among certain peoples it is also the most hated. This hatred stems from envy and frustration—envy of our national resources and productive genius—and frustration by our willingness to fight and die for the way of life which we believe essential to individual and national dignity.

This way of life is the American way—the way you have been taught to follow and cherish throughout your schooling. It is the way, not of the "four freedoms" alone, but rather the way of unnumbered liberties and blessings which makes our democracy unique. It is the only way along which you can travel as free human beings, and maintain the community and the society which have grown vigorous and strong under the Constitution and the laws of the United States.

All this means simply that the lessons of your civics, government, social science, and history classes must be applied by you in the form of active and intelligent participation in all phases of your community and social life. The rights, privileges, and blessings which go with your priceless gift of American citizenship cannot be preserved unless you realize that they entail duties and obligations to God, to home, to the State, and to the Nation.

It will not be easy for you to assume these duties and obligations. I can think of no period of history which compares in difficulty with the one which you are about to enter.

Yet you would not be the youth of America if you did not face the problems of your coming age with confidence and determination. Your faith in God, your hope in His mercy, and your love for your fellow man will sustain you. For these are the eternal principles which will survive even an atomic age, and enable men in any generation to perform great deeds and achieve a high destiny.

Be mindful of all the moral yardsticks that serve as a medium by which to help make good citizens. Be mindful of the advice of your spiritual leaders and the example of those great men and women that have helped to make this country what it is. Be mindful of your obligation to give a practical demonstration of the meaning of the word "worship" by making your private and public lives living examples of the value of the truths of American citizenship.

Pray for the assistance of Heaven to maintain these high standards. Be faithful to yourselves not only in great things, but in small things. Be charitable.

Permit no foreign ideology to interfere with your chain of thought. Be tolerant, permitting no racial or religious prejudices to cross the pathway of your thoughts. Hold fast to your liberties.

Never sell God or your country short and you may be certain that your future life, not measured by dollars and cents, but measured by the eternal principles of truth and justice, will be a success.

Stalled Science Foundation

EXTENSION OF REMARKS
OF
HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Marquis Childs, from the Washington Post of June 25, 1947:

WASHINGTON CALLING
(By Marquis Childs)
STALLED SCIENCE FOUNDATION

The farther we get from the war the more we are inclined to forget the lessons of the war. In so many ways we seem to be lapsing back into the past or, rather, into a convenient dream of the past.

We learned in the war the paramount importance of scientific research and development. We saw what the efforts of our own scientists brought about—the proximity fuse, atomic fission, DDT, a whole host of discoveries, most of them with direct application to better peacetime living as well as to war.

Supposedly we learned in the war the criminal folly of our draft policy. Unlike our allies, we drafted young men out of science and scientific education. And thereby we robbed our science of 4 years that can never be made up.

Supposedly we learned that we had to try to make up for this folly. In the immediate aftermath of VJ-day, there seemed to be a great deal of enthusiasm for supporting scientific research with Federal funds. Almost everyone seemed to agree that such a program was necessary so that we could begin to make up for the grave loss we suffered during the war in pure research, in medicine, chemistry, physics, in every field. We were told that the Soviet Union was appropriating vast sums for research and exploration.

So—action. But before action, argument. As in so many instances, it seemed difficult to agree on how we should proceed.

One source of disagreement was how the Federal money should be distributed and who would get the gains. The Federal funds would be made available in grants to business for research and to nonprofit laboratories run by universities and foundations. But what about the patents that would come out of this research?

Democrats on the liberal-labor side, such as Senator HARLEY M. KILGORE of West Virginia, wanted to write into the law that any and all business firms should be able to use the inventions achieved with Government money. Conservatives said this would take away incentive. They argued that it was contrary to the free-enterprise system.

Little less than a year ago this column told how a Federal science foundation bill was buried in the House Interstate and Foreign Commerce Committee. It had been passed by the Senate with the Kilgore patent provision.

Now another science foundation bill seems to be stuck in the same committee. Like the first one, it has been passed by the Senate. In deference to the conservatives, the present bill does not contain the provision making patents available to all. When it was up in the Senate its sponsors said that in the beginning about $20,000,000 a year would be spent for scholarships, for research, for all-around promotion of science, including the exchange of scientific information with foreign countries. It is, then, a more modest bill and far less controversial with respect to changes that it might or might not bring about in the present organization of our society.

This time the opposition has come from another source. It is led by Frank B. Jewett, president of the ultraconservative National Academy of Sciences. He has been conducting a one-man crusade against the science foundation bill.

Jewett has argued that such a Federal foundation is unnecessary. He insists that the money to advance science must come, as in the past, from private contributors. To encourage such contributors, he proposed special tax exemption on donations to science and education, which is a dubious proposal since it would require several years to institute and then it is doubtful how much money would be realized for basic research.

Running through Jewett's propaganda is the fear of Government interference. That is understandable. We believe passionately in the right of free inquiry and free research.

But it sometimes seems that we carry this so far as to bend over backward into complete distrust of any common effort for the general good. It begins to look as though only in war can we unite in a common cause.

Backing for science now, as approved in the Senate bill, is a minimum for national security. The time has come to prove that we have learned at least this one small lesson out of the war.

Hon. Fred E. Busbey Replies to Mr. William A. Benton

EXTENSION OF REMARKS
OF
HON. FRED E. BUSBEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. BUSBEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the following letter which was delivered to Mr. William A. Benton, Assistant Secretary of State, today:

WASHINGTON, D. C., *June 26, 1947.*
Mr. WILLIAM A. BENTON,
Assistant Secretary of State,
Washington, D. C.

DEAR MR. BENTON: Under date of June 16, 1947, you transmitted to me an analysis of my speech in the House of Representatives May 14, 1947, wherein I expressed my personal objections to certain persons employed in your division of our State Department.

Notwithstanding the fact that the analysis is dated June 2, 1947, and it was released to the press on June 10, 1947, I appreciate your sending it to me, even though I did not receive it until June 16, 1947.

In your covering letter of June 16, you state you would welcome my comments. I appreciate your invitation to comment and assure you I would have done so without solicitation. Because of certain constructive changes that have recently been made, as well as those contemplated in the near future, in the personnel of the State Department, which, in my judgment, will be for the good of the service, I have purposely refrained from sending you my comments until after the Mundt bill successfully passed the House.

Your letter states, "the attached analysis was prepared by one of the members of my staff." Evidently Mr. Sargeant did not inform you as to the total number of employees of the State Department who worked on the analysis of my speech, for if he had, I am sure you would not have stated that it was prepared by a single member.

I note in the memorandum purported to have been prepared by Mr. Howland Sargeant for you, he chooses to completely ignore the following specific charges in my speech of May 14 against the activities of your Department, which are fully amplified by supporting data:

1. That the Department has misled Congress and the country regarding the difficulties of access to Soviet and Soviet-controlled areas.

2. That it has broadcast innocuous and oftentimes harmful material at great expense to the Government.

3. That Communist publications have easy access to confidential information in the Department.

4. That the Department has cooperated with well-known Communist organizations and individuals known for their Communist sympathies.

The proof of the pudding is in the eating, Mr. Benton. Of what value is it to cite a long list of meaningless biographical references to the key persons in your Department; namely, Haldore E. Hanson, Charles A. Thomson, and William Treadwell Stone, when they have by their very activities indicted themselves as persons whose judgment is either disastrously faulty or whose loyalty is open to serious question, or both?

In the case of Mr. Hanson, the reference to him as a "smuggler, soldier, and diplomat" very obviously is an error, and I freely admit it. But this does not mitigate the fact that Mr. Hanson did undeniably possess the confidence of the Chinese Communists. Can you cite for me a single correspondent who is not pro-Communist in his sympathies who has ever been permitted entry inside the lines of a Communist Army? If various press agencies have chosen to employ such a man for any special purpose, it does not justify his employment by the State Department. State Department employees, particularly top-level policy makers like Mr. Hanson, should, like Caesar's wife, be above suspicion.

In a grapevine effort to whitewash Mr. Hanson, it has been amusing to note the type of rumors being circulated on the "hill" to the effect that it is a case of mistaken identity and that he wrote the articles in his youth, etc. It is also interesting that you do not make this defense in writing.

Furthermore, in regard to Mr. Haldore E. Hanson, I am, as a member of the subcommittee of the Committee on Expenditures in the Executive Departments to investigate the State Department, herewith making a formal demand on you to furnish me a photostatic copy of Mr. Hanson's form 57, copies of all correspondence pertaining to any and all deferments he received from serving in the armed forces of our country during World War II, as well as an explanation as to why he was ever employed by the State Department.

I am indeed surprised that exception should be taken to my reference to the association of Mr. William T. Stone with Mr. George Shaw Wheeler. You evidently do not know and were not informed by Mr. Sargeant of the circumstances surrounding Mr. Wheeler's clearance by the Civil Service Commission. Mr. Wheeler was cleared by the Civil

Service Commission as a direct result of pressure by certain individuals like former Congressman John M. Coffee and others with a significant list of Communist-front affiliations and sympathies. Mr. Wheeler can be proven to have been a Communist stooge inside the Socialist Party. Men who have returned from Germany have testified to his pro-Communist activity in that important strategic area. Files in my possession show that David A. Morse "contacted William T. Stone, Chief of the Foreign Economic Administration in London and told Stone that he (Morse) wanted a statement from the FEA that Wheeler was trustworthy and could be continued on Morse's staff; that a day or two later Stone talked with Morse and stated that he (Stone) was convinced in his judgment that Wheeler was not a disloyal man, that Wheeler was completely trustworthy and should be continued in his present post and that as far as Stone was concerned there was no question or reservation in his mind." This clearly indicates that someone is lying in connection with this case.

In further reference to Mr. Stone, you say that the editorial board of Amerasia, of which he was a member, never met. Would you consider sound the judgment of an individual, in such an important spot as Mr. Stone, who allows his name to be used on the masthead of a magazine involved in espionage activities (see case of Philip Jaffe), which has advocated without protest from Mr. Stone, a negotiated peace with Hitler's Germany, and which numbered among its contributors Frederick V. Field, whose Communist views and record are a matter of public knowledge? Mr. Stone's connections with Amerasia cannot be properly defended, nor can his employment by your Department.

In reference to Mr. Thomson's article in Foreign Policy Reports of May 1, 1938, he could well have cited such men as Norman Thomas, Luis Araquistain, and others as to the disruptive activities of the Communists in the Spanish Loyalist forces. Mr. Thomson's statement, however, is one of unreserved praise.

Reference to Abel Plenn as former chief propaganda analyst at the American Embassy in Spain can be found in the Daily Worker of April 7, 1946, page 10; April 3, 1946, page 13; New York Times, April 2, 1946, page 26; Daily Worker, May 8, 1946, page 12; April 19, 1946, page 13. He has contributed to the New Masses.

As to the quotation from the speech of Mrs. Esther Brunnauer, it seems to me that the most elementary kind of diplomacy would require that our representatives do not support charges made against us by a nation which is vilifying this country throughout the world.

The analysis states, "In the course of his speech [Busbey] made allusions to 15 persons by name. Only 4 of these persons are now employed by the Department."

This, of course, if true—and I assume it is—is extremely gratifying to me. I will appreciate it if you will kindly supply me with the names of the persons to whom I referred who are no longer in your Department, along with the following information:

1. The date their employment was severed with the State Department.

2. For what reasons were they detached from the State Department pay roll?

3. Were they transferred to some other division of the State Department or to some other agency of the Government? Please advise me of their present location and position.

4. What is your reason for retaining the last 4 of the 15 I criticized on the pay roll?

Now, Mr. Benton, if you will discuss in detail the rest of my speech and refute the charges made there, I would appreciate it. Where I have made a demonstrable error, I have admitted it. Will you do the same?

Finally (a matter of extreme interest to the Committee on Expenditures in the Executive Departments) would you please advise me at the earliest possible date whether you or any of your staff have enlisted the services of one or more advertising agencies for the purpose of promoting a campaign in behalf of the activities of the Office of International Information and Cultural Affairs, and in behalf of an appropriation for such purpose? If so, will you please let me know the name or names of such firms? Furthermore, I would like to have a statement from you as to who engaged such firm or firms and paid for the services and expenses.

Very truly yours,

FRED E. BUSBEY,
Member of Congress.

Equal Rights Under the Law Means Equal Justice for Women and Men

EXTENSION OF REMARKS
OF

HON. JOHN M. ROBSION

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1947

Mr. ROBSION. Mr. Speaker, on January 9, 1947, I had the honor and pleasure to introduce House Joint Resolution 62, proposing an amendment to the Constitution of the United States. The amendment reads as follows:

That equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex. Congress and the several States shall have power, within their respective jurisdictions, to enforce this article by appropriate legislation.

This amendment shall take effect 3 years after being ratified by the Legislatures of three-fourths of the several States.

Seven other distinguished members of the House have introduced identical resolutions as follows: Mr. CLIPPINGER, of Illinois; Mr. DAWSON, of Illinois; Mr. HARRIS, of Arkansas; Mr. MILLS, of Arkansas; Mr. POTTS, of New York; Mr. REED, of New York; and Mr. FARRINGTON, of Hawaii.

ONE HUNDRED AND TWO COSPONSORS

This proposal is nonpartisan and nonpolitical. Our distinguished colleague, Hon. FADJO CRAVENS, Democrat, of Arkansas, in the Seventy-ninth Congress rendered outstanding service in cooperating with more than 70 other Members of the House and myself in advancing this legislation.

One hundred other distinguished Members of the House, Democrats and Republicans, have joined Mr. CRAVENS and myself as cosponsors in supporting this proposed amendment in the present Congress. Their names and States are as follows: Representatives FRANK W. BOYKIN, of Alabama; RICHARD F. HARLESS and JOHN R. MURDOCK, of Arizona; OREN HARRIS, WILBUR D. MILLS, and W. F. NORRELL, of Arkansas; JACK Z. ANDERSON, WILLIS W. BRADLEY, CARL HINSHAW, GORDON L. MCDONOUGH, RICHARD M. NIXON, JOHN PHILLIPS, and HARRY R. SHEPPARD, of California; ELLSWORTH B. FOOTE and JAMES T. PATTERSON, of Connecticut; J. CALEB BOGGS, of Delaware; JOE HENDRICKS, J. HARDIN PETERSON, EMORY H. PRICE, DWIGHT L. ROGERS, and GEORGE A. SMATHERS, of Florida; W. M. WHEELER, of Georgia; ROY CLIPPINGER, THOMAS L. OWENS, and WILLIAM L. DAWSON, of Illinois; GEORGE W. GILLIE, EDWARD A. MITCHELL, and EARL WILSON, of Indiana; PAUL CUNNINGHAM and HENRY O. TALLE, of Iowa; WINT SMITH, of Kansas; W. HOWES MEADE, THRUSTON BALLARD MORTON, and BRENT SPENCE, of Kentucky; JAMES DOMENGEAUX and OTTO E. PASSMAN, of Louisiana; GEORGE H. FALLON, HUGH A. MEADE, and EDWARD T. MILLER, of Maryland; ANGIER L. GOODWIN and EDITH NOURSE ROGERS, of Massachusetts; HOWARD A. COFFIN, ROY O. WOODRUFF, and HAROLD F. YOUNGBLOOD, of Michigan; H. CARL ANDERSEN and EDWARD J. DEVITT, of Minnesota; WAT ARNOLD, CLAUDE I. BAKEWELL, MARION T. BENNETT, WALTER C. PLOESER, and ORVILLE ZIMMERMAN, of Missouri; FRED A. HARTLEY, JR., of New Jersey; WALTER G. ANDREWS, WILLIAM T. BYRNE, EDWARD J. ELSAESSER, EDWIN ARTHUR HALL, BERNARD W. (PAT) KEARNEY, ARTHUR G. KLEIN, W. KINGSLAND MACY, JOSEPH L. PFEIFER, DAVID M. POTTS, DANIEL A. REED, and KATHARINE ST. GEORGE, of New York; HERBERT C. BONNER and MONROE M. REDDEN, of North Carolina; WILLIAM LEMKE and CHARLES R. ROBERTSON, of North Dakota; HENDERSON H. CARSON, P. W. GRIFFITHS, and J. HARRY MCGREGOR, of Ohio; GLEN D. JOHNSON, TOBY MORRIS, and WILLIAM G. STIGLER, of Oklahoma; HOMER D. ANGELL, of Oregon; FRANK BUCHANAN, ROBERT J. CORBETT, WILLIAM J. CROW, HERMAN P. EBERHARTER, WILSON D. GILLETTE, MITCHELL JENKINS, JOHN MCDOWELL, FREDERICK A. MUHLENBERG, ROBERT F. RICH, GEORGE W. SARBACHER, JR., and HARVE TIBBOTT, of Pennsylvania; WIRT COURTNEY and DAYTON E. PHILLIPS, of Tennessee; WILLIAM A. DAWSON, of Utah; J. LINDSAY ALMOND, JR., JOHN W. FLANNAGAN, JR., and HOWARD W. SMITH, of Virginia; HOMER R. JONES and THOR C. TOLLEFSON, of Washington; E. H. HEDRICK and MELVIN C. SNYDER, of West Virginia; JOHN C. BROPHY, ALVIN E. O'KONSKI, and WILLIAM H. STEVENSON, of Wisconsin; FRANK A. BARRETT, of Wyoming; and JOSEPH R. FARRINGTON, of Hawaii.

EQUAL JUSTICE UNDER LAW

Over the stately and magnificent Supreme Court Building chiseled in the marble are the words "Equal justice under law." The Supreme Court interprets the Constitution, the acts of Congress and the laws of the several States. It is not within the province of that great Court to make the laws. There can only be equal justice under law provided there is equality in the laws themselves. The suffrage amendment wiped out the discrimination on account of sex in giving voting rights to women. Until that amendment was adopted there could not be equal justice under the law. The equal rights amendment, if adopted, will grant men and women equality and equal justice under the law regardless of sex and will forbid discrimination against men or women on the basis of sex. If this amendment is ratified future laws of the Congress cannot deny or abridge

equality of rights merely on account of sex, and no State law can deny or abridge equality of rights under the law, either to men or women on the basis of sex. This does not mean uniformity of the laws enacted by the legislatures of the 48 States. It merely forbids any State passing any law which denies or abridges equality of rights to men or women on account of sex. One State may adopt laws that are radically different from the laws of other States. For instance, the Legislature of the State of Ohio may pass laws that differ widely from the laws passed by the State of New York. They can do this provided that such law or laws do not deny or abridge equality of rights on the basis of sex to the citizens of the State to which the laws apply.

This proposed amendment preserves State's rights and also equality of rights which will mean justice under the law. There are many gross discriminations in the laws against men as well as women in the several States based on sex, and there are discriminations under the Federal laws against women as well as men based entirely on sex. There may be a difference as to the effect of the laws on men and women in the same State but such differences cannot be based on sex. We earnestly contend that this is not right and it results in a failure of many of our citizens to receive equal justice under the law.

NONPOLITICAL AND NONPARTISAN

The Republican National Convention platforms in 1940 and in 1944 each contained a plank approving this legislation. The Democratic National Convention in 1944 adopted a plank approving this legislation in principle, and as I recall, President Roosevelt and Governor Dewey accepted the provisions of their respective platforms, including these planks. President Truman has approved this legislation. This is the second time this amendment has been endorsed by a President of the United States. Speaker of the House JOSEPH W. MARTIN, in speaking of the movement for the equal rights amendment plank in the 1944 Republican platform, said in June 1944:

I am for the amendment absolutely and unqualifiedly.

Hon. Harrison E. Spangler, chairman of the Republican National Committee, in June 1944, at the Republican Convention, endorsed the equal rights amendment, as follows:

I am for the equal rights amendment and have no doubt but what the Republican Party will adhere to its traditional stand for justice and equality and again endorse the amendment.

Former Senator John W. Townsend, chairman of the Republican Senatorial Campaign Committee, in June 1944, said:

The Republican Party is proud to have been the first to carry the banner of equality for women. I am wholeheartedly for the amendment and believe it will not be long before it will take its place beside the suffrage amendment in our Constitution.

Senator Warren R. Austin, of Vermont, recently appointed United States member of the Security Council of the United States, said in June 1944:

This proposed amendment is very close to my heart and I am particularly gratified that it will be placed in the Republican platform. I had the honor of submitting the favorable report of the Judiciary Committee of the Senate to the Senate in the spring of 1943, and I am very happy that it has now been approved by the whole Republican Convention.

Senator Austin, on the floor of the Senate in July, 1946, in speaking in support of this amendment, said:

I favor the proposed constitutional amendment primarily because I believe in the principle it seeks to establish. * * * The amendment does not deal with rights in the abstract. The amendment deals with certain rights, namely, rights under the law. It says that no State shall deny equality of these rights under the law on the sole ground of sex. A discrimination on the grounds of sex alone is perfectly absurd.

Hon. Carroll B. Reece, chairman of the Republican National Committee, on May 3, 1946, addressed the following telegram to the National Women's Party, West Central Regional Conference, Hotel Fort Des Moines, Des Moines, Iowa:

All good wishes for your conference and the sincere hope that the adoption of the equal-rights amendment will not be longer delayed. Our party has twice gone on record in national convention for this measure—in 1940 and 1944. I need not recall to you the part played by the Republican Party in winning the women suffrage amendment. We are proud of that record. We are also proud of the record of our party up to the present in support of the equal-rights amendment. It was a Republican Senator, Charles Curtis, of Kansas, later Vice President, who first introduced the equal-rights amendment in the United States Senate. It was a Republican Representative, Daniel R. Anthony, of Kansas, nephew of the great Susan B. Anthony, who first introduced the equal-rights amendment in the House of Representatives. In this Congress the equal-rights amendment has been favorably reported by both Senate and House Judiciary Committees. Republican Members of both these committees took a leading part in securing these favorable reports. This measure is now on the calendar of both Houses. Action is due the women of the country. In my opinion if our party were in power there would be no question about the immediate submission of the equal-rights amendment.

CARROLL REECE,
Chairman, Republican National Committee.

President Harry Truman, as United States Senator on April 20, 1944, approved the equal rights amendment in a letter to Mrs. Emma Guffey Miller, a leading Democrat and chairman of the Congressional Committee of the National Woman's Party and a leader in the fight for the equal-rights amendment, and which letter is as follows:

UNITED STATES SENATE,
Washington, April 20, 1944.

DEAR MRS. MILLER: I understand you are going to visit the great State of Missouri and will address the Federation of Women's Clubs in St. Louis.

Please express my sincere regret at not being able to attend the meeting to which I received an invitation, but due to other engagements it is not possible for me to be present.

Say to them that I am in sympathy with their fight for the equal-rights amendment because I think it will improve the standard of living by setting a level on wages equal for both sexes.

I have no fear of its effect on the home life of the American people. Nearly every man has his woman on a pedestal anyway, and this will only make the legal aspects of the situation more satisfactory from the standpoint of the legal rights of the women of the country.

I am sure you will have a cordial reception in the great city of St. Louis, and I know you will enjoy being a guest in the great State which I represent in the Senate of the United States.

Sincerely yours,

HARRY S. TRUMAN.

Hon. James A. Farley approves the equal-rights amendment in a letter to Miss Anita Pollitzer, who is now president of the National Woman's Party of the United States and who has rendered most distinguished and effective service in the advancement of equal rights for women. The letter is as follows:

NEW YORK, *May 4, 1945.*

DEAR MISS POLLITZER: As I have been away considerably during the past few weeks, this is the first opportunity I have had to acknowledge your letter of the 17th relative to the equal-rights amendment.

I am in favor of the passage of this amendment and I sincerely hope and trust that it will be accomplished. I quite agree in your statement equal legal rights for women seem the logical conclusion of the suffrage amendment.

With my best wishes,

Sincerely yours,

JAMES A. FARLEY.

Hon. Robert E. Hannegan, the present Postmaster General of the United States and chairman of the Democratic National Committee, on May 3, 1947, sent to Mrs. Emma Guffey Miller, a Democrat and a distinguished advocate and worker on behalf of women, the following telegram:

WASHINGTON, D. C., *May 3, 1947.*

MRS. EMMA GUFFEY MILLER,
Des Moines, Iowa:

On behalf of the Democratic Party we want to extend best wishes for the success of your convention. The Democratic Party included the equal-rights amendment in its platform in 1944. We still stand on that. The Democratic Party has taken the lead in giving the women representation in party organization and in Government and our party will continue to be deeply concerned in all that relates to the advancement of women.

ROBERT E. HANNEGAN,
Chairman, Democratic National Committee.

Cardinal Dougherty, of Philadelphia, approved this equal-rights amendment in the following letter to Mrs. Cecil Norton Broy and Dr. Mary Sinclair Crawford:

CARDINAL'S OFFICE,
Philadelphia, Pa., September 22, 1945.

MRS. CECIL NORTON BROY,
DR. MARY SINCLAIR CRAWFORD,

MY DEAR LADIES: Apropos of the equal rights amendment to the Constitution, according to which it is proposed to give women full constitutional rights, I am glad to hear from you that his Excellency, President Truman, and also the Judiciary Committee of the House of Representatives are heartily in favor of this amendment. Personally I agree with them in this matter.

Respectfully yours,

D. CARD. DOUGHERTY,
Archbishop of Philadelphia.

A similar endorsement comes from Rev. Donald B. Cloward, of the Baptist Church of White Plains, N. Y.:

WHITE PLAINS, N. Y., *September 18, 1945.*

The equal-rights amendment is a constructive measure and should be passed. Any legislation ought to protect individuals in accordance with need or the hazard of the job, and until wages and salaries are adjusted to meet basic family responsibilities women in commerce and industry should receive equal pay with men for the same skills and performance.

Numerous laws on the statute books seemingly enacted to protect women actually discriminate against them in favor of men. Only a uniform national law such as is proposed in the equal-rights amendment will correct this inequality.

The Annals of the American Academy of Political and Social Science, Philadelphia, Pa., had the following to say about the equal-rights amendment:

We wish to draw attention also to a recent survey of some of the great documents of human freedom in England and the United States by a distinguished jurist, William Draper Lewis, director of the American Law Institute. This survey begins with Magna Carta, the Petition of Right, the Bill of Rights, and ends as follows:

"It is a comment on the immaturity of civilization that the recognition of woman's political equality with man did not come in the United States until 1920. The fight to gain for her full legal recognition as a human being has neared its culmination in the presentation to Congress of the equal-rights amendment."

Believing that the time has come for Congress to submit this resolution to the State legislatures for their consideration, the Committee on the Judiciary voted, February 21, 1946, to report this resolution to the Senate with the recommendation that the resolution do pass.

Rev. Beverley M. Boyd, executive secretary, Department Christian Social Relations, Federal Council of Churches of Christ in America, joins others in commending the equal rights amendment:

NEW YORK CITY, *September 28, 1945.*

Senator CARL A. HATCH,
Chairman, Senate Judiciary Subcommittee,
Washington, D. C.:

I regard it as just and fundamental to have the principle of legal equality for men and women as stated in the equal rights amendment incorporated in the Constitution. I urge immediate favorable report of this amendment by the Senate Judiciary Subcommittee and wish this individual statement be laid before the committee as part of the hearing proceedings.

BEVERLEY M. BOYD,
Executive Secretary, Department Christian Social Relations, Federal Council of Churches of Christ in America.

THIRTY GOVERNORS APPROVE

Twenty-three Republican and seven Democrat governors have made public statements in support of the equal rights amendment. I am unable to furnish the names and States of the seven Democrat governors. The Republican governors and their respective States are as follows: California, Hon. Earl Warren; Colorado, Hon. John C. Vivian; Delaware, Hon. Walter W. Bacon; Idaho, Hon. A. C. Bottelfsen (former Governor); Illinois, Hon. Dwight H. Green; Indiana, Hon. Ralph E. Gates; Iowa, Hon. Robert D. Blue, Iowa, Hon. B. B. Hickenlooper (former Governor); Kansas, Hon. Andrew F. Schoeppel; Kentucky, Hon. Simeon Willis; Maine, Hon. Sumner Sewall (former Governor); Massachusetts, Hon. Leverett Saltonstall (former Governor); Michigan, Hon. Harry F. Kelly; Minnesota, Hon. Edward J. Thye (former Governor); Montana, Hon. Sam C. Ford; North Dakota, Hon. Fred C. Aandahl; Oregon, Hon. Earl Snell; Pennsylvania, Hon. Edward Martin (former Governor); South Dakota, Hon. M. Q. Sharpe; Vermont, Hon. Mortimer R. Proctor, Vermont, Hon. William H. Wills (former Governor); Washington, Hon. Arthur B. Langlie (former Governor); Wisconsin, Hon. Walter S. Goodland.

Many State legislatures have approved this proposed amendment. Among these was the resolution adopted in March 1945 by the New York State Legislature at a time when the Republicans were in control of both houses of the legislature and declared as follows:

Resolved, That the Congress of the United States be and it hereby is respectfully memorialized to adopt and submit to the several States the equal rights amendment to the Constitution of the United States, which amendment is now pending before the Congress.

On February 28, 1947, the North Dakota Legislature memorialized the Congress to pass the equal rights amendment to the Constitution, and submit same to the several States for their approval and adoption. The Republican leader in the House of Representatives, Hon. JOSEPH W. MARTIN, Jr., of Massachusetts, who gave valuable assistance in the movement to have the equal rights amendment plank in the 1944 Republican platform, said in June 1944: "I am for the amendment absolutely and unqualifiedly."

This proposed amendment strongly appeals to men and women in every walk of life, who believe that there should be no discrimination against any man or woman merely on the basis of sex.

Irving Fisher, political economist and author, recently deceased, endorsed the equal rights amendment, as follows:

It seems to me that the same reasons which justified giving the franchise to women apply to other rights.

One of these reasons is that women are not fully represented by men. The life of a man is largely centered on preserving property and earning a living. The life of a woman is largely centered on preserving life and caring for children. War costs both property and life. But the latter cost is the greater and this fact is more appreciated by women than by men. If world peace ever comes, it will be largely due to the love of the lives of the family in the hearts of wives and mothers. Whatever adds to the prerogatives of women promotes world peace.

IRVING FISHER.

Dr. Frederick May Eliot, president, American Unitarian Association, adds his approval, as follows:

It has long seemed to me that the equal rights amendment to the Federal Constitution ought to be adopted because it simply makes explicit and definite what I think the vast majority of the American people really want. Indeed, I suspect most Americans still take it for granted that the woman suffrage amendment guarantees equality of rights for men and women, and when they discover that this is not so I am confident almost all of them would be ready and eager to take whatever steps may be necessary to accomplish the end they have in mind. If the use of my name would be of any value in the effort to promote the campaign for the adoption of this amendment, I should be very glad to have you use it.

Raymond Gram Swing joins with other distinguished Americans in approving this proposal as follows:

The guaranty of full equality to women would complete the historic catalog of the first freedoms which are embodied in the concept of Americanism. The grant of equality to women has been delayed by complex and secondary considerations, chiefly the effect it would have on legislation designed to protect working women from exploitation. Democratic society tends to tie itself into such knots, where the major principle is tangled up with the consequences of well-meant compromises. Then comes a time when the compromises themselves, however well-intentioned, hold back the acceptance of a vital principle. That time has come in this question of full equality for women. It needs to be affirmed and established as the basic law of the land. The inconvenience of readjusting past compromises is insignificant. The principle is vital. America cannot be a vigorous democracy while withholding any fraction of full equality from half of its citizens.

RAYMOND GRAM SWING.

Prof. Arthur Meier Schlesinger, professor of American history, Harvard University, and president of the American Historical Association, commends this legislation as follows:

Many well-meaning persons have opposed the equal-rights amendment on the ground that it would deprive women of special statutory protection in industry. In recent years, however, legislation has extended to men wage earners most of the advantages earlier granted exclusively to women. Hence, no substantial objection of a practical character remains for treating the two groups of workers differently, whereas the principles of democracy require that they should be treated alike. For these, as well as for other reasons, I favor the proposed amendment.

ARTHUR MEIER SCHLESINGER.

Thirty great national women's organizations have expressed their approval of this legislation and are engaged actively in promoting its adoption by the Congress and ratification by the States. These organizations are as follows: National Woman's Party; General Federation of Women's Clubs; National Education Association of the United States; National Federation of Business and Professional Women's Clubs; Industrial League for Equality; National Association of Women Lawyers; Women's National Democratic Club; American Medical Women's Association; Women's International Association of Aeronautics (board of directors); American Society of Women Accountants; American Women's Society of Certified Public Accountants; Osteopathic Women's National Association; We, the Mothers, Mobilize for America; National Association of School Secretaries; National Council of Women Chiropractors; Women's Auxiliary to the National Chiropractic Association; Mothers and Women of America; Association of American Women Dentists; American Federation of Soroptimist Clubs; American Council for Equal Legal Status; National Association of Women; National Association of Colored Women; Mary Ball Washington Association of

America; Ladies of the Grand Army of the Republic; Congress of States Societies; Pilot International; St. Joan Society; Alpha Iota Sorority; Avalon National Poetry Shrine; Wheel of Progress; Delta Phi Epsilon; Americans United; Quota International.

The executive committee of the National Council of Women of the United States, an organization with an affiliated membership of 5,000,000 women (the United States branch of the International Council of Women), endorsed the equal rights amendment. These organizations represent a total of about 8,000,000 women, and from every walk of life.

POPULAR INTEREST AND SUPPORT INCREASES

The equal-rights amendment was first introduced in the Senate in 1923 by the Honorable Charles E. Curtis, of Kansas, later Vice President of the United States. It was first introduced in the House of Representatives the same year by the Honorable Daniel R. Anthony, Member of Congress from Kansas and nephew of the great suffrage leader, Susan B. Anthony. The amendment has been introduced in every subsequent Congress.

The support back of the amendment was slight at the time of its first introduction, but has grown steadily. In particular, the following progress has been made during the past few years, and as a result the amendment now stands in a more favorable position than ever before:

The two major parties endorsed the equal-rights amendment, for the first time, in 1944; previously it had been endorsed only by the Republican Party.

The President of the United States, Hon. Harry S. Truman, endorsed the amendment. This was the second time the amendment had ever received Presidential support.

The Judiciary Committees of both Houses of Congress reported the amendment favorably, for the first time, in the last Congress; previously only the Senate committee had taken this action.

The numbers of sponsors in the House of Representatives has grown from 3 in 1941 to over 100 in the present Eightieth Congress. This increase shows the growing sentiment for the measure.

The Senate voted on the amendment in 1946, for the first time. A majority vote was secured, although not the two-thirds necessary for a constitutional amendment.

The chairmen of both major political parties gave their support in 1944, the first time that the chairman of any political party had taken such action.

Over 30 governors have endorsed the equal-rights amendment during the last 3 years; previously only 1 governor of a State had given his endorsement.

For the first time, in 1943, a leading newspaper gave editorial support to the amendment. This honor went to the New York Herald Tribune. A few weeks later the Christian Science Monitor followed with editorial endorsement, and since then editorial support has been given by leading papers from coast to coast.

The National Woman's Party, always a leader in the movement for justice for women, formed a joint committee of women's organizations in 1943 to work for the amendment. This was the first time that joint action for the amendment had ever been taken by women's organizations.

During the last few years religious leaders of practically all denominations have come out in support of the amendment.

The organized teachers of the country gave their support to the amendment for the first time, in 1944, when the National Education Association, by the almost unanimous vote of its national convention, gave its endorsement.

Furthermore, in 1945 the United Nations Charter was ratified by our country. This Charter declares, in unequivocal terms, for fundamental human rights—the rights of men and women.

These forward steps were taken at a time when the work for any reform movement was hampered by great difficulties—the war, railroad strikes, coal strikes, shortage of help, hotels, transportation. But through perseverance and devotion on the part of the women of the Nation, the work for justice for women was carried on through the difficult war years, as through the preceding peace years, and this great progress achieved.

Each one of us elected to the House and Senate in 1944 is committed to the principle laid down in this proposed amendment. We are committed by the platform pledges of the two great political parties. I consider it a high honor and a great privilege to be one of the 102 sponsors of this historic measure to wipe out discrimination on account of sex.

I congratulate the millions of patriotic and intelligent women, as well as many men, in their steadfast efforts to keep our Nation in the vanguard in this great movement for justice and equality. I congratulate them on what has been obtained. It is my sincere belief that in the end victory will crown the efforts of those who contribute to this splendid cause. We are eternally right—and right and justice in the end must prevail.

H. R. 2007, THE RED HERRING

The equal-rights amendment has grown so rapidly in popular esteem that those who opposed it have collaborated together and had introduced H. R. 2007, which, in effect, would set up a commission to study the biological differences between men and women. It requires no commission to make such a study at this time. The people of this Nation are already fully advised of the biological differences between men and women.

The purpose of H. R. 2007 is merely to obstruct and delay final action on the equal-rights amendment by the Congress. Some have denominated H. R. 2007 as the red herring.

On March 10, 1947, the Federation of Women's Republican Clubs of New York State, Inc., at their annual legislative conference, the members of which were made up of 272 Republican Women's Clubs from 60 of the 62 counties in New York State, recorded their unalterable objection to H. R. 2007. They said, in part:

> It represents a philosophy with regard to economic, civil, social, and political discriminations against women that in the past has proved a political liability to those who have held that philosophy. We criticize H. R. 2007 for the futility of its purposes. It can serve no useful purpose, save only to delay women in their achieving that equal status under law which all citizens of a free country should in right and justice possess. Specifically, we object to the assumption that the economic, civil, social, and political status of women requires at this late date investigation and study and research by a Presidential commission. The economic and civil status of women has already been the subject of comprehensive investigation and study and report by the Women's Bureau of the United States Department of Labor, the National Federation of Business and Professional Women, and other organizations, and these studies are presently available to the Members of the Congress for their enlightenment on the subjects proposed for commission study.

They also point out that those who are most vocal in support of H. R. 2007 in the years past opposed the granting of suffrage to women and other measures helpful to women.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. BLATNIK. Mr. Speaker, on February 19, I introduced House Joint Resolution 132, which would authorize the construction of the St. Lawrence seaway and power project, as provided by the Canadian-American agreement on March 19, 1941. On May 9, I introduced another resolution—House Joint Resolution 194—which incorporated self-liquidating provisions into the original resolution.

I might say that two of my colleagues, the gentleman from New York [Mr. KILBURN] and the gentleman from Michigan [Mr. DONDERO] have also introduced similar bills. Furthermore, this same measure has the sponsorship of some 15 Members of the other body, from both political parties, and including the distinguished Senator from Michigan [Mr. VANDENBERG].

Mr. Speaker, the people of the Great Lakes region—of that great midwestern section of the United States which embraces some 20 States and 40,000,000 people—have long hoped for the construction of the seaway project. These people know that the well-being and prosperity of the Midwest requires the waterway. The people of New York and New England are also beginning to realize that their future is closely linked with the development of the Midwest, and are now convinced of the feasibility of the project. In fact, all Americans who sincerely desire the fullest development of the Nation's resources and who have the future prosperity and security of the Nation at heart, now favor the St. Lawrence project.

It is most natural that the seaway should command the support of a majority of Americans. The arguments in favor of the project are so overwhelming that no other conclusion is possible—the construction of the waterway is the

logical and rational thing to do. It is a necessary step in the development of the natural resources and commerce of the great Middle West.

In my opinion, congressional action during this session to enact the St. Lawrence seaway proposal into law is desirable for the following reasons:

First. The seaway will result in greatly reduced transportation costs and will therefore encourage the development of commercial relations between the Great Lakes area and the Eastern States. The Midwest will be able to ship grain, automobiles, iron ore, and other products to the Eastern States and receive in return the textiles and other manufactured goods from the New England area. The seaway would also make the markets of the world accessible to the Great Lakes area, and the lower transportation costs will enable many foreign countries to buy American grain rather than turn to our competitors. It has been estimated that from Duluth to Liverpool, the shipping costs on wheat will be reduced by 5.2 cents per bushel or $1.74 per ton as a result of the waterway. This will mean an expansion of American grain sales abroad. The same will be true of many commodities—the opening of the Great Lakes area to deep-sea traffic with reduced shipping costs will mean that both the Middle West and the Eastern States would enjoy a great volume of business.

Second. The seaway is necessary as a source of cheap electrical power. It is estimated that the power generated from the St. Lawrence project would amount to nearly 2,000,000,000 kilowatts per year, twice as much as now generated by Boulder Dam. The cost of producing this power would be only about one-tenth of 1 cent per kilowatt-hour. Thus New York and New England would have abundant cheap power available to allow for industrial expansion in these areas—the St. Lawrence project would act as an industrial shot in the arm for this entire region.

Third. The St. Lawrence waterway is necessary from the point of view of the national security of the United States. This deep waterway would provide the United States with additional inland shipping facilities, a thousand miles of protected navigation, and additional shipbuilding yards, not to speak of the power so necessary to war effort.

And fourth, the waterway project is necessary for the development of the raw materials of the Great Lakes—our vast peat, taconite, low-grade ores, and forest resources. The high-grade ores of Minnesota are running low, and our future prosperity requires the transportation facilities that the waterway would afford.

In spite of these arguments which justify the St. Lawrence waterway project, the people of the Great Lakes States have been disappointed time and again as Congress after Congress has yielded to the "dog in the manger" alliance of the private power, coal, railroad, and aluminum interests. Year after year, these selfish lobby groups have allowed their picayunish private interests to take precedence over the welfare of the Nation.

It would appear from all reports that sectional interests have again triumphed over the general welfare during this session of Congress. Again the representatives of certain seaboard interests, the coal and railroad lobbies, have been able to stymie the efforts of the proponents of the waterway in the other body.

It seems to me that it is high time for the Congress of the United States to stop listening to these selfish interests who are sacrificing the well-being of the whole people for narrow sectional reasons. It is the duty of every Member of the Congress to do his duty by enacting into law as soon as possible the St. Lawrence waterway project which is so essential to the future prosperity of not only the Midwest, but the people of all the 48 States.

The Co-Ops Grow Up

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. GRANT of Indiana. Mr. Speaker, under the unanimous consent of the House, I submit herewith two very interesting and well-written editorials from the issues of the Indianapolis Times for June 17 and June 23:

[From the Indianapolis Times of June 17, 1947]

THE CO-OPS GROW UP

The Indiana Tax Equality committee has compiled a list of 81 cooperatives doing business in Indiana that have made major expansions during the past year, bought or built new plants, or spread out into new fields of enterprise.

Although this is only a partial list of such co-op growth, it reveals the astounding size to which such operations have grown in this State. They own grain elevators, oil refineries, mills, warehouses, insurance companies, commercial refrigeration plants, fertilizer factories, coal mines, hatcheries, farm implement factories, lumber mills, oil wells and pipe lines, river barges and docks, building materials, production and distribution concerns, livestock marketing organization, bulk oil plants, wholesale and jobbing enterprises and retail stores.

Many of them are the biggest businesses in the cities in which they operate. One in Indianapolis last year reported a business volume of $25,900,000, and another a gross business in excess of $37,000,000, for the year.

The interesting feature about all these businesses is that they pay no Federal taxes. Cooperatives are exempt from such taxes on the theory that they enable a group of neighbors, especially farmers, to get together and buy and sell cooperatively and thus save themselves a little money.

We haven't any way of knowing, of course, about the profit structure of the two big Indianapolis co-ops we just mentioned, nor any exact means of estimating just how much they save by paying no taxes. A private business doing a gross volume of $25,000,000 a year might be paying as much as $5,000,000 in tax, and some pay more on such a business volume.

Assuming that each of these co-ops did save $5,000,000 in tax last year, just for the purpose of discussion, that would be $10,000,000 saved by these two. But the Federal Government hasn't saved anything. It still needs the $10,000,000 to pay its running expenses. So where does it get the money?

Why, it just adds that $10,000,000 right on to the tax bill of the rest of the people in Indianapolis—and they pay it. And so on for all the other 79 co-ops that have made big expansions this last year. The taxes they don't pay still have to be paid—they are just shifted to other people.

In general those taxes are shifted to their competitors the privately owned stores and filling stations and refineries and insurance companies and coal yards and so on, which are also doing business in those communities. Thus the co-ops are able to sell merchandise a little cheaper, and quite often, lately, to drive those private competitors out of business, or buy them in to add to their own business. Thus the Farm Bureau Co-op of Hobart and Lakes Counties last year bought the Roper & Roper feed mill, grain and coal business, and the P. & C. Family Foods, cooperative, bought French's supermarket in Veedersburg, and the Clay County Farm Bureau bought the Griffith grain elevator, for $100,000, in Clay City—and so on all over Indiana.

There is nothing to indicate that cooperatives can do business at any less cost than any well-run private company in the same line.

They have to pay wages, and rent, and all the other running expenses that anyone else has to pay to do business. Because they have, in many cases, attained large volume, they are thereby able, perhaps, to buy merchandise for resale at slightly lower cost, though, of course, no lower than a private competitor who buys on the same scale.

Their big savings is in taxes. It is a double-barrel saving. It takes the tax cost off their shoulders and adds it to the tax bill of their competitors.

That gives them an unfair competitive advantage over the business that is paying its share—and theirs—of the cost of running the Government. That advantage shows up very clearly in Indiana, in the large growth of the co-ops and in the growing number of communities in which their operation has forced their competitors out of business.

Carried to its logical conclusion, this trend would ultimately result in all business being cooperative—and all exempt from tax.

Wonder who woud pay the cost of running the Government then?

[From the Indianapolis Times of June 23, 1947]

CO-OPS AND TAXES

We were not, of course, surprised to find the officers of cooperative business enterprises in disagreement with us on the matter of taxes, at least to the extent that we believe co-ops should pay taxes and they believe they should not.

Mr. Harry Goss, an editor of Farm Publications, Inc., one of those who disagrees, has asked for a statement of our policy on this whole subject. That is a reasonable request and one with which we are happy to comply. This is it:

Complete equality in taxation.

Every individual and every business should pay taxes on exactly the same basis as every other individual and every other business. All share alike in the benefits of government, and all should share alike in its cost. We know of no other way to levy taxes justly and fairly under a democratic form of government.

It is proper that a church, for instance, be exempt from taxes, but only if all other churches are likewise exempt. But if a church should decide to buy and operate a department store, we do not believe the store should be exempt from any tax that is paid by any other department store.

The same principle, it seems to us, should apply to businesses run by cooperative or mutual benefit groups. These are organized in such a way that their customers are also their owners, and thus share in whatever profit they make. Of this we have no criticism. What is manifestly unfair is that these owners should get what amounts to a Government subsidy in the form of exemption from a tax that a competing business, owned by someone else, has to pay.

In Indiana cooperatives operate hardware stores, grocery stores, filling stations, and a long list of other businesses that are in direct competition with other hardward stores, and so on, not owned by co-op groups. Why should one store pay a tax and the other pay none?

Thirty-fifth Graduating Class of the Federal Bureau of Investigation

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, June 27 (legislative day of Monday, April 21), 1947

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very challenging and thought-provoking address delivered this morning by the senior Senator from Wisconsin [Mr. WILEY] to the thirty-fifth graduating class of the Federal Bureau of Investigation.

There being no objection, the address was ordered to be printed in the RECORD as follows:

CHALLENGES TO AMERICAN LAW ENFORCEMENT

Mr. Chairman, Director Hoover, fellow Americans, I am sincerely grateful for the opportunity to address this outstanding group of American law-enforcement officers.

This occasion marks your completion of a memorable, significant experience in your lives. It likewise marks part of your contribution to the American job of maintaining peace and order in every community.

You came to the greatest capital on earth to receive light, information, and insight into your problems through one of the greatest and cleanest government institutions on earth—the FBI. I doubt if there are more than a handful of other Government units anywhere in the world which can boast so unsullied a record, so wholesome a hard-hitting history of service in the public interest as does the FBI.

No mention of this outstanding organization would be complete without paying deserved tribute to its splendid leader, Mr. J. Edgar Hoover, whom I count as a friend and whom you know to be so important in helping to maintain our American way of life.

THE FBI ACADEMY

Since Director J. Edgar Hoover organized it in July of 1935, the FBI National Academy has been functioning effectively as an educational force in law enforcement.

At the time this unique institution of higher police training was initiated, lawlessness and the rapidly spreading moral leprosy of gangsterdom was a desperately serious menace to our country's welfare.

This academy was founded for the express purpose of instructing police officers and executives active in law enforcement and allied fields. The academy and the men it has produced have made an outstanding contribution to the fight against crime. I understand that the kind of training given you here in Washington has, through your graduates, been made available to more than 100,000 police officers in the field.

WISCONSIN POLICE TRAINING

The law-enforcement officers of my own State of Wisconsin have always been closely allied with the FBI National Academy, and a representative from the police department of Superior, Wis., is graduating here today. He will be the thirtieth Wisconsin police official to graduate from the academy.

If I may be pardoned a further reference to my own State of Wisconsin, I might add that last year 39 FBI law-enforcement training schools were held in the State. The Wisconsin Sheriff's Association, the Wisconsin Chiefs of Police Association, banding together with the FBI, have created a committee which plans police-training schools throughout the State. Individuals attending these schools will be issued certificates bearing the seals of the three departments mentioned.

Thus far this year, some 22 training schools have been conducted in Wisconsin, and it is contemplated that 25 additional schools will be held before the end of the year. There have been general police-training schools in 22 Wisconsin cities, and in 1946 there were specialized law-enforcement training schools in seven Wisconsin cities.

MEANING OF ACADEMY'S WORK

To us in Wisconsin and to observers in every State the work of the academy is tremendously impressive. It is impressive because it is a cooperative working partnership between Federal, State, and local officials.

Principally, however, it is impressive in the accomplishments of its graduates which have brought credit to the individual officers, their departments, and fellow graduates of the academy—accomplishments written on the pages of contemporary American history in stories of courage, loyalty, and patriotism at a time when courage, loyalty, and patriotism are so essential to our national life.

OUR SUBJECT TODAY

I should like to sketch briefly the historical backdrop for the drama of American law enforcement and then discuss the role which each of you men are playing in it.

HISTORY OF LAW ENFORCEMENT

It is an ironic indictment of our high-octane civilization that the list of statutory crimes has lengthened with the growth and development of modern life. With the increased number of statutory crimes, there has been a corresponding increase in the complexity of law enforcement.

In ancient times "the outlaw was said to have caput lupinum (a wolf's head) and might be knocked on the head like a wolf by anyone that should meet him." It wasn't until the reign of England's King Edward III in the fourteenth century that this power was restricted to the sheriff when armed with lawful process.

Until recent history, except in periods of civil disorder, crime was largely a local phenomenon. But, as one writer pointed out—

"The Kansas town into which sweeps a squad of high-powered cars to depart amid a cracking of machine-gun fire, after a bank has been expeditiously rifled, can count no native sons among the bandits; nor can hue and cry rouse the townsfolks to effective pursuit. Local police are equally impotent to act."

LEVELS OF ENFORCEMENT

All of this means that there has been an increasing responsibility on local law enforcement. It means moreover that there is an increasing necessity for a closer integration of all of the law enforcement and investigative agencies of government—local, State, and Federal.

There are probably shadowy twilight zones between the effective jurisdiction of local police officers, county police officers, commonwealth police officers, and Federal officers, but the work of all of these units must be coordinated.

There is no national police force as such. The reason that the Federal Government has been called into many cases has been that with respect to some offenses it alone is competent to act.

Appeals to the Federal Government for assistance in law enforcement have not gone unanswered. Laws directly involved with the problems of law enforcement have been a small, but important, part of approximately 66,000 laws which have been passed by Congress since 1789, though some of these laws have been repealed or superseded or otherwise eliminated.

PRESENT TRENDS

During the colonial period, law enforcement was largely left to the local sheriff and constable, a process which sometimes brought stagnation in law-enforcement procedures.

At the present time the trend is to centralize and to coordinate control of law-enforcement agencies at all levels through appointed administrators who have tenure during good behavior and during efficient administration.

It is my firm conviction that tenure is essential not only for the administrative positions, but for police personnel if progress is to be maintained. Tenure supplies added stability and incentive for continued study in learning and developing new techniques of crime detection. This learning and these techniques are essential to effective law enforcement, and nowhere do we find that better illustrated than here in the academy.

As you know, speaking in general terms, law enforcement today is divided among three groups—Federal, State, and local. Congress has endeavored to enact legislation which will aid these groups. This congressional action has been essential because the country is large, the population is highly mobile, and crime knows no State boundary lines.

FEDERAL JURISDICTION

It is perhaps desirable to point out at the outset that the Supreme Court in an opinion handed down in 1812 held that the courts of the United States have no common law jurisdiction over criminal cases, because such jurisdiction was not among the concessions made by the several States to the Federal Government.

Nevertheless, while the Federal Government does not possess a general jurisdiction on police power, this does not mean that it does not exercise police powers in connection with other broad constitutional grants. In conjunction with these other grants, article 3, section 8, of the Constitution confers upon Congress the power "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers and all other powers * * * in the Government * * * or in any department or office thereof."

For example, to enable Congress to control interstate and foreign commerce, it may be necessary for Congress to employ means which have in them characteristics of police regulations.

STATE AND FEDERAL POWER

In general, it may be said that in respect to laws of this character, the exercise of police power by the State must yield whenever Congress legislates upon the precise subject matter conferred by the Constitution upon the Federal Government.

Actually, the powers reserved to the States to protect the public health, safety, and morals are not absolute but subject in certain instances to the paramount authority of the Government of the United States.

Let me cite some examples of the use of broad constitutional power by Congress to aid law enforcement: The National Firearms Act of June 26, 1934; the National Motor

Vehicle Theft Act; the National Stolen Property Act.

I mention these few laws as illustrations of the interest and the efforts of Congress in providing the Nation-wide dragnet of Federal assistance in the relentless prosecution of criminals.

INTERSTATE COMPACTS

I might also mention the act of June 6, 1934, in which Congress gave consent to any two or more States to enter into agreements or compacts for cooperative effort and mutual assistance in the prevention of crime and the enforcement of criminal laws and policies.

For example, there could be a compact which would give authority to the officers of the enacting State to cross a State line and continue the pursuit in the cooperating State. There could be a compact giving authority to officers of an enacting State to return a fugitive after arrest in the cooperating State without following the customary rendition procedure. There could be a compact whereby one State would agree to supervise parolees released by another State upon the latter's agreement to supervise parolees released from the first State.

There are many possibilities under this authorization. The extent of State cooperation is almost unlimited and it is up to each State to decide to what extent it will effect mutual compacts with other States for better results in law enforcement.

FUTURE POSSIBILITIES

Further action and assistance from the Federal Government may be necessary. There are some who favor Constitutional changes which will permit the consolidation of all law enforcement, but that could afford a convenient and a dangerous approach to the corporate state to which I will shortly refer.

There are those, however, who insist that greater cooperation among governmental units and coordination of their activities is the answer to the present crime problem of this country.

One thing is certain and that is that the mere enactment of new laws or the amendment of old laws is no substitute for proper education and training in good citizenship or for good old-fashioned devotion to law and order.

NEED FOR GOOD CITIZENSHIP

I am greatly concerned with this last point because I believe it is the real answer to problems of crime and delinquency. It is not enough for us to have effective law enforcement.

It is not enough for us to have infallible police systems.

Perhaps our greatest need in the problem of crime is the need for education—character education in the home, spiritual education in the church, and civic education in the school.

If we can insure that the character lessons learned in the home are retained in our national character, then there need be no fear that law and order will be swamped in a national crime wave.

If we can insure that the spiritual lessons learned in the little churches and the great cathedrals of our land are incorporated in our daily lives, if these lessons throb in our hearts and minds and in our national blood stream, then we need not fear the crimes of violence which result from man's inhumanity to man.

If we can insure that every school in our land teaches the real vital meaning of democracy and the great rights and duties and privileges of American citizenship, then we need not fear crimes against the state.

The character of a nation is, of course, merely the composite expression of the character of its individual people.

OUR RESPONSIBILITIES AS CITIZENS

If there exist in our land corrupt big city political machines; if there exist in our land well-organized gambling syndicates; if there exist in our land sinister white-slave rings or a spiderlike national network of dope peddlers; if there exist in our land at any time a lengthening underworld shadow—it is an indictment of us as individuals and as citizens; it is an indictment of our educational process; it is an indictment of our failure to keep the trust with the lessons we learned at the family hearthside; and it is an indictment that we have failed in the law-abiding faith of our fathers.

I repeat that in my judgment it is not enough for us to be concerned with good law enforcement. We must be concerned with creating good citizens so that the problems of law enforcement will never be created.

CHALLENGE TO GRADUATES

Your group has completed a special program of instruction and training. As a part of the great body of law-enforcement officers comprising Federal, State, and local units, you represent the long line of historical progress of law and order to the present time.

You have at your disposal highly specialized, trained laboratory and scientific assistance. Your achievements will bear a direct relationship to the use you make of this assistance, to the intelligence and to the initiative which you bring to your work and to the extent that you cooperate wholeheartedly with other law-enforcement officers and units.

I have every confidence that you will do these things, that you will make the finest possible utilization of your training and facilities which are offered to you.

IMPORTANCE OF YOUR JOB

Yours is a big and important job, although at times it may seem drab and monotonous. I recall the thought of Justice Oliver Wendell Holmes that every job, however humble, can be a great job if greatly performed. Yours is a great job. You are the custodians of America's great values. We are looking to you now more than ever to protect us from the influences of crime on the one hand and from the influences of anti-American and un-American ideologies on the other.

Every youth in our land looks to the policeman on the beat. In his eyes there is no more important official in the community. As a youngster, I can recall seeing the officer in my little community and respecting him with greater esteem perhaps than that accorded the other public officials. Today, as then, our youngsters are looking to you as models of American manhood, clean living, clean thinking, clean acting.

But every American adult looks to you also. You are the protectors of our homes, our lives, our fortunes, material and spiritual. At times it may seem that you are not appreciated, that you are performing your dangerous work at great personal risk to yourself without the gratitude of the American public. As W. S. Gilbert said, "A policeman's lot is not a happy one."

But I say to you that the American people in their underlying wisdom and common sense do recognize the indispensable job you are doing.

LAW-ABIDING OFFICERS VERSUS GESTAPO

Certainly you have unique positions in the world today, a world in which the so-called secret police state is still known for its concentration camps, its brass-knuckle justice, its drumhead courts, its lethal chambers and its mass executions. You men are servants of the law, of government, unlike foreign Gestapos sold into moral slavery as servants of a personal fuehrer or leader. We know that in these dictator states every policeman on the beat is an agent of the secret police. He respects the civil liberties of no one. He enforces arbitrary rules, his personal hates and the personal hates of his dictator master.

But we are a nation governed by law and not by men. You men enforce that law. In so doing, in administering the law, you help make the law. I am sure that through your training here, you will be better able to execute the law and establish precedents for protection of civil rights, while protecting the community from crime and foreign-thinking ideologies.

YOUR ANTIRACKETEERING ROLE

We know that there are various kinds of racketeers. There are political racketeers, labor racketeers, and economic racketeers. But probably more serious than all these is the racketeer who strikes at the morality of a community, who would sabotage our youth and make them criminals, who would termite our American traditions and the American values of which you are custodians. A racketeer, simply speaking, is one who will not abide by the rules of the game, but who wants to make only his own rules in spite of the harm he may inflict on his fellow human beings. You men constitute, in part, our front-line defenses against racketeering.

CONCLUSION

Gentlemen, I am grateful to have had the privilege of addressing you on this splendid occasion.

We have briefly looked at American law enforcement and at your individual roles.

You in your uniform are the center of all eyes, whether you know it or not. The attention of your community is focused upon you. What you say, what you do, how you act, has a direct bearing and reaction in your community.

We send you forth with the blessings of your Government. You have now been, figuratively speaking, cradled in one of the greatest institutions of its kind. I know you have been inspired by its effectiveness and by the way it is devoted to the public welfare. You go out with the blessings of all of us.

It is our prayer, too, that in furtherance of your work we may constitute every home and every school and every church as a potential laboratory in the prevention of crime.

If we strengthen the moral fiber of our people, and if we build high the bulwarks of American character, we need have no concern for the future of our land.

How Can We Strengthen the American Family?

EXTENSION OF REMARKS

OF

HON. CHAUNCEY W. REED

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1947

Mr. REED of Illinois. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a short article by Dr. George J. Schulz. This article was selected as particularly outstanding by the judges in the recent Town Hall of the Air contest for the best contribution of 750 words on the subject How Can We Strengthen the American Family? For it Dr. Schulz was awarded the Town Hall certificate of merit.

Although I am sure that many Members of the House still remember Dr. Schulz as our erstwhile Director of the Legislative Reference Service—1935–37—I include the following brief biographical statement:

Dr. Schulz is an alumnus of the Johns Hopkins University, the University of Maryland, George Washington University, American University, and National University. He holds, among other degrees, that of doctor of jurisprudence, conferred by National University. He was professor of political science and head of the department of history and political science at the University of Maryland and associate professor of political science at National University. He was in charge of the investigations in flood control undertaken in 1927–28 by the House, and later, in 1928, by both House and Senate in the Boulder Dam legislation. He was consultant and adviser to Senator James Watson, of Indiana, during the debates in the Senate on the Smoot-Hawley Tariff Act.

Among the publications of which he is the author are the following: Election of the President by the House of Representatives; Stream Pollution in the United States; Vocational Education in the United States; Creation of the Senate; Creation of the Federal Judiciary; editor in chief, Annotated Constitution of the United States; Subversive Materials in Textbooks Used in American Schools.

The article follows:

HOW CAN WE STRENGTHEN THE AMERICAN FAMILY?

We can strengthen the American family by realizing the contribution that the American home has made to our national unity, our national security, and our international renown. The realization of that contribution can come from a study of the lives of America's forefathers and foremothers, the sacrifices they made to establish homes even in the wilderness, and the virtues with which they endowed those homes.

We can strengthen the American family by retracing the steps of our national progress and learning again or anew the spiritual and the moral values that were fostered and developed in those early American homes and that have pervaded our national consciousness so profoundly since the building of the first home on American soil. Ours is the history of an exemplary national ancestry.

We can strengthen the American family by realizing that in our colonial homes virtuous mothers observed the tenets and taught the principles of a victorious faith by precept and conduct. Our colonial mothers courageously overcame the vicissitudes of a strange and rugged environment and they endowed their children with courage; they were prudent in the management of their affairs and they left their children a heritage of wealth; they were temperate in their desires and in the use of their possessions and they left their children a heritage of modesty and thrift; they dealt circumspectly and they left a heritage of discretion and wisdom; they practiced justice and they left a heritage of tolerance; they excelled in the spiritual virtues and religious morality prevailed in their homes; they devoted themselves to the needs and the cares of their families and they gave the Nation a race of notable men and praiseworthy women.

We can strengthen the American family by realizing that the endowment that flowed from our colonial homes was recapitulated in every settlement in the fertile valleys and plains beyond the mountains. Environment made the settlers of America self-reliant and independent. Aspiration for home ownership made for the solidarity and unity of the family and the Nation. Our early American families were self-sustaining units in the national economy.

We can strengthen the American family by meeting the present threat to its continuance from the increasing substitution of so-called dwelling units in artificial cliffs high above city streets for the American home as it existed for more than 300 years. We can meet that threat by building in suburban and even in semirural areas houses for all who need and want homes and who are eager to perpetuate the individual home ownership that characterized our formative years. We possess the genius, the ability, and the means for such enterprise.

We can strengthen the American family by utilizing for the development of home and family more of the abundant leisure created by our modern industrial economy. We must cease wasting that abundant leisure in perishable pleasures. We must cease dissipating it in alluring but debilitating entertainment. We must curtail our lavish expenditures for extravagant nonessentials. We must make the American home a place for victorious living.

We can strengthen the American family by realizing that there is much in our modern way of living that tends to destroy the family unit and by adopting measures to prevent that destruction. We can preserve the family unit when our men find the same thrilling experience in establishing homes as did our forefathers and when our women devote themselves to homemaking with the same diligence as did our foremothers. We must cease deserting the American home for the club, the bar, and the cocktail lounge.

We can strengthen the American family when we reestablish for our juveniles the edifying ideals of our earlier excellence. We must develop in them by conduct and precept a sense of responsibility and impress upon them the concept that rights and privileges imply duties and obligations. We must recapture our earlier habits of temperance, thrift, and morality.

We have come a long way as a Nation. We have conquered a continent. New responsibilities in international relations have been imposed upon us. We stand in the role of international leadership. But back of all our national greatness and our international prominence stand the homes of America—millions of them—heirs to the spiritual, moral, and cultural excellence of an exemplary national ancestry. We can strengthen the American home. We can and we must strengthen the American family.

GEORGE J. SCHULZ.

VIENNA, VA.

Argonne National Laboratory

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STRATTON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. STRATTON. Mr. Speaker, today I have delivered to the Joint Committee on Atomic Energy a documented statement from the citizens of Du Page County, Ill., protesting the location of the Argonne National Laboratory in their community.

It is their contention that the Atomic Energy Commission has not shown any sufficient reason for causing Argonne National Laboratories to leave its present satisfactory site in a remote part of the Cook County forest preserve, where it has ample room for expansion, to take 3,500 to 4,500 acres of residential farm property in suburban Du Page County at a needless cost of millions. Further, that the Commission has ignored the undeniable fact that other sites, including its preferred present site and the Elwood ordnance site, are available at less cost and without dispossessing anyone.

Congressman CHAUNCEY REED, in whose district this project would be placed, joins me in bringing this matter to your attention.

United States Employment Service

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, June 27 (legislative day of Monday, April 21), 1947

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the RECORD a statement which I have prepared in connection with Reorganization Plan No. 2, with particular reference to the retention of the United States Employment Service in the Department of Labor, which is so essential.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, I agree with the views of most of the members of the Committee on Labor and Public Welfare that the United States Employment Service should be permanently located in the United States Department of Labor. I don't see how there can be any serious question that the United States Employment Service belongs in that Department. After all, the employment offices are concerned entirely with seeing that workers get jobs and that employers get the workers they need. This type of activity attempts to bring about the necessary balancing of labor supply and demand in the labor market. I know that the Department of Labor, through its various bureaus, is properly concerned with a wide variety of labor problems, all of which are related in one way or another to the kind of activities carried on by the United States Employment Service. It makes good sense to me that the United States Employment Service should therefore be permanently a part of the Department of Labor.

If we do not support the President's Reorganization Plan No. 2, 1947, the United States Employment Service will revert to the Federal Security Agency. I am deeply sympathetic with the important programs administered by the Federal Security Agency. I know how great is the contribution these programs make to the welfare of our people. I have a high regard for the work of the United States Public Health Service and its efforts to control the spread of communicable diseases. I also recognize the valuable work that is being done by the United States Office of Education in its relationships with State and local educational authorities. By the same token, I am appreciative of the programs which provide public assistance to the aged and the needy and the blind. These are all fine programs and they properly belong in the Federal Security Agency. But I should hate very much to have our public employment system made a part of an agency whose primary responsibility lies in the field of health, education, welfare, and relief activities. I do not believe that our workers or employers would use the facilities of the public employment offices in the same way as they have in recent years if these offices were

part of a governmental system concerned with welfare and relief functions.

The people of my State are entitled to have an employment service program which will provide them with the maximum of job assistance and employment counseling. I am fearful that if the United States Employment Service were to become a part of an agency whose primary concern is with welfare and relief activities that the activities of the public employment office would suffer. As you know, Mr. President, we have a Federal-State system of public employment offices. The employment offices in my State are financed entirely from Federal funds. They receive a great deal of technical assistance, advice on the most successful methods of operation, and occupational and labor-market information from the United States Employment Service. I have been advised by the employees working in the employment offices in my State that employers are now using the facilities of the employment service to a greater extent than ever before. I am told that since the United States Employment Service has returned to the Department of Labor, where it was originally placed by an act of Congress, the employment service program has been greatly strengthened and developed so that it provides more effective service to both employers and job seekers.

Just the other day I received a letter from Mr. Harley, who is the director of our South Carolina Employment Service. I know that he did not realize that I would discuss the content of his letter on the floor of the Senate. Nevertheless, I am sure that he would agree with me that the information contained in this letter should be brought to the attention of this body so that you might properly have the facts in deciding on the permanent location of the United States Employment Service. Here's what his letter says:

"DEAR SENATOR: I have just learned that the Senate Labor Committee has voted 8 to 5 to retain the United States Employment Service permanently within the Department of Labor, and it will probably come to a vote on the Senate floor very early next week.

"As you know, some are supporting a bill to return the Employment Service in the Social Security Board. Inasmuch as the Social Security Board administers all types of insurance, such as benefits to the needy, the blind, old age, and unemployment compensation, it is naturally 'insurance-minded.' The Employment Service was under the Social Security Board from April 1939 until the fall of 1942, when it was transferred to the War Manpower Commission and then the Department of Labor. The records will show that the performance of the Employment Service while under the Social Security Board could not equal in any way its present high standards, with its present professionalized personnel which has been trained under the Department of Labor. We are getting much better public acceptance from employers over the entire State than in the history of the Employment Service, and I am certain that a vast majority of workers in this State would prefer that the Service remain with the Department of Labor rather than return to the Social Security Board.

"The reason some are in favor of returning the Employment Service to the Social Security Board is because they realize that they can then have a worker accept any kind of employment, whether suitable or not, rather than claim unemployment compensation to which he is entitled when suitable employment is not available.

"You further remember, as Governor of this State, the difficulties you experienced on more than one occasion with the Employment Service and the regional office of the Social Security Board.

"Due to the above-mentioned facts and others too numerous to mention, I would appreciate it very much if you could see your way clear to vote for the permanent retention of the Employment Service in the United States Department of Labor.

"I regret to have to worry you with these things, which probably seem very minor to you, but they are very important not only to the personnel of the Employment Service in this State but to the thousands of workers which we serve daily.

"With kind personal regards, I am,

"Sincerely yours,

"W. RHETT HARLEY."

Mr. President, I want the employers and workers of my State to have an effective public-employment service. I am sure that is the wish of all the Senators for their respective States. One of the surest ways of developing a strong sound system of public employment offices is to provide for the permanent location of the United States Employment Service in the Department of Labor. In this way the United States Employment Service will be able to devote its full time and energies to giving assistance to the State employment services. If the United States Employment Service were to be removed from the Department of Labor, it is my conviction that its activities would be diverted to the purposes and objectives of programs not concerned directly with labor problems. For this reason, I heartily endorse the committee report to continue the United States Employment Service permanently in the Department of Labor. I urge my colleagues to support the committee report by voting against House Concurrent Resolution No. 49, thereby supporting the President's Reorganization Plan No. 2.

Security for the Masses and Not Just Classes

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1947

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD my address on the subject, Security for the Masses and Not Just Classes, delivered at Uline Arena, June 26, 1947:

You who are gathered here tonight have had a busy day and are hardly in the mood for any startling performance at this point. For that reason alone, I am going to forego the pleasure of serenading you, for when I burst into song, I assure you it is a startling performance. The reason you were almost subjected to what might have been one of the greatest vocal triumphs of all time is that my sentiments of this evening are perfectly expressed in a song popular some years back. You may remember, it began like this: "I offer you congratulations, I really mean it from my heart."

Every one of you deserves congratulations. You are here to further an ideal. You have come great distances at great expense, not only in money but in energy as well, to do all in your power to make a positive contribution to the American way of life. You are here, not in the all-too-frequently encountered spirit of getting, but in the spirit of giving to this great Nation a workable plan for discharging one of its most sacred duties, the provision of economic security to the masses, rather than to certain classes. You are here because you believe with St. Paul, that the great moving forces within mankind must be faith, hope, and the charity which is love of one's fellow men. With the God-given power derived from your faith, your hope, and your love for mankind, you will go on to win the goal for which this great organization has been working for these many years.

Selflessness and generosity are the very foundations of the Townsend movement. It truly has been said that necessity is the mother of invention, and the need could not have been greater at the time Dr. Townsend came forward with the idea he had evolved for a nation-wide old-age pension plan to be administered by the Federal Government. At that time we were in the midst of an economic depression, the ghost of which still haunts this outwardly prosperous land. There are those, of course, who say we have never actually recovered from that violent disruption of our economy. They point to the facts that artificial pump priming and a devastating world war have provided the misleading appearance of prosperity, without restoring actual health to our economic system. Unfortunately, we may learn more about that within a very few years unless we are willing to look about us and find new answers to the vast problems besetting us on every hand.

You know, we in the United States are prone to regard our own Government as the most progressive and enlightened in the world. I frequently wonder whether or not this is a good idea. Is there not a danger that we will fall into a rut of complacency, and like the hare in the old fable, fall asleep while the slow but steady tortoise passes us and wins the race to the finish line?

Today the world is moving very swiftly. Changes are taking place in countries all over the world which completely alter the old world picture as we have known it. We, as a Nation, and as individuals will have to bend every ounce of effort at our command to keep up with these new developments. We want to retain world leadership because we are convinced that the fundamental concepts upon which this republic is built are in the best interests of all mankind. But we cannot hold our place as a world leader by force of arms or by utilizing our vast resources to buy our way to the top. Humanity today is awakening all over the world, and demanding its rights to dignity and peace and security.

If we are to maintain our position as a progressive and enlightened Nation, we must listen to those demands and examine them with an eye to doing our share in fulfilling them. It is a mistaken notion that only the people of India, of Africa, or of some far-off South sea island are lacking in security, peace and dignity. Let us look at France, which has been called the most civilized nation on earth.

The new French constitution, wrought out of suffering, despair, and near-death of a great nation testifies to its leaders' recognition of the responsibilities of a modern government. At the very top of its preamble, the French constitution puts what the Townsend Plan envisions for the citizens of the United States: I quote from the preamble to the French Constitution: "The nation assures the individual and family of conditions necessary to their development. It guarantees to all, and especially the child, the mother, and the old worker, health protection, material security, rest and leisure time."

At the present time a White House family conference is being planned for 1948. Now, everyone knows that the basic need of the family today is for security. In the Committee on Ways and Means of the United States House of Representatives today lies a bill, H. R. 16, introduced way back on January 3 of this year, which would provide real security to every adult citizen. This bill has not even been discussed by a committee. It has been pigeonholed, as has every bill embodying the Townsend plan since I came to Congress. In the Senate is another bill, S. 57. It has been decreed the same fate.

I say to you now, as I have said to the Members of Congress, "A pigeonhole is no place for a bill ardently desired by millions." Before we go to the trouble and expense of another conference at the White House, why not at least take a look at a bill designed to provide not only the security needed by the family, but also the means for increasing the tempo of our economic life so that markets for our goods and services will be expanded?

Many of you may have heard me voice my opinion that prosperity depends on the movement of money, not the amount of money at hand. Velocity rather than amount is the important factor. The plan espoused by you who are gathered here tonight takes that simple truth into account.

Sometimes I wonder if it is not the very simplicity, the straightforward character of the Townsend plan which creates opposition in bureaucratic circles. Perhaps it is too reasonable. Perhaps we should do it up nicely in yards of red tape. Perhaps the bills before Congress should be doubled or tripled in length, and obscured by legalistic phrases, so that the sense of the provisions would be safely hidden from the average citizen.

That, I greatly fear, is what happened when our present Social Security Act was passed back in 1935. How many of you have read that famous piece of confusion confounded? Whenever I have cause to refer to it, I am reminded of Mr. Winston Churchill's famous summation of Russian foreign policy. You remember he characterized it as "a mystery wrapped in an enigma." Well, to me that is a pretty apt description of the law under which our present so-called Social Security System operates.

As is so frequently the case, complicated language, in this instance, is used in an attempt to cover a basic confusion in thinking. Time is not sufficient tonight to go into the shortcomings of the Social Security Act. However, I want to call to the attention of every person in this audience an article which appeared in the May issue of the Reader's Digest, a publication I am sure all of you know well. The author, John T. Flynn, calls his piece "Our Present Dishonest Federal Old-Age Pension Plan." My personal feeling is that it might better have been called our confused, misleading, or unworkable old-age pension plan, but I must admit that Mr. Flynn makes an impressive argument for his own adjective. Every one of you in this audience will want to read that article, if you have not done so already. It is the second article in the May issue, on page 4. The utter inadequacy of the present system of old-age pensions is cited, chapter and verse, in the kind of clear English I learned to appreciate as a boy in a country school back in Ohio.

This article makes abundantly clear the present need for renewed efforts on the part of sincere and honest advocates of old-age and disability pensions for the masses, not just for the classes.

There are those, you know, who pat supporters of the Townsend plan on the back and say kindly, "You have contributed toward securing our present social-security measures * * * your job is done. Go home and be good boys and girls. You have got what we wanted for you." These are the real betrayers of those who seek to provide security for all, not just a part, of our population. So long as 30 percent of our employed workers, even, are not protected, the job has not been finished. And the number of our senior citizens still unprotected is growing in this country today, not decreasing.

Let us look at the facts. Every year science adds a little to the sum of human knowledge. Every year medicine and other fields of scientific research turn over to us new methods of prolonging human life. Diseases which once swept whole communities and wiped out human beings like flies have become rarities in this country today. Improved surgical techniques are responsible for keeping tens of thousands of Americans alive every year.

In 1940 one out of every 15 people in this country was 65 years of age or older compared with 1 out of every 40 just 80 years earlier. By 1980 it is estimated that one out of every six will be over 65.

At the same time it is becoming increasingly apparent that in our highly industrial society the older person is finding it harder and harder to find gainful employment. In my work with the veterans committee of the House of Representatives, I have seen more than my share of pitiable examples, men who truly sacrificed the best years of their lives in order to help defend their country, managed to survive a great world conflict only to find upon returning that they are no longer wanted on their old jobs, and are "too old" to be hired elsewhere.

Are we to stand idly by and let these men become a lost generation? I say we cannot afford such indifference, either from humanitarian considerations or from an economic standpoint. Another group who must not be cast aside are the widows with young children.

Those who for selfish reasons oppose all efforts to broaden and equalize our provisions for the aged have criticized the Townsend plan, saying that other groups would be bypassed, groups which need help as much or more than those over 60.

The present form of H. R. 16 completely neutralizes these objections—objections which were designed as camouflage in the first place. The bill now would provide equal basic Federal insurance for those 60 and over, for certain citizens under 60 with total disability, and gives protection to widows and children, as well.

On every hand the citizens who originally espoused the Townsend plan have shown their willingness to revise and amend their proposals in every possible way to make them practical and acceptable to those people of good will who had honest objections to certain provisions of the plan as it was first conceived by Dr. Townsend.

The original plan for raising the revenue needed to pay the benefits contemplated provided for a transaction tax, which economists felt would eventually be passed on to the consumer in the form of a sales tax, thus indiscriminately penalizing the lower-income groups. This provision no longer is a part of the bill. The present provision for financing the plan is eminently fair and reasonable and could not be shifted.

You are all familiar with the provisions of H. R. 16. Mr. Flynn, in his article, was not lobbying for the Townsend plan, but as an expert he had this to say, and I quote:

"The Government old-age-security plan is merely a Government insurance agency. Therefore old-age benefits, like life insurance and other contingent benefits, must be paid out of the income of the people concerned, earned by them in the very year when the benefits fall due. If there are 50,000,000 workers employed and 5,000,000 retired, the 50,000,000 must each year, by their contributions, pay enough to support the 5,000,000 on pension. There is no other way. The payments may be masked or disguised in whatever form a timid politician wishes to hide them. But that stern fact must be faced, and any honest system of old-age pensions must be built on it. The Government does not provide the money. Its only role, like that of the insurance company, is to act as the agent which collects from the employees and employers and pays the benefits to those who are retired.

"In the case of old-age pensions the great role which the Government can play is in bringing all workers into it, giving it the permanence essential to the plan and protecting it from disintegration by making it compulsory for all."

There is no question but that the Townsend plan faces these "stern facts." Title II of this bill directs that there shall be levied, collected, and paid a tax of 3 percent of the gross income of all persons or companies derived from any and all sources except in personal incomes there shall be an exemption up to $100 a month. By means of the collection as a tax of the stipulated 3 percent of gross income, the money to provide for the payment of the benefits set forth in the general title of the bill would be raised, mind you raised currently and paid currently; not a mortgage on the future to be carried and refinanced over an indefinite and vague period of time; not something borrowed or gone into debt for; not an obligation to be borne by generations yet unborn. The idea is simple and old fashioned, yet bureaucratic financial policies being what they are, it sounds revolutionary.

There is no need to labor the point of total coverage. We all know that to be a fundamental concept embodied in the Townsend plan. Today not only all over 60 but disabled citizens between the ages of 16 and 60, and widows who have the care of children under 18, would be awarded an annuity to be used immediately to fill basic needs.

So far I have talked about the concrete aspects of the Townsend plan. But sometimes, perhaps always in the long run, intangibles are even more important. I am thinking now of the mental and emotional anguish our senior citizens suffer even in cases where there is not yet physical hardship.

All of us know the basis of fear and anxiety is insecurity. We know the difference between real insecurity and psychological insecurity.

We know almost one-third of our workers are unquestionably insecure in a very real financial sense—and I am putting it mildly when I use the word, "insecure." I might more accurately say they are desperate. They know the Federal old-age pension will never reach them. They have been cast aside.

Because of the many flaws in our present system, an even greater number of workers among those technically insured are today the victims of psychological insecurity. They fear that this technical insurance, based on a system too involved for them to understand, will not "pan out" when they need it. Actually there is real ground for their apprehensions. Perhaps they know that in 1946 the families of retired workers got an average pension of $6.40 a week. How far does that go today? Perhaps they have read the report of the Public Affairs Committee showing that although more than 41,000,000 people had money to their credit in the old-age insurance accounts in 1940, by no means all of them would receive benefits. Is it any wonder they look forward to the future with misgivings?

Now we know that insecurity breeds fear and distrust. We know fear and distrust are among the most important factors involved in social unrest and wars between nations. If we are to do our utmost to avoid war and revolution in this time of change and uncertainty throughout the world, we must look for causes and find cures. We here tonight are convinced that the need for a feeling of security is fundamental with all men and women. We believe we have a plan which will give all our people assurance of financial security when they have become unable to work and support themselves and their families, through no fault of their own.

All we ask is that this plan be brought forward and studied—not pigeonholed. We will continue to work, and eventually we will win out over the bureaucrats prejudiced against the Townsend plan because they are selfishly unwilling to give up their private car on the "gravy train" which some day will be taken off and replaced by the "equality

special" where all are allowed to ride. Let our slogan be, "Security for the masses, not for just the classes."

Arms for Latin America

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of June 25, 1947:

ARMS FOR LATIN AMERICA

The appearance of Secretary of State Marshall and Secretary of War Patterson before the House Foreign Affairs Committee to urge prompt congressional authorization for the inter-American military cooperation bill focuses public interest upon an important aspect of our foreign policy.

The purpose of this bill is aptly described by its title. It aims to weld all the military ertablishments of the Western Hemisphere into an effective defense organization, using identical arms, and operating under the same strategical and tactical concepts, the United States being the arsenal and coordinator.

The result of such a system would be that, in case of a threat to hemispheric security, the entire military forces of the New World could be quickly mobilized into a homogeneous fighting machine. It should, of course, be understood that close coordination already exists between this country and Canada. Its extension to the whole of Latin America would make the system all-inclusive.

The need for pan-American military coordination was vividly illustrated during the last war. Then, as now, there was the problem of a full score of diverse forces, with different arms, training, and concepts. Most of the Latin-American Nations buy their equipment abroad and train their forces under military or naval misisons which naturally instill their respective ideas. Under the proposed set-up, the United States would be the source of all these matters, including replacements. Existing armaments of other origins would be taken over by us and replaced by our equipment. Thus, homogeneity in all respects would be quickly attained.

The advantages of this method appear so obvious, both for ourselves and for the other nations of the Western Hemisphere, that opposition here at home would appear unlikely. Yet such opposition does exist, though with various motivations. One objection is the expense to us, though the War Department estimates it would not exceed $10,000,000 per year. Others are that it might encourage armaments competition, strengthen dictatorial regimes, and by-pass the United Nations. However, Secretary Marshall appears to have made an effective rebuttal by assuring proper administration and pointing out that there is nothing in the UN Charter which prevents such a regional agreement.

The Secretary went on to utter the warning that this was a golden opportunity which should not be lost. If we do not provide arms and training, the Latin American countries will get them elsewhere, with all the unfavorable consequences that might thereby accrue. The test of our intentions will arise at the forthcoming Inter-American Conference at Rio de Janeiro, tentatively scheduled for August, at which a hemisphere defense pact will be discussed. The proper implementation of such a pact will require congressional action on the pending military cooperation bill. It would therefore seem to come under the heading of "must" legislation.

Aid to Europe?—Yes, but Within Our Means

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. BENDER. As part of my remarks, Mr. Speaker, I would like to insert in the RECORD today an editorial from last Sunday's Akron Beacon Journal. Editor and Publisher John S. Knight hit the nail on the head. If it were possible to have an editorial printed in neon lights or to have it set in bold-face type this would be most desirable as Mr. Knight expresses the thoughts of an overwhelming majority of the American people. His editorial follows:

AID TO EUROPE?—YES, BUT WITHIN OUR MEANS

When an individual contributes to the support of the needy, whether they be less fortunate relatives or a deserving charity, his gift normally bears some relation to the state of his own finances.

The balance sheet of his assets and liabilities determines what portion of his income he feels can be used for helping others without jeopardizing the security of his own family.

Thus, a sense of prudence and self-preservation guides his thinking because he realizes that mismanagement of his financial affairs will in time not only reduce his own standards of living but directly affect his ability to assist the indigent.

A comparison can be made in the relationship between nations. The sole difference is that the United States is the only country with the money and the resources to help rehabilitate the war-stricken areas. Therefore, the hungry and impoverished peoples of the earth look to the United States for salvation.

If we agree that they should be helped, and I hold strongly to that view, the only question is: To what degree can we afford to help them?

For a nation, like an individual, ultimately finds that its capacity to pay can be exhausted. If we ever permit ourselves to fall into that dilemma, the United States will wind up in the hands of a Communistic receiver.

The record of our generosity to date shows that billions have been poured into China without achieving economic stability in that unhappy country; money and credits extended to Russia's satellites have been used for further expansion of Soviet power and one-half of the British loan of three and three-quarter billions has already been exhausted.

At the time Congress supported the Truman doctrine by appropriating $400,000,000 for Greece and Turkey, the Beacon Journal opposed the loan on the theory that it was unrealistic to believe that we can stop communism with dollars.

The soundness of that view was demonstrated recently when Russia took over Hungary without firing a shot and, as one Soviet leader said, "before the United States could rub its eyes."

We predicted, also, that if the Truman doctrine were carried out to its logical conclusion wherever communism was on the march, the cost to the United States within the next few years would run from $17,000,000,000 to $20,000,000,000.

The accuracy of that prediction is now supported in the recommendation of Secretary of State Marshall that a new program calling for gifts or loans of five billions a year is necessary for world rehabilitation.

The Secretary tells us that "in many countries confidence in the local currency has been severely shaken." What he did not tell us is that, with the exception of England, these countries have made little effort to live within their means; that they have tried to escape their financial obligations by printing money; that because of their political and ideological vagaries, it is doubtful whether they will ever mend their ways.

It is true that Secretary Marshall is striving for a joint program, but here again, what course shall we pursue if Russia decides it is not to her advantage to participate?

Do we go it alone—and foot the entire bill?

How is Europe reacting to our latest venture in world paternalism?

In France, the newspaper Franc-Tireur explains that the motivating force behind the Marshall plan is fear of a business depression. This newspaper reasons that overproduction of goods is forcing us to look to world markets.

The Communists in France, according to George Weller, of the Chicago Daily News foreign service, have decided not to shoot Santa Claus so long as thousands of superfluous functionaries can be carried on the pay roll. The Communists in Italy have decided that they want plenty of any money that is being handed out.

In England, where our funds are being poured into a hopelessly inefficient economy, Graham Hutton, of the British Information Service, says frankly that "everyone knows Britain is living on the American and Canadian dollar loans, and that those dollars are fast running out, like sand out of the hour glass."

Mr. Hutton urges the British to face the truth that they cannot afford what they would like to buy, that the Nation must get to work with the utmost efficiency, and that precious human beings must not be wasted in the confusion of hopeless red tape caused by tying up more of Britain's working population in government offices than any nation in the world.

From his vantage point in Paris, George Weller writes that "no Communist, and, indeed, few Europeans of any political flavor, can understand why the United States, plagued by strikes and housing and tax troubles, is willing to throw any further moneys into Europe without asking anything in return."

A rapidly growing number of Americans are today beginning to ask themselves the very same question.

Four steps suggest themselves as essential if the American people are to support further aid to Europe:

1. We should follow Herbert Hoover's recommendation that all governmental agencies having anything to do with foreign relief, international finance, and exports be coordinated. This step would eliminate much of the present interdepartmental conflict and confusion.

2. Our capacity to extend aid must be carefully surveyed so that we do not bankrupt ourselves while endeavoring to aid others.

3. Create a bipartisan committee to plan and supervise the administration of an overseas economic program. In other words, we should have something to say about the way our money is spent.

This suggestion stems from the British experience where 52 percent of the American loan has been exhausted without any of us having the faintest idea where the money

has gone. In fact, no break-down is available from the British.

In other words, simply pouring out American funds to pump oxygen into dying economic systems is neither good charity nor good business on our part.

4. If we are actually frank enough to admit that the ultimate purpose of the Truman and Marshall doctrines is to stop Russia's expansion, why can't we see the folly of being economically interventionist and militarily isolationist?

As an example, we have spent between three and four billions dollars in China for economic relief and political prestige, but the coastal bases, fixed garrisons, and airports remain in Soviet hands.

The same experiment, conceded to be a colossal failure in China, is about to be repeated in Greece and Turkey.

Why can't we see, as George Weller says so succinctly, that creditable as both the Truman and Marshall plans may be, the hard core of military reality is missing? Both plans are soft at the center because they make America responsible for Europe but ignore the very security they aim to achieve.

I believe that Mr. Truman, who says this is not time to reduce taxes, will find his new $24,000,000,000-aid-to-Europe program meeting tremendous opposition in Congress.

Certainly the people who pay the bills are entitled to know just how, where, and why the money is to be spent before they place their approval on a single cent of such a staggering appropriation of funds.

Our hearts go out to the less fortunate peoples of other lands but experiences of the immediate past give little hope that these additional gifts will be used effectively for their own best interests.

We should never agree to let the Government sign our names to another blank check without knowing all the facts and having our eyes wide open.

JOHN S. KNIGHT.

The Role of the United States in International Affairs

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1947

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include an address delivered by me at the sixtieth annual convention of the Tennessee Pharmaceutical Association at Chattanooga on June 19, 1947. The address is as follows:

INTERNATIONAL AFFAIRS AS THEY AFFECT OUR NATION

The United States, at the present time, lies in the middle of the onrushing stream of history. We will either have to guide and direct the turbulent waters in which we find ourselves or be swept away by them. Based on this truthful premise the American people have but one choice—it is to intelligently direct the course we are to pursue. In doing this, every person, business, and association has a direct stake and a definite responsibility. This is true of the pharmacists and of all other businessmen, large and small.

In the short space of 30 years this Nation has come to the point where we have no choice but to assume this awful responsibility. It is not that we wanted it to be that way but the course of world affairs has directed that it should be. We have been converted from a Nation secure by our boundaries and largely self-reliant upon our resources into a Nation thrown into the middle of perplexing world problems and issues. We have found from our experience in two World Wars that we are no longer protected by the broad oceans that surround this continent. We have come to find that the things that take place in Europe, Asia, and Africa concern us immediately and directly. The might of this Nation was mustered in magnificent fashión to play the decisive role in winning World War I and World War II on the battlefields. We fumbled our opportunity of securing a just and lasting peace after World War I. We are learning now that, while we have had success on the battlefield, World War II has actually not been carried through to victory. The war is still on. We find that in this twentieth-century era we cannot fight in the manner of the knights of old. We cannot defeat our enemy and then be content to restore the sword to its sheath and return home and consider the job done. It is just as important, although not as exciting and glamorous, that our efforts be devoted to restoring order and settling the chaotic conditions resulting from the war as it is to win victories on the battlefield. This Nation, and this Nation alone, may be able to avert the decline of Western civilization and a reversion to as dark an age as history has ever known.

The present situation with which we are confronted was not altogether unexpected. Famine, pestience, suffering, and a complete economic and political dislocation were the inevitable consequences of war. The sad fact is that there can be no real security—there can be no real peace until some sort of order is brought out of the present chaos. There is no need of minimizing the distressing condition as it exists today. Germany is divided and broken. Belgium is scarred by old wounds and ancient animosities. France, politically and economically bankrupt, lies torn and confused. Communism is strong in France and seems to be on the ascendancy in Italy. Confusion, chaos, and political want mark the condition in China, India, and through the Near East. In China civil war is weakening in tempo.

We do not know what may develop in India when British control is removed. The war has destroyed the wealth and assets of the world, and a large part of the people in all of the nations, save those of the Western Hemisphere, is ill-fed, poorly clothed, and has lost its stamina to make an immediate comeback. It is important to consider the plight of Britain. The British are barely holding on by their bootstraps. The power of the British pound and the might of the British fleet have lost their magic charm. The people of England, stripped of the wealth of empire and bound under a crushing burden of taxation, are no longer able to bring stability and order in many parts of the globe which were previously considered under the British sphere of influence. This means that vacuums are being created in many unstable regions of the earth. And it has developed another ideology which is ready to fill any vacuum and which thrives upon confusion, want, and instability. There can be no doubt of the aggressive and expansive policy of the Soviet Government. There can be no question but that the Soviets intend to supplant democratic rule with communism in any part of the earth where they are given the opportunity. Until the day comes when the Soviet policy of expansion and aggression is ended in favor of a desire for truly peaceful relations, it is this Nation that is going to have to bear the brunt of preventing the growth and expansion of this pernicious control.

We compromised and appeased the Soviet as long as we could. It became necessary to make a stand somewhere. With bipartisan backing the Truman doctrine of aid to Greece and Turkey was used for the purpose of taking our stand. It was this doctrine which enabled us to say to the Soviets that we had had enough—that we do not expect to be pushed out of Europe. We said to them in the Truman doctrine that the democracy of this country was still active and vigorous and that we intended for free nations to have an opportunity of choosing in carrying out a representative form of government if they desired to do so.

I think, though, it must be pointed out that aid to Greece and Turkey is only a stopgap measure and that unless we are willing to continue our leadership and to take other measures to help broken nations get back on their feet our assistance will be of little lasting benefit. We find ourselves in a dilemma. We want to prevent expansion of communism and at the same time we do not want to allow a strong Germany to again come into existence to threaten the peace of the world—and yet—France, Denmark, Belgium, and many other European nations have secured steel, coal, and other raw materials and manufactured goods from Germany in the past. It is these things they need to get their own production going. So, recently, Herbert Hoover and others have recommended that German heavy industries be allowed to operate to a greater extent. At Potsdam you will recall a formula was adopted authorizing only the operation of light German industries. Our leaders want fuller German production and yet we appreciate the necessity of keeping a strong finger on this nation which has plunged the world into two horrible conflicts.

Recently, Secretary of State George Marshall has proposed the Marshall plan. This is intended to augment and perhaps be later substituted for the so-called Truman doctrine. Under the Marshall plan it is required that an over-all canvass of the economic needs of Europe be made and that ways and means be devised, as economically as possible, to restore the economy of Europe. The plan contemplates that the distressed nations will largely pull themselves through by their own efforts. For instance, in France the problem seems to be of getting more coal from the German Ruhr with which to operate French factories. If enough coal can be imported to France her economy should soon be on a fairly good basis. The same is partially true of Italy and of other European nations.

Then in connection with the over-all economic survey of Europe, it is proposed that this country consider what it can afford to do—not for just 1 year, but over a period of years. Senator VANDENBERG, Herbert Hoover, and I think this idea has the support of Secretary Marshall and President Truman, feel that we should make an estimate of just what help and assistance this Nation can render without bankrupting ourselves. Senator VANDENBERG, after the whole matter is presented, wants the plan carried out by a bipartisan agreement. I think the Marshall doctrine, together with an appraisal under the Vandenberg plan of what we can do to help get the world going again, is the sensible way to approach the present distressing situation.

It is important that the nations of the world realize that they are going to have to do most of their rehabilitation themselves. They should know now that they cannot count indefinitely upon tremendous sums of money from this country. They should know that we are willing to do our part to help them in their immediate emergency and to assist them in getting back on their feet but that a great part of their recovery must be through their own efforts. While we want to do all we can, it is unquestionably true, as

has so well been pointed out by Senator VANDENBERG and Secretary Marshall, this country itself must remain strong and productive. A strong and productive America can render greater assistance than a bankrupt and depressed America.

It is also incumbent upon us to use to the utmost those agencies and organizations that have been set up to assist in world recovery and to maintain peace among the nations. The United Nations has had its share of rough going, but, of course, its activity is now somewhat limited by the direct conflict of economics and ideologies between the Western World and Russia. However, the United Nations is a going concern, and it has accomplished a great deal. It has at least kept all of the parties involved at the conference table and as long as discussions and genuine efforts to settle disputes are in progress there is hope for a solution. The International Bank has now been launched, and through it loans can be made for world recovery and currency stabilization which are so necessary if order is to be restored. These organizations must continue to have our full and hearty backing, and this must be done regardless of what any other nation or group of nations may say or do.

There are some other bright spots in the picture. This Nation, and the principles and ideas we represent, still has many friendly allies, and we can know that the great majority of the people, even though they may be in Communist-controlled countries, would like to join with us in our effort for freedom and peace. We also find comfort in the fact that we are still economically the strongest nation of the earth. We have great resources, and we have ingenious and strong people.

But let us not mistake the magnitude of the task we have and let us all appreciate the fact that the greatest things we have to sell are our American ideas. It is necessary in this difficult time that our public be well-informed as to the facts with which we are presented. It is necessary that each citizen appreciate his individual responsibility. To meet the test it is required of us that we make democracy work better and more efficiently than do the ideologies and other forms of government with which we must compete. It is high time that we be impressed with the necessity of considering our Government and the solution of the international problems ahead of selfish aims and ambitions. Management and labor alike must put aside some of their disputes. This is no time for stoppages in work. This is no time for petty gains or selfish advantages to be put above the welfare of the Nation.

Also, it has been very discouraging to see, of late, so many people placing the objective of their pet creed or race above the welfare of the Nation and of the world. For those who do this must remember if we lose in this great effort the world, including this country, may be in a condition where they will not even have the opportunity of advocating the causes in which they are so greatly interested.

What does this mean to the individual druggist? It means that you like every other businessman and every other citizen are going to have to put first things first. The thing to come first is to appreciate the fact that regardless of the cost, the personal inconvenience or the sacrifice that any of us may be called upon to make—all of these are worth while if we can bring about an orderly world in which we and our children will have an opportunity of living as a free people under a free government which fosters continued individual opportunity. When compared with this great ambition our petty difficulties seem trifling and yet that is the decision the American people are going to have to make. I think there needs to be a rededication to ideas we have always held so dearly. There needs to be a firm determination in every citizen's heart to do his share to carry through toward the fulfillment of those purposes for which the war was fought. If we have this resolution there is no obstacle that we cannot overcome and I am convinced that when the issue is fully understood the American people in this decisive hour will not be found to be lacking.

Henry Clay as an American Symbol

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, June 27 (legislative day of Monday, April 21), 1947

Mr. WILEY. Mr. President, the brilliant young South American leader, Dr. Luis Gonzales Barros, first officer of the diplomatic department of the Colombian Foreign Office, made some very stimulating historical remarks recently when he was in Washington at the opening of the third annual Institute on the United States in World Affairs, at the American University. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The figure of Henry Clay was chosen as the symbol which unites the peoples of this continent in a single aspiration of fraternity and justice. Henry Clay lifted his voice in every struggle of civil life from the day he first appeared, a vigorous and gallant youth in the American Congress, to the day when full of years and laurels and disillusions, his mortal remains received the last tribute of homage from the peoples and the nations in whose behalf he had so long labored.

Among the great discussions touched by his fiery tongue from the beginning was the political independence of this hemisphere.

Henry Clay lifted congressional debate from the limited sphere of purely local interests and dispositions to the transcendent things of human liberty and the future of the American continent.

He emphasized the wonderful extension in character of the countries to the south and, turning the eyes of his fellow representatives toward those distant horizons, he made them see the riches of Mexico and of Guatemala, the potential wealth of New Granada, and of Venezuela, and the future of Brazil soon to break her colonial bonds, as well as the prospects of the United Provinces of the River Plate. Crossing the Andes, he paused to give eulogy to Chile and Peru, concluding with these words: "Each of those several parts is sufficient in itself to be a powerful state; even the smallest is in population enough people to make it a solid republic." He dreamed the dream of the Americas.

Clay's attitude, always ardent and never failing in its advocacy of the new independent governments, had its reward when the House of Representatives of the United States in February of 1821 approved the resolution proposed by him declaring that the "House will give its constitutional support to the President of the United States whenever he may deem it expedient to recognize the sovereignty and independence of any of the said provinces."

Clay lived to see the realization of one of the fervent desires of his heart. He wrote to his great friend Torres, the representative of Colombia: "The cause of South America has at last prevailed. The House yesterday adopted my resolution which has for its object, substantially, the recognition of the independent governments. I congratulate you on the occasion. It has been to me a day of proud and big satisfaction. What is much more important, its moral tendency will be deeply felt everywhere."

One of Clay's biographers referred to him in these words: "One of the most brilliant champions in the cause of humanity and the rights of man; an apostle whose generous words in the decisive and strategic moment were always heard on behalf of the emancipation of the peoples of this hemisphere; a statesman whose spiritual contribution gives him a place among those great benefactors worthy of the undying gratitude of the American nations."

Letter From National Association of Postal Supervisors

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith a letter from Mr. Wilt Grossman, of Cleveland:

NATIONAL ASSOCIATION OF
POSTAL SUPERVISORS,
Cleveland, Ohio, June 5, 1947.

Hon. GEORGE H. BENDER,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN BENDER: For a great many years supervisors in the postal service who, when the needs of the service required, worked daily overtime have been allowed this overtime off when they could be spared from their duties, without cost to the Department.

This administrative practice is authorized in article 47, page 90, of the July 1943 Official Postal Guide.

On June 6, 1946 the Comptroller General of the United States issued a ruling as follows:

"Without raising any questions here regarding the propriety or legality of the past practice of granting supervisory employees compensatory time for all overtime in excess of 8 hours a day, the granting of compensatory time to them on and after July 1, 1945, is limited by the provisions of section 3 of the statute, supra, to services performed on Saturdays, Sundays, or holidays. That statute does not provide for the granting of compensatory time for work performed in excess of 8 hours on other days, etc., etc."

As a result of the above ruling, some of the supervisors, namely, route foremen and clerks-in-charge assigned to the duties of route inspections, and station examiners who because of the nature of their work, which requires them to work overtime, are being denied this time off.

For example, on route inspections the 1945 pamphlet, Form 1360, Supervision of City Delivery Service, section 49, states, "All classes of mail available to the carrier must be routed and taken out for delivery and all delivery trips must be completed, overtime being used if necessary."

Public Law 134, Seventy-ninth Congress, first session, states:

"SEC. 2. Hours of duty: Employees shall be required to work not more than 8 hours a day except as provided in section 4.

* * * * *

"SEC. 4. Overtime: In emergencies or if the needs of the service require, employees may

be employed in excess of 8 hours per day and for such overtime service they shall be paid on the basis of 150 percent of the annual rate, etc., provided that the provisions of this section shall not apply to railway mail service, etc., etc., and supervisory employees."

The enacting clause of Public Law 134 states, "That the term 'employees' wherever used in this act shall include officers, supervisors, and special delivery messengers, in offices of the first class, etc., etc."

From a study of the above sections of Public Law 134 it can readily be seen that it needs amending to eliminate the unfair practice of supervisors working overtime without being properly recompensed.

On April 16, 1947, Congressman HOMER JONES of Washington introduced H. R. 3075, a bill to amend the act of July 6, 1945, so as to provide proper recompense in the form of compensatory time for overtime performed by supervisors.

On behalf of all postal supervisors who are affected by the ruling of the Comptroller General, I appeal to you to contact Congressman EDWARD REES, chairman of the Post Office and Civil Service Committee, and ask him to hold early hearings on H. R. 3075.

As an example I have over 130 hours of daily overtime accumulated since April 1, 1946, other supervisors have more, some less. The Department has been able in the past to grant this overtime off without cost so that there should be little or no objection to early enactment of this meritorious bill.

Thanking you for your many acts of kindness to all postal workers, and with best wishes, I remain,

Sincerely yours,

MILTON GROSSMAN,
Legislative Chairman, Branch 46, National Association of Postal Supervisors.

Here Are Some Air Crashes Traced Directly to Defective Motors

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. GILLIE. Mr. Speaker, every Member of Congress is vitally concerned about the numerous air crashes that have been occurring throughout America and in all parts of the world.

What can be done to bring an end to these catastrophes is a great problem confronting the Nation today.

Certainly every possible cause or clue should be discussed and brought out into the open for all to see and ponder over.

Therefore, with this in mind, I desire to place in the RECORD a statement from Joseph H. Leib, who is well qualified to speak on these matters. It will be remembered that he was directly responsible for the investigation of the Curtiss-Wright plant at Lockland, Ohio, and at Buffalo, N. Y., by the Senate War Investigating Committee some years ago. He also brought about the investigation of the Consolidated-Vultee plant at San Diego, Calif. In each of these investigations Mr. Leib's charges were upheld by congressional committees and by a grand jury at San Diego, Calif.

His statement follows:

HERE ARE SOME AIR CRASHES TRACED DIRECTLY TO DEFECTIVE MOTORS

(By J. H. Leib)

On June 19, 1947, the Nation's newspapers carried blazing headlines of another aircraft disaster involving a Pan-American Constellation.

Twelve persons were killed, 10 injured, in the Syria crack-up.

What caused this crash?

Well, the Associated Press reported that this clipper was the same plane which had turned back at Gander, Newfoundland, on the out-bound flight a few days earlier that week, after developing engine trouble, delaying the trip for several days. (Source, banner headline Washington Times-Herald, June 19, 1947.)

Then 24 hours before this tragedy—on June 18—the Washington Star carried another Associated Press dispatch that the globe-circling Pan-American Constellation with a party of American editors and publishers had landed at the London Airport with only three of its four engines functioning. These gentlemen of the press were indeed fortunate that the dead engine did not catch on fire.

In this connection, it is worthy to note that these type planes are equipped with Curtiss-Wright motors, made by the same corporation that the Senate War Investigating Committee had denounced on two separate occasions—once under Senator Truman, on July 10, 1943 (S. Rept. No. 10), and again under Senator Mead, on July 26, 1945 (S. Rept. No. 110).

For what it may be worth, here is what the old Truman committee had to say about this company: On page 18 of Senate Report No. 10 there appears the following charges:

"The committee found that the company was producing and causing the Government to accept defective and substandard material. This was accomplished in the following ways:

"1. By the falsification of tests.

"2. By destruction of records.

"3. By improperly recording results of tests.

"4. By forging inspection reports.

"5. By failing to segregate substandard and defective material.

"6. By failing to promptly destroy or mutilate such defective and substandard material.

"7. By orally changing tolerances allowed on parts.

"8. By circumventing the salvage committee set up to pass on the usability of parts outside tolerances.

"9. By allowing production to override the inspection force, thereby destroying morale of both company and Army inspectors.

"10. By skipping inspection operations."

It is important to point out that these shameful, unpatriotic, and disloyal practices took place when our beloved Nation was at war and when millions of our boys were fighting and dying throughout the world in defense of this great Republic.

In the Appendix of the CONGRESSIONAL RECORD, volume 91, part 13, page A4903, there appeared my report on the untimely death of a former Member of Congress—Jack Nichols, of Oklahoma. In this story I told how this man lost his life in an ill-fated Army plane (B–25) powered by defective Curtiss-Wright motors that directly caused the crash.

It will be recalled that Mr. Nichols, prior to his resignation from the Congress, was chairman of the House Select Committee To Investigate Air Accidents. This writer had assisted the chairman in the investigation of safety conditions, etc.—and then suddenly the committee was abolished.

Soon afterward Mr. Nichols became vice president of the Transcontinental & Western Air, Inc.

I had often pleaded with Mr. Nichols to assist in bringing about a study of manufacturing methods employed by the Curtiss-Wright Corp.—but my efforts in that direction were in vain as far as he was concerned.

And sadly enough this former legislator met his death in a plane crash caused when a Curtiss-Wright motor flunked out.

This is not all.

Even in the days of the First World War it was the late Gen. Billy Mitchell who was also charging this company with making faulty "flying coffins."

About a year ago (July 12, 1946), when the Constellations were grounded it was reported in official circles that the cause of the crashes was due to defective wiring in the fuselage. Certain pilots flying these ships expressed the opinion that a definite fire hazard existed in the induction system of the power plants and would continue to exist despite all precautionary measures. At the same time it was said that a new type Curtiss-Wright motor would be installed in all Constellations—known as the fuel injection engine.

However, regardless of what is being done, motor trouble is still piling up Constellation disasters.

What are the factors behind these engine failures?

That is the question befuddling aviation experts.

No one seems to know the answer—and that is why I have mentioned the above history of the manufacturer who makes these motors.

The Congress may well deliberate the above facts in the realization that some constructive action must be taken in order to spare and save human lives in the future.

Everyone agrees that accidents are inevitable. Yet on the other hand it is of public record that at least some of these very crashes could have been avoided had proper action been taken by Government and certain aircraft officials.

Finally, here is another version of the possible cause of some of these unfortunate disasters. The following speaks for itself:

[From the Washington Times-Herald of June 24, 1947]

"DC–4 PILOTS BLAME CONGRESS, CAA, AIR LINES FOR CRASHES

"NEW YORK, June 23.—The men who fly the DC–4's—the giant four-engine planes that have figured in America's three worst domestic crashes within the past month—blame Congress, the Civil Aeronautics Authority, and the air lines, in approximately that order, for United States aviation's tragic recent record, a survey disclosed today.

"Congress gets the rap because it arbitrarily cut off funds for intermediate weather stations in its headlong economy drive. The CAA is blamed for failing to insist that war-developed safety equipment be designed into planes on the drafting boards. And the air lines are charged with balking at the heavy expenditures involved in safety rehabilitation of aircraft.

"This reporter flew 6,000 miles on the survey, talking to DC–4 pilots in flight, at ground stations in a dozen cities, and as they relaxed at the dinner table. The cities covered included New York, Newark, Cincinnati, Indianapolis, Chicago, Detroit, and Washington, among others.

"Everywhere the pilots were unanimous in the opinion that the DC–4 is the best all-purpose commercial plane flying today, capable of standing up ruggedly to storms, lifting tremendous loads, and giving passengers as smooth a ride as they have reason to hope for.

"There is, of course, a 'but.' That is the DC–4—which carries 44 to 60 passengers, depending on seating arrangements—wasn't basically designed to include all the safety aids that the war has made available to aviation."

When will those in power, who are under oath to protect the interest and welfare of the American people, do their jobs properly and efficiently, regardless of whose toes they may be forced to step upon?

The Foreign Policy of the United States

EXTENSION OF REMARKS
OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, June 27 (legislative day of Monday, April 21), 1947

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix a speech delivered by the Honorable Alf M. Landon, former Governor of Kansas, on the subject of our foreign policy The speech was delivered Thursday night at Philadelphia, Pa., at the annual banquet of the Junior Chamber of Commerce.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHETHER PEACE

I am talking tonight not as a Republican. I am speaking as an American citizen.

There is a growing realization that this is the year of crisis in foreign affairs. The Nation realizes the world situation is extremely critical.

In such a situation it behooves every patriotic American to do everything in his power to support and aid the Government of his country.

We Americans have our bitter family difference on domestic issues. Frequently our purposes cross each other.

Two ambitious and ruthless attempts to conquer and rule the world have learned to their destruction—in the lifetime of this generation—that when the Republic is in peril we Americans have no other consideration but our Nation's safety and security. The American breed is never discouraged.

This is no time for pessimism. It is a time to be on guard. We are the strongest Nation in the world. American influence in the world has never been as great as it is today.

The greatest problem of all at this time is the wise use of that strength.

This is neither the time nor place to review the damage done by the ill-advised handling of our foreign policy.

The administration is now embarking on a new and superprogram.

At the same time the Kremlin—through its weakness—and fears born of that weakness—is overreaching itself.

That kind of situation can create a sudden and terrific explosion.

However, I anticipate instead a long, arduous, expensive road ahead of us. The information furnished by the administration to the American people regarding that road should be accurate and ample.

Instead it has been too much like running a river steamer without lights or acquaintance with the shifting sand bars.

I stanchly supported the basic objectives of the Truman doctrine as enunciated by the President. As I understand it, that objective is to block Soviet aggression and expansion wherever it may evidence itself.

I did not and I do not now consider that policy as interfering in the internal affairs of Russia. I do not consider the Truman doctrine as in any way challenging the right of Russia to run its own internal affairs.

But that inherent right does not carry with it any right to interfere in the internal affairs of any other country—near or far—either by mailed fist—economic power—or terrorist pressures.

Imperialist totalitarian aggression of any kind has always been abhorrent to the American people.

It is abhorrent because it is immoral and because it threatens the peace of the world.

Right is right, and wrong is wrong. The world cannot live in peace based on immorality.

It doesn't matter what ideology it parades under—imperialistic aggression is still evil.

The world cannot hope for peace, and mankind cannot look for a future of reconstruction and progress as long as any nation commits the immorality of aggressive imperialistic expansion by force.

In declaring early my support of the Truman doctrine I acted as an American citizen first and above all other consideration.

That is the only basis a patriotic citizen can act in time of national crisis. There can be no partisan, personal, or other considerations.

I accepted the Truman doctrine as a declaration of national foreign policy. I agreed with the basic objective of that policy because it was aimed against an international evil. I am still in favor of that basic objective.

But I have earnestly hoped for a comprehensive constructive plan to back it up. The Truman doctrine needs that badly if it succeeds in avoiding another war.

The real test of the Truman doctrine is yet to come—probably in Italy, Germany, or France.

It is no secret that those major sections of Europe are in great danger of a Communist seizure of power. France and Italy are in the coils of government upheavals. What will our Government do about that? Has it a plan of action in accordance with the basic objectives of the Truman doctrine?

It is not sufficient to invoke the United Nations. Every American is desperately eager that the United Nations fulfill its great purposes.

But realities are realities. There is no use fooling ourselves that the United Nations today has any real power to enforce the peace of the world.

It is no solution of the perils we face to invoke the threat of the United Nations—especially when our Government proclaimed a national policy that was outside the United Nations.

I believe it is now incumbent upon the administration to fish or cut bait.

It must formulate a definite, comprehensive plan and execute it without any quibbling.

The popular thinking now in administration circles is to underwrite politically and financially—to the tune of twenty or more billion dollars, spread over the next few years—some kind of a union of the nations of western Europe. That is in effect a blood transfusion. And we should first find out how much we can spare.

That policy must be more intelligently and efficiently managed than was the case with the fantastic administration of the UNRRA.

In his Harvard speech Secretary of State Marshall made offers to the European nations.

It is generally assumed that policy implements the basic objective of the Truman doctrine.

Naturally I would like to support it. But the people of the United States still are in the dark as to the real meaning of Marshall's declaration.

He leaves many vital questions still unanswered—questions that have not yet been clarified or even discussed by administration spokesmen.

There is prevalent throughout the Nation a profound and widespread feeling of uneasiness and concern over the world situation. Our country is against imperialistic expansion. But the American people also want peace.

But I am convinced that profoundly as they want peace they are prepared to accept the responsibilities to go with enforcing peace.

But the American people want to know what the administration is doing to insure peace. They have a right to that information because it is the people who—in the final analysis—will pay the price.

The demand of Americans that the administration lay its cards frankly on the table does not mean that people approve of discordant and ill-advised criticism of the administration and its policies.

The great mass of American people view such outcries—especially on foreign policies—with disgust and disapproval.

But at the same time they feel that the administration must be honest and frank with the country. The people know that great and grave decisions face the Nation and them.

They want those decisions made with their full knowledge and full understanding. And, without any official attempts to minimize the hazards involved.

Only in that way can national unity be preserved and maintained.

Also, such national unity can only be secured if the administration has a definite and constructive policy. The American people want their Government to be bold and vigorous in defense of peace. The American people want their Government to act forcefully—intelligently and steadfastly for peace.

I believe I am voicing the sentiment of the Nation in saying that the people are prepared to make great sacrifices for enduring peace.

Whether the plan of Secretary Marshall's for a European union is successful or not I renew my previous suggestion of a consultative committee from the legislative bodies of Britain, Canada, and America. The need is becoming more apparent every day. It should be broadened to include France at least. I believe it should be based more now on the reconstruction problem than the atomic one—for the former is much more urgent.

To me, it seems that other certain steps are essential if the decent, peaceloving peoples of the world have the best chance of heading off another war.

In that group I include the Russian people, Hungarians, Yugoslavs, and Chinese, as well as Americans.

The common peoples of the world do not want war. It comes only through the blunders and ambitions and fears of their political leaders.

The first step is to boldly and vigorously push real and genuine disarmanent with all the safeguards including inspection and control by a reorganized security council of the United Nations.

I do not mean any ratio hocus-pocus—any attempt to fix ratios of any kind.

I mean, for the first time in all history, an honest attempt to bring about complete universal disarmament.

The most simple means of restoring and preserving civilization—I speak of disarmament—seems the most difficult. We are not aggressively pushing the most obvious design of mutual international understanding and cooperation. Honest disarmament is more than the next step in the policy proposed by Secretary of State Marshall. It is the primary step in restoring, not only the world but our own country, to health.

The conflict between communism, socialism, and capitalism can then be safely left

to the mutations of time, and settled without national animus or aggression.

Tensions and fears—of a third world war—now creating an unhealthy apathy would vanish.

World-wide record-breaking production for peace would be released. Currencies would be strengthened. Relief problems on a national scale would disappear.

As a part of that program there should be internationalization of all the key spots in the world. I mean, the Panama Canal, Suez, Gibraltar, and the Dardanelles.

The alternative to genuine universal disarmament is to push vigorously United States military preparedness.

There is no use of my reminding you that the burden ninteen million men under arms in the world today puts on civilization is in reality a millstone about our necks.

Nor is there any use of my working up hysteria by discussing the horrors of the world's armament race.

It means living in an armed camp. It means our standard of living of necessity would be lowered to finance that arms race. In the atomic age it means dismal life in an insecure fortress. That means a rising militarism engulfing eventually our Republic.

The moves for disarmament must be inspired from our highest governmental quarters. Any organized and active moves along that line—at this time—must be conducted so they will not embarrass our Government in their negotiations with foreign countries.

In other words, it has to be a matter of good timing. We cannot afford any premature move on disarmament, but that should be our immediate goal.

Until the whole pattern of world affairs makes disarmament conversations feasible the American people will close ranks behind the President in any controversy with foreign power. We have proved in two great wars our ability to work and to fight for life and liberty.

All other things—our business, taxation, political parties, the things that concern us today—fade into insignificance beside this one gigantic fact. Another war may come. It would relegate them to mere trifles. The battle to survive alone would count.

Time is running out. Just a few years remain in which to work out a functioning world organization able to maintain the peace. It is our only hope. It must be done.

Today we are the most powerful nation on the face of the earth. We—and Western civilization—have the atomic bomb. In a few more years Russia, and communism, too, will have it. Then the world will be divided into two armed camps, each fearful of the other, and awaiting for the explosion that will touch off the conflagration.

The United Nations—either with or without universal disarmament—can become the means of averting another world tragedy. We must press, with all the power at our command, for the rapid setting up of a world police force to be used at the direction of a functioning United Nations security council.

We must demand the elimination of the veto, and at once. We must risk our fate in the hands of other people of the world. It seems a small risk compared with the greater one of war.

If the Soviet Union continues to stall for time, and to fight the elimination of the veto, and real genuine universal disarmament, we should seek with full dispatch to make the United Nations function—preferably with Russia—but without her, if necessary.

An organization for world peace without Russia merely would give practical recognition to conditions as they exist today. It would be no insurance against war. Although it would be better than we now have. This United Nations—without Russia, and without universal disarmament—could mobilize its world police and decide conditions under which it would be used.

Such a result would permit huge economies on armaments within the member nations. They would save billions by naval union alone. By sharing the staggering burdens of armament western Europe's recovery could be financed out of the economies instead of having to raise fresh billions by taxation or borrowing.

Two conflicting ideologies must learn to live together—even as two strong personalities. Western civilization with its freedom, its competition, and rewards is colliding with a doctrine of expanding oppression—that refuses to recognize any reason but force—in which the citizen is the servant of the state. The real test is before us. A test to determine which can offer more liberty, a higher standard of living, and greater prestige for the individual. I believe we know the answer.

The Pennsylvania State Senate and State Assembly Oppose St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. VAN ZANDT. Mr. Speaker, the Pennsylvania State Assembly, mindful of the welfare of the citizens of that great Commonwealth, calls to the attention of the American people through a memorial to Congress the adverse effect of the St. Lawrence seaway and power project to the taxpayers of the United States.

With our Nation staggering under a huge national debt and with the peoples of the world looking to the United States for financial assistance the economic fallacy of the St. Lawrence seaway proposal is plainly evident.

The following resolution, No. 27, was approved by the Pennsylvania State Assembly on May 26, 1947, and concurred in by the Senate of the State of Pennsylvania on the same date.

The resolution is as follows:

Resolution 27

Whereas the St. Lawrence seaway and power project will produce no practical benefits for the people of the two countries, it is designed to serve; and

Whereas the general assembly and the citizens of this State are greatly concerned about the effect the completion of this project would have upon them; and

Whereas the construction of the project would burden the taxpayers of this Commonwealth and the United States with an initial sum estimated at from $543,000,000 to $1,350,000,000, and experience in similar public works would indicate that this project would cost much more; and

Whereas existing facilities, the Welland Canal, which bypasses Niagara Falls and the Great Lakes channels amply provides for the present lake traffic. The railroads on both sides in the United States and Canada have demonstrated that they are prepared to handle all through traffic offered; and

Whereas with its channels closed to navigation for about 5 months of the year due to ice and weather conditions, it would be unreasonable to expect the railroads to perform the required service during the period that navigation is closed and to be in a position to handle the peak load. The railroads would be required to maintain equipment that would be idle or little used for 60 percent of the time and have the added problem of maintaining the personnel organization. Great numbers would have to seek employment elsewhere while tonnage was moved by Government subsidized competitors. This situation would greatly affect the ports of Erie and Philadelphia; and

Whereas seagoing boats cannot travel this great distance for nothing, and the saving in transportation costs would be exceedingly small, if any; and

Whereas it would be disastrous to Great Lakes shipping, injurious to American rail, highway, and inland waterways services, and seriously harmful to the American coal and iron ore industries; and

Whereas electrical energy that would be generated could only be used at nearby points as it has been demonstrated that the cost of transmission over long distances greatly exceeds that generated locally; and

Whereas such an agreement if ratified would reduce the exportation of manufacturing, mining, and agricultural products of this Commonwealth, and result in loss of employment and contribute to increased taxation: Therefore be it

Resolved (if the senate concurs), That the General Assembly of Pennsylvania hereby memorializes the Congress of the United States not to approve the agreement for the construction of the St. Lawrence seaway and power project; and be it further

Resolved, That copies of this resolution be transmitted by the chief clerk of the house to the President of the United States, the presiding officers of each House of the Congress of the United States, and to each Senator and Representative from Pennsylvania in the Congress of the United States.

Japanese Mix Politics and Labor Unions in New Deal

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an article by Mr. Ralph Donaldson, of the Cleveland Plain Dealer:

JAPANESE MIX POLITICS AND LABOR UNIONS IN NEW DEAL

General MacArthur's new deal for Japan has given the Japanese people two new toys to play with—political parties and labor unions—and they are as busy as a couple of boys with a new electric train figuring out different combinations of track on the day after Christmas.

Party politics and the organization of labor unions are closely entwined in the new Japanese order.

The Potsdam declaration called for the establishment in Japan of a peaceably inclined and responsible government chosen in accordance with the freely expressed will of the Japanese people. Consequently political activity of all kinds is encouraged by the occupation authorities.

But the occupation has another objective, which is based on General MacArthur's vision of future profitable trade relations between the United States and Japan and other

oriental countries. As MacArthur sees it, this will be possible only if the labor standards in Japan are raised, so that cheap Japanese labor will not compete unfairly with American labor.

UNIONS ARE ENCOURAGED

For that reason labor union organization is encouraged by the occupation authorities. The labor division of the economic and scientific section of SCAP has obtained literature put out by a number of labor organizations in various parts of the world, including the CIO in the United States and the International Labor Organization, has translated it into Japanese and distributed it among Japanese labor unions. This literature tells the Japanese how to organize, how to draft constitutions for labor unions, how to bargain collectively with employers and how to prepare contracts.

Another reason for seeking to elevate labor standards in Japan, as given by Anthony Costantina, chief of the labor-relations branch of SCAP, is that a depressed labor force is not interested in democracy. Thus it is hoped that higher labor standards will help to establish and preserve democracy in Japan. In addition, Japanese labor unions are encouraged by the occupation authorities to take part in politics, which they do with a great deal of zest.

CONFUSION OBSCURES MOTIVES

Consequently Japan is seething with labor unrest and political ferment and it is sometimes difficult to distinguish whether strikes and demonstrations are actuated by political or economic motives, or both.

The Communists are extremely active in both political and labor organizations. According to Brig. Gen. Courtney Whitney, head of the government section of SCAP, the Communist party is the only one in Japan with a clearly defined philosophy and purpose. Other party labels mean little or nothing. Yet the Communists elected only five of their candidates at the 1936 election.

At that election, there were 268 parties with 1 or more candidates, but only 30 parties elected members of the Diet. Since the election the party alinements have been changing, as various independents join the predominant parties or form new ones.

PARTY PICTURE CHANGING

Thus, the Liberals, who might be dyed-in-the-wool conservatives, won 140 seats at the election and now have 148; the Progressives won 93 and now have 111; the Social Democrats won 92 and now have 99; 2 minor parties combined to form the Cooperative Party, which has 44; another group of independents joined to become the People's Party; the Communists elected 5 and now have 6; the Independents elected 82 and now have 21, and there are other minor parties without any affiliations.

At the last election all candidates had to fill out questionnaires which were posted at the balloting places 15 days before the election. This permitted the neighbors of the candidates to determine whether the answers to the questionnaires were accurate and helped the occupation authorities screen out candidates who were not eligible for public office because they had been active in the Japanese war effort. The names of the candidates were not printed on the ballots, consequently all the voters had to be able to write.

FACTIONS BEING CONSOLIDATED

Since then a new election bill has been drafted, under which candidates whose parties polled 2 percent of the votes at the last election or who elected 25 members to the Diet will have their names printed on the ballots, with blank spaces to permit the names of other candidates to be written in.

This is expected to cut down the number of parties and eventually give more stability to Japanese politics.

Meanwhile the Japanese people seem to be brimful of enthusiasm for the new order. Parades can be organized at the drop of a hat, either to demand higher wages or the resignation of the cabinet or to protest the wearing of pants by Japanese women.

PARADES ARE ORDERLY

Nearly every week crowds will gather on the plaza of the Imperial Palace, across the street from General MacArthur's headquarters in the Dai Ichi Building. They will listen to speeches all morning and then spend the afternoon parading.

They always seem to be good-natured and orderly. A Japanese policeman holds up his hand at a street intersection and the parade stops. Then a song leader takes over and the section of which he is in charge begins to sing. American songs, particularly those of Stephen Foster, seem to be favorites.

At the end of the day everybody is tired and has had a good time. One wonders how people who are so poor, who lack many of what we would consider the necessities of life and have none of the luxuries, can afford to take time to parade and demonstrate. But that is democracy, American style, in Japan today.

Need Him Where He Is

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, June 27 (legislative day of Monday, April 21), 1947

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Need Him Where He Is," which appeared in the Memphis (Tenn.) Commercial Appeal on June 13 as a tribute to our distinguished calleague the senior Senator from Louisiana [Mr. OVERTON].

This editorial, from a great newspaper in my State, correctly describes the esteem and affection which all the people of the alluvial valley of the Mississippi hold for the Senator from Louisiana. He has been their champion, their advocate and their counselor, without respect to the point or place from whence they came. The flood-control program on the lower Mississippi River is, in large measure, a monument to his leadership.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEED HIM WHERE HE IS

Would-be political strategists in Louisiana recently sent up a trial balloon which involuntarily cast Senator JOHN H. OVERTON in the role of prospective gubernatorial candidate.

Louisiana's senior Senator and foremost expert of the Congress on flood-control matters has effectively, characteristically exploded that myth by asserting that he wouldn't have the Louisiana governorship "if offered to him on a gold platter." Coming from him, as Louisiana well knows, that's the last word on the subject so far as he is concerned.

It isn't so far as we are concerned. We prefer to add that neither Louisiana nor the alluvial valley could afford to have Senator OVERTON in a post other than the one he now occupies. On flood-control matters he has no peer, and he has worked as earnestly in behalf of the safety of every valley State as he has the one he officially represents.

To make Senator OVERTON Governor of one State would be to deprive six other valley States of the most earnest and successful champion of their safety they have. The alluvial valley needs and wants him just where he intends to stay—in the Senate.

The Philippines—Land of Opportunity

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. HAGEN. Mr. Speaker, I have received a letter from P. W. Reeves, who served as Director of Personnel, Engineer Service, of the War Department in the Philippines, during the year 1946.

His letter so dramatically expresses his own observations and views and describes the conditions in the Philippines as he saw them that I feel it would be of interest to my colleagues and the readers of the CONGRESSIONAL RECORD.

His letter follows:

WASHINGTON, D. C., *June 26, 1947.*

Hon. HAROLD C. HAGEN,
Member of Congress, Washington, D. C.

DEAR CONGRESSMAN: I have your request that I incorporate in a letter certain facts gathered by me, as well as observations I made, during my stay in the Philippines from April 1946 until March 1947. I am very glad to comply because I believe the information obtained will be of interest to you.

The seeds of communism being sown all over the world also are being sown in the Philippines. The same subversive groups are in Manila and the Philippines just as they are in China, Greece, Poland, Yugoslavia, Rumania, France, Germany, Italy, and some parts of South America. General MacArthur has been able to stop the advance of communism in Japan, but the followers of Marx and Stalin have a foothold in Korea. The Huks are the greatest menace to the Philippines today! The Huks are better known as Hukbalahaps, a militant rebel organization which was first organized in Central Luzon. Labor leaders came to Manila from China and organized the tenants (peasants) into units. These labor groups are being schooled in communistic theories, and they are being taught military discipline. They are taught to hate all forms of capitalism. These Huks are anti-American and at their meetings they denounce the United States and praise Russia. It is an undisputed fact that the Huks in the Philippines are linked with the 'Reds' of China. The Huks are all supplied with arms and ammunition. Their objective is the overthrow of the Philippine Government.

During the past few months the government of the Philippines, with the aid of Philippine Army intelligence officers, conducted an investigation of the Huks and their activities. A connection between the Huks of the Philippines and Moscow was definitely established. The Philippine Army disclosed that documentary proof was found showing conclusively that the Huks of the Philippines have as their leaders well-known Communists, who receive their instructions from Moscow.

At meeting places where the Huks assembled, communistic literature, pamphlets, and so forth, were found in great quantities. In all of the meeting places of the Huks

hammer and sickle flags were found. Captured Huks and others who have surrendered admitted that the Huks were taught the principles and teachings of Lenin. They were taught to organize and spread their ideology. They were taught that the solution of their ills, poverty, and hardships is the overthrow of the Philippine Government and the establishment of a Communist dictatorship. What I am telling you can be verified by reference to investigations made and reports filed by the Philippine Government since President Roxas assumed the office of president. Congressman Villareal headed the committee which conducted the investigation and made the report. The investigation and filing of the report consumed almost one year, and the report was released in Manila the 24th of May 1947.

Unlike the Communists in America, the Huks in the Philippines do not hesitate to resort to armed violence. Luis Taruc, the Huk leader, has publicly announced that he will very soon issue orders from Malacanan Palace in Manila. The Huks permit no opposition. The Huks have a meeting and then make unreasonable demands upon the landowners for money, rice, food, etc. If their demand is denied they murder the landowner and burn his home. Out in the provinces I saw many houses which had been burned or blown to bits by the Huks. In Manila I read daily accounts of brutal murders committed by Huks. In July 1946, Rev. Father Limlingan addressed a group of Huks and urged them to cease their lawless activities. The night following the afternoon on which this priest addressed the Huks, he was murdered. Yes; this priest was murdered in such a way that would cause the caveman to bow his head in shame. Four carabaos were tied to the priest—one carabao to each arm and one to each leg, and the carabaos were driven away in four directions, thus tearing the body of the priest into four parts. This happened 50 miles from Manila in July 1946.

The peasants (tenants) formerly received 40 percent of all they produced. An increase to 50 percent was granted. President Roxas granted another increase to 60 percent, and then another increase to 70 percent. The Huks have demanded 80 percent of all they produce. Their objective is to get 100 percent of everything they produce—leaving nothing for the owners of the land (the taxpayers). The uprisings in the provinces have increased, and thus more followers for the Huk army are made. The Huks started out with a small organization in Central Luzon. Their followers are now scattered, and rapidly increasing, in many of the provinces. I recently read a statement from Gov. Angeles David of the province of Pampanga. Governor David charged the Huks with spreading communistic doctrine in the Philippines and attempting to overthrow the Philippine Government. I quote the following from Governor David's statement issued a few weeks ago: "* * * The Huk organization recognizes no law but anarchy and lawlessness and has no love of country because it advocates communistic principles, uses the red flag in all of its demonstrations, and celebrates November 7 (the birth of the Third International) every year with a big parade."

We talk about Pearl Harbor, where, in a few minutes on December 7, 1941, the people of the United States were taught a terrible lesson in blood. We are reminded that our brave men died at Guadalcanal, in New Guinea, at Tarawa, at Iwo Jima, at Bikini, and elsewhere. We are told about the men who died on the cruiser *Houston* in the Java Sea, and about the death-dealing submarines off Midway and in the Aleutian Islands. We have heard speeches about the bombing of Dutch Harbor and about the loss of lives in the fall of Singapore. The death march of Bataan was grimly brought to our attention. But we treat this onrushing tide of communism with indifference. The greatest stronghold of the Communist Party (outside of Russia) is China. The Communists are growing stronger in Brazil, Chile, and Cuba. The Communists are in charge of the government in Hungary. Although General MacArthur is doing a great job in Japan, and has to a certain degree checked the increase of the Communists in Japan, in 1946 there were 2,000,000 party members (Communist Party) in Japan.

We all know the objectives of communism are the creation of strikes, chaos, disorder, unemployment, poverty, misery. It is easy to understand how easy it was for the Communists to launch their movement in China. I saw Chinese in Shanghai grabbing garbage from barrels with their hands—and I saw them devour what they found like a pack of hungry wolves. The Communists believe that the poverty-stricken peoples of the world will turn to communism because of the glittering promises made by communistic leaders. From the time of Lenin every Communist has been made to believe that mankind is divided into two groups—Communists in one group and the rest of the world in the other group.

To every people who worship God, He is the personification of their code of morals. Where there is no belief in God there is no ideal of virtue. The most remote savage African tribes, the Taoists, the Buddhists, the Mohammedans, also the worshippers of Mumbo-Jumbo, all have their God and preserve their deity. In America those of us who profess religion hold our deity inviolate. Upon God and the teachings of His Son are based everything that we hold precious and necessary to a good life. Communism has legislated God out of existence. Communism strives by force to drive God out of the hearts of men, not only our God but the gods of every other race and every other tribe. Creeping over the world is a way of thinking which denies both the existence and necessity of a God. This force is anti-God. The name of this force is communism. If this letter could be read by your colleagues in the House it would cause them to think more about this menace of communism, as I have seen it.

It has occurred to me that you might be interested in the geography of the Philippines, and what these little islands have to offer pioneering souls in the way of opportunity.

The Philippines are the largest island group in the Malay Archipelago. They were discovered by Magellan in 1521. In 1565 they were conquered by Spain. The Portuguese contested Spain's right to the archipelago until Spain and Portugal finally united. In 1577 Sir Francis Drake arrived. Thomas Cavendish's expedition arrived in 1587. The Dutch came in 1596. These expeditions were seeking trade rather than colonies. In 1762 Manila was captured by a British expedition. In 1763, by the Treaty of Paris, Manila was restored to Spain. Not until 1814 were foreigners permitted to establish themselves in Manila. It was difficult for foreigners to get trade on account of the constantly changing Spanish policy of opening ports to foreign trade and then suddenly closing the ports to foreign trade. Finally on December 10, 1898, by the Treaty of Paris, the Phillipine Islands were turned over to the United States on payment of $20,000,000.

Thus since 1898 the Philippines have been closely tied to America. The islands have wonderful natural resources and afford unlimited opportunities. The mountains are rich in minerals. Between the mountains and the sea are immense fertile plains, well watered. The average temperature is 78 degrees in winter and 84 degrees in summer. There are 7,083 islands in the group known as the Philippines. Four hundred and sixty-two of these islands have an area of 1 square mile or more. Two thousand four hundred and forty-one of the islands are named. Four thousand six hundred and forty-two of the islands are not named. The largest island is Luzon, on which Manila is situated, with 40,814 square miles. Mindanao is the second largest island with 36,906 square miles. Panay Island has 4,448 square miles. Palawan Island is next with 4,400 square miles. In 1939 the population of the principal cities were: Manila, 653,000; Cebu, 145,000; Zamboanga, 132,700; Davao, 97,000; Iloilo, 88,000; Bacolod, 58,000; Baguio, 24,120. The total population of the islands in 1939 was estimated to be about 17,000,000. The population today is estimated to be between eighteen and nineteen million.

There are many large banks in Manila, two of which are American-owned, National City Bank and the Bank of America. Freedom of the press and religion and the right of assembly are guaranteed in the bill of rights. The chief agricultural products are unhusked rice, copra, hemp, sugarcane, corn, tobacco, and manguey. The principal fruit is the banana. Other fruits are mangoes, papaya, lanzones, mandarins, chico, and oranges. Forests provide large quantities of timber for cabinet and other household necessities. Rattan wood is made into many useful articles for the home. This is a large and growing business, since the market for rattan-made articles is rapidly expanding. The mining of gold, silver, lead, zinc, copper, iron, coal, petroleum, chromite, asbestos, and manganese is extensive throughout the islands. Clay, marble, and salt can be found in abundance. It is estimated there are between 80 and 100 square miles of coal fields containing lignite and bituminous. There are many American businessmen in the islands and there will be many more as soon as machinery and equipment for contemplated new business concerns can be sent to Manila.

Americans are not wanted in India, Japan, or China. On account of poverty and disease in India and because of China's civil war, Americans are disinclined to live in or invest money in China and India. Certainly, Americans do not wish to live in or invest money in a destroyed and defeated nation like Japan. There is no hatred of Americans in the Philippines, and the Filipinos are eager for Americans to join them in their efforts to industrialize and rebuild their country. In the Philippines the corporation tax is 12 percent as compared to 38 percent in the United States. Income tax in the Philippines ranges from 3 to 60 percent (in the large brackets) as compared to from 20 to 91 percent (in the large brackets) in the United States. In the Philippines there is no excess-profits tax. Filipinos like American goods, American automobiles, American movies.

On account of the vast amount of money which was spent in the Philippines in getting ready for the attack on Japan—about $700,000,000—and on account of the huge Army and Navy installations maintained in the islands since liberation, there is more money in the Philippines today than at any time in the history of the Filipino people. The working class in the Philippines today has money to spend, and they are spending it for anything and everything that is for sale.

On account of the bombardment of Manila by the American troops in driving out the Japs, every Government building in the city of Manila was wholly or partly destroyed. The Manila Hotel is the only first-class hotel left. About 40 percent of the homes in Manila were partly or entirely reduced to shambles. Practically all of the bridges and most of the roads were destroyed or badly impaired. If all of the large construction companies in the United States were to go to Manila to rebuild the city they would have enough work to keep them busy for the next 5 years. Before the Japs occupied the Philippines there were about 50

sugar centrals operating. Today only 12 sugar centrals are in operation. Until machinery is sent to the Philippines to rebuild and repair the sugar centrals the prewar production of sugar (more than a million tons per year) cannot be maintained. The sugar production in the Philippines at this time is estimated to be less than 100,000 tons per year.

The Filipino people have an almost fanatic love for the same type of freedoms exemplified by America. They have great respect for the United States and its democratic processes. Wherever I traveled I found Filipinos of all walks of life discussing with considerable fervor and intelligence the various issues of the day. One of the most discussed subjects were the charges hanging over the head of former President Laurel, who served his people as president during the Japanese occupation. He is being charged by his political enemies with collaboration with the Japs. Laurel has been trying unsuccessfully to bring his case to trial.

Wherever I talked to a Filipino, the question always arose, "What about that man Laurel who served as President during Japanese occupation?" So many distorted statements and so much misinformation has been sent to America about Laurel, I have decided to give you some facts about Laurel and his illustrious and unparalleled service to his people. The facts which I have gathered in the Philippines will be a revelation to you.

While living in Manila during the major part of 1937 I heard Dr. Laurel speak at a public function and I was fascinated by his great learning. When I returned to Manila in March 1946, to serve as Director of Personnel, Engineer Service, United States War Department, I sought an introduction to Laurel. I left Manila February 28, 1947. During my stay in Manila in 1946 and 1947 I discussed with many people the charges against Laurel. I talked with high Government officials. I talked with members of the supreme court and former members of the supreme court. I visited in the homes of members of the Roxas cabinet and others who are close to President Roxas. I talked with the middle classes, the working classes, and with men in the streets who did not have jobs. I made a thorough investigation of the life of Laurel, particularly that part of his career when he served his people as President of the Republic during Japanese occupation. It was my pleasure to talk with President Roxas on two occasions. Once I called on him when he was taking his rest and he received me in his pajamas. I visited in the home of Elpidio Quirino many times during 1937. Also after Quirino became Vice President of the Republic I talked with him in his home on four occasions during 1946 and 1947. When I left Manila in February 1947, Mr. Quirino gave me his picture autographed "To my dear friend."

In the Philippines there are millions who believe that, intellectually, Dr. Laurel has no peer among the living or dead. Laurel's enemies will not challenge this statement. Laurel has more earned degrees (not honorary) than any other Filipino has ever received. A few of the certificates, diplomas, degrees, et cetera, which I noted on the walls of the study in Dr. Laurel's modest home are: A. B., LL. B., LL. M., M. A., D. C. L., LL. D., and Ph. D. He has attended and received degrees at the following places of learning: University of Philippines in Manila, University of Santo Tomas in Manila, Tokyo Imperial University in Tokyo, University of Paris in Paris, Yale University in New Haven, and Oxford University in England. Space will not permit my listing the honorary degrees which have been presented to him. He speaks and writes five different languages fluently.

My investigation causes me to express the opinion that no man has served his country more conspicuously and faithfully than Laurel. From 1909 until 1923 when he was quite young he served his government as clerk, chief clerk, law clerk, under secretary, secretary, etc. Gov. Gen. Leonard Wood appointed Dr. Laurel as head of the Interior Department in the famous "Wood Cabinet." From 1925 to 1931 he served as a senator in the Philippine Senate. In 1935 he was a delegate to the Constitutional Convention and he was one of those selected by the convention to write the Constitution for the Commonwealth of the Philippines, which constitution was adopted when the Philippine Republic came into being. In 1936 he was appointed by President Quezon to be Associate Justice of the Supreme Court. On December 24, 1941, after war was declared on Japan, President Quezon again appointed Laurel—this time to one of the most important positions in Philippines—the post of secretary of justice. When President Quezon was preparing to go to Corregidor because of the imminence of the fall of Manila he (Quezon) named Jorge Vargas, Quezon's most trusted and loyal friend, to be ranking member of the Quezon cabinet. Quezon also made Vargas mayor of the city of Greater Manila. Quezon sent for Dr. Laurel and told him he wanted him to accompany him in an advisory capacity. Laurel hurriedly packed a bag and was ready to go with Quezon. He wanted to remain with his people but he had never failed to answer the call of his country in time of need, and he was ready to go with Quezon on the flight to Australia. However, at the last hour Quezon decided, on account of Laurel's popularity with the Filipinos, that Laurel should stay in Manila, and he, therefore, instructed him to remain and help protect the people. Quezon took Justice Santos with him. Quezon told Laurel to do whatever was necessary to protect the people short of taking the oath of allegiance to Japan. Upon invitation from President Quezon, Dr. Laurel accompanied President and Mrs. Quezon to the boat that was to take them to Corregidor. Quezon's instructions to Laurel were given with the knowledge and approval of General MacArthur. MacArthur's instructions were that the Filipino officials could serve in the Japanese-sponsored organization in order to better protect the people, but he admonished them that they must not take the oath of allegiance to Japan, otherwise they would be shot by his order upon his return to the Philippines.

From the fall of Corregidor on May 12, 1942, until October 1943, Jorge Vargas was head of the Philippine Executive Commission. During this same period, Dr. Laurel served as Commissioner (or head) of Justice. This was the same post which Laurel held under Quezon by appointment in December 1941. In October 1943 Laurel was made President of the Republic of the Philippines by order of the Japanese who were occupying Manila. Laurel was carrying out Quezon's instructions to remain and cooperate with the Japanese in order to better protect the people. Laurel served as President from October 1943 until February 1945, when, over his protest, he was taken by the Japanese to Tokyo.

The late President Quezon was a patriot of the highest order. No man ever accused Quezon of being a traitor. When the Japs were approaching Manila, thousands of Filipinos fled to Baguio and to the mountains. It is a matter of record that Quezon, in the presence of several prominent Filipinos, requested Laurel to remain in Manila and help the people. This was a signal honor paid Laurel by the famous Filipino President. Here is further proof as to the high regard which Quezon entertained for Laurel. Mr. Sotero Laurel, a law graduate of Harvard University, and who is now taking a postgraduate course at Harvard, is the son of Dr. Jose P. Laurel. At the time announcement was made in the press that Dr. Jose P. Laurel had been selected as President of the Philippine Republic by the Japanese, Mr. Sotero Laurel was serving in an official capacity with the Commonwealth Government of Philippines in Washington, D. C. At this same time President Manuel Quezon was residing at the Hotel Shoreham in Washington, D. C. Under date of September 27, 1943, Sotero Laurel sent a letter to President Quezon, from which I quote the following paragraph:

"I am sure that Your Excellency will understand my feelings. Despite my firm belief in the honesty, courage, and patriotism of my father, I feel that I have no right, as his son, to stay within the Commonwealth Government because of reasons of delicacy and because it might be embarrassing to you and the Commonwealth Government. In this situation, I feel that I should resign, but I have thought it best to first submit the matter for your personal consideration. Anything you might decide, I am sure, will be for the best."

Under date of September 30, 1943, President Quezon sent a reply to Sotero Laurel, from which I quote the following:

"Your letter of September 27 touched my very soul. I am not convinced that your father is a traitor either to the United States or to the Philippines. I know him personally and have been closely connected with him officially for many years. I believe he is doing what he honestly believes is in the best interest of the Filipino people for the time being. After saying what I have said, it is a matter for you to decide what you should do. If you are loyal to America and to my Government, stay on the job. If you are not, resign and I will accept your resignation forthwith."

Further proof that President Quezon did not question Laurel's integrity or patriotism, and that he appreciated the service Laurel was rendering the Filipino people during Japanese occupation, can be found in the book The Good Fight which was personally written by the late President Quezon just before his death.

In February 1947, I dined in the home of one of the most outstanding Filipinos in Manila. This man held a high post under President Quezon and President Osmena. In 1946 he was appointed to a high post by President Roxas. When I asked this man what he thought of Laurel, he replied: "Laurel is one of our greatest patriots. He has devoted his life and has given the best there is in him for the betterment of his people."

I sailed from Manila February 28, 1947 Just 10 days before I left, I called at the home of Hon. Elpidio Quirino, Vice President, Philippine Republic. I was accompanied by Justice Sabino Padilla, a member of the Supreme Court of the Philippines. During our talk I showed Mr. Quirino a photograph which had been given to me by Justice Padilla. It was a photograph of three young Filipinos who were classmates and bosom friends at college. The three young men were devoted friends in youth before entering college, and their friendship and admiration for each other has remained steadfast down through the years up to the present time. These three men have been honored with high offices many times by the Filipino people. Justice Padilla served 10 years as assistant attorney general. He served 17 years as a judge of the court of appeals. He is now serving as justice of supreme court, Philippine Republic, by appointment of President Roxas. Thus Padilla served under President Quezon, President Osmena, and President Roxas. Hon. Elpidio Quirino was a member of President Quezon's Cabinet, and he is now Vice President of the Philippine Republic, having been elected on the same ticket at the last election with Presi-

dent Roxas. Dr. Jose Laurel, the third man in the photograph, was a State senator for 6 years. He was selected by the constitutional convention to help write the constitution when the Commonwealth of the Philippines was formed. In 1936 he was appointed by President Quezon as associate justice of the supreme court. On December 24, 1941, after war was declared on Japan, Quezon appointed Laurel to his Cabinet as Secretary of Justice, a very important post in the Quezon Cabinet. As has been stated, just before leaving Manila, President Quezon's last act was to designate Laurel to remain and help protect the people. The Japanese, upon entering Manila, soon learned that Laurel was the idol of his people. The Japanese wanted to win over the Filipino people to their cause, and they thought the appointment of Laurel as President would help them in this objective. The Japs made Laurel President of the Philippine Republic. As Vice President Quirino held the photograph in his hand on Sunday, February 16, 1947, he said: "Yes; we have worked hard and have gone quite far, but, my dear friend Reeves, of the three of us who started out together, Laurel has outshone us, has rendered greater service, and has gained more glory." It should be borne in mind that the foregoing statement was made by the No. 2 man in the Philippines, the Vice President of the Philippine Republic, and the statement was made on February 16, 1947, after the evidence against Laurel was widely known and discussed by all.

The people of Manila had their places of business destroyed, their homes blasted to shambles. Fathers, mothers, husbands, wives, brothers, sisters, and loved ones were killed. And yet when Laurel was brought back to Manila in July 1946, the streets of Manila were lined with countless thousands screaming words of praise for Laurel. Banners were carried by many thousands announcing "Laurel is back." Circulars were scattered throughout the entire city of Manila. Here is one of the circulars which I picked up on the streets:

"Laurel has returned to his beloved country. In times of stress he stood for us and with us. He fought for us in every step when the Japs would have totally destroyed us. When all seemed to be lost he still tried to defend us against great odds. He did all within his power to prevent a greater evil upon his beloved country and his beloved people. Most of us are alive today because Laurel was the wall that delayed our wholesale martyrdom. He is back. The least we can do is show our appreciation for him."

On August 18, 1946, the people of Laurel's home province of Batangas paid Laurel the highest honor he had received throughout his eventful career. A mass demonstration and parade in honor of Laurel took place in Manila. All Manila streets were filled to overflowing. What pleased Dr. Laurel most was the fact that many thousands of residents of Batangas came to Manila to participate in the parade. Additional thousands from farflung provinces of Llocos, Cagayan Valley, Bicol Peninsula, and Pangasinan poured into Manila. For 2 days before the Laurel parade in Manila there was a continuous stream of cars and various forms of vehicles on all roads leading from Batangas to Manila. And with tears rolling down his cheeks, Dr. Laurel said to me: "Mr. Reeves, that was and that is my answer to the charges which some have brought against me."

An unusual story appeared in a Manila newspaper. It described an imaginary conversation which could have taken place in Manila in July 1946 if President Roxas had met Dr. Laurel when he returned to Manila. Actually president Roxas did not go to the airport to meet Dr. Laurel. Here is the story which I copied from the newspaper:

"ROXAS. Welcome home, Joe. It is good to see you again. We are free, Joe! The Philippine flag flies all alone!

"LAUREL. Hello, Manoling! During my time the Philippine flag also flew alone, except in Japanese military installations.

"ROXAS. I have a Council of State.

"LAUREL. So did I.

"ROXAS. I have called into service Quirino, Rodriguez, Tirona, Yule, Zuluela Abello.

"LAUREL. So did I, and remember, Manoling, you also served in my cabinet."

In January 1947 a leading physician of Manila told me:

"During our period of reconstruction and rehabilitation, we need Laurel to guide us now as never before. President Quezon was pro-Spanish and a large number of his appointments to high places were given to Spaniards who changed their citizenship and became citizens of the Commonwealth. President Osmena was pro-Chinese because he is part Chinese. He favored the Chinese at every opportunity, and, as a result, the Chinese have a strong foothold in Manila's business world today. President Roxas is pro-American and seems more anxious to please Americans than Filipinos. The people know Laurel is a statesman, an intellectual giant, a fighter. His aims are to serve his country and his people. Filipinos worship Laurel because he is pro-Filipino."

One of the most badly damaged districts in the Philippines was represented in Congress by Hon. Jose B. Laurel, son of Dr. Jose P. Laurel. The people in this district were embittered because of the damage done to their people and their property by the Japanese. Because of the fact that his father was in Sugamo Prison in Japan, Congressman Laurel was undecided about making the campaign for reelection to Congress. Those who were trying to crucify Dr. Jose P. Laurel (father of Congressman Laurel) were bitterly opposing the Congressman. Just 1 month before the election (the same election which elected Roxas as President), Congressman Laurel launched his campaign for reelection. The charges against his father were issues in that campaign. When Congressman Laurel was overwhelmingly reelected to Congress, he stated: "My great triumph was achieved because of the great admiration which our people still have for my father."

Friends of mine in Manila told me about this campaign of Congressman Laurel. When I mentioned the subject to Dr. Laurel, he said to me: "Mr. Reeves, if you had been in that congressional district and heard the charges made against me, you would have thought I was running for Congress instead of my son. That great victory won by my son made my heart feel good."

In the campaign of Dr. Laurel's son for reelection to Congress, the issues against the father were presented to the people by the opponent of Dr. Laurel's son. The verdict of the voters speaks for itself.

When Rafael Alunan, a member of President Laurel's Cabinet, was tried in Manila in 1947, the trial was in reality a trial of Dr. Jose P. Laurel rather than the trial of Alunan. Mr. Alunan was acquitted on all charges.

An interesting report on Laurel was made by Capt. R. Espiritu, a guerrilla leader who was an operative of the Allied Intelligence Bureau. This report is on file in the prosecutor's office in Manila today. In 1944 President Laurel offered to Col. Alejandro D. Garcia the position of Governor of Nueva Ecija. Colonel Garcia was undecided about accepting the post. He told President Laurel he would like to take up the matter with General MacArthur. However, his doubts about accepting the post were dispelled when President Laurel handed him a piece of paper on which were written the following words: "My loyalty to America can only be removed by cutting off my head. (Signed) Laurel." Colonel Garcia was later taken prisoner by the Japs. The note above quoted was found by Captain Espiritu when he discovered some private papers and effects which Colonel Garcia had left behind. Colonel Garcia was working under cover, receiving instructions from President Laurel, when he was taken prisoner and shot. Supposing Colonel Garcia had lived. No doubt, some would charge him with collaboration just as some have charged Laurel. Suppose Laurel had been killed while carrying out instructions given to him by Quezon to cooperate as best he could and help protect the people. I hardly think anyone would have charged Quezon with being a collaborationist. To say that Laurel collaborated with the Japs is to impugn the motives and challenge the patriotism of Quezon.

Rafael Alunan was appointed by Laurel as a member of the Laurel Cabinet during Jap occupation. After liberation by the American troops, Alunan was charged with collaboration and treason. Alunan insisted on a trial. The same facts, the same evidence brought out against Laurel were used in the trial against Alunan. On February 26, 1947, Alunan was acquitted and completely exonerated. Alunan did not have the following which Laurel has. Laurel has insisted on a trial. The political enemies of Laurel are holding off the trial because they know Laurel will be acquitted and vindicated. The Intelligence of the Army and the Navy and the United States Office of Strategic Service have investigated and have tried unsuccessfully to pin something on Laurel. The enemies of Laurel in Manila—the political enemies who fear his increasing power and popularity—have turned heaven and earth to blacken the name of Laurel. They have all reached the same dead end of the street. The facts dug up have conclusively proven that Laurel is a true patriot and not a traitor. From October 1943, until February 1945, during the period of Jap occupation when Laurel was President, the searchlight has been turned on every move, every act of Laurel. Every document he signed and every order he issued as President has been carefully scrutinized by those who have undertaken to stop Laurel. They have given up all hope of convicting Laurel. The handful of men still fighting Laurel have concentrated their efforts on preventing the trial taking place.

It is a matter of record that while Laurel was President the Japs were insistent that Laurel arrest and punish members of the Philippine constabulary who were connected with the guerrillas. President Laurel promised the Japs that an investigation would be made, but the record discloses that no arrests were ever made. It is common knowledge in Manila that Laurel was aware that many officers in Laurel's presidential guard were active in the guerrilla movement. On one occasion the Japs insisted on arresting Major Vargas, who was one of Laurel's guards ir Malacanan Palace. Laurel declined to surrender Major Vargas to the Japs. When the Japs came to Malacanan Palace to take Major Vargas, Laurel gave instructions to the head of the presidential guard, Colonel Salgado, to line up his men and resist the Japs.

The Japs demanded that President Laurel declare war on the United States. The Japs also wanted conscription in the Philippines. In October 1943, Premier Tojo called President Laurel to Tokyo and reiterated his demands about war and conscription. Tojo wanted the Philippines to follow the steps of Burma. Laurel used all of his resourcefulness to thwart the will of the Japs. Laurel explained to Tojo that the Filipinos could not be made to fight the Americans. He pointed out that Japan would lose much and would destroy in the minds of the Filipinos the estimation of the "independence" which Japan had so graciously granted to the Philippines. With great courage, Laurel stood before Tojo and unhesitatingly and unflinchingly presented his reasons for failure to comply with

Tojo's orders. According to Filipinos who were present at the conference between Tojo and Laurel, Laurel displayed iron strength and courage in his argument to Tojo, and he finally convinced Tojo that he, Laurel, was right. After Davao and Legapi were bombed by the Americans, the Japs again demanded that Laurel declare war against the United States. Laurel called his cabinet together and advised there were three courses open. One course would be to refuse and flee to the mountains. The second course was to make a stand at Malacanan Palace with the presidential guard. The first course was ruled out, because the Japs had placed guards around the President and all members of his cabinet. Flight to the mountains was impossible. The second course would mean sure death to Laurel and every member of his cabinet. Dr. Laurel told me that death was not the determining factor that caused abandonment of the first two courses. Laurel knew that the Filipinos would suffer by his death. Laurel knew that when he and his cabinet were wiped out, the Japs would take over and govern directly, or would name some rabid pro-Japanese to succeed him as President of the Philippine Government. The third and only course left open was to "play ball" and declare a state of war by Presidential proclamation. Laurel's clever mind was too much for the cunning Japs to cope with. Laurel issued the proclamation, but added there would be no conscription of manpower. Laurel knew that a presidential proclamation recognizing that a state of war existed, without conscription of man-power, would be a mere joke. The Japs were thus satisfied but thoroughly outgeneraled by Laurel. Laurel points with pride to his next act, which was the cleverest act performed by him during his rule as President. He went on the air and by radio told the Filipino people there would be no conscription. Laurel's purpose, as his friends fully understood and as he explained to me recently, was to tie his own hands so he could not later disavow the promise he had made to his people that there would be no conscription. In all his life Laurel had never failed to keep a promise made to his people. He had an ace in the hole in case the Japs insisted on conscription. Laurel wanted to be in a position to tell the Japs that if he went back on his word to his people his usefulness as President and leader would be at an end. The Japs were again fooled by Laurel's cleverness. By Laurel's act in refusing to order conscription, the lives of hundreds of thousands of Filipinos were saved. When the Americans landed in Manila, from all directions they were met by hundreds and hundreds of thousands of Filipinos, all waving American flags and screaming with joy. One Army officer in Manila told me that if the Filipinos had had guns in their hands instead of American flags when the Americans arrived, at least 200,000 Filipinos would have been slaughtered. Another Army officer told me that Laurel's wonderful leadership saved the lives of possibly 300,000 Filipinos. Yes, Laurel fed, protected, and saved the lives of his people while he was President during Jap occupation.

Another incident during the reign of Laurel which showed the side he was on was related to me by a prominent man in Manila who is a member of Roxas' official family. Certain accused persons were brought before the bar of justice for trial. They were Japanese sympathizers. The Japanese would endeavor to have the accused acquitted or have the indictments thrown out of court. Also in some cases the Japanese were anxious that certain persons be convicted, and the higher Jap officials would talk to the judges and prosecutors. The judges and prosecutors resented this interference. Also President Laurel did not like it. President Laurel issued a circular and placed it in the hands of all Jap officials to the effect that there would be no more meddling in court affairs. When the circular was issued, Laurel was taken to Fort Santiago for questioning by the Jap military police. Fort Santiago was known as the "butcher shop" and 99 percent of Filipinos who were called to Fort Santiago never returned. Laurel's friends thought he would not return. At Fort Santiago Laurel was told to withdraw the circular. Laurel refused to withdraw the circular and he was able to convince the Japs that the circular was necessary.

During Japanese occupation a maddened guerrilla went out of his mind and tried to murder Laurel. Three shots were fired into Laurel's body and all hope of saving his life was given up. There are millions of Filipinos who believe that Laurel lived so that he might save his country. The guerrilla who tried to assassinate Laurel stated he thought Laurel was trying to favor the Japanese. The only purpose in relating this story of the attempted assassination is to bring out the fact that the chief defender of Laurel was Manuel Roxas, now President of the Philippines. General Roxas told the guerrilla that Laurel was not a traitor but a true patriot.

The Japanese offered Manuel Roxas many posts. Roxas refused to accept all offers on the grounds that he was a very sick man. The Japs went to Laurel and told him they had made up their minds to liquidate Roxas. Laurel was Roxas' friend. Laurel was alarmed over the fear that his friend Roxas would be killed. So Laurel persuaded Roxas to accept the position as chairman of the Economic Planning Board. As such he was an ex-officio member of Laurel's cabinet. The Japs were not satisfied. They had commenced to be suspicious of Laurel. Again the Japs went to Laurel and demanded the head of Roxas. The chief of the Japanese military police told Laurel that Roxas must die. It was then that Laurel showed more of the steel of which he is made. His ultimatum to the Japs was that before he would surrender Roxas, they would first have to shoot him—Laurel.

The food shortage in the islands was a difficult problem for Laurel to handle. In the provinces the production of rice had fallen down terribly. Another problem was the lack of transportation. Again Laurel called on Roxas for assistance. Laurel and Roxas worked out a plan that materially helped the shortage of food. They saw to it that the needy received rice rations. The records which I have seen and the facts which I developed while in Manila are convincing proof that Laurel was not a puppet or a quisling or a collaborationist or a traitor. He was, indeed, a great patriot. You cannot say Laurel is a collaborationist without including Roxas. You cannot say Laurel collaborated without making the same charge against Quezon, the man who asked Laurel to cooperate as best he could and help protect the people. Laurel and Roxas collaborated to help the Filipino people. During Jap occupation Laurel and Roxas worked together in many ways—and that is why, up to this good hour, President Roxas has uttered not one word of criticism or condemnation of his friend Laurel.

Finally the Japs commenced to learn the truth. They went to Laurel and told him of their discontent, dissatisfaction, and disappointment over the way he was handling affairs. They demanded that Laurel give key positions in the Laurel government to Japanese sympathizers. Laurel refused to favor pro-Japanese with appointments. He did make one or two minor appointments, but this was not satisfactory to the Japs. The Japs finally decided to take drastic action. They organized the "Makapili" which was supposed to be a military organization only. Soon the Makapili seized all civil power in a great many of the municipalities. By force the Japs took President Laurel, also his cabinet, also General Roxas, together with other ranking officials, to Baguio. At Baguio they were held as prisoners. Thereafter, with the exception of Manila, it was the Makapili which ran the government of the Philippines. At Baguio it was understood that the Laurel government would be dissolved and the government of Makapili would be created. The timely return of the American forces prevented either plan being carried out.

Laurel stood foursquare to every wind that blew. He faced one crisis after another. He never faltered. He never compromised with the truth. He never surrendered his convictions. He never failed to show the true steel in his make-up. He ranks by the side of Rizal. Laurel has just reason to feel proud of the faithful service he has rendered to his people—all throughout his wonderful life.

Many outstanding members of the legal profession in Manila have volunteered to defend Laurel—if and when he is brought to trial. Pedro C. Mendiola, a prominent lawyer of Manila, was one of the first to offer his services in the defense of Laurel. Senate Floor Leader Vicente J. Francisco is another who has offered his services to aid the defense. The Lawyer's League of Manila has announced it will aid in the defense of Laurel. Congressman Timoteo Ricohermoso of Marinduque held the rank of major in the Philippine Army. He saw active service in Tayabas, Marinduque and in Manila. He was awarded the bronze medal for gallantry in action. He issued a statement about Laurel which I read in a Manila newspaper, from which I quote the following:

"Dr. Laurel is not a traitor to his country. Wisdom dictated his course of action to 'play ball' with the vicious and cunning Japs. No one else could have done differently under the same circumstances. At heart, Dr. Laurel is a true Filipino imbued with deep-rooted patriotism and sincere love and devotion for his country. Dr. Laurel in his acts and pronouncements clearly revealed his courage, bravery and patriotism."

Laurel is not afraid to face trial. For months he has pleaded for an early trial. The politicians know that the people are solidly behind Laurel. The charges of collaboration have come from people who fled to the hills when the Japs poured into Manila. An overwhelming majority of the people who did not flee to the hills but who remained in Manila to face the Japs know that Laurel is not guilty of any charge which has been brought against him. This is not a trial of one man—Laurel. The trial concerns from 18 to 20 millions of Filipinos who benefited from the patriotic service which this patriot of patriots rendered.

An elder statesman of Manila, a man who is respected by everybody, told me that in order to appreciate the high regard in which this former Chief Justice of the Supreme Court is held, one has but to remind himself of the references made to Laurel in the classes in the universities and law colleges, in the courts of justice, and in other branches of the government. He mentioned the following references which are often quoted: "According to Laurel's Administrative Law and Practice, etc."; "Reference is made to Laurel's Cases on Political Law, etc."; "The Supreme Court, speaking through Laurel, holds, etc."; "Laurel's Procedural Reforms in Philippines," etc."; "Laurel, speaking for the Supreme Court, says."

Ariston de los Trinos, an attorney of Manila, sent a letter to a Manila newspaper. I wish to quote the letter:

"Laurel's name is linked with the progressive administration of justice in the Philippines and strengthens the faith of the people in the courts as dispenser of that justice. His pen is the mightiest and most powerful in the Philippines. His term as a member of the supreme court enhanced the prestige and honor of our courts and gave lustre and dignity to Philippine jurisprudence such as it never before enjoyed."

Law professors in the colleges and universities in the Philippines have a prepared textbook of Laurel decisions and these decisions are used in teaching law students. Some of the more celebrated decisions of Laurel are in the cases: *Planas* v. *Gil; Angara* v. *Electoral Commission; Cristobal* v. *Labrador; Calaeng* v. *Williams*. Many other noted Laurel decisions could be mentioned but space will not permit.

After the war ended Laurel was selected as chancelor of the National Teachers College of Manila, a leading educational institution of Manila. It is hardly probable that he would have been thus honored by an educational institution if taint surrounded his name.

From the Manila Bulletin of February 17, 1947, I read that Dr. Laurel was invited by the Mapa High School of Manila to make the principal address. Dr. Laurel made the address, which closed with these lines: "I plead with all students to be true to God, to country, to themselves and to their fellowmen and the consequences will take care of themselves." Many other invitations have been extended to Laurel since liberation.

In the Manila Bulletin of February 18, 1947, reference was made that Dr. Laurel was elected Honorary President of the Young Democrats League as a result of his speech before the student body of Mapa High School on February 17, 1947. I read in the Manila Times of February 16, 1947, that Dr. Laurel had accepted an invitation to speak at Bohol Junior College in Manila and would be the guest of honor on February 22, 1947. In the Manila Bulletin of February 24, 1947, mention was made that the University of Philippines Lawyers' Circle would hold its round table forum at the Manila Hotel on March 1, 1947, and that Dr. Laurel would be the guest speaker. I could cite many instances during 1946 and 1947 when Dr. Laurel was the guest speaker or the guest of honor at various functions in Manila. These invitations, these honors, put at rest the charges that Laurel was a collaborator.

My talks with Filipinos in all walks of life convinced me that Laurel is the most loved man in the Philippines. I feel that I have shown by the facts I have produced that Laurel was not a collaborator, a quisling, a puppet, or a traitor. He was selected by the Japanese to head up the Philippine Government because the Japs knew they had to select a man who would be able to guide the Filipinos. The Filipinos trusted Laurel before the Japs arrived in Manila. They trusted him during Japanese occupation. They trust and love him today. The Filipinos are better able to pass judgment on Laurel and Laurel's acts than a small group of power-seeking politicians who challenged Laurel's patriotism. My study of Laurel and my investigation of his record prompts my prediction that 7 out of every 10 Filipino voters will vote for Laurel for any office within the gift of his people. I talked with many Americans in Manila and other parts of the islands. They all readily admit that Laurel ruled justly, fairly, honestly, and with the welfare of the Filipino people uppermost in his mind at all times. They were all willing to concede that he has the most brilliant mind in the Philippines today. They also admitted that he saved thousands and thousands of lives by his courageous acts. I talked with hundreds and hundreds of Filipinos and not a single Filipino uttered a word of criticism against Laurel. They acclaimed him as their savior.

Before I close this letter I should like to briefly refer to the chief charge which was brought against Laurel—the charge of being a collaborationist. What is collaboration? Collaboration implies willingness. The facts I have gathered, and from which I wrote the foregoing letter, do not disclose any willingness on the part of Laurel to work against the interests and the welfare of the Filipino people. The Filipinos were inadequately prepared and were quickly beaten by the Japs. Notwithstanding the Filipinos were at the mercy of a ruthless enemy, they remained loyal to America. Some of the Filipinos "played ball" with the enemy because they knew that eventually they would be liberated. Some Filipinos disguised their real feelings in order to survive until liberation came. Yes; some few Filipinos "played ball" with the Japs because they thought the Japs would be victorious. Those few made a lot of money. The record will show that Laurel dealt brutally with this latter group of traitors. This small group of Filipinos who thought the Japs would win are bitter against Laurel and they have charged him with being a traitor. When the war ended Laurel was a poor man. Today he lives in a small house, poorly furnished, but his conscience is clear. He holds his head high and looks in the faces of his fellow men because his fellow men love and trust him.

On February 25, 1947, just 2 days before I left Manila, Dr. Laurel asked me to have lunch with him at a small, not-too-impressive restaurant in downtown Manila. When we walked into the restaurant all who were sitting at tables and at the lunch counter crowded around their idol, the man they loved, the man who had saved them during Japanese occupation. I was seated at a table and I waited almost 30 minutes for Dr. Laurel to join me. He just could not get away from his friends. Finally, when he reached my table and we started to have our lunch, I asked Dr. Laurel for a statement. He asked for a piece of paper and started to write rapidly and without a pause. The following is the statement which this great man handed me:

"Before the Pacific war I was an Associate Justice of our Supreme Court. After the outbreak of the war I was made Secretary of Justice and thus became a member of Mr Quezon's war Cabinet. I was to accompany him on his flight from Manila, but at the last hour he asked me to stay and help the ranking member of his Cabinet (who was his executive secretary, Jorge Vargas) protect the civilian population.

"President Quezon left the Filipino leaders behind with instructions to do their best to protect the people, and he authorized us to do whatever was necessary to this end, short of taking the oath of allegiance to Japan. This was done with the knowledge and approval of General MacArthur.

"The Filipino leaders endeavored and tried their best under the circumstances. They refrained from taking any step calculated to help the Japanese in their military objectives, and if anything was done which might give the impression of rendering aid to the enemy, this was done either under force or duress under military occupation. This is evident, for instance, in the case of the declaration of a state of war where the Filipino leaders refused to authorize conscription of the Filipinos for military purposes of the enemy. Many more instances can be mentioned.

"The fundamental objective of the Filipino occupation's leaders was to enable the people to live and to prevent their extermination by the cruel and barbarous enemy. This was not only the duty of the Filipinos to themselves, but the moral obligation of the United States after the Filipinos had been abandoned to their fate. We were faced with an actual situation, not with theories, and we did our best under God and in loyalty to our people.

"I am not insensitive to the demonstrations of affection of my people wherever I go, and I shall continue to serve them in my retirement with loyalty and courage.

"JOSE P. LAUREL."

"FEBRUARY 25, 1947."

Dr. Laurel is a deep thinker, a man of great learning, a far-sighted man. In talking to me about Russia in the early part of February 1947, he said:

"The United Nations needs oil in its machinery. It is not functioning properly. This great body can do a world of good if reorganized and made workable. Russia is not greater than the United Nations and Russia should be made to understand this in plain language. If Russia wishes to oppose all free peoples then it is better for the world to have Russia outside the family of United Nations."

Laurel's greatest obsession is his uncompromising opposition to communism. He is alarmed because a number of former liberty-loving countries are shifting or have shifted to socialism. One day when we were driving along Dewey Boulevard on the ocean front, he looked into the open sea and said:

"Mr. Reeves, communism is the greatest menace to the world today. Communism has spread throughout Europe and it is gaining rapidly in Asia. It has ruined China and reports indicate it has a strong foothold in South America. Thank God, MacArthur has not permitted it to make any headway in Japan." I told Dr. Laurel that communism would not make any headway in the United States, whereupon he added: "You Americans seem to think this Red movement cannot take root in your country because of your great wealth. Red infiltration has made considerable headway in Brazil, the richest country in South America. This should serve as a warning to America."

This man Laurel seems to have been endowed with that extraordinary clarity of vision, that vivid imagination, which is the mark of the truly great man. There is not a coarse fiber in his make-up. He is kind, humane, and quiet-spoken. He loves children. On once occasion I found him in the rose garden in front of his home. He was wearing khaki shirt and khaki trousers, watching a little girl romp and play among the flowers.

The example set by Dr. Laurel will forever stand out as a beacon light, typifying the quality and character that go to make up a great man in all senses of the word. He fought for the Filipinos before the commonwealth was established. He fought for Philippine independence. He fed, he clothed, he guided, he protected his people during Japanese occupation. Today he is using his energy and resourceful mind to oppose the onrushing tide of communism. Before the war and during Japanese occupation the name of Laurel was a living symbol of national assertiveness, of dignity and of patriotic ardor which enrich the mainsprings of a noble heritage. The war did not change the genuine metal of his greatness. Today he has more friends throughout the Philippines than he had before the Japs arrived in Manila.

Laurel has used his great talents to advance the cause of justice. He has given his all to the cause of righteousness. His only concern is the triumph of justice. He has fought against every form of oppression and discrimination. He has used his wisdom, his influence, his energy, and what material means he had to assist those who needed his help and guidance. His intelligence, his strength, his greatness has not caused him to lose the common touch. His pulse beats for the common man. He is the champion of the common man in the Philippines today. He represents the ideals which Rizal fought for. By his devotion to principle, his austerity, his refusal to compromise, his love of country, he has won millions of followers to his banner. He spent himself utterly, with never a thought of his own comfort or his own welfare. The one impelling force which has guided this man throughout his life has been his desire to help his people.

When Laurel's time has come to an end historians of the future will present the true size and stature of this great patriot. They will rank him with Rizal, Bonificio, General Luna, Mabini, and Quezon. It will be said

that his understanding mind, his profound sympathy, his human kindness, his moral courage, his iron will, his rugged fearlessness will serve as an inspiration for unborn generations to come, and an illustration of how a great personality can utilize the opportunities of the land he so deeply loved.

Whatever verdict awaits cannot disturb Laurel's conscience. Justice cannot fail this great man whose sacrificial service now shines in the fullness of its grandeur within the contemplation of a grateful people. Laurel thinks that what he did was for the best interests of his people, and he has publicly stated he would do it all over again. Such a man of steel will always remain in the hearts of his people.

This has been a long letter, Harold, and I hope that you have taken time to read it through carefully. The welfare of the Philippines and the Filipino people is still a matter of vital importance to the United States—of more importance than we may now realize. It would be a disaster to his country if Laurel's effectiveness as a leader were in any way impaired. There may be a time in the near future when the exponents of democracy will need every strong friend they can muster in the fight to keep the insidious forces of communism from spreading throughout the Philippines.

Give my regards to the staff and keep up the good work.

Regards,

P. W. REEVES.

The Budget-Cutting Fizzle

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1947

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sun of June 25, 1947:

THE BUDGET-CUTTING FIZZLE

How goes the great Republican economy drive in Congress? Representative ALBERT GORE (Democrat, Tenn.) has been keeping tab. He presented his findings in the House the other day, and they stood up well against the crossfire of the Republicans.

At the beginning of the session, the House leadership talked big about slashing $6,000,000,000 off President Truman's proposed expenditures. The Senate decided to cut only $4,500,000,000. Under the Congressional Reorganization Act the two Houses are supposed to get together early in the session and adopt a legislative budget as a guide to all appropriations and tax bills. That has never happened. The legislative budget is defunct—still tied up in conference.

Most of the major appropriations bills having passed the House, it is now possible to measure performance in that branch against the promise of a $6,000,000,000 cut. By Representative TABER'S own claim, the savings to date total only $3,700,000,000—a discount of about 40 percent.

But the really interesting part of the story, as pointed out by Representative GORE, is that the claim itself is wildly misleading. He estimates that actual reduction of expenditures amounts to $1,800,000,000. The rest of the savings are paper transactions representing no actual cut in outlays at all.

For example, the Republican leaders claim to have saved $800,000,000 in tax refunds. That is, they estimate the Treasury will have to pay out $800,000,000 less for this purpose than Mr. Truman estimated. But the Treasury's liability for tax refunds is not controlled by anybody's estimates. If taxpayers have legitimate claims, they will be entitled to collect, whether this year, next year, or some other year. Any saving here is purely on paper.

Another saving is accounted for by the House decision not to cancel $642,000,000 in Commodity Credit Corporation notes held by the Treasury. These notes represent money already spent by the CCC in pursuance of its congressional mandate. Some day, as Congress intended, the notes will have to be canceled. Carrying them on the books a little longer does not save a dollar of the taxpayers' money.

Representative GORE cites many other cases of agile bookkeeping. The House "found" $500,000,000 by figuring that the Government would sell more surplus ships than anticipated; but no expenditures are thereby cut. The House takes credit for some downward revisions in the budget made by the President himself. It commits the Government to certain expenditures, such as construction of veterans' hospitals, but postpones the actual outlay until next year or later. Other savings are made in the sure knowledge that they will be dissipated by deficiency appropriations next winter.

So the budget seems to be working out about as expected. The GOP majority has managed to hobble some valuable functions of Government, such as enforcement of the wage-hour laws, but has not begun to accomplish the spectacular cuts so gaily promised for purposes of winning the 1946 elections.

The Courier and His Creed

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, June 27 (legislative day of Monday, April 21), 1947

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most beautifully written article entitled "The Courier and His Creed," by Rev. Pierce Harris, pastor of the First Methodist Church, of Atlanta, Ga. During the many years that I have been associated with the Civil Service I have never seen such a beautiful tribute paid to the letter-carrier as is this one paid by Pastor Pierce Harris, and I particularly call attention to the fact that he signed it in his own handwriting.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COURIER AND HIS CREED

Riding recently along Peachtree one of those hot afternoons when the sun blazed down and the hot tar oozed up from the pavements, I saw trudging along the sidewalk a postman bowed over with a back-breaking load of mail. He was not accompanied by any band. He was not keeping step to any martial music. Nor was he discharging his duty to the sound of trumpets—just a postman—delivering the mail.

I remember another day, chill and windswept, with cold rain washing the sidewalks, when out on the edge of the city I saw another postman bearing about the same burden and plodding steadfastly along from house to house.

Then there came to my mind some words my wife and I years ago copied from the cornice of the great post-office building in New York, "Neither snow nor rain nor heat nor gloom of night stops these couriers from the swift completion of their appointed rounds." Checking these couriers against their creed and observing without their knowledge how nearly they came to living up to its high principles, I felt like stopping my car, getting out on the hot street, and lifting my hat in respectful salute.

So accustomed have we become to a postman recognizing his place in the pattern of living, being at the right place at the right time, and discharging his humble duty as though there depended upon its faithful performance the destiny and well-being of an entire city, we give it little thought. Yet—it is the basis of victorious living. If in the church and community, the individual citizen could bring himself to a similar height of fidelity and do humble, yet important, duties of church membership and citizenship, what a great surge forward the whole program of life would take.

When next you see a postman trudging along, remember his creed—and remember yours—and ask yourself if you are doing as good a job.

PIERCE HARRIS.

The Rescue of Europe—The Marshall Plan

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1947

Mr. KEFAUVER. Mr. Speaker, Congress is tremendously interested in the recent plan for the rehabilitation of Europe proposed by the Secretary of State, George Marshall. Congress is also interested in the reaction of Europe nations to the proposal. Under leave to extend my remarks, I include an editorial of the London Observer of June 22, 1947. The Observer states that the editorial was prepared by its editorial staff with the help of some members of the Institute of Statistics at Oxford and that the editorial staff had the benefit of consultation with Lord Beveridge, Sir Arthur Salter, M. P., and Sir George Schuster.

The editorial is as follows:

Mr. Marshall, in proposing that the United States should back a joint reconstruction program to cover all Europe, including Britain and Russia, proposed a radical departure in American policy—the financing of an international new deal. We cannot expect his proposal to be accepted by the United States Congress unless the potential beneficiaries respond with an equal readiness to depart from habit and precedent.

The joint economic program, cutting across national boundaries, which the European nations have been invited to produce, would be an audacious experiment. But without such an experiment, Europe, including Britain, is heading for economic decline. At present Europe's economy is held from a dangerous collapse only by dollar credits to some countries, which are fast being used up, and UNRRA help to others, which ends soon.

There are 350,000,000 Europeans. They live in an area which produces far less food and

raw materials than they consume. Moreover, it is wastefully cut up into a number of separate national economies. This huge population grew up and flourished in Europe during the nineteenth century because of one basic fact: It had a virtual world monopoly of industrialization and could, by trade, draw upon the food and raw-material resources of almost the whole globe.

This nineteenth-century basis of European prosperity has disappeared forever through the effects of two wars and the enormous developments outside Europe. The United States now produces more steel than the whole of Europe has ever produced, and her industrial technique is the most efficient in the world. Russia has developed a closed economy of gigantic proportions. In Asia, Japan has become industrialized and much of China's trade flows to America. Thus, Europe, her industrial supremacy gone, is thrown back on her own limited resources and those of her remaining dependencies, which lie mainly in undeveloped Africa. But Europe's population has not diminished. There are still 350,000,000 people in Europe used to a civilized living standard.

SINKING UNDER A LOAD OF DEBTS

At the same time physical war destruction has greatly reduced Europe's own productive capacity, both agricultural and industrial. Economic nationalism, so far from subsiding, has been intensified. The productivity of Europe's greatest industrial unit, Germany, was partly destroyed by war, and its recovery is being intentionally reduced for political considerations.

Finally the impoverished economy of Europe carries new mortgages—on the one hand the reparations claims of Russia, herself equally devastated by the late war, and on the other the sterling debts of Great Britain to all parts of the world. Moreover, Russia has tied much of the production of East Europe to her own 5-year plan, causing a further drain away of resources from Europe as a whole.

If these circumstances continue, it is patently clear that Europe must continue to decline. Unless there are radical changes, 350,000,000 people cannot possibly go on living in Europe even at their present reduced standards of living. All will be forced to lower their living standards even further. Many will have to emigrate or starve. The world, however, no longer contains fields for mass emigration, and people will not resign themselves quietly to starvation. Economic collapse in Europe would, therefore, lead to political upheavals of incalculable magnitude.

The economic collapse of Europe has been staved off in the last years only by running into piecemeal dollar debts to the tune of about £750,000,000 annually. Of this, only a very small part—less than £100,000,000—has been used for productive purposes. The rest has been first aid, mostly food.

HOW DOLLARS MUST BE USED

These dollar credits are now nearly used up, and Europe is faced with an inability to go on "buying" from America the food and raw materials which she needs merely for current consumption. This so-called "dollar crisis" is the hard proof of Europe's basic economic maladjustment or present inability to live unsupported.

The Marshall offer is intended to give Europe the chance to overcome that maladjustment, to change the basic conditions which at present oblige her to be a perennial beggar from the New World. Europe is offered even larger amounts of dollars, just at the moment when dollar asphyxiation is imminently threatening, on one condition: that this time the dollars should be used on a joint program that really provides a cure.

This means much more than the mere repair of war damage. It means that Europe must adapt herself to her new circumstances, change her patchwork nineteenth-century structure into an integrated twentieth-century structure, and thus be enabled to produce as much from her own resources and those of her dependencies as is physically possible. The object of the program must be for Europe, within a limited number of years, to become capable of balancing her trade account with the outside world, while maintaining a tolerable standard of living for her 350,000,000 people.

In this program of modernization the most important single item without which lasting success cannot be expected is the gradual economic integration of the participating countries. Unless this is achieved they cannot obtain the benefits of a continent-wide economy such as the United States of America and Union of Soviet Socialist Republics at present alone enjoy.

Trying to put each European country separately on its feet would, in the conditions which have developed in the last 30 years, be attempting the impossible. That is why Mr. Marshall has rightly made a joint program the condition of American aid.

This condition has acute political implications which must be faced. First, those countries which take part in a joint European economic program will, in the process, lose some of their economic sovereignty. It might be possible formally to disguise this. No explicit surrender of sovereignty need be asked for in the initial agreement. But countries pledged to adapt their economic life to a supranational program will become so interdependent in fact that their sovereignties must in part become merged. For their joint efficiency the countries within the scheme will have to exchange economic hostages; they can do this only on the assumption that they will never again be at war with one another. Such a recognition of interdependence may be historically overdue in Europe and a condition of her present survival. But it is a revolutionary step for the individual countries to take.

Secondly, no joint European program can work unless its participants are enabled to disregard the most-favored-nation clause in their dealings with each other. For trading purposes the European house must be allowed to drop its internal divisions while retaining the house walls.

WORKING TOWARD A CUSTOMS UNION

Ultimately the area of the joint program must become a currency and customs union in which goods, services, and labor can be interchanged freely in accordance with the needs of the over-all program. This, of course, could be achieved only gradually, over a period of, say, 10 years. But in the meantime there must be an intermediate period of adjustment by preferences and special tariffs. This involves a departure in favor of Europe from what has hitherto been the established American policy regarding multilateral trade. Europe, during the period in which it develops toward full customs union, would have to be regarded as an economic union "in gestation," entitled freely to assist and protect internal trade within its prospective boundaries. Without such a concession, American dollar injections into any part of Europe could not have their full effect on the recovery of Europe as a whole. America would be stifling what she intended to revive.

The draft charter of the International Trade Organization states that "the contracting parties recognize that there may in exceptional circumstances be justification for new preferential arrangements requiring an exception to the provisions in this agreement." The Marshall offer is an "exceptional circumstance."

The third and largest problem arises from the present state of American-Russian and European-Russian relations. Russia has up to now most decidedly opposed every move toward European unity. The fact that this particular European program would be sponsored and financed by America will arouse her instinctive suspicion. Without the consent of Russia, the eastern European countries would hardly be able to join the scheme.

Mr. Marshall, however, has made it explicit that the American offer includes Russia herself. It is conceivable that the economic advantages which Russia could derive from participation in the American-aid program might be such as to outweigh, in her own evaluation, her objections to the economic unity of Europe.

What are these advantages? It is hard to envisage a program which would lump Russia and Europe together in an integrated economy. It could scarcely be the American hope to create a united economy for the entire space which stretches from Brest to Vladivostok or her intention to integrate Europe into the Soviet 5-year plan.

But if Russia cannot be made a part of an economically integrated Europe, she can receive American aid within the scheme, both indirectly and directly. The scheme would have to take account of the Russian reparation claims against the ex-enemy states. If Russia agrees to European reconstruction, a reviving European economy could produce German, Italian, Hungarian, and Bulgarian reparations for Russia without collapse; a bankrupt continent could pay nothing, whatever Russia's claims.

Nor should the possibility of direct dollar grants to Russia be excluded. Clearly, America, in the present political situation, is unlikely to offer a loan to Russia, if Russia flatly opposes the Marshall scheme for Europe. But if Russia agrees to and cooperates in the project, and does not make impossible demands intended to wreck it, the political atmosphere would be electrically changed. Direct American aid to Russia would even appear probable within the framework of a scheme permitting the joint recovery of Europe, including east Europe.

RUSSIA AND THE BASIS OF PEACE

Another consideration which should not be absent from Russian minds is that if Russia adheres to the scheme, she will, as a sponsoring power, have an influence on the way it is worked. If she holds aloof, she has indeed the power to restrict the scheme to western Europe, but she would be creating the very western bloc she fears and foregoing any influence on its development.

From our point of view Russian adherence might add to the internal tensions and delays in working an already difficult scheme. But it would be well worth even that. A parallel and conjoint reconstruction of Russia and Europe would make for peace, while a reconstruction race between Russia plus eastern Europe on the one hand, and western Europe backed by America on the other, must almost inevitably turn into an armament race. Europe, moreover, is a sounder economic proposition than western Europe. The west and east of Europe are roughly complementary in their products, western Europe having the industry, eastern Europe the food. Together they can help each other tremendously, and thus the world. Their economic reunion and integration may well be the decisive factor in attaining stable peace.

Even if Russia returns a negative answer now and the joint program has to begin with the western European nations only, the door must be left wide open for the eastern European nations and Russia herself to come in subsequently.

After the present diplomatic parleys, the obvious meeting place for the first conference on the Marshall offer would be the United Nations Economic Commission for Europe, established in Geneva. Voting in

the commission is by simple majority, with no big power right of veto. It offers the ideal medium for discussing the scheme. But if Russia takes a violently obstructive attitude, a special conference of European states might have to be called.

ELECTION YEAR IN AMERICA

Whatever and wherever the conference, there must be no delay in calling it or slowness in its deliberations, for two vitally important reasons. One is the extreme physical urgency of Europe's dollar needs. The other is that 1948 is Presidential election year in the United States; no favorable decision can be expected from America during that year. Unless Europe replied in time for America to make her decision in the latter months of 1947, Europe would have to wait until 1949. And she cannot wait till then.

This leaves us with only about 3 months to agree on the essentials of the joint European program for which Mr. Marshall asks. Can a full plan possibly be drawn up during that time? How much can be achieved may greatly depend on the preparatory work which individual governments get done within the next weeks.

The great mistake which the conference must avoid is to misinterpret the whole purpose of the Marshall offer by producing nothing better than a combined shopping list of urgent requirements. The least that the representatives of countries agreeing to participate must do, if the scheme is not to fail by default, would be:

1. Principles: To pledge their countries in general terms to the principles of joint economic action in a declaration of interdependence.

2. Priorities: To decide on a hard core of productive capital investment of incontestable urgency, together with a budget of current consumption needs for the area for 1 year.

3. Funds: To estimate the total dollar requirements for a complete scheme of reconstruction and capital development for the whole participating area.

4. Administration: To outline the administrative machinery—which would necessitate a central development agency—required to elaborate and carry out the programs, insuring proper use of the credits provided.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. HARVE TIBBOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. TIBBOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement by Dr. Beatty H. Dimit, a very able teacher at State Teachers College, Indiana, Pa., before the House Committee on Education and Labor on Federal aid to education:

STATEMENT OF BEATTY H. DIMIT, LECTURER OF THE PENNSYLVANIA STATE GRANGE

Dr. DIMIT. I am Beatty H. Dimit, lecturer of the Pennsylvania State Grange. I am speaking for the grange in opposition for Federal subsidies for elementary and secondary education.

The grange, because of the farmers' dependdence on the working of natural laws, has always sensed the mutual dependence yet delicate balance inherent in the order of the universe. Rainfall and sunshine, heat and cold, birth and death, plant and animal life, insect and bird population, all are interdependent yet a balance must be maintained.

Man in all his relationships is subject to these same universal principles. Our forebears who gave us this Nation in which a higher value is placed on human life than in any other nation, recognized this principle when they devised a form of government with numerous checks and balances yet definitely interdependent.

Complementing national and State governments were established. Legislative, executive, and judicial divisions within each form were instituted. Church and state were separated. All powers not expressly given to the Federal Government were reserved to the States or to the local communities. All government was of the people, by the people, and in the interest of safeguarding the sacredness of human personality.

Always there has been a struggle between this type of democratic government and the centralized, power grasping, totalitarian form dominated by a single party or dictator.

Our Federal Constitution made no provision for the establishment of an educational system. This omission was intentional and was made out of fear of the consequences to democracy when education is controlled and dominated by the State.

Germany, Italy, France, Russia, Japan, and most South American countries have or have had state-controlled education. The results have been antidemocratic.

For this reason the grange vigorously opposes all moves toward Federal subsidies for elementary and secondary education, and toward the establishment of a Bureau of Education with a Secretary, with a possible Cabinet status, which is the ultimate goal of many organizations advocating these subsidies.

That the grange is justified in its fear of eventual Federal domination if subsidization is accepted, is proved by the experience of our farm people with so-called agricultural food subsidies, which parenthetically are really consumer subsidies but paid to the farmer.

The program of research and interstate regulation carried on by the Department of Agriculture since its inception has been most beneficial not alone to the farmers but to all consumers. With the institution of food subsidies and the action programs the deadening hand of Federal bureaucracy and control began to be felt. Fines were imposed on farmers who accepted subsidies but produced more food than the quota allotted by the AAA. In a test case brought before the Supreme Court of the United States in the summer of 1942, this highest court ruled that "The Government has the right to regulate that which it subsidizes."

This decision showed that the insights and fears of our founding fathers were well fixed, that Federal support entails Federal control. It further confirms the soundness of the grange position insisting on local control and State support of education in the common schools.

But while vigorously opposing Federal subsidization of elementary and secondary education, the grange has since its very inception consistently fought for increased education and for more adequate financial support. The need for increasing State support has been driven home to us by reason of the fact that the rural districts produce 52 percent of the children. Less than 22 percent stay on the farm and yet the rural districts must educate these boys and girls.

We have therefore learned first-hand the necessity for greater financial support and have suffered teacher shortages even before the war made the condition universal. Nevertheless, we hold that State and local support rather than Federal subsidies can adequately finance our schools and pay teachers salaries commensurate with their service to society.

Even in 1943, before the forerunner of the present subsidy bill had been formulated, the Pennsylvania State Grange in its educational report recommended that the department of public instruction raise the minimum teaching unit to $2,000 per teacher and advocated a sales tax to furnish the necessary funds.

That they have kept pace with the needs of education is proved by this further action quoted from the proceedings of the October 1946 session:

"We recommend that the minimum reimbursable unit now fixed at $1,800 be raised immediately to $2,400 and progress in succeeding bienniums to $2,600 and $2,800."

But concurrently with their insistence upon increased State support, their proposition in regard to Federal support is shown by Resolution No. 18 unanimously adopted and quoted in full from the 1946 Journal of Proceedings:

"Whereas certain groups are advocating Federal appropriations for the support of the public schools as a means of improving our educational standards, and

"Whereas we are convinced that the adoption of such a policy would speedily result in undermining local control and initiative in educational affairs and the establishment of just one more giant bureaucracy at Washington, and

"Whereas the Federal Government is now burdened by the most colossal debt ever accumulated by any nation in all history, approximately $265,000,000,000, while the fiscal affairs of practically all the States are in good condition: Therefore be it

"*Resolved*, That the Pennsylvania State Grange hereby reaffirms its long-established policy in favor of State and local control of our public-school system; and be it further

"*Resolved*, That we strongly oppose Federal appropriations for primary education, on the ground that such a departure would strike a blow at the independence and sovereignty of the States and weaken the fundamental principles underlying our dual system of government."

That the above stand is in accord with the viewpoint of the National Grange is evident from the action taken by the eightieth session of the National Grange at Portland, Oreg., in November 1946 and appearing on page 180 of the 1946 Journal of Proceedings. The action follows:

"Since the days of its inception the Grange has been a staunch friend of education. There is justification for saying that during its long career it has done more to promote sound progress in the field of education than any other farm organization in the country.

"Our public school system, which in the older States has been in successful operation for more than a century, is at once the pride of our people and one of the chief bulwarks of free institutions of government.

"At present our public schools are facing a crisis, just as they did during the inflationary conditions that existed during World War I and for a short period thereafter. The chief difficulty is that salaries of teachers have not kept pace with the rising cost of living occasioned by wartime conditions. Tens of thousands of experienced teachers have left the classroom in quest of more remunerative employment elsewhere.

"Many States and school districts have taken steps to meet this emergency. Where this has not been done, since most of the State legislatures will be in session during the coming winter, proper provision should be made to correct the situation and to do justice to the teachers, who are among our most worthy public servants.

"Your committee does not believe that the remedy for our present difficulties in the field of education is to be found in securing Federal appropriations for the support of the public schools. Our best hope of preserving American democracy lies in preserving the

independence and sovereignty of the States. If the States want to remain sovereign and independent, they must perform the functions that naturally fall within their sphere. Education is one of those functions.

"The Grange has always stood for local and State control of our public schools, because in that direction only lies the path of true progress in educational affairs. In the long run, Federal appropriations for public schools and Federal control would go hand in hand.

"Because we are against bureaucracy and all the evils that go with it and because we are opposed to the evils of Federal control of education and in favor of continued State and local control of our public-school system, we must oppose Federal appropriations for elementary and secondary education except the already existing vocational educational program."

A recent striking development in our American life, no doubt a reflection of totalitarian trends throughout the world, is the manner in which organizations are designed and set up ostensibly to serve various public interests, but in reality to control them.

Here was the United States building a series of bureaucracies, whole organizations of persons that should be engaged in productive effort which are supported by public appropriation. Infinite numbers of forms must be filled out, and infinite numbers of records must be kept and classified and regularly audited at an increasing cost.

No less an educator than Dr. Nicholas Murray Butler has stated:

"Overcentralization has taken place in education. Too many persons are engaged in supporting supervision and recording work for other persons. There has been a temptation to lay more stress upon the form of education rather than its content. Statistics displaced scholarships."

The glory of education in the United States has been the ability to reflect the needs, and ambitions and capabilities of local communities. Its success has been due to its ability to keep touch with the people themselves.

Now it is proposed to bring into the educational system of the whole United States a control, while giving the most solemn assurances that nothing of the kind is intended.

For Americans to accept the oversight and direction of our schools from Washington, which can easily follow subsidies, can only mean we have failed to learn the plainest and most weighty lessons of two world wars; likewise to tap an already overburdened Federal Treasury in the guise of aiding States and to establish another organ of bureaucracy in Washington.

A permanent movement in our educational system in that direction would effect such a great revolution in our American form of Government as to sooner or later threaten its perpetuity.

We oppose Federal subsidies and hold to local and State control and support of our public schools, since this very support and control is a phase of continuing or adult education. It is on-the-job training and education in the principles and practice of democracy itself. Furthermore, it is a tenet of pedagogy and sound education "that he who does for a pupil what the pupil can do for himself does that pupil harm."

By the same token, when the Federal Government does for a State or local community what that State or local community can do for itself, it does them harm.

Moreover, all funds expended by the Federal Government must come, in the last analysis, from taxes which the citizens of each State pay either directly or indirectly. Neither science nor the Federal Government can create something from nothing. We the citizens pay the Federal expenditures and debt. When they become too onerous, investment in and ownership of homes is discouraged. Thus we weaken the stability of the home, the bedrock upon which democratic education rests.

One of the chief arguments advanced for this bill rests on the assumption that the effectiveness of education depends on the amount of money expended. The criteria has been the cost per pupil or teacher salary rather than the product of education, the character of the pupil itself.

But while figures do not lie, they oft lead to an erroneous conclusion, a fallacy into which many educators and statisticians have fallen. Costs differ markedly. Living and housing costs differ between rural and urban areas, between north and south, between the standards of dress, social prestige, etc., required of teachers in one community but not in another.

Thus from my own personal experience as a teacher, it required almost 50 percent more to maintain a comparable academic and social standing in New York City than in a community of 10,000 or 20,000 population. The cost of raising my four boys was much more per boy in the large city than in the smaller city or rural community.

Finally it is the history of all Federal subsidies that even though started in a modest way, other demands are made, additional funds are appropriated, and Federal control increases. This tendency in the present instance is revealed in the introduction of S. 199, the so-called Aiken bill, which, going further than the present bill, provides for reimbursing private or parochial schools not to exceed 60 percent of expense for transporting pupils, for school health examinations, and for purchase of nonreligious instructional supplies and equipment.

Likewise, the Taft bill, S. 472, provides that the Federal funds may be disbursed to nonpublic educational institutions for any purpose for which State and local funds are disbursed except interest, debt service, and capital outlay. Thus Federal subsidies to elementary and secondary education may be used to further breach that vital but uniquely American constitutional provision, the separation of church and state.

In conclusion, speaking on behalf of the Pennsylvania State Grange and the National Grange, we are opposed to Federal subsidies for elementary and secondary education because they violate our democratic system of checks and balances; they can lead to Federal control and domination as experienced by our farm people under AAA. This danger of Federal control becomes more real in the light of the Supreme Court's decision when it ruled that the Federal Government could regulate that which it subsidized.

We contend that the Federal Government, with its colossal debt of $265,000,000,000, is not in a position to assume this extra burden which rightly and constitutionally belongs to the States. The States are in much better financial condition to raise the funds required for increased educational costs and higher teachers' salaries. Contrary to the oft-expressed popular belief that funds received from the Federal Treasury cost the individual citizen nothing, we indicated that all Federal subsidies must be paid directly or indirectly by us, the citizens. If postponed by borrowing, the payment will have to be made in the future, in many cases by our boys who fought in World War II.

This bill is opposed, since it must be considered as an entering wedge by which Federal usurpation of State and local responsibility may lead to the establishment of yet another huge bureau, the break-down of our established principle of separation of church and state, and the use of our educational system to instill the propaganda of a dominant party or dictator in the minds of our youth. This fruitage is only too evident in the totalitarian countries with whose ideologies we are now in a life-and-death struggle.

Medical Service Corps

EXTENSION OF REMARKS
OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1947

Mrs. SMITH of Maine. Mr. Speaker, on June 2, the House approved H. R. 3215, a bill to revise the Medical Department of the Army and Navy by the establishment of a Medical Service Corps in both the Army and Navy. The Army provisions are contained in title I and the Navy provisions in titles II and III.

It proposes to establish in the Medical Departments of the Army and Navy a Medical Service Corps, which will be composed of pharmacists, sanitary engineers, optometrists, psychologists, bacteriologists, business administrators, and similar skills, all of which have served with the Medical Department of the Army and Navy. Experience during World War II demonstrated the advisability of including these scientific and highly trained specialists of the Medical Department in a single corps.

The mission of the Medical Departments of the Army and Navy in the treatment of the sick and injured and the preservation of health in conservation of the strength of the military and naval forces entails the performance of numerous duties which do not require the application of professional technical training in medicine, dentistry, or veterinary medicine. These duties such as certain phases of medical supply, personnel management, laboratory investigation, psychiatric social work, clinical psychology, sanitary engineering, and others can be performed adequately by scientific specialists and skilled administrative personnel.

H. R. 3215 proposes to establish the Medical Service Corps of the Army and Navy with three sections initially, a pharmacy, supply, and administration section, a medical allied science section and an optometry section; however, the Secretary of War and Navy may establish such other sections as may later be deemed necessary.

The bill provides for the strength of the Army Medical Service Corps to be prescribed by the Secretary of War, and the Navy Medical Service Corps to be 20 percent of the Medical Corps of the Navy. Grades are established for the Army from second lieutenant to colonel and for the Navy from ensign to captain. A limitation of 2 percent is placed on the number of full colonels for the Army and captains for the Navy.

A chief of the corps, appointed by the Secretary of War from officers of the corps in the permanent grade of major or above is provided for in the Army title. Provision is made for the Surgeon General of the Army to designate assistant chiefs, who will be section chiefs and consultants to him in activities peculiar to that specific section.

Provisions are made for the transfer of officers from already existing corps,

abolished by this legislation, without detriment to their status, as to pay and seniority, and requirements for initial appointments are established.

The grouping of these highly skilled and especially trained individuals into one corps without lessening their individual responsibilities, will enable the respective Surgeons General to utilize more effectively and economically, these skills and training to the better advantage of the respective medical departments and the Army and Navy.

The Surgeon General of the Army and the Surgeon General of the Navy, in testifying before the committee, emphasized the shortage of doctors, explaining that this bill, if it becomes law, would be some relief—that personnel of the Medical Service Corps would carry on administratively, releasing the doctors for the practice of medicine and surgery.

Our Aged Come to Washington

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. WEICHEL. Mr. Speaker, the aged people of our country have come to Washington to personally inform the Congress of their needs and we welcome their visit. I believe that there should be old-age security as a matter of right.

The present social-security program could be greatly improved.

The most important change to make it real, in my opinion, is to pay benefits as a matter of right to every aged citizen.

To more than 2,000,000 aged American citizens the only income is old-age assistance payments, and these are made only on the basis of need. None of these toil-worn 2,000,000 aged people are permitted to feel that this meager amount is a matter of right.

Mr. Speaker, may I say that this is not a mere question of words. The cold fact that aid to the aged is not given as a matter of right, takes the heart out of every aged person. It means that rigid limitations are placed on the aged person's little income, if he is to be granted old-age assistance.

Personally, I have known an aged woman who was obliged to spend the few hundred dollars she had saved for her funeral, before she could have the so-called aid for the aged.

The relief agencies can and do pry into the little private affairs of our old people, some States requiring our worthy aged to turn over their meager savings, even a little home, household goods, and personal property, before aid is given to the aged. The field investigators snoop in the homes of these aged people to make sure the budget is as low as possible. In many States every effort is made to keep from paying the maximum to the aged, even with the Federal Government paying one-half of the amount. Such indignities brought about by the so-called means test, have no place in our American way of life.

Mr. Speaker, there are more humane ways and I believe the best way is to provide old-age security insurance as a matter of right without red tape and the indignities of the present system. The existing old-age and security-insurance program does not cover all our people who reach old age.

Therefore, I believe the present program should be changed to one of security for the aged as a matter of right.

Lt. Gen. Ira C. Eaker

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. JOHNSON of Texas. Mr. Speaker, Lt. Gen. Ira C. Eaker, one of the true pioneers of the air, retired last week from active duty in the United States Army Air Forces. The loss occasioned by his departure is a great one to the entire country. However, he is accepting retirement in order to champion an all-important cause—that of making our Nation aware of the danger we face if we allow ourselves to become weak in the air. If General Eaker succeeds in this mission, he will have made as great a peacetime contribution to his country's security as he did a wartime contribution to its victory.

His earnest philosophy is well expressed in the words he used before one of our committees recently in urging adequate provision for a first-rate air force "to have the second best air force is just like having the second best poker hand." General Eaker believes in an air force second to none so sincerely that he has seen fit to give up the second highest position in his Nation's Army air program in order to work toward that goal unhampered by the limitations his uniform and stars placed on him. This spirit of allegiance coupled with his unequaled Army achievements make him a true patriot.

The New York Times, one of the great independent newspapers of this Nation, pays Ira Eaker a deserved tribute. I hope every Member will take the opportunity to read it.

GENERAL EAKER RETIRES

One of the great commanders of the Second World War, Lt. Gen. Ira C. Eaker, will doff his three stars tomorrow and go back to mufti after 30 years in the Army. As Deputy Commander of the Army Air Forces he will be sorely missed in the high councils of security. His retirement at 51, however, is the result of a deep conviction that he can be of more service outside of uniform than in. He intends to devote himself to the cause which he cherishes so earnestly—the cause of making this Nation aware of the peril in which it stands if it allows itself to become weak in the air.

No man is better fitted to preach the gospel of peace through security and strength than Ira Eaker. The man who dared to pick up the torch of Billy Mitchell and crusade for air strength when this subject was unpopular inside and out the services is the same man who also dared greatly as an active pilot. In 1929 he flew the Army Question Mark, first aircraft to stay aloft 150 hours, refueling in flight. In 1936 he made the first transcontinental blind flight. He led personally the first raid of Flying Fortresses over Europe as commander of the Eighth Air Force. But General Eaker has qualities other than those of the moral and physical courage of leadership. He is articulate as are few other men in the armed services, with an orderly and incisive mind and the gift of persuasive and convincing speech. We are sure that the country will have reason to be grateful to him in retirement, as it has reason to be grateful for his distinguished Army career.

Address of Hon. Katharine St. George, of New York, Before Federation of Women's Clubs

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mrs. ST. GEORGE. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include a portion of an address delivered by me before the General Federation of Women's Clubs in New York City on June 26, 1947:

CURRENT LEGISLATION

It is the fashion to picture Congress in the person of a rather stout old hayseed unshaven and gray, with the expression on his face of an old sheep, being lead to the slaughter.

As a matter of actual fact, I have found no such individual in the present House of Representatives. We have a great many young men in the Eightieth Congress, all veterans of the last war; they have the enthusiasm and the courage of youth and they are insisting on going full steam ahead.

It has been said that Congress is slow; in my opinion the Congress could be criticized for acting too fast. In a little over 3 months the House has cut the budget, passed a tax bill, and a labor bill. I do not remember ever hearing of three such important pieces of legislation being passed so rapidly.

The passing of a law under our system of government is bound to take some time, and it is very right and proper that it should.

Our Government, being based on law and a written Constitution, makes it mandatory to hear evidence for and against any proposed legislation.

This is done in the committees first. Under the new Reorganization Act—and the present Congress is the first to operate under it—each Congressman serves on one committee only, except in the case of the Committee on Un-American Activities, and the Committee on the District of Columbia; members of these two committees can serve on another committee as well.

The fact of belonging to one committee has the great advantage of giving a member the chance to familiarize himself with his subject and to become a specialist in it. In this age of specialists and in this age of size (everything is colossal, especially the Government of these United States) this is perhaps a good thing.

I feel that we have started in on an era of reform. I think that most of our current legislation is slanted in that general direc-

tion. The American people are slow to anger and of great kindness, but ever so often they demand a thorough cleansing of their body politic, and they are very definitely demanding it today. They are impatient at any delay.

They want relief from the twin burdens of high taxes and high costs. The basic reason for both is the high cost of government. The cost of government has gone up 460 percent since 1939.

The high cost of government is one of the major factors in the high cost of living. Taking into consideration all taxes paid—Federal, State, and local—the average wage earner is working about 1 day out of every 3 for the Government. That is an intolerable burden on any economy.

This year's Federal budget, as submitted to the Congress by the President, is over three times what the last peacetime budget was. Who pays to support the Federal Government? Where does it get its wealth? The Federal Government does not produce one dollar and we should know that. The Federal Government, all government for that matter, is paid for by the average citizen, not by the multimillionaire. If every large fortune in the United States were confiscated tomorrow, it would keep the Federal Government going for only a few weeks.

No, it is the average man and woman who has his or her tax taken before he or she gets the pay envelope, who is supporting the thirty - seven-and - one-half - billion - dollar monster.

How does this affect prices? It is so simple that even a child can understand it. It is an inevitable spiral, a chain reaction. In order to pay more to the Government we must earn more; in order to earn more, wages must be raised.

The extent of wage increases is shown by the fact that average weekly earnings take-home pay increased from $24.83 in August 1939 to $47.47 today. The latter figure is for a 40-hour week and is actually the same as the wartime peak for a 45-hour week. No one, of course, wishes to deny any merited wage increases, but to argue that substantially higher wages can be paid without affecting prices is just plain nonsense. The important thing about a dollar received in wages, is how much will it buy?

Taking one of our key industries as an example, United States Steel, the other day, raised their wage scale 15 cents an hour. This will increase the cost of production $75,000,000 per year. Where is this money coming from? From the consumer; and it has to be passed right along the line to make up for the higher taxes that result from the higher cost of Government. These same higher taxes necessitating high wages, so that the workers in turn can pay for this Government.

The farmer also has to pay more and higher taxes. True, he has had subsidies, but again where does the money for these subsidies come from? Right out of his own pocket, of course. Food will cost more when it costs more to produce, and is scarcer because we are trying to feed the world. A world starving as a result of two world wars in half a century.

Reckless and ill-timed buying by Government agencies of food for foreign relief, resulted in pushing up, or keeping food prices up. An example was the action of the Commodity Credit Corporation when it purchased 19,728,647 bushels of wheat on one day, January 20, 1947. That resulted in an almost instantaneous increase of about $1 per bushel in the price of wheat. It should be remembered that food accounts for more than 40 percent of total cost of living index figures.

The big question is how to bring this Government down to what one of my southern colleagues calls "frying size."

The job of passing legislation to curtail extravagance and waste is fraught with political pitfalls, one has to have courage to do the job; your present Congress has shown that courage already, many Members have had their homes picketed, they have been abused and insulted by pressure groups. One new Member made the best reply to one such group who promised to see that he would be defeated if he ran again, he said: "Don't threaten me with votes," that is the spirit we need if we are ever to reform abuses in Government, if we are to truly represent the people who sent us to Congress, we must have courage to do what we believe to be right.

The legislation that has been passed, the tax bill, labor bill, Greek-Turkish relief and Greek-Turkish loan, all are highly controversial. The present cuts being attempted in the various appropriations bring forth loud cries of agony from those living off the Government.

We come up against the interesting fact of the Civil Service Commission, requiring $24,900,000 additional money for the purpose of investigating and dismissing disloyal persons on the Federal pay rolls. What a farce to give an agency that has been so lax or so inept, more money to get rid of people that should never have been put on the Federal pay roll in the first instance.

Finally, I want to urge you as women to take a more active part in your Government, by running for public office. It is not all fun, but we women of America have got to do our share and not expect to have everything handed to us on a silver platter. No nation in the world has done so much for its women, and no women in the world owe so much to their country.

It is truly shocking that we have only seven women in the House of Representatives, and none in the Senate, and no one is to blame for this but the women themselves.

Some English ladies came to interview some of the women in Congress the other day, and one of them said to me, "Don't you find that you have to educate your men?" I said, "No, I find that we have to educate our women."

Women have a great contribution to make to Government. First of all, in most cases, they cannot take up a political career until after they have brought up their families, this gives them a mature, as well as a maternal viewpoint that is invaluable. They also stand for the family, which is the greatest political unit of all. They are greater individualists than men, which at times serves as a useful break on the herd instinct. And, in the field of economics, women can make a very real contribution, they control 80 percent of the private wealth of the country as proved by their income-tax payments. They live on and regulate the family budget, they know full well that evtravagance and waste spell ruin in the home and in the Nation.

You cannot successfully tinker with the laws of nature, for in the end nature will get her revenge with interest.

You cannot tinker with economic facts, supply and demand, production and costs; without these same laws asserting themselves to the confusion of the individual.

We must reduce the cost of Government first, because Government produces nothing. We must increase our productivity now more than ever when we are undertaking to care for most of the world. Our motto should be that we will support no drones and no parasites in or out of Government.

The laborer is worthy of his hire; no more, no less. Prices will be forced down automatically by production. Wages will be kept high by production and expanding markets.

The legislation before the Congress now is merely the tidying up of the last appropriations, etc., before adjournment. The big bills have all been taken care of.

Your Congress has worked with unusual speed and, I might add, with great courage.

We are the children of revolutionists and pioneers, if we are to progress we must practice eternal vigilance and self-control. We must discipline ourselves, because we do not tolerate any other kind of discipline.

No one can take away our freedom. But we ourselves will lose it if we are too lazy to assume our responsibilities.

Labor Bill Veto

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Hon. FRED A. HARTLEY, Jr., chairman of the House Committee on Education and Labor:

Last Wednesday, at Princeton, N. J., President Truman said he had not read the Taft-Hartley bill. He said he had not studied arguments for or against the bill.

Yet, less than two days later, on Friday morning, he vetoed the bill, and with his veto submitted to Congress a message of 5,500 words.

Who wrote the veto message? Certainly the President did not. The President, I think, is an honest man. But the veto message is studded with misrepresentations, half-truths and distortions.

They are the same misrepresentations, half-truths and distortions that left-wing lawyers for the CIO and left-wing lawyers for the Labor Board have been circulating for weeks.

Without taking time to study the volumes of evidenee that committees of Congress received during their long hearings and evidently without even reading the debates in Congress on the bill, the President has swallowed whole what the left-wing lawyers fed to him, and has adopted their extreme, untrue assertions.

Extreme New Dealers made every one of these assertions in the halls of Congress while the Taft-Hartley bill was under consideration. Congress debated every one of them, considered them, weighed them, and by tremendous majorities in each House, rejected them for what they are—false and untrue. And far more Democrats, members of the President's own party, voted for the bill than voted against it.

The Congress that passed this bill believes in collective bargaining, believes in the right of workers to organize, believes in the trade-union movement and wishes it to grow and develop on a sound basis. It passed a good bill, a fair bill, and one that, far from undermining the Wagner Act, strengthened it, gave workers greater protection under it, and made it work in the public interest.

Now, why did the President veto this bill? The answer is in the veto message, camouflaged in a mass of double-talk and innuendo, but there nevertheless.

In brief, the President has surrendered to the New Deal politicians. He has surrendered to the Wallaces, the Peppers, the Marcantonios of the once great Democratic Party; and he has given his blessing to the unholy alliance by which they, conniving with unscrupulous labor leaders, seek to regiment the working men and women of our country, to exploit them for political and personal advantage, to dictate to them how they shall vote, and to use their money for objects that many of them oppose.

Repeatedly he complains that the new act gives workers new rights to vote by secret ballot upon matters that concern them. That is the democratic way. But it is not the New Deal way. The New Deal way is to

dragoon the workers, and to deliver them, bound hand and foot, to corrupt politicians and to unscrupulous labor bosses. The current scandals involving the corrupt Pendergast machine in Kansas City, to which the President is so loyal, illustrates the New Deal way.

He complains that the new act forbids unions to use members' dues to support political candidates whom the members may oppose, just as it forbids corporations to use stockholders' money to support candidates whom the stockholders oppose. To strengthen this complaint, he comes to the far-fetched conclusion that this clause might infringe upon the freedom of the press. But he knows, or ought to know, that a clause like this governing corporations has been on the books for 25 years. Had he paid the slightest attention to what supporters of the bill had to say, he would have known this assertion was groundless. But he did not care about the facts. Giving the workers a new and real political freedom touches the President and his New Deal satellites in a tender spot. Any reason for vetoing this clause was good enough for the President.

Another indication of the President's real motive in vetoing this bill we find in his strictures against those clauses that rid the labor movement of Communist influence, domination and control. These clauses, too, touched the President's left-wing friends in a tender spot. So repudiating the majority of the Congressmen in his own party, he gives his blessing to the specious arguments by which the fellow travelers in the labor movement have tried to save their necks.

Again, he complains of clauses that give union members the right to know what their leaders do with the members' money. Is he fearful that members will object to unons' using their money, not for their benefit, but for the benefit of left-wing politicians and of labor racketeers?

Yet again, he complains of abolishing the closed shop and limiting the grounds on which unions can deprive workers of their livelihood. He thus betrays his interest in continuing the power that New Dealers and labor racketeers now have over unionized workers, and particularly their power to dictate the workers' politics.

The President omits one assertion with which his left-wing friends have attacked the bill. He does not call it a "slave labor" bill. This is understandable in view of the President's own proposal last year that we draft workers and compel them to work a bayonet point—the only "slave labor" proposal to come before Congress in 100 years.

The President argues by assertion. He says the bill is inconsistent with "principles of our democratic society," that it leads toward "a totally managed economy," that it would "weaken our trade-union movement," and that it is "a clear threat to the successful working of our democratic society." The President does not say how the bill would have these results, and he cannot, for nothing in the bill supports what he says.

But even so, who is best qualified to judge the effects of the bill—the President, who had not even read it Wednesday night, or the more than 500 Senators and Representatives who spent months studying the problems and weeks debating the clauses of the bill, and who, every time it came before them, voted for it by tremendous majorities? Or does the President imply that only he, of all the people concerned with this bill, has the interests of our country at heart? Or does he think that Members of Congress, elected last year, do not know what the people want?

No; he knows better than this. But he puts his faith in the power of big city politicians, Communists, fellow travelers, and labor racketeers to dragoon the workers and to deliver their votes. What he overlooks is that the workers themselves have tired of regimentation, and that millions of them voted for a change last year.

Let us look at some of the things the President says. He complains that the act makes the Government "an unwanted participant at every bargaining table." Does he not know that the Government has been at every bargaining table for the past 12 years, but on only one side of the table—the union's side?

He says that cooperation between management and labor "cannot be achieved by force of law." Is he, then, suggesting that we repeal the Wagner Act, which for 12 years has exerted force of law upon one side, but only one side, of the labor-management relation? Is it not better, if we believe that the force of the Wagner Act promotes industrial peace, to bring its pacifying influence to bear upon both sides?

The President, of all people, talks of leaving collective bargaining to the bargainers and against bureaucratic procedures in collective bargaining. Is his memory so short that he does not recall that his meddling, and the meddling of Hatless, Hapless Henry Wallace, his then Secretary of Commerce, and the meddling of his fact-finding panels, more than anything else, were responsible for the disastrous strikes of 1946, and for the inflation that followed them?

Does he not know that, as well as the Wagner Act, other laws, including the Wages and Hours Act, the Walsh-Healey Act, and the antitrust laws, govern the terms of collective agreements? Does he wish to repeal them all? The only new limit that the Taft-Hartley Act puts on bargaining is one that restricts the power of labor bosses to deprive a man of the right to work upon arbitrary or fictitious grounds.

He says that if no-strike agreements become binding upon unions, then unions will not agree not to strike. If such agreements do not mean anything, then of what use are they to employers? Of what use are they to employees who want to work, not to strike? Of what use are they to the public, which wants stability and peace, and the output and low prices that go with stability and peace?

Here is an interesting thing. The President talks of terrible things that, according to his left-wing lawyers, might, perhaps, possibly, maybe, happen under the language defining "feather bedding." He says this definition might outlaw agreements concerning safety, rest periods, and other legitimate practices. The Taft-Hartley Act does not define "feather bedding." The original Hartley bill did. But the definition was deleted in conference, and does not appear in the act the President vetoed. One wonders, more and more, if the President read the bill, and if so, which bill.

Another thing the President complains about is a clause saying that so-called welfare funds must be used for the benefit of the workers for whom they are intended. This is an odd complaint. It follows the pattern that the President, through his Secretary of Interior, established in settling the coal strike last year.

In part 3 of the veto measure, we find the President's left-wing lawyer friends weeping over the effect of the Taft-Hartley Act upon employers. It seems strange that they should be so saddened by things that employers themselves have not complained about at all.

The clauses the President complains about here substitute for the empty promises of the Wagner Act a real right of workers to select bargaining representatives of their own choosing. Employers far and wide, and workers by the thousands, know from experience that the New Deal policy of forcing upon workers unions they do not want does not promote industrial peace. The Taft-Hartley Act lets workers do their own choosing.

The President professes to fear that thousands of minor grievances, instead of being settled in established grievance procedures, will result in a multiplicity of lawsuits to harass employers. Nearly everyone, except, it seems, the President, knows that no one can go to court if another method of settling a dispute exists by contract.

Sometimes directly, sometimes by sly misstatements the President, following the technique of his left-wing friends, misrepresents many other clauses of the bill.

He says unions will be subject to suit for acts of violence by members, wildcat strikes by members and other unlawfulness by members. That is false. The act clearly says that unions shall be responsible only for acts of their agents. If the President does not know the difference between a member and an agent, his left-wing lawyer friends surely do.

He says an employer can fire a man for union activity, pretending it was for cause. This is false. The Labor Board can decide, in every case, why the man was fired, and reinstate him if he was fired for union activity.

He says the act reduces the responsibility of employers for unfair labor practices committed in their behalf. This is false. Employers are fully responsible for what they and their agents do, but the Board no longer may hold them responsible for things they did not do, did not authorize, or, indeed, forbade.

He says the provisions enabling the President to enjoin for 80 days strikes that imperil the public health or safety would authorize "inequitable injunctions." This is false. It is only when the President and the courts agree that an injunction should issue, that a strike can be enjoined. If the President cannot trust himself to be fair, he surely can trust the courts.

He says this procedure would be "ineffectual." The President used a similar one in the coal strike last year. It worked, although not to the satisfaction of the President's left-wing friends whose views he now adopts.

He says the strike vote procedure that the act calls for in emergency strikes is like that provided for in the War Labor Disputes Act. This is false. Strike votes usually took place under the War Labor Disputes Act before serious bargaining began. Under the Taft-Hartley Act they are upon the employer's final offer, and after each side has had an opportunity to fully present its position to the workers.

He says the act operates upon workers and employees. This is false. The President slyly uses the words "workers" and "employees" where he ought to say "unions" and "labor leaders." It is only unions and their agents who come within the prohibitions of the act. The act forbids them to abuse their powers in such a way as to injure "workers" and "employees." He says the act imposes on unions "burdensome reporting requirements" not suffered by employers. This is false. Employers already, under State and Federal laws, including the income tax laws, are required to make more, and more "burdensome" reports than unions must make under this act.

He says the act weakens "the protections afforded to the right to organize. This is false. The language of the original Wagner Act protecting that right from interference by employers is in the new act. If the President means that employees no longer have the "right" to be beaten up to force them into unions, he is correct.

He says the act will injure "smaller unions far more than larger ones." This is false. It injures no legitimate union, large or small. Many of its clauses, smaller unions asked for. These clauses forbid the Labor Board to annihilate small unions, as it has done in the past.

He says that it will force unions that have Communist officers to strike instead of going to the Labor Board. This is false. The unions can get rid of their Communist officers—an alternative distasteful to the President and his left-wing friends, but to the advantage of workers whom they wish to exploit.

He says that separating the functions of the Board would be "burdensome and unworkable." This is false. Having one Board as prosecutor, judge, and jury has proved unfair and unworkable.

All the way through, the veto message is the same—double talk, sham, distortion, abuse; farfetched, strained, and tortured interpretations of clear and simple clauses; hysterical grasping at any argument, however invalid, to thwart the will of Congress.

The truth is that the act is a good one. It reflects the considered judgment of 400 of the 500 Republicans and Democrats in the House and Senate. Many of its clauses, Congress has considered more than once. Some of them, William Green, himself approved when they appeared in a bill that, in 1940, a Democratic House of Representatives passed by a vote of 2 to 1.

The act is designed, in the interest of all our people, and in the interest particularly of our working men and women, to promote industrial peace, not politics; to provide real, not sham protection for organizing and collective bargaining, and to strengthen the Wagner Act and make it work.

In vetoing the bill, the President was true to the tradition of one-man rule that the New Deal fostered in our country for 14 years. He was true to the policy of corrupt politicians and left-wingers to regiment and exploit our working people. But he was false to the great majority of his own party in Congress, false to the people as a whole, false to his pledge 6 months ago to cooperate with Congress, and false to his duty, under the Constitution, to let Congress legislate.

GI Bill of Rights

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to revise and extend my remarks, I desire to include in the RECORD a statement that has been sent to me by the Catholic War Veterans Post, No. 606, of Belleville, Ill. I agree wholeheartedly with this veterans' organization that the Congress should restore the full benefits provided by the original GI bill of rights.

A BREACH OF FAITH

The amending of the educational feature of the GI bill during the closing session of the Seventy-ninth Congress was one of the most flagrant violations of confidence in the history of our country. This breach of faith activated in the amending of the GI bill, insofar as it provided, for Government subsistence, to those participating in the apprentice and on-the-job training program and the educational program, has upset the economic apple cart of large numbers of vets who laid their plans on the terms of civil occupation.

Lives were ordered and visions directed toward the future on the basis of legislation existing at the time its glowing picture was painted to the boys upon their separation from service. The action of the Seventy-ninth Congress encouraged by the Veterans' Administration, most certainly has disrupted the vets' entire thinking and have them questioning the alleged generosity of veteran benefits that were so widely ballyhooed. New fields of employment, forced decisions to abandon college courses—yes, a complete new start has been the assignment this revision gave the vet.

The intent of the original legislation was to encourage the returning veteran, man and woman, to complete their education—the result of this amendment, violating the original intent, is to discourage the vet in this desire. The intent of the original legislation was to encourage the returning serviceman to enter apprentice training or on-the-job training despite the lost opportunity, and advanced age, caused by service to his country. Congress by its amending action has shattered the hopes, weakened the confidence, and undermined the foundation of all veteran legislation. It committed a serious breach of faith with those who served.

The program of CWV for 1947 contemplates encouraging the Eightieth Congress from the day of its opening session in January to reestablish those features of the GI bill ruptured by the amendment and thereby proving to those who served that the Nation is truly grateful.

Less Oil for Export

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. WEICHEL. Mr. Speaker, the House has extended to January 31, 1948, the President's authority to control or ban the export of petroleum to meet a serious emergency.

Since January 1, 1946, and while the President had the same authority he permitted gasoline and petroleum to go out of the United States for foreign nations, to May 1, 1947, about 191,000,000 barrels of gasoline and petroleum products with some 600,000 barrels of gasoline alone being carried to Russia from Los Angeles in lend-lease ships paid for by the citizens of the United States since January 1947.

Of what good is this further vested authority when it has been utterly ignored for nearly 2 years. There must be positive bans and restrictions by the Congress to stop the flow of gasoline and petroleum to foreign nations. The President should not have the continued discretion to export gasoline and petroleum. The Congress should take quick, positive action banning gasoline and oil shipments from the United States to foreigners.

Mr. Speaker, I have introduced the following bill:

A bill to control the export to foreign countries of gasoline and petroleum products from the United States

Be it enacted, etc., That no gasoline, Diesel oil, bunker oil, lubricating oil, nor any petroleum products whatsoever, shall be moved or transported from the United States to a foreign country, unless the Commerce, Navy, and War Departments shall certify in writing that any such gasoline, Diesel oil, bunker oil, lubricating oil, or petroleum products to be moved or transported from the United States, will not prejudice nor impair the national defense nor the continuous nonrestricted use of gasoline, Diesel oil, bunker oil, lubricating oil, or petroleum products by the people of the United States.

Give the Law a Fair Trial—Amend if Necessary

EXTENSION OF REMARKS
OF
HON. JOHN M. ROBSION
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. ROBSION. Mr. Speaker, there has been so much misrepresentation and so many misleading statements made about H. R. 3020, the labor-management relations bill, by the President in his message, statements over the radio and in the press, that I feel it not out of place to review some of the important provisions of this bill and the very careful consideration it has been given over a period of 5 months by appropriate committees of the House and Senate and by the House and Senate.

On June 23, the Senate, by a roll call vote, passed the bill over the veto of the President by 68 to 25. On last Friday, June 20, the House passed the bill over the President's veto on a roll call vote by 331 to 83. Only 71 Democrats voted to sustain the veto. 106 Democrats voted for the bill and against the President's veto. I do not recall when a President was so overwhelmingly repudiated by his own Party. This is more unusual because the President, in a 5,500 word message, denounced every part of the 30-page printed bill. It was all wrong according to the message. There never was a message that contained so much misrepresentation, misstatement of facts, illogical and misleading conclusions as this veto message. Many persons are convinced that the President never read the bill and did not, in fact, write this veto message. It clearly is a partisan political message and many believe that it was largely written by CIO and other labor lawyers. According to press reports the President stated on Wednesday, June 18, that he had not made up his mind on the labor bill because he had not read it, but on Friday morning, June 20, his long veto message, denouncing every part and provision of the bill, was sent to the House and Senate. He did not have time to read and study the bill or to write the message. The CIO has taken the lead in denouncing each and every provision of the bill and denouncing all of those who favored the bill.

WAS LEGISLATION NECESSARY?

The President, in the opening part of his message, uses this language:

I share with the Congress the conviction that legislation dealing with the relations between management and labor is necessary. I heartily condemn abuses on the part of unions and employers, and I have no patience

with stubborn insistence on private enterprise to the detriment of the public interest.

Government statistics show for the 6 years next before the passage of the NIRA—Blue Eagle—in 1935 in this country we had on an average per year not more than 700 strikes in which not more than 300,000 workers were involved. However, each year since that time, there has been a steady increase in the number of shut-downs and the number of workers involved. The latest statistics available are for the year 1946. They show there were 4,985 strikes in that one year involving several million workers, with the loss of 119,000,000 man-days of work. In some large industries we have had 2 within a year and others threatening. These do not include the immense number of workers whose plants or shops were shut down by reason of these strikes.

It is difficult to estimate the loss to workers, to the employers and the American people as a whole. This loss runs into many billions of dollars and great inconvenience to the American people.

I have always believed in the right of workers to organize, to bargain collectively and to strike where it is necessary to secure justice. However, I believe that strikes should not be employed except as a matter of last resort. I helped to pass the first law giving the right of workers to organize and bargain collectively and to preserve their right to strike. I have not changed my position. No one, through the years, has been more consistently friendly to those who toil than I have.

You know, I was not born with a silver spoon in my mouth. I was born the son of a poor tenant farmer, and my parents died before I was 16. I worked for many years on the farm, by the job, in railroad shops, malleable iron works, sawmills, and at anything I could find for my hands to do. Eighty or 85 percent of the Members of the House and Senate likewise helped to make their own way in early life by manual labor and I think we know something about the problems of those who toil and we are deeply interested in their problems.

I helped to pass the Railway Labor Adjustment Act and it has now been on the statute books for many years and it has worked the best of any labor law that has been passed by Congress. In 15 years, they have had only one strike. Two of the 20 brotherhoods engaged in a strike for 2 days or less. The other 18 brotherhoods, under that act, submitted their differences to voluntary arbitration.

The President, in his message, agrees with the American people and many of us that there are three groups involved in this important legislation:

First. The workers;

Second. Those who invest their money in industries and business enterprises to create jobs; and

Third. The American people as a whole.

Of course, we recognize how deeply labor and management are vitally interested in this legislation but the American people as a whole are likewise interested. The American people as a whole include labor and management and are the consumers of the products of labor and management.

I know of no bill that was more carefully and thoroughly considered than H. R. 3020, the labor-management bill, and no important, controversial legislation that received such overwhelming support. This would indicate that there was a universal demand from the American people as a whole for the Congress to pass legislation that would, if possible, improve the relations between labor and management in industry.

BILL WAS CAREFULLY PREPARED AND CONSIDERED BY HOUSE AND SENATE

An overwhelming majority of the House and Senate fully appreciates that labor, management, and the American people as a whole each have rights that should be and must be respected and protected. No one could be more sincere to protect the rights of the workers of this Nation than myself. The record that I have made through the years establishes that point beyond question. At the same time I would be false to my oath of office if I was unwilling to give just and fair treatment and no more to those who invest their money and create jobs and also to the 140,000,000 Americans. With this purpose in mind, the Committee on Labor, for 7 weeks, heard witnesses testify on this subject for or against the bill. Representatives of labor and management and scores of others appeared and expressed their views on the bill. Then the bill was considered at length by the committee. Nineteen members of the Labor Committee which included three or four members of one of the great national labor unions voted to report this bill favorably and only three members voted against the bill. This bill then came to the House where it was read word for word and line by line. Many amendments were offered and perhaps more than one hundred speeches were made on the bill and amendments. I recall one of the able speeches in favor of the bill was made by a Member who belongs to the American Federation of Labor. Some of the amendments were adopted and others were defeated.

On a roll call, 308 Members voted for the bill and 107 against it. You can see at once it passed the House by nearly 3 to 1. The bill then went to the Senate where it was considered by the Senate committee and after several days of hearings and consideration, it was reported to the Senate. The bill was approved by a record vote in the Senate of 54 to 17, more than 3 to 1. There were some differences between the House bill and the Senate bill as usual. The bill was then referred to a conference committee made up of five Members of the Senate and five Members of the House. These 10 able experienced men, Democrats and Republicans, spent about 10 days considering the two bills. They finally worked out a compromise bill which was approved by 7 of the 10 members of the conference committee. Two of these seven were Democrats. In fact, in practically all of these votes a majority of Democrats as well as Republicans voted for the bill.

The House first took up this compromise bill and passed it on a record vote by 320 to 79. The Senate adopted the compromise bill by a record vote of 68 to 24. Of course, during all of this time, Members of the House and Senate were interviewed by representatives of labor, management, farmers, veterans, and other groups of the Nation, and many telegrams and letters, for and against, were sent to them. Then the bill went to the President, and he comes along with a political veto and denounces the bill from top to bottom—a bill that he had never read or studied, but the Members of the House and Senate had made a most careful study of the bill over a period of 5 months, and the House passed the bill by a vote of 331 to 83 over his veto. The President, through his appointive power and other great powers, can wield a tremendous influence in the House and Senate if he has right, justice, and reason on his side. Only 71 Democrats voted to sustain the President on his veto. One hundred and six Democrats voted to override his veto and pass the bill. About one-half of the Democratic Senators voted against the President on the veto. The fact that Democrats and Republicans in the House, by a record vote of 4 to 1, passed the bill over the President's veto, and the Senate did likewise by a vote of nearly 3 to 1, must lead honest, sensible people to believe that there must be a great deal of merit in this bill, and they must know that it is not a slave bill and will not be unfair to labor, management, or the American people.

The bill must be based upon an informed opinion on the part of the House and Senate and based upon a desire to do the just thing and the right thing for labor, management, and the American people. There never was a bill in all of my experience and service in the House that received more thorough and sincere consideration than the present bill. Although the President and the American people said that some improvement should be made in our management-labor relations laws, I regret to say that the Congress did not receive any cooperation from the leaders of labor. Some of them did as they have always done for a number of years now and that is to denounce every effort made to improve management-labor relations.

Although strikes have been on the increase and reached the high-water mark in 1946, with 4,985 strikes involving millions of workers and with 119,000,000 man-days of labor lost by workers involved in these strikes, the Congress was disappointed that in view of the President's statement that legislation was necessary, yet in his 5,500-word message he made no suggestion whatsoever as to what changes should be made. He claims now, with Henry Wallace barking at his heels and with a threat of a third party, that this bill was unfair to labor and management. It has only been about a year ago that the President rushed to Congress one day and demanded they pass a bill authorizing him to put the railroad workers in the Army and subject them to Army court-martial regulations if they went on strike, and on that he misled the Congress that the

strike was on, and we were confronted with a national disaster. It turned out that the two railroad unions that had threatened to strike had called off their strike and were willing with the other 18 brotherhoods to arbitrate their differences with railroad management.

The President's antistrike railroad bill was the most vicious of any bill that has been presented to Congress during my service. I said on the floor of the House that the President's veto of the tax relief bill and the veto of the labor bill was to stop the Honorable Henry Wallace and a third party. It certainly is bad to play politics with such an important matter as this, but I believe that is the very thing that was done.

CONCILIATION, MEDIATION, AND VOLUNTARY ARBITRATION

The railroad workers are not included in this bill. The relations between railroad workers and railroad management are governed by the Railway Labor Adjustment Acts. The original act was passed about 1925. The central points in that act were that the railroad workers had the right to unionize, select their own bargaining agents and bargain collectively with railroad management.

Conciliation and mediation boards were set up to hear disputes between labor and management and to aid them in adjusting their differences and also to encourage voluntary arbitration in the settlement of these disputes and it provided for a cooling-off period of 60 days, giving the representatives of labor and management and the conciliation and mediation boards time to work out and settle amicably the disputes. That has worked very well. While this bill retains the essential rights of labor in industry, it also, in the main, follows the Railway Labor Adjustment Acts. We cannot help but believe that if labor and management will use common sense and friendly cooperation, this bill will prove to be quite an improvement over our present labor laws.

THIS IS NOT AN INJUNCTION BILL

We have pointed out that the central purpose of this bill is to settle the differences between labor and management by collective bargaining and through the orderly processes of conciliation, mediation, and voluntary arbitration. I doubt if Congress has the power to force labor and management to arbitrate. This bill does not undertake to force them to do so. The use of the injunction in this bill is more limited than in the present law. Under the Railroad Labor Adjustment Act, the injunction may be used in a very limited field, and that is where the national health and safety are involved. This bill provides that where there is a shut-down of an industry that threatens the national health and safety it will be the duty of the President, as under the Railroad Labor Adjustment Act, to make a thorough investigation and, of course, through competent and fair-minded men, get the facts in dispute and make a finding of the facts known to the American people. The stoppage of such industry will be held up for 60 days in order to secure and report on the matters in dispute and, if necessary, the President may order the Attorney General to apply to the courts for an injunction to prevent the stoppage of such industry until this report is made, and the President is given 15 days in order to study these facts and of course, during all of this time, the parties themselves, the mediators and conciliators, can be busy too, trying to settle their differences, and if this is not done within 15 days the President must in 5 days report the whole matter to the Congress.

Now, this only applies to those great industries the stoppage of which endangers the national health and safety. It cannot be used where the stoppage of a plant involves only a community or section of our country. The threat must be Nation-wide and it must endanger the public health and safety. What reasonable man would be unwilling to hold up a strike or lock-out that would be Nation-wide in its serious effects on the health and safety of the Nation? The worker, of course, would receive his pay. All parties would have time to cool off. Public opinion would aid in the settlement. All but one instance in the last 15 years under the Railroad Labor Adjustment Act a settlement has been arrived at. This provision is in the interest not only of the American people as a whole but in the interest of labor and management as well, in my candid opinion. Every individual and group ought to be willing to use every reasonable means to prevent such a disaster. Such a strike or lock-out would put millions of other workers out of work. It would bring distress, want, and death to people of our cities and in our hospitals.

This bill outlaws the jurisdictional and so-called sympathy and wildcat strikes. The National Labor Board set-up in this act can issue a restraining order against such a strike. Labor leaders have denounced the jurisdictional strikes. That is where two small unions, belonging to the same big union, or any two unions, with contracts, fall out among themselves, break their contracts, and strike. This bill does not prohibit strikers themselves from boycotting their employers, but it does forbid using the boycott by members of some union in a distant section or State to break their contract and go on strike when some other union has broken their contract and gone on a strike. Almost every day we hear of some wildcat strike, some workers breaking their contract and going on a strike, often against the instructions and will of their national leaders. The employers cannot get an injunction in these cases. The Labor Board must take such action, and, of course, they could take action if the employer tried to engage in an unfair employer practice against the workers.

Now what union man can reasonably claim that he has a right to break his contract and engage in a jurisdictional strike or to engage in a wildcat strike or break his contract and engage in a so-called sympathy strike and strike against some employer that is not in fault at all? Should the employer in these three cases, who has a contract and who is doing his full part under the contract, be subjected to strikes and stoppages when he is in no way at fault?

CONTRACTS SHOULD BE CARRIED OUT

I have always defended the right of workers to organize and bargain collectively by representatives of their own choosing. This law protects those rights. The purpose of honest collective bargaining, of course, is for labor and management to arrive at a contract and when a contract is once made and terms agreed upon, it should be lived up to in good faith by both parties. If they are not to do this, why waste the time and expense of making these collective bargaining contracts?

The observance of a contract fairly entered into has been approved by fair and honest men through the centuries. I have heard many labor leaders say that they favored the observance of contracts by both parties. This bill provides that where one party breaks a collective bargaining contract, the party not at fault can recover damages from the party at fault. These suits can only be instituted against the union by the employer and suits do not lie against the members of the union, and the union, if it has been damaged by the employer shutting down his plant and throwing his workers out of work, or damaged them in any way by violation of the contract, they, of course, can sue the company and not the individual stockholders of the company. I do not see how anyone can object to this provision in the law. It has been recognized as the law by men, companies, and organizations a hundred years or more.

GIVE IT A FAIR TRIAL—AMEND IF NECESSARY

A bill that has received the long and thorough study given to H. R. 3020 and which has been approved by both Houses of Congress by such an overwhelming majority, must have something in it that will be helpful; therefore, would it not be fair on the part of labor and management to give this law a fair test? No one claims that it is perfect. Much of it is embraced in our present laws relating to labor and management in industry and relating to management and labor of our railroads.

The Labor Board has pledged themselves to do their very best in administering this law justly and fairly, and it is gratifying to know that President Truman has issued a statement calling upon both management and labor to cooperate with the Labor Board and with him in carrying out the provisions of this law.

The bill expressly provides for the appointment of a committee composed of seven Senators and seven Representatives to make a careful review of this whole subject and to observe the administration of this new law to determine if the law is being honestly, fairly, and efficiently administered and if there are any provisions in the law that are unfair to labor, management, and the American people, amendments are in order. It has been the purpose of an overwhelming majority of the House and Senate from the beginning, and it is their purpose now to make this law as nearly perfect as possible to insure just and fair treatment for labor, management, and the American people as a whole.

I see in the press where some labor leaders have been urging President Green of the American Federation of Labor to encourage a general strike of workers against this bill but President Green has declined to entertain such a proposal. He wisely suggests that labor avail themselves of the courts if any of their just rights have been taken from them by this bill and if the measure turns out as some claim it to be, Congress will be called upon to repeal the act. I have been informed that President Murray of the CIO has taken a position similar to that of Mr. Green. If these reports are true, I wish to commend each of them. I regret to say, however, that quite a sizable number of workers have quit their employment and have closed down many places in resentment to this legislation. I wonder how many have really read this law. Undoubtedly no harm has come to them as yet by reason of this law because it will not go into effect until August 22, 1947, and there are provisions that preserve the present collective bargaining contracts entered into between labor and management.

I sincerely trust that those workers who have abandoned their contracts and have gone on a strike will reconsider. This bill does have a provision in it against wildcat and unauthorized strikes. So far as I have been able to learn, President John L. Lewis of the Mine Workers has not ordered anyone to strike and I doubt if he will do so. I also wish to express the earnest hope that the miners and operators will, in the very near future, enter into a collective bargaining contract. They can enter into an industry-wide collective bargaining contract under this law. Neither side should make unreasonable demands and I also express the hope that the Conciliation and Mediation Board provided under this law will become active just as soon as they can and if all these fail, that labor and management will agree to voluntary arbitration of their differences and save the country as well as the miners and industry from another coal-stoppage disaster. Should this happen, it will, of course, cause great loss to the country as a whole and to the miners and the operators themselves.

CLOSED SHOP, UNION SHOP, AND CHECK-OFF

In some lines of industry and in some shops and mills there are closed shops, union shops, and also the check-off system, through collective bargaining. This bill provides in the first instance for a union shop. If the workers desire to organize and form a union shop, they can do so by a majority of the workers, in any plant or industry, voting for a union shop, and under this bill the workers can strike if they vote for a union shop and are denied a union shop, and 30 days after the forming of a union, as prescribed by this law, workers in that particular plant or shop may be required to identify themselves with the union, but the check-off is eliminated. No one can be required to have any part of his wages taken out of his pay. He will be free to pay into his union or not pay. He cannot be forced to do so.

No one can be discharged because he belongs to a union, and he cannot be discharged if he does not belong to a union. He cannot be discharged to satisfy the whim of some officer or member of his particular union or by his employer. There must be just cause and good ground for him being discharged.

A careful poll of the American people shows that only 8 percent or less favor a closed shop and a check-off. A larger number, but not a majority by any means, favors a union shop. In fact, only about one out of three or four of the workers of this country belong to a union. The others are nonunion. I might say that if I were a worker, I would belong to a labor union and strive to make it as helpful to the members as possible within the bounds of reason and justice, but we must bear in mind that the Railway Labor Adjustment Act, which the railroad workers helped to pass, expressly excludes the closed shop and the check-off system and a large majority of the railroad workers has consistently opposed the closed shop and the check-off system. They claim that they strive to make their organization so attractive that their brother railroad workers will want to be a member of their organization and pay their dues without being forced to join and pay their dues.

Under this bill, however, labor and management have a wide field of discretion when it comes to collective bargaining. All must admit that the railroad workers and railroad management have carried on, under the Railway Labor Adjustment Acts, their labor-management relations most amicably, effectively, and efficiently for many years.

Why should not labor and management get together and through collective bargaining settle their differences? If they cannot, then why not welcome the aid of unbiased conciliators and mediators in adjusting their differences and then, if all of these fail, why should they not avail themselves of voluntary arbitration by an impartial board? Sometime, somebody, must settle these differences or we must have lock-outs and strikes until one or both parties wear themselves out, with great loss to management, labor, and the American people.

USE OF FUNDS FOR POLITICAL PURPOSES

This bill forbids the officers of a corporation or a business association from using the funds of the company or association, and which belong to the stockholders, for political purposes. These officers cannot use these stockholders' funds to promote the election of a President, Vice President, Representative, or Senator in Congress. Such use of the funds would be palpably unfair because the stockholders are often divided themselves as to party affiliation or as to choice of candidates, and it certainly would not be right for the officers to use such stockholders' funds to help promote a party or a candidate that they are against.

This has been the law for many years as to corporations and business associations. I have never yet heard any of our union friends condemning such a law as to corporations and associations. This new labor law carries this same provision and also forbids the use of the funds of a labor union to be used by the officers for political purposes to help elect a President, Vice President, Senator, or Representative. These funds belong to all the members of the union and it is common knowledge that members of the union do not always support the same party or the same candidate, and therefore it is certainly unfair for an officer or officers of a union to use the funds of members for a certain party or candidate when the members themselves favor some other party or candidate. The officers and stockholders and the officers and members of a labor union have the right to contribute their own funds for political purposes.

I know of no fraternal, patriotic, or church organization where the officers claim the right to use the funds of the lodge, church, or association to promote any particular party or candidate. The purpose of this law is to protect the funds of stockholders, of business concerns, and the members of labor unions and to promote fair, clean, and honest elections. I never did call upon either one of these groups to contribute to any campaign of mine and, so far as I know, neither group has ever put any money in any of my campaigns. They do have the right to carry on their trade journals, union journals, magazines, and to write editorials and make favorable or unfavorable comment on parties or candidates, but this law does not forbid them from doing that very thing, according to some very high legal authorities, and this law would likely benefit the labor unions more than it would the corporations. The corporations might have more money to spend in elections than the labor unions.

VIOLENCE AND LAWLESSNESS

This law forbids the use of violence and lawlessness on the part of employers or labor unions in an effort to accomplish their purposes. I might say that many laws have been passed on this subject and I know of no laws that were passed heretofore and now in force that upholds violence or lawlessness on the part of either management or labor unions or others. This is not the American way of settling differences. Employers have indulged in coercion, violence, and lawlessness against labor unions and labor unions have indulged in the same practices. This law attempts to eliminate these practices on the part of labor and management. Such tactics by either labor or management has never served in the end the best interest of either one of them.

This law should bring about a better relationship between labor and management and a full appreciation on the part of both groups and the American people that each of these groups have rights that should be and must be respected and protected and that each of these groups must fully realize that when they cooperate and pull together it will serve the best interest of labor and management and the American people.

The American people should produce to their fullest capacity and thereby provide for the great demand now being made by the American people for themselves and to provide and have a surplus which may be bought and consumed by people throughout the world. If we get

ourselves lined out in this country, we should have a long period of continuing prosperity that will redound to the benefit of labor and management and the American people, and if this bill in any respect should be proved to be unfair, either to labor or management, I shall be one of the first to support amendments that will correct such unfairness or inequity.

Palestine Question

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. HUGH D. SCOTT, JR. Mr. Speaker, the Billy Rose article appearing in the Philadelphia Evening Bulletin of June 24, which is in the form of a letter he addressed to the President, presents the Palestine question in an interesting and pointed manner. With permission granted in the House today, I submit it for publication in the CONGRESSIONAL RECORD:

PITCHING HORSESHOES
(By Billy Rose)

Mr. HARRY S. TRUMAN,
1600 Pennsylvania Avenue,
Washington, D. C.

DEAR MR. PRESIDENT: I think you ought to send out for a copy of Bartley Crum's new book, Behind the Silken Curtain. And when you read it, sir, have a cold towel handy. It's going to make your face awfully red. Especially chapter 2, The Secret File in the State Department.

This San Francisco lawyer reports that shortly after you appointed him in 1945 to the Anglo-American Committee of Inquiry on Palestine he was handed a document containing confidential communications between our State Department and the Arabian potentates of the Near East. Crum writes: "It was a sorry and bitter record for an American to read. According to this file, since September 15, 1938, each time a promise was made to American Jewry regarding Palestine, the State Department promptly sent messages to the Arab rulers reassuring them in effect that, regardless of what was promised publicly, nothing would be done to change the situation in Palestine."

Now let me say right here, Mr. President, that I'm not writing this piece to add my 2 cents' worth to the Palestine question. What I want to talk about is secret diplomacy—Honest John talk in high places and skullduggery in the lower echelons.

Crum goes on: "It was clear that the State Department continued playing both ends against the middle under President Truman's administration. On August 16, 1945, President Truman revealed he had discussed Palestine with Mr. Churchill and Mr. Attlee at Potsdam, and that they wanted to let as many Jews into Palestine as possible. But on October 23, in a confidential cable to Baghdad, Cairo, Damascus, Beirut and Jidda, the State Department explained that President Truman and the Prime Ministers 'engaged in exploratory correspondence on this subject * * * but there has been no change in this Government's previously announced attitude on Palestine'."

Not very fragrant, is it, Mr. President? Either you have been guilty of some pretty fancy double talk or your State Department has been sending these cables without your knowledge—in which event you ought to blush every time you endorse your salary check.

I often wonder what makes politicos think they have the right to gamble with Joe Citizen's life and fortune without letting him peek over their shoulders at the cards. Is it because they think they're so talented, so smart, so wise? And that 145,000,000 of us are so dumb?

How did they get up there anyway? At some liquored-up convention hall, the boys with the expensive cigars made a guess as to who would bring in the vote. After the nomination came the banners, billposters, beer parties and buttons. A fellow read some numbers over the radio on a Tuesday night in November, and a bit later a few ordinary human beings found themselves running the country.

Okay, what does that make them? Jefferson, Lincoln, Einstein, Thomas Edison? Not in my book. You've got to prove it first.

Well, what have you done? So far, what single piece of management or administration has come out of the whole kit and kaboodle that any industry boss would pay a decent salary for?

If the State Department has a secret file on Palestine, how are we to know it hasn't similar folders on Greece, Spain, Turkey, and Argentina? And if it has, where do you gents get the gumption to make life and death decisions without first telling us the whys and wherefores?

When the boys in the silk toppers decide to make up my mind for me, I at least want to know what they know. I'm not much impressed with this business of pointing to a brief case and saying, "Sssh." There are too many little white crosses around the world for me to buy that mumbo jumbo.

Instead of worrying about whether we should recognize the new government of Hungary, isn't it about time you insisted on the State Department's recognizing the old Government of the United States? Isn't it about time you and General Marshall got a couple of fly swatters and went in and cleaned out some of the well-barbed pests who operate the State Department as if it were a private country club?

It sounds like insanity when you put it on paper, but it looks as if there might be another war. I think the kids who will be asked to fight that war would like to know whether they're going to be fighting for their country or for some self-declared experts in the Department of State.

As you may have heard, there's a Presidential election coming up pretty soon. I think a lot of fellows like me are going to sign their campaign checks and mark their ballots according to results, not rhetoric.

From Bartley Crum's book, I gather that you and some of the boys in the inner circle haven't much faith in the judgment of the people.

Don't be too surprised in '48 if it works both ways.

Sincerely,

BILLY ROSE.

The Townsend Plan

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mrs. SMITH of Maine. Mr. Speaker, more than 100 Townsend-plan delegates from Maine visited me this morning. From my office they went to the Ways and Means Committee hearing and later to the House gallery. These people in urging consideration of the following resolution presented petitions of several hundred signers:

Resolved, That we Townsend people have changed the course of history. But for our activities, there would be now, no old-age pension at all—even the meager and inadequate one which is now on the statute books.

We shall keep our original objective constantly in view and may have renewed courage that what we believe in and anticipate, is already in sight. This is the sentiment of our entire delegation from Maine—over 100 strong.

Mr. Speaker, I have filed these petitions and a copy of resolution urging committee and House action on the Townsend plan, H. R. 16.

San Francisco

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. WELCH. Mr. Speaker, under leave to extend my remarks, I desire to bring to the attention of the House one of the finest gems of literary description of San Francisco which has come to my attention in many years.

The value of this very excellent article is greatly increased when it is recalled that Mr. Hal Boyle, an AP staff writer, is now on tour of many American cities.

SAN FRANCISCO: A CITY OF FAITH—A CITY THAT NEVER WAS QUITE TRUE
(By Hal Boyle)

(Hal Boyle is on a Nation-wide tour writing a series of articles on his observations on and views about the various cities he visits.)

San Francisco—this isn't really a city—it's a matter of faith.

There is no such thing as San Francisco. You can see it on the map, and drive through it, and get run over by a motorcar in it. But it isn't really there.

This is the second time I've been in it, but you can't convince me it really exists. It is like London in Shakespeare's day or Paris for restless Americans in the 10 years after the First World War.

It is Nineveh and Tyre and a mist-ridden Babylon—well policed. It is the Far East in transfusion, and the Old West wrapped in amber. It is a melting pot where the ingredients mix without anger.

San Francisco is a product that sells itself. The people who make up the place are glad to see you when you come, but they wouldn't give you a lead nickel to induce you to stay. They would pay money to keep from being a second New York, and they'd mortgage their homes to prevent becoming another Los Angeles.

They are one of the most history-conscious communities west of Cairo, but they never have got the idea that history doesn't keep on happening.

There is always a fog coming up here, and there is always a breeze to blow it away. That is what is known locally as the climate.

It is the only settled place in America where a stranger wishes in summertime he had brought along his long woolen underwear. When the hot sun sets, he starts

looking around for the penguins. Nature air-conditions it to the temperature of a Kansas movie theater in July.

San Francisco is grown up. Like New Orleans, it believes in food. It is the happy hunting ground of the finicky alimentary canal, a palace of the palate, be it steak-hungry or in quest of tapioca-tasting oriental bird's nest soup. A shrimp is shrimp-sized here as it is in Copenhagen. If you want what the stature-worshiping Manhattanites call a shrimp, your pocketbook is in pawn to a "prawn."

You have heard of the Hollywood diet? You will never hear of a San Francisco diet. A fat man here doesn't have to apologize every time he reaches for the olive oil. He isn't embarrassed to stick his fork into a well-flavored calorie.

San Francisco is one of the few places left in the world under a million population that is still lusty, gusty, sentimental, and individual. It builds the country's most modern underground garage—but it wants to get out its six-shooters when somebody tries to abolish its historic cable cars.

It stands on as many hills as Rome—but stays on the level. It tamed the Barbary Coast without destroying the exuberance that made it. It has both Alcatraz, the symbol of quarantine, and Treasure Island, which carried on the legend of the Golden Gate.

It built the two great bridges of tomorrow without letting go of its bridge to yesterday, when the gold miners and clipper ships gave it the peculiar luster it has never lost.

But San Francisco still isn't so. It's the fabled city that never was quite true, like Athens of old, the city that everybody wants to be in, and never wants to leave. It's a long municipal romance without a Carthage ending.

It doesn't exist and never did. Yet here it is. And while you're here—you have to believe in it. For San Francisco is purely a city of the heart, a projection of whatever you came to find.

Wagner-Ellender-Taft Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

SUFFOLK COUNTY COUNCIL,
VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Boston, Mass., June 22, 1947.

The Honorable JOHN F. KENNEDY,
House of Representatives,
Washington, D. C.

DEAR COMRADE KENNEDY: It is with pleasure that I carry out the mandate of the Suffolk County Council, VFW, to write a letter of thanks to you for your earnest and driving efforts on the Wagner-Ellender-Taft bill in Congress.

It is such striking evidence of sincere actions such as this that justifies the confidence we place in our elected officials.

Again offering our sincere thanks to you, our comrade, in behalf of your sterling efforts, I remain, with kindest regards from our Suffolk County Council, VFW,

Yours in comradeship,

JOHN J. SULLIVAN,
Adjutant.

Taft-Hartley Labor Bill Veto

EXTENSION OF REMARKS
OF
HON. WILLIAM W. BLACKNEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. BLACKNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the State Journal, Lansing, Mich., entitled "Mr. Truman Does a Disservice":

In vetoing the Taft-Hartley labor bill last Friday President Truman frankly confessed, by his action, that he places political expedience far above national welfare and the common good.

There can be no other interpretation of the veto. The bill which was originally approved in the House of Representatives by a vote of 320 to 79, and in the Senate by a vote of 54 to 17, contained certain controls over irresponsible labor leaders and practices that drew the fire of labor.

Mr. Truman is going to be a candidate to succeed himself in 1948. You may be sure of that. And it is rather certain that he is not going to be elected without the wholehearted support of labor. His motive for doing his best to kill the bill thus is as clear as crystal.

Certainly legislation worked out through long months of thoughtful deliberation and compromise, which finally won the approval of such huge majorities of the people's representatives in both the upper and lower chambers of Congress, cannot be construed as viciously constructed, dangerous to the Republic, unworkable, or totally worthless, as it was termed in effect by the President in his veto message.

The Members of the House of Representatives were so certain their legislation was good that they reaffirmed their faith in their original judgment, and expressed their lack of faith in the President's judgment by an overwhelming vote of 331 to 83 on the proposal to override his veto. The action by the House came so swiftly on the heels of the bill's reading, as to be considered an additional affront to the President.

The President knew he was not speaking the truth when he branded the entire measure as a bad bill. He knew when he made that statement that it was not true, for there are in the measure many changes in the present law which he, himself, had advocated in the past, and which prominent labor leaders in their testimony before House and Senate committees had definitely said should be enacted.

To brand an entire measure as bad merely because some portions of it might not suit his personal ideas is to stamp his entire message as insincere and actuated by purely political purposes.

It would have been far better had Mr. Truman recognized the admittedly good features of the proposed legislation, and then picked out the few with which he disagreed and stressed them as his reasons for not approving.

It would have materially strengthened his position had he complimented Congress for the elements in the measure with which he agreed, singled them out, and told why he was for them. For it is a well-known fact that many of the changes incorporated in the act were ones which he, in the past, had indicated that he favored, and were based on actions which he, himself, had taken in connection with labor disputes under authority given him in the War Powers Act.

It would have strengthened his position had he stressed these points of favor, urged that they be enacted in a future law, and then pointed out those things with which he did not agree and stressed the point that it was because of these, and these alone, that he felt it incumbent on him to veto the measure.

A great building cannot be branded as all bad because of some flaw in its arrangement, any more than a boy can be branded as all bad because of some peculiarity in his nature with which his friends might not find favor. One would not tear down the whole building to correct the little things that were wrong, any more than they would put out of the way the boy who did not measure up wholly to the rules as some others might wish. They would correct those flaws without impairment to the good that admittedly existed.

Mr. Truman could have sent to Congress a constructive, thoughtful, helpful message, instead of one that was so filled with insincerities, misinformation, malconstruction and political implications as to shake the faith of the great American public in the stability of thinking that emanates from the White House.

To have done so would have enhanced his position with the people, and with Congress. It would have gone far to restore confidence on the part of the people in the good faith of the executive branch of our Government at a time when such is so sorely needed.

It is sometimes difficult to follow the line of reasoning employed by Mr. Truman.

The fact that Mr. Truman's advisers may have told him that the proposed law was unworkable, does not establish that fact. It must be borne in mind that those advisers are Mr. Truman's personal appointees, whose decisions would be weighted heavily in the direction toward which they believed the boss wished them to be.

Some of the greatest scientific and political advancements in history were declared unworkable when first announced, yet when put into operation and developed proved just the opposite. Therefore it cannot be said truthfully that the new labor legislation is unworkable until it has been put into operation, thoroughly tested, and tried out to the fullest. Only by such means is it possible to know the whole truth. Only by such means will it be able to determine what, if any, flaws there might be in the new law, so that future Congresses can rectify them.

Headlining the provisions of the bill are those which would require union responsibility. Is Mr. Truman opposed to such a widely recognized principle of democracy as that of living up to one's word? The bill would oblige unions to live up to their contracts or risk civil lawsuits. Is there anything wrong with that idea?

Again the bill would outlaw jurisdictional disputes—those interunion arguments that are neither fish nor fowl, and in which no self-respecting union man ever wishes to become involved. It would outlaw secondary boycotts—and such abuses should never have been permitted by responsible union leadership. Thus, is Mr. Truman opposed to orderly processes of union behavior in its relationships with management and industry? What is wrong with those so-called curbs?

The bill would end wildcat strikes, those old devices by which one man or a handful of men can close down whole plants and destroy the earning power of thousands of innocent colleagues. What union man or woman would find fault with such a provision as this? Is Mr. Truman against enforcement of union regulations? Unions do not, in their charters, either countenance or encourage wildcat striking.

The workers in the Nation's plants and the public have a common bond. The workers wish to earn, that they may maintain themselves and their families in an orderly manner. The public wishes to be free of the constant threat against public health, public utility service, fuel, and the very food of life.

In some of its provisions the bill attempts to make certain that these elements can be met to the satisfaction of workers and the public, even though labor leaders must be relieved of some of their most stubbornly held powers.

On and on through the bill, one can find provision after provision intended to help the Nation rid itself of labor-management chaos, and get back to a rational basis of steady work and consistent production.

As it has been pointed out before, all of the law may not have been good. But is there anything to prevent Congress from amending its legislation from time to time, when the need arises? There is not.

Had Mr. Truman given this law a chance to work, its errors would soon have manifested themselves. They could have been and would have been corrected. Now, unless the Senate, under the most terrific pressure it has faced on a domestic issue in years, strikes straight through with a repudiation of Truman's veto philosophy, and turns this labor bill into law with a vote to override Monday, this country may face a labor-management situation the like of which no one ever before dreamed.

This situation cannot be considered simply a controversy. It can become a national calamity.

It is to be hoped the country's thinking Senators will be sufficiently numerous to poll the needed strength to vindicate the Nation's confidence in its law-making body as a whole.

Seven Thousand Dollars for a Flagpole

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1947

Mr. ENGEL of Michigan. Mr. Speaker, I am including herewith a letter I received from the Secretary of War and my reply thereto. I call particular attention to the item of a flagpole, which was estimated to cost $3,500 at Hawaii, $5,000 in Puerto Rico, and $7,000 in Alaska, all for the same size and type of flagpole.

Secretary Patterson's letter to me follows:

WAR DEPARTMENT,
Washington, D. C., June 14, 1947.

Hon. ALBERT J. ENGEL,
Chairman, House Subcommittee,
House of Representatives.

DEAR MR. ENGEL: In connection with the supplemental estimates of appropriations presently under consideration by your committee for the three cemeteries in Hawaii, Alaska, and Puerto Rico, I desire to emphasize the importance and urgency I attach to the necessity of providing funds for the early development of these cemeteries. Due to changes in the status of possible locations for these cemeteries and other factors, it was not possible to complete detailed plans and process estimates of appropriations for the establishment of these cemeteries at an earlier date.

These cemeteries constitute an integral part of the program for the return of World War II dead. Unless their development can be started at an early date, the repatriation program, which is already under way, will be seriously delayed. In most cases, the next of kin have already been polled as to their desires in returning the remains to the locality of their homes. Unless these three cemeteries are suitably and promptly developed to permit the interment of such remains, it will be necessary to delay return from overseas, or to hold the remains in temporary cemeteries or in the limited above-ground storage space available. This, of course, would entail increased costs in addition to causing disappointment to the next of kin who naturally desire the early return of the remains and the interment in a fitting cemetery.

In the event any additional information is desired by your committee in connection with the above, I hope that you will call on me.

Sincerely yours,

ROBERT P. PATTERSON,
Secretary of War.

My reply to Secretary Patterson:

JUNE 25, 1947.

Hon. ROBERT P. PATTERSON,
The Secretary of War,
Washington, D. C.

MY DEAR MR. SECRETARY: I received your letter of June 14 regarding the supplemental estimates under consideration by my subcommittee for three cemeteries—one in Honolulu, T. H., one in Juneau, Alaska, and the third in Puerto Rico.

We have examined the records and are informed that there is no legislative authority upon which to base an appropriation for either Alaska or Puerto Rico and that there is legislative authority for Hawaii with a limitation of $50,000. The request for the appropriation for a cemetery at Hawaii aggregates $746,400 or almost 15 times the amount authorized by law. I do not see how my committee can report this appropriation which has no legislative authority. I would suggest that the War Department go to the proper legislative committee and obtain such authority.

Before I close I want to comment upon certain items in these justifications which seem to be outrageously high.

CEMETERY IN HAWAII

1. Clearing 44 acres of land at $1,270 per acre—total request $55,880.

2. Subdrainage under the grave section not including subdrainage of road system, 30 acres of land at $675, total request $20,250.

3. Six thousand and three hundred feet of temporary fencing at $3 a foot, total $18,000.

4. Top soiling 44 acres at $5,700 an acre, total $250,800.

5. Landscaping and planting 44 acres at $680 an acre, $29,920.

You have $52,700 in the request for a six-room lodge and administration office. You have $50,400 for the first unit of utility group for comfort rooms, locker and shower rooms, garage, etc.; one flagpole $3,500. You have added on the total amount a 15 percent engineering, field supervision, inspection and contingency item aggregating $97,360. Total to develop a 44-acre cemetery $746,400.

PUERTO RICO

Total acres purchased, 75 acres; to be developed, 14 acres. The first item that comes to my attention is 75 acres of land at $600 an acre, total $45,000.

Clearing and grading 14 acres at $1,190 per acre, total $16,600.

Subdrainage of area under the grave section not including subdrainage of road system, 14 acres at $630 an acre, total $8,820.

Entrance gates, $24,500; enclosing 5-foot wrought iron picket fence with masonry base at $35 a foot, $70,000.

Temporary enclosing fence, 2,300 lineal feet at $2.80 a foot, $6,440.

Top soiling 14 acres at $4,800 an acre, $67,200.

Landscaping and planting 14 acres at $630 per acre, $8,820.

Superintendent's lodge, office and comfort rooms, $35,000.

Flag pole, $5,000.

Engineering, field supervision and inspection, $50,000.

The total cost of this cemetery in Puerto Rico is $423,500 with only 14 acres of 75 acres of land to be developed.

JUNEAU, ALASKA

Entrance gate, $32,000.

One thousand and fifty lineal feet of fencing at $50 a foot, $52,500.

One thousand two hundred and seventy-five lineal feet of temporary fencing at $4 a foot, $5,100.

Eight hundred lineal feet of curb and gutter including excavation at $5 a foot, $9,000.

Topsoiling, humus, fertilizer, and seeding 6 acres, at $7,600 an acre, $45,600.

Landscaping and planting 6 acres, at $900 an acre, $5,400.

Superintendent's lodge, office, and comfort rooms, $50,000.

Temporary utility building, shed-type, approximately 1,750 square feet, at $8 a foot, $14,000.

Flag pole, $7,000.

Designing, engineering, field supervision, and contingencies, $45,500.

The total cost of this 20-acre cemetery with only 6 acres to be developed is $348,700, or almost $60,000 for every acre developed.

Your letter reads in part as follows:

"Unless their development (the cemeteries) can be started at an early date, the repatriation program, which is already under way, will be seriously delayed. * * * Unless these three cemeteries are suitably and promptly developed to permit the interment of such remains, it will be necessary to delay return from overseas, or to hold the remains in temporary cemeteries or in the limited above-ground storage space available. This, of course, would entail increased costs in addition to causing disappointment to the next of kin who naturally desire the early return of the remains and the interment in a fitting cemetery."

These estimates seem to me to be outrageously high. When you pay as high as $7,600 an acre for topsoiling, $7,000 for a flagpole, $50,000 for a superintendent's lodge, office, and comfort rooms in a little 6-acre cemetery, $50 a foot for permanent fencing, $4 a foot for temporary fencing, $14,000 for a comparatively small temporary shed-type utility building, and add 15 percent engineering overhead and supervision, $600 an acre for land in Puerto Rico, I believe you are going beyond all reason, and these expenditures are not justified not even for the cemeteries for our war dead. These dead come from all walks of life. Some of the fathers and mothers of these soldiers are low-income people who pay heavy taxes, and they would be the last to ask such outrageous costs for a cemetery.

You mention in your letter the delay and expense. The war in Germany ended in April 1945 and the war with Japan ended in August of the same year. You had had nearly 2 years to make plans for these cemeteries and yet the justifications we received were dated May 19 of this year and the President's message did not reach us until we were almost through with the hearings on this bill. Your witnesses could not give us any information as to costs. They took these costs out of the air. When I asked them how many cubic yards of dirt they were to move or any other itemized detail, they could give us absolutely no information. If there is any delay or additional expense, the War Department and not the committee is responsible.

If a private group, incorporated or otherwise, presented Congress with a claim for cemeterial costs such as these they would be accused of racketeering. It is up to the War Department to obtain authorization for this appropriation from the proper legislative committee and bring their costs somewhere down to earth.

Yours truly,

ALBERT J. ENGEL.

The Housing Problem

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. KENNEDY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by Samuel Grafton:

I'D RATHER BE RIGHT
(By Samuel Grafton)

Congress boasts that its voice is the voice of the people. Whether it sings an ominous basso profundo on the reform of labor, or a frightened falsetto on raising rents, in each case, we are informed, the song comes from America's heart.

If this theory is correct—and it is the theory we live by—one wonders why certain large groups of the American people should have as much difficulty as they have today in establishing communications with Congress, or in raising an answering signal.

There are, for example, 41 States in our country which have passed laws authorizing local public housing authorities. That is an amazing thing, you know, for 41 States, 5 better than three-quarters, to kick along with a social idea. As a result of these enabling acts, public housing authorities have been set up in cities with a total population of 60,000,000. All these want the Wagner-Ellender-Taft public housing bill passed. Yet somehow, this enormous appeal from the heart of America doesn't seem to register on the congressional recording apparatus.

Maybe Congress should use radar, or something, to cure this break-down in communications.

The National Public Housing Conference, which represents about 40 of the country's biggest organizations, totaling, again, about 60,000,000 people in all religious groups and both labor federations, occasionally gets a faint answering signal from the Senate on its plea for the W.-E.-T. bill. Could it be static, of course.

Sometimes it seems to hear a far-away voice in the headphones, saying: "This is TAFT. I am for you. This is TAFT. I am for you," but the volume is so low it could be just a mere feed-back.

From the House it doesn't even get a superheterodyne whistle. The National Public Housing Conference has designated June 25 as a kind of frantic fight-for-housing day, during which many of its member organizations will send emissaries to Washington to try to set up contact with Congress. Some suggest smoke signals, others believe the situation is urgent enough to warrant a desperate tapping in Morse on the Capitol's steam pipes.

It does seem odd that it should be so hard to get through. Only in April the Republican, an official publication of the Republican Party, sent questionnaires to 3,500 Republican Party workers asking them to say which of the problems then before Congress were, in their opinions, urgent. More than 54 percent of these party functionaries listed solving the housing shortage as very important and urgent—more than voted for tax reduction.

But tax reduction has already passed, while it seems impossible to catch Congress' eye on housing whether by hand signals, handkerchief waving, ear-wiggling, or any other common device.

The W.-E.-T. bill has opponents in the real estate industry, and if housing does not pass it will, unfortunately, look at the end of this session as if these have had better luck in getting their points of view through. That will be bad for the voice of the people theory. How many people have to line up on an issue to get a clear channel?

How much will the average Congressman bet against the proposition that there are more Americans concerned about housing than about curbing the labor unions, or cutting taxes, or both together.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, June 30 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, in April of this year I caused to be printed in the body of the RECORD a letter from Dr. Nicholas Murray Butler, the president emeritus of Columbia University, opposing the admission of Hawaii as a State in the United States. I have now received a letter from Mr. Gregg M. Sinclair, president of the University of Hawaii, on the same subject, and I ask that Mr. Sinclair's letter also be printed in the body of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF HAWAII,
Honolulu, June 23, 1947.

Senator HENRY CABOT LODGE, Jr.,
United States Senate,
Washington, D. C.

DEAR SENATOR LODGE: Dr. Nicholas Murray Butler—in his letter of April 15 to you and his letter of March 7 to Secretary of the Interior J. A. Krug, in both of which he objects to statehood for Hawaii—proposes another solution to our long, long plea for adequate representation in Washington and the right of American citizens in Hawaii to select those who govern them. Because of Dr. Butler's eminence, I believe that his proposal and his statements should be analyzed carefully.

Dr. Butler states that the admission of Hawaii to the Union would end the United States as it has been. We had thought this question was settled nearly 50 years ago, when Hawaii was annexed; certainly, the question was discussed vigorously in 1898, but it has not received much attention since. By that act of annexation the United States extended its border beyond continental shores and changed the United States "as it has been."

Speaking practically, is it not truer to say that science and invention have ended the United States as it used to be? Is it not really wisdom to recognize that the United States will never again be the same as it was in the days of our grandfathers? Dr. Butler, with his forward-looking life—as anyone who has read his two excellent volumes, Across the Busy Years, will testify that it was a forward-looking life—should be the first to agree that a cry to "return to the good old days" is hopelessly contrary to the scientific, economic, and political factors of 1947.

By any contemporary test, Hawaii is closer to the Capital of our country than any State—after the first 13—was at the time of its admission. Science has so minimized time and space that Hawaii is next-door to Washington. We heard the fireside chats as soon as Dr. Butler did; our newspapers carry the great news services, "with today's news today"; we have airplane service to the mainland with several planes daily. During the war a member of the Military Government Division of the Army left Washington on Monday morning; I dined with him on Tuesday evening, and he had had several hours of business in San Francisco and several more in Honolulu before our dinner.

In the free exchange of ideas as well as in the transportation of goods, Hawaii is closer to Washington than any State—again excepting the original 13—was at the time of its admission. Take two examples, Vermont and Arizona, the first and last States to be admitted. In 1791 what were transportation, mail service, and "exchange of ideas" between Montpelier and other Vermont cities and New York? How soon did the people of Vermont learn of Jay's Treaty or of George Washington's quarrel with the Congress over that treaty? In 1912 how long did it take to go from Arizona to Washington? How fared "exchange of ideas" between this new State and the capital? To pose these questions is to answer them. Surely science and invention have changed the United States "as it has been," but statehood for Hawaii has nothing to do with this fact. (In lumping Hawaii with Alaska and Puerto Rico, Dr. Butler confuses the issue. Statehood for Alaska or Puerto Rico will be decided on its merits, and not at all on whether Hawaii becomes a State.)

Last year Honolulu was host to many world-famous scientists passing through for the Bikini tests. To listen to these scentists was to realize how far our world has traveled from the United States as it has been. To realize from their talk the significance of the new world created by the use of atomic power was to appreciate how people in the age of chivalry must have felt on the discovery of gunpowder. These highly intelligent men, when speaking of statehood, posed a question which Dr. Butler might have raised to better purpose: In this new atomic and Pacific world, is it not to the advantage of 140,000,000 Americans to have Hawaii as a State? Hawaii's whole statehood campaign is based on an affirmative answer to that question. (In this letter it is not necessary for me to do more than to suggest a phase of that campaign, which I shall do in closing.)

Dr. Butler's statement, "Think of what would happen were the vote of one senator from Alaska or Hawaii or Puerto Rico to defeat the ratification of an important treaty affecting the policy and good order of the world," really involves two questions:

1. Is our American system of ratifying treaties a bad one in that it gives a Senator from any State—Vermont or Arizona or Hawaii—too much power in possibly casting the deciding vote in an important treaty ratification? I think Dr. Butler is too good a constitutionalist to say so. And in any case a State, to possess such power as Dr. Butler instances, would have to be joined by at least a third of the country to make a negative vote effective and by nearly two-thirds of the country to make a positive vote effective. Therefore, why be especially afraid of Hawaii?

2. Is Hawaii's electorate capable of choosing Senators worthy of standing with Senators from other States? We say "Yes." With practically no illiteracy among the Hawaii born and with 85 percent of our people born in the islands or on the mainland, with a citizenry more interested in government and public affairs than is the electorate in many States—whereas throughout the Nation only 56 percent of those eligible to vote cast ballots in the 1944 Presidential election, 86 percent of Hawaii's electorate voted in the same election, and our votes were cast for local candidates only—with as great a proportion of university-trained men and women as in other States, we see no reason why our Senators should not be worthy. Hawaii is ready to be judged by her elected officials, her legislators, her Delegates to Congress, her mayors of Honolulu. The Larcade

committee pointed out how progressive our laws were. Visitors to Hawaii have often commented on the high quality of our local leaders. We have no doubt that we shall be able to elect two Senators of quality and character.

Regarding Dr. Butler's main proposal that Hawaii be set up as an independent, self-governing country, except in the control of its foreign affairs, and further subject to the supremacy of the United States Supreme Court, this suggestion seems to us to be anachronistic. Hawaii, like Texas, was once an independent, self-governing country. For mutual assistance—and I stress mutual—the United States and Hawaii agreed to annexation, with every assurance that after a trial period as a Territory, Hawaii would become a State. It is a little late in the day to propose that we return to our former status, and what would be the advantage for either Hawaii or our country? (The one merit to this proposal is the recognition that Hawaii's status should be changed; that it has been a Territory long enough.)

Our objections to this proposal are three: (1) It very definitely does change the United States "as it has been," and we wish we had Dr. Nicholas Butler on our side to point out this fact to the American people. History and precedent unite in proving that the culmination of territorial status is statehood, not "restricted" independence. (A friend has pointed out that our country is called "The United States of America," not "The United States and Territories of America.") (2) Whether this proposal is not unconstitutional is a serious question. In *Downs* v. *Bidwell* (182 U. S. 254) Justice Brown, in a concurring opinion, stated: "When the Constitution has been once formally extended by Congress to Territories neither Congress nor the Territorial legislature can enact laws inconsistent therewith." In another case (*Rasmussen* v. *U. S.* (273 U. S. 284)) the Supreme Court held that a law passed by Congress which would have provided a jury of six for the Territory of Alaska was unconstitutional since it was not consistent with the incorporated status of a Territory, and the opinion seems to indicate that Congress cannot change incorporation after it has been established. (3) Now that Hawaii has fulfilled every qualification demanded of Territories before being admitted to the Union, this proposal has the appearance of an attempt to deprive Hawaii of that for which, in good faith, it has striven for nearly 50 years. When I first read Dr. Butler's proposal, I had a feeling of moral collapse. Hawaii wishes to be considered as a candidate for statehood—statehood and only statehood.

Has not Hawaii fulfilled every qualification? Ten years ago the joint committee of the Congress reported: "Hawaii has fulfilled every requirement for statehood heretofore exacted of Territories." The Larcade committee concluded: 'The Territory of Hawaii now meets the necessary requirements for statehood." The 1937 committee did suggest that the Territory learn how substantial was the local majority in favor of statehood. A vote was taken in 1940; 66 percent voted in favor. (It should be pointed out that in 1940 international conditions were confused, and that as a consequence some people were suspicious of certain elements in our local population. Since then Hawaii's boys—especially the sons of those very elements—have made such a highly commendable war record, and our citizens generally such a superb record of cooperation with the military in bond purchases, blood-bank contributions, civilian defense generally, etc., that many voters who were doubtful in 1940 would be favorable today. A vote for statehood for Hawaii in 1947 might run as high as 10 to 1.)

What are some of Hawaii's other qualifications for statehood? Limited in land area as it is, Hawaii would not be the smallest State in the Union; and placed as it is geographically, it would continue to be in a choice position to render incalculable service to the other States and to the Union, as it did in World War II, and World War I and the Spanish-American War. Our population of over half a million is greater than that of several States now and exceeds that of every other State but one at the time of its admission. Hawaii is economically sound; it has always paid its way. Until recent war expenditures—and perhaps even including them—Hawaii has always sent to Washington every year more money than it has received in return. Our Federal income-tax returns exceed those of any one of fourteen States, and the percentage of individuals filing Federal income-tax returns exceeds that of 26 States. "Taxation without representation," fighting words once, is an active phrase in Hawaii. The assessed value of our real property exceeds that of every State at its admission except one. Since Admiral Nimitz's testimony and the testimony of General Herron, there is no longer any feeling that Hawaii should be kept a Territory for military purposes.

What other tests must Hawaii pass before being admitted to the Union?

Not only is Hawaii economically, socially, educationally, and politically worthy of statehood, but also as a member of the recent Larcade Committee pointed out, "The stature of the United States would be increased by incorporating such a forward-looking community into the Union." One far-seeing Congressman put it bluntly, "Hawaii is asking for statehood not solely because her citizens want representation, but also because of the great advantage which will accrue to the Nation with the addition to our Congress of four capable men with a knowledge of the Pacific area. In the development of a Pacific policy by the United States, statehood for Hawaii will have the effect of increasing our stature greatly in the eyes of the world and in the eyes of the people bordering the Pacific Ocean." This latter fact should be stressed, and it was stressed at the hearings of several Congressmen. One, who had had experience in the Pacific area and in China, stated, "It will focus attention throughout the whole vast Pacific basin on the capacity of our form of government to inspire the loyalty and cooperation of people of many racial and national origins. I am sure that such an example will have an immeasurable value in strengthening our relations with every people of the Pacific Ocean area."

It seems to me, therefore, that Dr. Butler's proposal is untenable; that history and moral obligation and the facts of the situation all are opposed to it; that on the contrary the arguments are all in favor of statehood for Hawaii, and statehood for Hawaii now.

With warm Aloha!

Sincerely yours,

GREGG M. SINCLAIR,
President.

A Sane Voice Speaks to Labor

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. MADDEN. Mr. Speaker, owing to the great confusion, misunderstanding, and desire for information concerning the recently passed Taft-Hartley bill, the enclosed editorial from the Indianapolis Star commending Dan Tobin, president of the International Brotherhood of Teamsters, is constructive and enlightening.

Mr. Tobin gives constructive advice to all labor and wage earners in America, as set out in the accompanying editorial.

I, as a member of the Committee on Education and Labor, opposed the so-called Taft-Hartley bill, but now that it is a law by act of Congress, any of its provisions should be legally tested in the courts. If any of its provisions are unconstitutional, our courts are open to both the employer and the employee to test the same. The American people will, in due time, give the verdict as to amendments or the possible repeal of this law.

The editorial follows:

A SANE VOICE SPEAKS TO LABOR

"Anyone who advocates wholesale breaking of union agreements through a general strike is, in my judgment, an enemy of organized labor and of our Nation as a whole." With these words Dan Tobin, president of the International Brotherhood of Teamsters, spoke out against those who would incite labor to strikes in defiance of the Taft-Hartley law.

Mr. Tobin has set an example of restraint, common sense and leadership that other labor leaders should follow. This is no time for any group to weaken our democracy by inciting disrespect of law. "The citizenship of any nation striking against its government means nothing but revolution," said Mr. Tobin. "The working people of this Nation are not revolutionists." Communists and others who now are trying to turn them toward revolution have only one aim—to keep American labor in constant turmoil. Thus they would destroy democratic processes and in the end fasten a repressive dictatorship over all our people.

Free people do not need to use the methods of conspiracy and violence to gain their just ends. The ballot box is their means of obtaining justice, for in America the Government belongs to the people.

Labor's leadership should have realized by now that the Taft-Hartley law was not foisted upon America by unfair or illegal means. It was voted by men and women who were elected by the majority of our people. It was a response to the people's demand that certain labor abuses be rectified.

The Star has supported the Taft-Hartley Act. Unlike Mr. Tobin, this paper sees more good than bad in it, for we believe that it is about time that union leadership became responsible to the same principles of law that govern other American institutions. But if injustice to either labor or management develops under this new act, they can and will and should be rectified at the next session of Congress. This is what Mr. Tobin seeks to bring about through the orderly process of democratic government.

Meantime, in Dan Tobin's words, "Now is the time for men to keep their heads and use their brains." Those who wish to destroy our freedom want nothing more than to create division and unrest among us. Let us not play into their hands.

High Prices

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mrs. DOUGLAS. Mr. Speaker, Congress should act immediately to bring

relief to the American people. Relief from high and rising prices.

The Representatives of the American people cannot recess without having taken the steps which will balance the housewife's budget.

There should be a bipartisan effort to meet this acute problem.

The Democrats are willing to cooperate.

Since the great majority of Republicans, with a small minority of Democrats, swept away the consumers protection last summer and since the Republicans now control Congress, the responsibility for initiating action is theirs.

The housewife and her family cannot eat studies, charts, and NAM philosophy.

She needs action—and now.

Since last year, the food she buys has gone up 33 percent.

The clothes she needs—20 percent.

Household replacements up 20 percent.

Her pocketbook will not stretch. She cannot buy what she needs, now—and prices are still rising.

America's housewife is in trouble.

The $12,000,000,000 net corporation profits after taxes in 1946 will not help her.

The $15,000,000,000-rate of profits after taxes in the last quarter of 1946 will not help her.

The first quarter corporate earnings for 1947, the highest in our history, will not help her.

Increased dividends for the first quarter of 1947 over 1946 will not help her.

Nor will corporation assets of $104,000,000,000—$49,000,000,000 over 1939, help her.

They are not reflected in her pocketbook.

They do not help her to buy ground round steak at 85 cents a pound, milk at 17 cents a quart, butter at 76 cents a pound. Pork chops at 73 cents a pound. Coffee at 47 cents a pound.

We are not talking about roast beef and steak budgets.

We are talking about three-fourths of America's families who earn less than $3,500 a year, or less than $70 a week.

We are talking about the 40 percent of America's families who earn less than $2,000, or less than $40 a week.

So that we know what this 40 percent have to live on, let us break it down.

Twelve percent of America's families in the peak year of 1945 had a family income of between $1,500 and $2,000.

Nine and one-tenth percent of America's families struggled with an income between $1,000 and $1,500.

Nine and five-tenths percent of America's families struggled with an income between $500 and $1,000.

Nine and seven-tenths percent of America's families struggled with an income between $0 and $500.

To bring home even this income it often takes two or three wage earners per family.

The Heller budget tells us that a family of four needed $70.52 a week in 1946 to live at a minimum of decency.

One overcoat for the wage earner only every 6 or 7 years on this budget.

And living has gone up 20 percent since 1946.

The housewife is left holding the bag. Congress must act now.

To pass legislation that says one thing and does another is not the answer.

The Taft-Wolcott so-called price control bill which killed price control last June is the cause of all the housewife's trouble today.

The Taft-Wolcott so-called rent control bill which was written to kill rent control and will kill rent control will be the final death blow to the budget of 15,000,000 renting families.

No one speaks for the desperate housewife whose budget has had a ceiling on it for 3 years.

Dispute rages rather around the so-called "high" wages of organized labor.

The time has come to consult his wife Molly.

In January 1945, the average pay in John Worker's pay check was $47.50. This was the peak wage year.

Today, the average pay in John Worker's pay check is the same in dollars.

But Molly Housewife and John Worker cannot live as they did in January 1945, during the war. It costs 20 percent more to live now than it did then.

For every dollar Molly spent for food last April, she has to spend $1.33 now.

For every dollar Molly spent for clothes last April, she has to spend $1.20 now.

Every week, Molly Housewife and her babies are short $9.50 of what they had to spend in January 1945.

It is simple. They eat $9.50 less or they do not buy the pair of shoes or the shirt that keep other people at work.

Congress must act now if Molly and all the other housewives and their families are to have enough to live on.

Second San Francisco Bay Crossing

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a statement made to the San Francisco Bay Area Council by Mr. Fred Cox, chairman of the Southern Alameda County Committee for a Second San Francisco Bay Crossing. This statement was made at a meeting of the committee held in the Lemington Hotel, Oakland, Calif., on May 19, 1947:

A joint Army-Navy board, acting under a resolution adopted in the House of Representatives, has made a comprehensive study of a second crossing of the San Francisco Bay. This board recommended a crossing from a location opposite the foot of Army Street in San Francisco to a point opposite Fifth Street in the city of Alameda, including the auxiliary facilities, such as a tube under the estuary separating Alameda and Oakland.

A recommendation has come from the California State Department of Public Works urging the construction of a bridge paralleling the present San Francisco-Oakland Bay Bridge, which to many of us is not an acceptable solution for a grave transportation problem.

Mr. Cox, in his following statement, points out the cogent reasons for supporting the more southerly crossing as recommended by the joint Army-Navy board:

In our consideration of a second San Francisco Bay crossing there are some points on which we can all agree and other points on which we disagree. Some of our disagreements seem irreconcilable, while on other points we can come together through logic, reason, and compromise.

Point No. 1, on which we can all agree, is that we need a second crossing; furthermore, we must have it at the earliest possible date.

Point No. 2 is location, and this is the one on which we probably most radically disagree.

Other points, such as type of bridge, number of traffic lanes, whether we shall have rails carrying main-line trains into San Francisco, appear to be within the range of agreement through reason and analysis.

With the immediate need for a bridge accepted by all, and with other features being subject to decision by logic, compromise, and economics of the situation, we seem to find the one question of location to be the subject of greatest difference of opinion.

On the one hand, we find the location from Army Street, in San Francisco, to Alameda, on the East Bay side, recommended by the joint Army-Navy board after extensive hearings. The impartiality and competence of the men on this Board cannot be doubted. The thoroughness of their work cannot be questioned. The practicability of a crossing as recommended by this board must be accepted by all.

On the other hand, these same things must be granted as to the men who prepared the report of the California Department of Public Works for the California Toll Bridge Authority.

And so we arrive at the conclusion that experts disagree on this point of great importance—the location where the second crossing shall be built. Shall we accept the recommendation of the experts of the Joint Army-Navy Board, or shall we accept the conclusions of the experts of the California Department of Public Works?

Inasmuch as the experts cannot agree and both claim equal authority as to the engineering features of the two locations, and inasmuch as the location of the second crossing will vitally affect the economic future of a vast segment of California's population and will determine the industrial destiny of great areas of the State, this one question of location should be finally decided by the people who will suffer or profit by the decision.

The people, themselves, who will use the bridge and who will pay for it with their tolls, should determine the location. The people should demand this right. In the spirit of real American democracy, they should tolerate no other decision than their own. So long as we have an American system by which the majority of the people have the right to say what they are to get for their money, those people should be the ones to say where their bridge is to be built.

The purpose of the Joint Army-Navy Board was to give all interested parties a chance to present their plans and the arguments in favor of them. They fulfilled this purpose admirably. All interested parties had their chance to present plans and to argue for their plans. Many individuals and groups representing widely different interests at-

tended the meetings of this Board. They presented their plans and arguments.

Certainly the proceedings of the Joint Army-Navy Board were fair, open, complete, and impartial. The Board was composed of men of unquestioned reputation, ability, and standing. Now public officials of California have disregarded the recommendation of that Board and have introduced dissension into public thinking on the subject of the second bay crossing.

DISTANCES

The California Department of Public Works engineers say that the majority of traffic comes from the near vicinity of the present bridgeheads on both sides of the bay. All of us knew this would happen more than 20 years ago when the present bridge was seriously under consideration. Traffic always concentrates around a bridgehead. That is the point where there is the most concentration. This result was a foregone conclusion. It is natural and inevitable.

Now because there is the concentration of traffic in the congested areas of San Francisco and the East Bay, the California Department of Public Works engineers say that we must build a second bridge in the same location to relieve that congestion which the first bridge has created. They know, and every thinking layman knows, that to put this second bridge in the same area, within 300 feet of the present bridge, will cause further concentration and congestion of traffic. Then in another few years there will have to be a third bridge another 300 feet north or south of the second bridge to relieve that concentration. And in another few years more there will have to be a fourth bridge within another 300 feet. One bridge after another will have to be built close to all the others to relieve the concentration of traffic at bridgeheads, which started with the first bridge and which will be magnified by the building of other bridges, according to the thinking of the engineers of the department of public works. There is no direction and no end to this vicious circle of false reasoning. According to this kind of thinking there will be no place to stop. And all the time traffic from the more remote areas will have to travel the same long distances to cross the bay.

We have two great concentrated population areas in San Francisco and the East Bay. At this moment we have only one street between these two large populations. Now it is proposed, in effect, that we merely widen the present street and keep all the traffic on the widened street and dump it on both sides in the same areas.

TWO BRIDGES

If, at the time of the construction of the present San Francisco-Oakland Bridge, the order had been given to build two bridges, where would they have been built?

If anyone has seriously proposed building them parallel to and within 300 feet of each other, the proposal would not have been taken seriously. If such a proposal had been made, it would have been branded ridiculous. And yet that very proposal is being made today by our State engineers. It is just as ridiculous and unfair today as it would have been 20 years ago.

To have proposed two bridges side by side and within 300 feet of each other at the time of considering the first bridge would have been considered just as preposterous and would have received far less attention than the recently demised Reber plan. We do not want a bridge located where it will hamper industrial development of the entire San Francisco Bay area, where it will retard growth. We want the second bridge located so it will encourage such development and growth. We want it located so its influence will reach out into the rich fertile valleys of Northern California. We need it where it will become an intelligent and logical part of the great bridge system of the future, consisting not only of two bridges; but of perhaps as many as a dozen. We do not want all of our future bridges side by side and within 300 feet of each other. We must have them where they will contribute most to the full development of the entire San Francisco Bay area. Such a plan for future bridge construction deserves the endorsement and support of every city and district, every organization, every citizen and every individual in the entire San Francisco Bay area. Anything less than this is a crime against posterity. Anything less than this would constitute a plan for hampering an unparalleled industrial development program for the future. It would constitute a course that will choke the growth that lies ahead of this gateway to that part of the world where the greatest development will occur in the century that now lies ahead of us.

SPREAD TRAFFIC

If we solve this problem by putting the second crossing in the location recommended by the Joint Army-Navy Board we spread the traffic and also serve a much wider area. Further, by locating the second crossing in accordance with the recommendations of the Army-Navy Board we find that the people north of the present bridge are no further from the center of San Francisco by the Army-Navy route than the people of East Oakland and the others to the south and east are from San Francisco by the present bridge. By following the recommendations of the Army-Navy Board we get a balanced traffic condition. We get better distribution of traffic instead of further concentration. We contribute to the development of the area where growth is possible instead of creating further confusion where there can be no further growth because the areas are filled.

In a recent meeting I spoke to a man who is a large industrialist in the area north of the present bridge. I asked him what he thought about the location of the second crossing. Here is what he told me: "If the second bridge is built within 300 feet of the present bridge we will have two bridges. If the second crossing is built from Army Street to Alameda or Bay Farm Island, we will still have one bridge. We cannot get hurt."

RIGHT-OF-WAY VALUES

What will happen to our future highway-development program as a result of the construction of the second bay crossing. One answer to this question can be found by looking at what has already happened.

In the proposed $200,000,000 Alameda County highway program we find two projects which take nearly one-half of the $200,000,000. One of them is 4 miles of construction from Santa Clara Avenue in Alameda to MacArthur Boulevard, which is to cost $50,000,000. The other is 10.1 miles through the heart of Oakland which will require $46,485,000. One of our supervisors has told us that the reason for the high cost of these two projects is that the rights-of-way will cost a majority of these two sums.

Another bridge in the same location will ultimately require morelhighways in the same area for heavier traffic with costs running into many millions of dollars for more rights-of-way.

To deliberately make a bad situation worse instead of spreading traffic so it will not create this worse condition does not make good reasoning.

POPULATION

Bridges should be built to serve people who will use them. A study of the population figures shows that of the 743,000 people living in Alameda County, 391,271 live in the southern part of the county. Yet according to the proposal of the California Department of Public Works, the second bridge would be built at a point where it would serve the minority of the county's population without consideration for the majority.

INDUSTRIAL DEVELOPMENT

Industrial leaders through the East Bay area have been saying for the past several years, "Industry and population have only one direction for growth in Alameda County—to the south and east." They repeat constantly that there are no more large industrial areas in Berkeley, Emeryville, Oakland, and that the only sites remaining open are from San Leandro south through Hayward and on to Niles, Centerville, Newark, and San Jose.

To build a new bridge adjacent to the present one would throttle and discourage this industrial development in the only direction in which it can go, while to build the second crossing on the location recommended by the Army-Navy Board would encourage such development.

On the San Francisco side it is also true that the only possible direction of growth is to the south. A second crossing to the south would bring these two potential industrial areas on both sides of San Francisco Bay closer together and contribute greatly to our entire Bay area industrial development.

In this connection, it is well to remember that the 10 years after the first World War saw the greatest industrial growth in the history of Alameda County. We should plan to encourage the even greater industrial growth that will take place in Alameda County during the 10 years following World War II.

Emphasizing this industrial growth during the next few years in Southern Alameda County, listen to this information taken from the annual industrial report of the Oakland Chamber of Commerce. "Magnitude of the industrial change since pre-war days of 1939 is revealed in a percentage gain of 73.4 for Alameda County in its production workers, as compared with 44.1 percent increase for San Francisco.

"Moving to welcome even greater industrial development, the board of supervisors endorsed a zoning study of the area between San Leandro Bay and Hayward.

"At the suggestion of Harold D. Weber, general manager of the chamber, and Don Follett, manager of the Alameda County New Industries Committee, they instructed Wallace Boggs, county surveyor, to plot prospective residential districts in that territory. The remainder will be allocated for industry.

"The industrial report predicted 1947 will be Alameda County's greatest year for industrial expansion. Future development, it predicted, will place large plants of national firms in the 1,056 acres of industrial land being developed by the port of Oakland around San Leandro Bay and the nearby 3,000 acres to the south."

To know these facts, to have this information in our hands, and then to build the second bay crossing where it will handicap such development rather than to encourage it, is to follow a course that it is difficult to reconcile with reason and intelligence.

POPULATION GROWTH

It is a fact that the population of California has doubled or more than doubled in every 20-year period during the past 100 years. And it is a further fact that authorities state that the only possible direction for substantial growth for both San Francisco and the East Bay area is to the south.

A recent survey of new home building in the Hayward area reveals that there are now under construction or planned for early construction more than 4,000 new homes. This points the trend of population growth emphatically.

If the California Department of Public Works made its recommendation for a second San Francisco Bay bridge in ignorance of

these facts, or if the department knows these facts and chooses to ignore them, then they are committing a serious and damaging offense against the areas of greatest future growth and the areas most in need of a second bay crossing.

SUPPORT OF SOUTHERN CROSSING

It should be of much interest to everyone who is attempting to get a second crossing built at the earliest possible date to know that the people of the affected areas have already expressed their wishes on this subject through various groups.

We find that the San Francisco Police Commission recently voted unanimously to oppose the California Department of Public Works' recommendation and at the same time to support the recommendation of the Army-Navy Board.

Further we find that more than 50 city councils, chambers of commerce, labor unions, service clubs, improvement clubs, and civic organizations have endorsed the location recommended by the Army-Navy Board. They are opposed to the location parallel to the present bridge.

When American citizens express themselves so emphatically, their wishes must not be ignored.

"The construction of proposed solid fill and rip-rap side slopes would form a fine protection from southeast storms to the bay area north thereof including the south shoreline of the city of Alameda, making said bay area a perfect set-up for recreation, yachting, and boating."

(2) "The type of crossing that can be built economically under the fundation conditions will provide only one long channel opening and other shorter bridge spans or fills which will obstruct the anchorage areas to a considerable degree, and may affect channel maintenance."

But the Army-Navy engineers have suggested a type of crossing that is acceptable to them and they are the ones who are responsible for watching the interests of the Army and Navy in the anchorage areas. If a crossing at this point is acceptable to the Army and Navy, then no one else can offer any logical objections.

(3) "Because of harbor facilities it must have its east bay terminus south of the estuary. This requires a freeway through Alameda and additional tubes under the estuary of sufficient capacity to handle future traffic to the center of traffic in Oakland."

Of course, the East Bay terminus of the second bay crossing should be south of the estuary. All the area north of the estuary should be kept entirely free of any more obstructions. Huge developments will take place in this area in the future, and there should be no construction of any kind that might interfere with such developments. This should be apparent to anyone.

And, of course, additional tubes will have to be built under the estuary to serve Alameda-Oakland traffic. Both Alameda and Oakland have been crying for such additional tubes for years. If this is a necessity of the future, by what line of reasoning can it be cited as an objection to the building of a bridge in this proposed location?

(4) Traffic on the present Bay Bridge will be reduced by not over 20 percent because of the location of the East Bay terminus. A normal increase in traffic on the present bridge will probably make up for this diversion within a few years, with the result that the relief for the acute congestion on the present bridge would be temporary only.

SUMMARY

In summary the conclusion must be very definite that Army and Navy men of unquestioned ability and competence have thoroughly studied and considered the whole San Francisco Bay Bridge problem.

They have selected as the best location for a second crossing the Army street area as the most desirable location for the bridgehead on the San Francisco side of the bay. They have selected the southern shore of Alameda as the best location for the bridgehead on the east side of the bay. These men are eminently qualified. Their integrity cannot be questioned.

The engineers of the California Department of Public Works are men of equally high standing but their reasoning is so apparently short-sighted. They count immediate needs as of first importance without due consideration to the still more important future requirements. They count cost when the saving of a few million dollars now will cost the entire San Francisco Bay area many times the amount saved.

When experts disagree, then fairness and justice to the people who will pay for the bridge with their tolls should determine the location.

The real problem that faces the people of California is not merely the building of a second bridge across San Francisco Bay now but the building of several bridges over a period of many years.

If the California Department of Public Works wants to render the kind of service to the people of California which it should be capable of rendering it should study the possibilities of bringing all bridges that now cross San Francisco Bay from the Golden Gate to Dumbarton under one operating head.

The Golden Gate Bridge, the San Francisco-Oakland Bridge, the San Mateo Bridge, and Dumbarton Bridge should all be put under the control of the California Toll Bridge Authority and all of them should charge a 25-cent toll. All tolls collected should go into one general bridge building fund and should be used to pay off the balances of existing indebtedness and also pay the cost of building additional bridges as fast as increasing traffic demands.

Such a program would give the State engineers an opportunity to do constructive long-range thinking. They could then do some planning that would mean intelligent preparation for the great future that is in store for the entire San Francisco Bay area.

Let us think in terms of practical planning for a brilliant future for this San Francisco Bay area as well as in terms of providing for pressing needs of the present.

The entire San Francisco Bay area is a single economic unit. It is desperately in need of vision and leadership. That fact is a challenge to all of us.

A Great Blow to California

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Times of June 26, 1947:

A GREAT BLOW TO CALIFORNIA

That the decision of the United States Supreme Court awarding title to coastal lands between low-water mark and the 3-mile limit is a great blow to California and to all other States similarly situated is evident. It is not only a blow but an unexpected one, since it upsets more than a century of precedent, acceptance, and custom. And it seems to have some aspects of a blow below the belt, also, since some of the reasoning in the majority opinion written by Mr. Justice Black appears to be irreconcilable with common sense and with the history of the United States.

The main question, however, is where this decision leaves us and what to do about it. That the State should seek a rehearing, even though such applications are seldom granted, is the first thing to be said. The second action that should be taken is to press for passage by Congress of an act quitclaiming the tidelands to the States which always have been supposed to own them. Congress passed such an act in 1946 but it was vetoed; but the coastal States can try again.

One point about the decision can be emphasized: the Court does appear to recognize the claims of the States to lands under bays, harbors, and rivers, and to the lands between low-tide and high-tide marks. What the decision gives the Federal Government is the land beyond low-tide mark.

This land, where it contains oil and other mineral deposits, is worth a vast amount of money. The State of California and municipalities have obtained revenues amounting to $12,000,000 a year from the royalties resulting from drilling only a small portion of this subsurface area; so the stakes involved are high.

To most people it will seem that the court majority has made in this case not a law decision at all, but a political decision, such as should be made by the President and Congress. This is the opinion of Mr. Justice Frankfurter, pointed out in his dissent. To assert claim to property is not the job of the Supreme Court; and in this matter Congress has not only repeatedly refused to claim the coastal belt but has sought to repudiate it. The claim was made by an executive agency without any specific authority from Congress and after Congress had declined to grant such authority.

As for the reasoning in the majority opinion, it appears in spots to be nonsensical. One quotation will illustrate: "The United States stresses that the Thirteen Original Colonies did not own the marginal belt; that the Federal Government did not seriously assert its increasingly greater rights in the area, until after the formation of the Union, that it has not bestowed these rights on the States but has retained them as appurtenances of the national sovereignty * * *."

The concept of a Federal Government existing and having rights "before the formation of the Union"—since it was the Union or at least the people of the Union that created the Federal Government—is something unheard of before this opinion was written. It has no historical basis. It looks as though it were drawn out of thin air to sustain the Government's case. This concept is no accident; without it, the court could not say, as it does, that the Thirteen Original States did not own their tidelands, which passed to them from the crown of England.

The Court's assertion that in the Pollard case, decided in 1845, only title to land covered by inland waters was involved may possibly be a valid distinction. But if the distinction is valid, the Court then is claiming for the United States unclaimed land, as pointed out by Justice Frankfurter, and is invading the province of Congress. Congress has never asserted that this belt is part of the national domain.

The majority opinion also contends that possession of this belt is necessary to the Federal Government, because that Government must defend it in war or conduct diplomatic negotiations with regard to it. But Mr. Justice Reed pointed out in his well-reasoned dissent that ownership by the States would not interfere with the needs and rights of the United States in war or peace. "The power of the United States is plenary over

these undersea lands, precisely as it is over every river, farm, mine, and factory of the Nation," Justice Reed said.

The original States, said Justice Reed, were sovereigns in their own right over these submerged lands and the States later admitted were taken in on the same footing.

In no war that the United States has waged has the supposition that submerged lands belonged to the States interfered in the least with their defense by the National Government. The Federal Government has always exercised its rights to regulate navigation in coastal waters, without any reference to who owned the land beneath them, nor has such regulation ever been challenged by any State.

But whether this decision is sound or unsound logically, it has been made; and unless the Court can be induced to reconsider, the only recourse of the coastal States is an appeal to Congress.

Tributes to the Late Senator David I. Walsh

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, June 30 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, I have an editorial from the Herald News, of Fall River, Mass., and another editorial from the Union, of Manchester, N. H., relating to the late Senator David I. Walsh, which I ask to have printed in the Appendix of the RECORD so that his many friends here in the Senate may read them.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Fall River (Mass.) Herald News of June 14, 1947]

DAVID I. WALSH

The passing of David I. Walsh recalls a chapter without parallel in Massachusetts political history. That it was an honorable contribution he made to his State and Nation will be admitted even by those who sometimes were confused by his forthright convictions. He was not given to double talk. At a time when most of his party deemed it little short of treason to disagree with Franklin D. Roosevelt, he disagreed with him. Not because he was unsympathetic with the hopes and needs of the underprivileged, but because he saw the need of perpetuating the old and tested values. It was when Roosevelt decided to pack the Supreme Court that this characteristic found its most impressive expression, except, perhaps, in that earlier day when he stood shoulder to shoulder with the elder Henry Cabot Lodge in opposition to Wilson's League of Nations. He was an isolationist.

Senator Walsh trod a middle path between conservatism and what is defined as liberalism. He represented a great industrial State, and he recognized both the needs of labor and capital. He was a protectionist.

He was chairman of the Naval Affairs Committee as the United States moved toward the Second World War. He was one of those alined in favor of strict neutrality, and in some quarters there was some uneasiness lest his neutrality affect his judgment relative to the need for a powerful Navy. Under his chairmanship, the United States Navy grew to be the most powerful in the world.

Senator Walsh had many warm friends in Fall River. "Fall River has always been very good to me," he said, on his most recent appearance here. When he surrendered his seat in the Senate to the younger HENRY CABOT LODGE, his political star had set. But the record of honorable service he had rendered down through the years remains, and Fall River joins with the rest of the country in respectful tribute.

[From the Manchester (N. H.) Union of June 13, 1947]

DAVID I. WALSH

People throughout all New England will join in an expression of sympathy and respect over the death of former Senator David I. Walsh. Mr. Walsh was one of those stalwart figures that have marked New England's record in recent years.

People did not always agree with him, but they always respected his ability and integrity. Throughout the more than a quarter of a century that he represented Massachusetts in the United States Senate, Mr. Walsh had strong convictions that he did not hesitate to follow in the face of strong opposition.

A stanch Democrat politically, he often found himself out of step with that party's leadership. He opposed President Wilson on the League of Nations issue, and balked several times at Roosevelt's policies. The Roosevelt attempt to pack the Supreme Court aroused his ire as an affront to the Constitution. Senator Walsh swallowed the Roosevelt third term with some hesitation, but he balked completely at the proposal of a fourth term as a violation of a precedent that should be respected. Incidentally, these revolts against Roosevelt's policies and practices were not forgotten in Roosevelt circles, and played a part in the Senator's ultimate defeat in 1946 by HENRY CABOT LODGE, JR.

Prior to Pearl Harbor, Senator Walsh was an ardent isolationist. He opposed lend-Lease, the trading of 50 destroyers with Britain, the establishment of convoys, and other measures designed to strengthen the opposition to the challenge of Hitler. After Pearl Harbor, however, his attitude changed completely. He declared then that since the United States had been attacked, there was nothing to do but to defend ourselves.

From that time on he supported the war with vigor and determination, performing valuable service as chairman of the Senate Naval Affairs Committee in promoting every means possible to make the United States Navy equal to the responsibilities of the war. In fact, during the period when Senator Walsh was preaching isolationist doctrines, he never wavered in his belief that a strong Navy was an important asset to American protection.

Throughout his entire career Senator Walsh's chief desire was to be known as a humanitarian. It was in this field that his deepest interest lay. Born amid humble conditions and fighting his way up the hard way, he never lost his fellow feeling for the unprivileged classes. Of Irish extraction, this same feeling made him the ardent apostle at all times of Irish freedom.

Although he had taken an active part in many national problems, in his later years he was accustomed to refer with most earnestness to such achievements as his campaign to help establish extension courses in State-supported universities and the regulation of State employment of labor. Throughout his life Senator Walsh was the friend of labor. Whenever he could, he sponsored its cause.

The Nation has lost one of its strong leaders. Both political friends and foes will join in a declaration of respect for a life lived in the American tradition.

Japanese Police Knocked From Fearsome Pedestal

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith the following article by Mr. Ralph Donaldson, of the Cleveland Plain Dealer:

JAPANESE POLICE KNOCKED FROM FEARSOME PEDESTAL

(Article 25)

In a police state, such as Japan has been for generations, it is the policeman who comes in daily contact with the people and whose job it is to enforce the decrees of the dictatorship which rules the country.

The occupation authorities recognized this and realized that if any of the proposed reforms were to be effective there would have to be a thorough reorganization of the Japanese police system.

This was done, by issuing appropriate directives to the Japanese government. But we went further than merely effecting a reorganization. We took steps to make the new police force an effective instrument to help guide and develop the people in their new-found enthusiasm for democracy.

We discovered that the Japanese are group thinkers, that they were willing to cooperate with us and that they would do all and more that we asked, provided they understood what we wanted of them. What could be better than to make each individual policeman a salesman of democracy in his district? That, at any rate, is what we have tried to do.

In the old Japan there were 66,000 policemen who had the power of life and death, of freedom and confinement over the people they ruled. They supervised every activity of the individual from birth to death, from licensing midwives to issuing burial permits. They even inspected spring house-cleaning activities, and bawled the housewives out to a fare thee well if they didn't do a good job.

They wore shoulder boards, a symbol of the emperor, and carried swords, a symbol of authority. People bowed to them as they would to a superior being.

In addition to the regular police, there were "thought police" who had the right to throw anyone in jail whom they believed was thinking dangerous thoughts or who spoke disrespectfully of the emperor.

The jails were filthy and overcrowded. Persons could be held without charge and, if tried and acquitted on some charge, could be immediately rearrested at the whim of the policeman.

"THOUGHT" CORPS ABOLISHED

We directed the Japanese government to abolish the "thought police" and to repeal all laws against dangerous thinking and free speech. We fired 5,000 of the top police officials, and began a reorganization which resulted in 90 percent of the old police force resigning and new men being appointed in their places. The police no longer wear shoulder boards or swords, in fact, they are unarmed except for batons.

We have established a bureau to handle offenses by juveniles and we are training a force of policewomen. The jails have been cleaned up and the prisoners segregated.

But few of the jails require any locks on them. So deep is the inherent respect for a policeman that in ordinary cases he doesn't have to make an arrest. He merely notifies a suspect that he is wanted and the suspect

promptly reports to the jail and asks to be admitted.

PRISONERS STAY PUT

Do you believe that? I didn't until I saw it. We visited a jail at Yokusuka. Three women were being held for minor offenses. There were no locks on the cells and the police station door stood wide open. But they never even thought of walking out.

There is only one link between the new and old Japanese policemen. They are allowed to salute American and Allied officers and our officers return their salutes.

We have also begun a reorganization of the Japanese fire departments which formerly were under the police departments and were badly neglected. There were only 60 fire alarm boxes in Kyoto, a city of 867,000 population and these were all torn out during one of the Japanese wartime scrap drives. The fire departments had to get their gasoline from the police and if the police didn't want to give them any they were unable to respond to alarms.

FIRE EQUIPMENT OBSOLETE

Fire hose was leaky, equipment obsolete and inadequate, and the Japanese never had a fire prevention program, a system of inspection or building codes. They took a fatalistic attitude toward fires—if there was a fire eventually it would burn itself out.

Nothing of course could have stopped the fires started by our mass bombing attacks. But in 1946 there were 14,000 fires in Japan which caused a loss of 3,000,000,000 yen.

Besides reorganizing the police and fire systems in Japan, we are preparing to establish a Japanese coast guard. Formerly it was the navy's job to prevent smuggling and to render assistance to vessels in distress. But the Japanese no longer have a navy, so we are organizing a coast guard to perform these duties and also to take over the enforcement of the maritime laws and to maintain a lighthouse service.

The Roosevelt Faith

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, June 30 (legislative day of Monday, April 21), 1947

Mr. PEPPER. Mr. President, on the 25th of June, at Warm Springs, Ga., a very touching ceremony was held when the Little White House was dedicated as a shrine, in the custody of the State of Georgia, in memory of the late President Franklin D. Roosevelt. One of the stirring addresses delivered on that occasion was one entitled "The Roosevelt Faith," by the former Secretary of the Navy and the former Ambassador to Mexico, Hon. Josephus Daniels. I ask unanimous consent that the address may be incorporated in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Many of us come here today out of affection for a man, but those of us who loved him most, I believe, come also in devotion to the things to which Franklin Roosevelt gave his life. It was his genius that he could speak clearly in warm-hearted leadership for us in an American period of difficulty never equaled in the history of our Nation. It is our fortune that in leaving this shrine he also left us here a parable which will go on teaching long after the last of us have followed him to the end of living. What we say here will be soon forgotten. On this day we are only a little group of the millions who will come not merely for aid in the ills of the body but for help in the deeper sicknesses of the spirit. The parable here will persist across the ages.

We do not merely come to the place where one of the great American Presidents died. We come to these springs to which a young man came. How young and debonair, striding and strong he had been. I am glad I can remember not only that he was great but that he was beautiful as well. He came here a cripple to recruit his strength. It is sad but instructive to remember that he came in the early twenties when the world also, which had been so strong, so beautiful in its purposes for democracy and for peace, was crippled with the paralysis of bitterness at home and abroad.

It is fitting that we come here in a like hour today when there seems to be more hate and confusion than love and purpose in the world. In New World and Old World alike recent allies of courage and sacrifice are made in their victory to seem implacable enemies across an impermanent peace. There are men among us who would defend democracy by infringing its liberties. There are more who think that the democratic faith depends for defense upon military force rather than the steady fulfilment of its promise for plenty and freedom together and everywhere. We live in a time when the last and greatest discoveries of our scientists seem only the basis for the most primitive fears. A great and beautiful Nation, equipped as no other Nation ever was for the leadership of mankind, is a cripple also and once again. And in a sick world we seem more concerned with contagion than energetic in cure.

It is not necessary for me to point the parable which these hills will hold to the end of time. It was on this ground that Franklin Roosevelt understood first—here he made the faith—and here also we may possess it.

We need not be the captives of our fears.

Only the already lost can think of our future as besieged.

We have more to give than to guard.

Our powers are not weapons but tools with which to build the promise of democracy into the purposes of mankind.

Sometimes that faith is hard to hold. Even to an old man, who has seen many years, these times seem dark. But this place is lit with courage. Indeed, it is illumined with faith. At Warm Springs today our task is not to dedicate a shrine, but here and now to rededicate ourselves.

How Can We Halt the Spread of Russian Power in Europe?

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, June 30 (legislative day of Monday, April 21), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject, How Can We Halt the Spread of Russian Power in Europe? broadcast by me over the Town Meeting of the Air, originating at Pueblo, Colo., June 26, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Before we can answer the question, How can we halt the spread of Russian power in Europe? we must answer the question, Do the American people really want to stop the spread of Russian communism in Europe? If we don't, we should. If we do, we, as a people, better start squaring our actions with our professed desires. The time has come for us to stop fooling ourselves, and above all else, the time has come to stop playing partisan politics with the peace. In my opinion, we are fast losing the peace while Russia continues to win the war. She has overrun Poland and Yugoslavia, now Hungary, and the Balkans are fast becoming her puppet satellites. She is playing for time.

We will never be able to stop the spread of Russian communism in Europe until we first stop the spread of economic isolationism here at home. As I sit in the Senate and observe day in and day out the shocking selfishness of various pressure groups doing everything they can to take economic advantage of the domestic dislocations brought about by the war, I am filled with dismay and despair. Some way, somehow, the American people must be brought to their senses, and quickly, in regard to what it will mean to the destiny of our Nation if we lose this peace. Right now is the time for each one of us to subordinate his personal selfish interests to the Nation's interest in winning the peace if this democracy is to survive.

The need for complete national unity and full devotion on the part of all of us to our patriotic obligations was no greater on the day of Pearl Harbor, December 7, 1941, than it is at this hour. The difficulty is that the need is not as dramatized as was the sneak attack on Pearl Harbor.

My mail shows that an increasing number of Americans are permitting their own selfishness and lethargic disinterest to be used as weapons for sneak attacks upon the peace. They are afraid we are being asked to pay too high a price for the peace. They want lower taxes, high tariffs, cheap labor, the emasculation of great pieces of social legislation and a quick return to the laissez-faire economic pattern of the 1920's. Even many of them think a depression is probably necessary to get back to the good old days of boom and bust.

Through such a program they are spreading Russian communism in Europe, but blinded by a myopia of greed, they do not see it. They do not see that if we fail to make democracy work in America, we cannot prevent the spread of communism in all of Europe. Too many of our politicians are telling them what they want to hear, but not what they should be told.

Our system of political and economic democracy, based upon the two foundation rocks of individual liberty and private property, are worth paying high taxes to retain, and unless we are willing to pay a high price for the peace I am convinced that it will be only a matter of time before we will have to pay the incalculable price of another war. We need to remember that a continuation of the present economic depression and collapse in Europe and Asia will make it impossible for us to enjoy prosperity here at home after our present surplus economic demands are filled by our increasing production supply.

There are millions upon millions of people in Europe and elsewhere who have nothing or little to lose in going from their present economic system, under which they are suffering and starving, to Russian communism which at least promises them food and shelter although its revolutionary propaganda feeds upon human suffering. Upon the promise of such a mess of pottage Russian communism is spreading through Europe, while we here in this country quarrel among ourselves over such things as giving needed support to the Truman doctrine, industrializing Germany, feeding the starving peoples

of Europe, and helping France, Italy, and England regain that necessary degree of economic stability so they once again can become self-sustaining nations.

I strongly favor the Truman doctrine, particularly as expanded by Marshall's Harvard speech, but it doesn't go far enough. It is not enough to make clear to Russia that we intend to resist with firmness any attempt on her part to overrun the freedoms and individual liberties of the people in the weaker nations of Europe. We must also make clear to her that we are ready to help rehabilitate war-torn Europe with or without Russia's assistance and in spite of her resistance. I think such a course of action is our best and only hope of bringing about peace in Europe and understanding with Russia.

We must keep ourselves strong and united at home, so that at all times we can demonstate to the world that we are strong enough to preserve the peace until such time as the other nations of the world, including Russia, acting through the United Nations, demonstrate that they want peace.

If free governments and personal liberties are to be protected from the police-state methods of Russia, nations which believe in the principle of self-determination of peoples must join in abolishing the veto and insisting that Russia abide by majority rule in the United Nations. If that fails, the peace is lost.

America's Leadership for Freedom and Peace

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Monday, June 30 (legislative day of Monday, April 21), 1947

Mr. O'MAHONEY. Mr. President, it was my privilege yesterday to broadcast over the Columbia Broadcasting System an address on America's opportunity for leadership in international affairs. I ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Freedom and peace are the primary goals of all peoples. Certainly they are the primary goals of the people of the United States, who, from the time the Nation was founded until now, have cherished the belief that mankind is capable of establishing a social and political order under which the individual shall be free to live his own life and under which war may be avoided.

Now, however, after two world conflicts fought within the space of 30 years, with a fury and destructiveness that defy imagination, it is becoming apparent that it is much more difficult to achieve peace than it is to win unwanted wars. Men are already hopelessly talking about a third world war to be conducted with weapons more terrible even than those which were used in the last one. It becomes imperative, therefore, if we desire to avoid such a catastrophe to attempt frankly to face the facts both with respect to ourselves and to the other nations of the world.

Surely we are not deceiving ourselves if we say that the people of the United States have amply demonstrated in the two terrible conflicts of this century that they have no ambition for conquest or aggrandizement. Now, as after the peace of 1919, we recognize the right of self-determination for every other people. We do not attempt to constitute ourselves a monitor to compel the adoption of our institutions elsewhere, but when free institutions are overthrown in any nation or self-determination is denied to any people, we have in the past at least recognized that such applications of force, internally or externally, are destructive of the fundamental hopes of all people, namely, the attainment of freedom and peace.

Throughout this century our people have cherished the confidence that mankind can perfect a world organization to provide peaceful settlement of all international disputes, promote disarmament and banish war. If we have failed in attaining these objectives, the failure has been due not to any purpose of preserving opportunity to gain dominance over any other people or area, but solely because of human frailty in selecting the proper course of action to gain the desired end.

Personal rivalry and purely partisan rivalry have impeded us in taking the effective world leadership which we should take in the effort to establish permanent peace and freedom. But a more serious impediment than either of these has been our failure until now to understand that there can be no political liberty without economic freedom, and, therefore, that the first step in the attainment of the great objective of all mankind is the establishment at home and abroad of economic liberty. This proposition has been stated over and over again by our leaders in the past. It was the heart and center of the Atlantic Charter, and it has once more been currently enunciated by Secretary of State Marshall.

"Our policy," he said in his address at Harvard University on June 5, "is directed not against any country or doctrine, but against hunger, poverty, desperation, and chaos. Its purpose should be the revival of a working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist." Surely this is a plain and unmistakable statement of our fundamental purpose—to help peoples everywhere, through free institutions to achieve triumph over misery.

What do we mean by "free institutions" and what threatens them? When we speak of free institutions, we speak of social and political conditions under which authority proceeds from the people themselves. What threatens the existence of such institutions? Obviously they are threatened by arbitrary power. That is to say, by the infliction upon people of authority which they are forced to obey, but in the establishment of which they have had no part.

If we ask ourselves whether or not arbitrary power exists anywhere in the world today, we must in all frankness answer ourselves that it does. It dresses itself, to be sure, sometimes in the habiliments of nationalism, sometimes in the garb of imperialism, sometimes even in the cloak of democracy. But no free person wherever he lives, whatever his background, can mistake arbitrary power whatever the disguise. It is the rule of the many by a few. By whomever it is exercised, it is a repudiation of every principle of political and economic life which has activated the people of this Nation from the beginning. Free men, whoever they are or wherever they are, cannot safely delude themselves into compromises of principle with arbitrary power. You cannot appease a tyrant. That does not mean that you should go to war with every tyrant. It means only that in dealing with him you make it as clear to him as to yourself that you know his character, that you are not deceived.

If any people in the world freely choose a program of socialism, no other free people can honestly or rightfully complain. Whatever program any nation adopts for itself is the business of that nation, and not of any other. This is not the case, however, when any program is imposed upon a people by arbitrary power. Americans in their efforts to win freedom and peace for mankind must not lose sight of this proposition. Nor should they close their eyes to the fact that the Soviet government in our time is a dictatorship.

When I hear men, who call themselves followers of Franklin D. Roosevelt and defenders of his ideals, urge the people of America to disregard the facts about the Russian Government, I am reminded of the speech which President Roosevelt made to the American Youth Congress in Washington on February 10, 1940, before we became involved in the war. It will be remembered that resolutions were being adopted at that time by naive conventions condemning American loans to Finland on the charge that they constituted an attempt to force the United States into an imperialistic war. President Roosevelt, in this speech of February 1940, took cognizance of these "futile resolutions," as he called them, and then said:

"More than 20 years ago, while most of you were very young children, I had the utmost sympathy for the Russian people. In the early days of communism, I recognized that many leaders in Russia were bringing education and better health and, above all, better oportunity to millions who had been kept in ignorance and serfdom under the imperial regime. I disliked the regimentation under communism. I abhorred the indiscriminate killings of thousands of innocent victims, I heartily deprecated the banishment of religion—though I knew that some day Russia would return to religion for the simple reason that four or five thousand years of recorded history have proven that mankind has always believed in God in spite of many abortive attempts to exile God.

"I, with many of you, hoped that Russia would work out its own problems, and that its government would eventually become a peace-loving, popular government with a free ballot, which would not interfere with the integrity of its neighbors.

"That hope is today either shattered or put away in storage against some better day. The Soviet Union, as everybody who has the courage to face the fact knows, is run by a dictatorship as absolute as any other dictatorship in the world. It has allied itself with another dictatorship, and it has invaded a neighbor so infinitesimally small that it could do no possible harm to the Soviet Union, a neighbor which seeks only to live at peace as a democracy, and a liberal, forward-looking democracy at that."

That was before Hitler turned upon his ally in the ruthless faithlessness that is always characteristic of the dictator. When we became involved in the war, we aided Russia, just as we aided Britain, and we fervently hoped that when the peace came and the arbitrary power of Hitler, Mussolini, and Hirohito was destroyed, the great people of Russia, in the words of Roosevelt "would eventually become a peace-loving popular government with a free ballot, which would not interfere with the integrity of its neighbors." We know now that arbitrary power is being imposed upon the peoples of many small countries in Europe with the connivance and support of the Soviet dictatorship. We know now that the pledges of Yalta and Potsdam have been violated and that little peoples are suffering at the hands of Soviet arbitrary power in the postwar period just as little Finland suffered in the prewar period.

These are facts which we must face. That does not mean that we should go to war against Russia. On the contrary, it means that we should undertake to prove to Russia and to all the peoples of other nations, that a free democracy can produce a higher standard of living than is possible under arbitrary power and we should do this by eliminating all possibility of arbitrary controls in our own economy.

Secretary Marshall, in describing the international policy of this government, has declared that, "Any government that is willing

to assist in the task of recovery will find full cooperation in the part of the United States." The purpose, proclaimed under the leadership of President Truman, is to aid Europe in its own economic rehabilitation. It is not a program of handouts, but a program designed to bring about economic rehabilitation and freedom by the same sort of cooperation that won the war. It is a program in which Russia may join. It is a program of work and production, and, after all, men cannot live except by work and production.

The leadership is ours. Never has this or any country had a greater opportunity to serve mankind. We have the largest national income ever achieved. We have substantially full employment. Profits are high and wage rates are high. World peace depends upon our example and we cannot afford the luxury of a class war, or even of petty quarrels over a slightly better share of the Nation's production. Few in America need more than they are now getting, but millions abroad live in misery and serfdom. We can produce. We can show Europe that by united determination to work in a free economy, production, and peace can be achieved for all the peoples of the world. The responsibility is ours. We must not fail.

Making Democracy Work

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, June 30 (legislative day of Monday, April 21), 1947

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address on the subject Making Democracy Work, by the distinguished junior Senator from Oregon [Mr. MORSE]. The address was delivered yesterday at the closing session of the Thirty-eighth Annual Conference of the National Association for the Advancement of Colored People, at the Lincoln Memorial, Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is fitting that we should gather at this great national shrine of human rights and rededicate ourselves to the principle that there shall be no discrimination in our democracy because of race, color, sex, or creed. Would that every American could come frequently to this memorial spot on the banks of the Potomac and renew his faith in the principles of individual liberty and of representative government which are epitomized in the spirit of the great emancipator who, seemingly alive but in the silence of stone, looks down upon us.

We assemble today at one of the cathedrals of American democracy conscious, I am sure, of the fact that there are still wide gaps between the universal truths of man's responsibilities to man, so simply stated in the teachings of Lincoln carved into the granite walls of this memorial, and our practices as a people one toward another. We cannot come within the spiritual and patriotic atmosphere of this historic edifice without being reverently moved by the realization that Lincoln saw democracy as Christianity put to practice. Too frequently in our national life we limit our devotion to great spiritual and political truths to special occasions but fail to practice those truths in our day by day actions. In this critical hour in the history of our Nation and of the world we dare not run the risk of paying lip service only to equality of justice and opportunity under law in these United States. Faith in democracy is deserved because it is the only system of government of which I know that is predicated upon the proposition that all men are created free and equal. It is the only system of government of which I know that recognizes in principle the dignity of the individual as being above the dictates of the state.

No police state, Fascist or Communist, can match the guarantees of individual liberty, human rights, and justice by law of our democracy. True it is we have yet to eliminate all political, social, and economic injustice from the workings of our democracy. Nevertheless, we have succeeded in protecting the rights and advancing the opportunities of the individual in his pursuit of happiness far beyond that of any other nation or people in all history.

We must not, and cannot afford to, rest, even momentarily, upon our accomplishments because there is still much to be done if we are to make democracy work in carrying out its full potentialities for human happiness through self-government. We, as individuals, must never forget that we are individual parts of our Government. In a very true sense we, the people, are the Government. The great majority of the American people have it within their power to determine the trends and policies of our Government by exercising the most precious right which free men can enjoy in a democracy—the right of a free ballot.

I am one who seeks to extend that freedom to all Americans irrespective of the color of their skin or the district in which they live. I maintain that such a freedom should be considered a Federal right under our Constitution beyond the trespass of any class or race consciousness.

Likewise, I believe that if we are to square our democratic principles with our political and economic actions we must remember that bigotry and democracy cannot be reconciled. Intolerance toward minority groups and the Declaration of Independence are not compatible. Economic discrimination in employment practices, a form of economic slavery, outrages the Emancipation Proclamation. Lynch law repudiates the Constitution and its precious Bill of Rights.

If we as a people are to be true in our actions to the principles of representative government so vital to the preservation of our political liberties, then we must insist that our elected representatives exercise an honest independence of judgment on the merits of issues as they find them, irrespective of the terrific pressures which selfish groups may bring to bear upon them. As Lincoln said:

"No one who has sworn to support the Constitution can conscientiously vote for what he understands to be an unconstitutional measure, however expedient he may think it; but one may and ought to vote against a measure which he deems constitutional if, at the same time, he deems it inexpedient."

Lincoln was right. These are days when men in office must be willing to put to a test that principle of representative government, having confidence in the fact that once the majority comes to understand the basis for opposition to bad legislation, they will approve, rather than disapprove, refusal to follow a temporary majority.

In closing I would say that if we lovers of democracy are to perpetuate it we must never forget that its ability to protect and advance human rights depends in no small measure upon lawmakers following a course of legislative action which seeks to protect the economic weak from the exploitation of the economic strong and accomplishes it within the framework of our private-property economy and in accordance with our Constitution and its Bill of Rights.

American Defense

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, June 30 (legislative day of Monday, April 21), 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of a radio interview between Mr. Charles Parmer and myself, which was broadcast yesterday over Station WEAM, Arlington, and Station WDEL, Wilmington. The subject of the broadcast on the "Parmer From Washington" program was America's plan for defense in the atomic age.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

DYNAMIC DEFENSE FOR AMERICA

Mr. PARMER. Senator WILEY, what do you regard as the most important single problem facing our country today?

Senator WILEY. Charlie, the biggest single issue that the Congress and the American people have to face is adequate defense in this atomic age.

Mr. PARMER. Why do you regard it as so important?

Senator WILEY. Because we can't afford another Pearl Harbor with America asleep at the switch. The next war may be decided in minutes or hours.

You and I know, Charlie, that in spite of the world's hunger for peace, the Second World War did not make for peace. We know, of course, that the world today is still trying to rehabilitate itself from the disastrous effects of the war.

Yet there is still suspicion, envy, distrust, and hatred between the nations. You remember, Charlie, that after the First World War we signed the Kellogg-Briand Peace Pact that was to outlaw war, but we found that mere words on documents didn't solve our problem. So I repeat that the biggest issue today is defending America against any emergency in the future.

PREVIOUS DEFENSE SUGGESTIONS

Mr. PARMER. You've made numerous suggestions for defense, haven't you, Senator?

Senator WILEY. Yes; I have. I have urged that we prepare push-button plans against a possible push-button war of the future. I have stated that we must stock-pile vital materials; that we must coordinate intensive research into atomic energy, guided missiles, etc. We must plan for legislation by television, if necessary. We must insure adequate succession to the office of the Presidency in the event that an atomic bomb wipes out the President and the Cabinet. Such succession, I believe, should place the highest ranking military or naval official next in line.

The Army and the Navy must snap out of the squads-right rut so that the Nation will be adequate to meet any challenge. We know that ours is a contracted world because of man's ingenuity. Time and space exist for us no more. It is essential therefore that we plan and execute adequately in advance; plan for manpower mobilization, industrial mobilization.

Mr. PARMER. Senator WILEY, you don't regard the world picture as completely gloomy, do you?

Senator WILEY. No, of course not, Charlie. America has striven valiantly in the 2 years since the United Nations organization was established, giving of her worldly goods and service to mankind. The so-called Truman

doctrine and the Marshall plan should prove effective instruments for peace if the other nations will play ball. But we must not blind our eyes to the realities. Peace is not here. Not only America, but all nations, must demonstrate the will, intent, and purpose for peace before it arrives.

Mr. PARMER. Well, Senator, what do you propose now to supplement your program for American defense?

POLITICAL DECENTRALIZATION

Senator WILEY. Charlie, I have prepared a several-point program which I submit the Congress and the people should realize. Here are the points:

First, the Congress ought to plan for the progressive decentralization of our Federal Government from Washington, D. C., out to the grass roots of the Nation. Just think this over for a minute, Charlie. If one atomic bomb were to strike us here in the future, it could with one blow destroy the very nerve center of our entire economy. The War Department, the Navy Department, and all of our civilian units would be smashed with one attack. That is why I believe that we should begin to decentralize personnel and functions out to the smaller communities of America.

Mr. PARMER. If I may interrupt, Senator, are there any other advantages to such decentralization?

Senator WILEY. Yes, there are several, Charlie. First, decentralization is necessary for national security in the atomic age. Next, it is necessary for purposes of efficiency in government. For example, if a Government unit is located close to the work which it is supposed to handle, it can better understand the people's problem instead of getting swivel-chair notions as to how the people's business should be run from Washington, D. C.

Then, too, decentralization is necessary for government economy. We won't have to build up a big bureaucracy in Washington, D. C., to duplicate the work that is done in the field offices. Decentralization will also make for better relations between citizens and public officials. Businessmen won't have to travel, for example, a thousand miles in order to present some problem that might have better been handled at the crossroads of America. Lastly, decentralization is economically sound, because it will help spread government payrolls into the lifestreams of many small communities instead of concentrating all those pay rolls in the Capital.

AMERICA'S CAPITAL

Mr. PARMER. You think a lot of our Capital, however, Senator, don't you?

Senator WILEY. Of course, I do, Charlie; we all do. We glory in its beautiful buildings and thoroughfares, its historic landmarks. But there is no good reason why all the major governmental business of America must be performed in one teeming, jam-packed "telephone booth," so to speak. Washington could well lose 100,000 or so of its one-quarter million Federal employees without being impaired as our Capital City.

I presented these facts to the Government's Bureau of the Budget in a recent letter. Unfortunately, however, the Bureau's response did not evidence a sense of awareness of this problem, nor a willingness to begin action along the line I suggested.

Mr. PARMER. Well, what are you going to do about decentralization?

RESOLUTION TO DECENTRALIZE AGRICULTURE DEPARTMENT

Senator WILEY. Well, Charlie, tomorrow I am going to introduce a resolution to have the Senate Agriculture and Forestry Committee begin a test study of decentralization. My resolution will require this Agriculture Committee or a subcommittee to make an intensive 6-month study of the ways and means by which the Department of Agriculture may be decentralized. Right there are more agriculture employees in Washington, D. C., then there are in any single State of the Union. One-eighth of the total force of the Department is concentrated in crowded, congested Washington, D. C.

But, I say, why shouldn't the Dairy Division of the Department of Agriculture be centered in the dairy section of the United States, the Cotton Division in the cotton area, the Wheat Division where the wheat is grown, etc.?

If the Agricultural Committee can make the sort of study that I envision, it might serve as a model for every other committee in the Congress to make a similar study so that the advantages of decentralization that I have mentioned may accrue.

Mr. PARMER. Well, Senator, decentralization then is the first point in your program for dynamic defense in this atomic age. What are some other points?

Senator WILEY. Another major point is that our American business leaders should begin now to think in terms of decentralizing their industrial plants. There is no reason why the great industries of America should all be concentrated in the larger cities of our country, thus laying them open to atomic attack. You and I know that there are tremendous advantages from having factories set up in small towns, economic advantages, social advantages, spiritual advantages. We know that problems of labor-management relations can, by and large, be more easily solved in smaller cities than in the larger centers.

The Government can encourage this decentralization in awarding its military and naval contracts. But our business leaders have to take the initiative in this work. I know it's not going to be easy. I know there is inertia and complacency, but I say that our businessmen are challenged here to show the business horse sense by serving themselves and their country through this means.

Mr. PARMER. All right, Senator, political decentralization and business decentralization, there probably is some connection between the two.

Senator WILEY. There certainly is, Charlie. I believe that our businessmen, our laboring men, our farmers, and everyone else should urge that political decentralization and business decentralization should go hand-in-hand. I believe that chambers of commerce, committees for economic development, labor organizations, should form advisory committees at the national and State levels on decentralizing industries for purposes of national security and the other advantages which I have stressed.

ECONOMIC STRENGTHENING OF NATION

And, Charlie, while I am on this point, I want to mention that one of the strongest possible ways by which America can insure dynamic defense is to make certain that she is economically sound at the core. A great forward step toward this objective was taken by the enactment into law of the labor bill last Monday. I believe that if it is fairly and efficiently administered it can open a new era in peaceful labor-management relations that will make for full production.

There are, however, some indications that the executive branch may not execute Congress' intent along this line, either in its formal administration or in its legal activities which may ensue in the courts over this law. Congress is going to have to oversee the Executive's handling of this problem through its joint labor-management committee.

But the American people will be the principal ones who will supervise the job that the administration does. It is up to the administration to respect the mandate of the American people and of the Congress by applying the letter and the spirit of the labor law.

Mr. PARMER. Well, Senator, what about that tax bill that the President vetoed?

Senator WILEY. Charlie, that was very unfortunate for the economic soundness of our country. Had the 30 to 10.5-percent tax-reduction bill been enacted, it would have exerted a powerful influence toward preventing any trends toward recession. It would have strengthened America's role in international diplomacy by insuring adequate purchasing power for our own people. Unfortunately, the President chose to ignore the demand of the people and the Congress for this legislation. In so doing he has at least temporarily denied relief to 45,000,000 American taxpayers. This bill would have given proportionate relief by increasing take-home pay from the lowest to the highest brackets.

Mr. PARMER. Well, Senator, are there any other points in your program for dynamic defense in the atomic age?

Senator WILEY. Yes, Charlie, there is one other point, and that is what we might call spiritual mobilization. By that I mean that every American must make sure that he is not slumbering in a false security in these critical times. We have just won the greatest victory of all time, but there is no reason for smugness or for complacency. It is up to each of us to recognize that although we are living in one world geographically we are living in two worlds economically, politically, and spiritually.

UNITED STATES VERSUS RUSSIA

We are contending with the Russian form of government not only for the governments of the world but for the minds of men. The Russians are a powerful nation, newly amalgamated by victory, a nation of over 70 races which has felt the flush of triumph and which stands at the threshold of realizing age-old imperial ambitions.

We are divided with Russia on almost every count, politically, economically, spiritually. We are contesting for the resources of the world, and yet I believe that we can achieve a basis of understanding and ccoperation with the Russians. We, however, here on this side, must "keep our powder dry." In the words of old, "eternal vigilance is still the price of liberty."

Defense, however, begins in every American home. It begins with a spiritual sense of the need for national unity, the need for peace on the home front, for cooperation.

SUMMARY

Mr. PARMER. Well then, Senator, summarizing your points, you have spoken of the need for political and business decentralization, for economic strengthening of the home front, and for spiritual mobilization.

Senator WILEY. Yes, Charlie, those are the points which I have made. I would like to have the suggestions of our citizens on them. Let our citizens write to me and to their own Representatives and Senators and to the White House. Let them think on these problems now and in the future. We remember the words in the Book of Books: "Without vision, the people perish," and if the blind lead the blind, they shall both fall in the ditch.

America will display the necessary vision, I am sure. The American people have their eyes wide open to the challenges which face them. I am sure they will be adequate to their responsibilities in the days up ahead.

Krug Disapproves Mining City Dam

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, June 30 (legislative day of Monday, April 21), 1947

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the Louisville Courier-Journal

on June 19, 1947, concerning a letter written by Hon. Julius Krug, Secretary of the Interior, to Hon. Tom Wallace, editor of the Louisville Times.

In the letter Mr. Krug opposes the building of a dam at Mining City on Green River in Kentucky, upon the ground that its construction and the consequent impounding of Green River would seriously damage Mammoth Cave.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KRUG DISAPPROVES MINING CITY DAM—CITES LOSS TO STATE AND NATION BY DAMAGE TO MAMMOTH CAVE

The proposed Green River Dam at Mining City would cause "a serious financial loss to Kentucky and a grave scientific and cultural loss to the Nation," Secretary of the Interior Julius Krug yesterday told Tom Wallace, editor of the Louisville Times.

The National Park Service and the Department of the Interior, Wallace quotes Krug as saying, are under a moral obligation and a congressional mandate to preserve the park.

Wallace last week wrote an article in the Times warning against the damage of a dam at Mining City. He is national president of the Izaak Walton League, and an appointee of former Secretary Harold Ickes to the National Park Service's advisory board on national parks.

WAR HALTED WORK

The proposed Mining City dam is one of a series of flood-control projects recommended in a special United States Engineering Department report drafted after the 1937 Ohio River flood. Initial congressional appropriations were used to construct dams in the upper Ohio Valley, but work on the series of reservoirs was suspended by World War II.

Officials of the Louisville office of the United States district engineers, said the Mining City project, with an estimated cost of $37,000,000, eventually would contain power-generating and soil-conservation features. Primary purpose of the reservoir, however, is to prevent floods on the Green and Ohio Rivers, they added. The Green is a tributary of the Ohio.

ONLY FUNDS ARE LACKING

Wallace released the following statement from Secretary Krug to him:

"As I understand the situation, so far as the Louisville district is concerned the Mining City proposal is the first-priority project for the Green River basin, and construction, in one form or another, awaits only the appropriation of funds. It appears further that whatever plan of operation is adopted, regardless of whether power generation is included, will cause longer, and at some river stages, higher floods in Mammoth Cave than if the dam were not built.

"Damage to the cave will follow periods when flood control is practised by retention of water above elevation 421.2 in Green River. Preliminary plans for the dam, however, provide for flood retention as high as elevation 450. Any retention above elevation 421.2 will interrupt trips in Mammoth Cave, not only during the period of that retention, but for a considerable time thereafter during which repairs must be made to bridges, boats, and trails in the cave, and while sludge and debris are being removed."

DISAGREES WITH CORPS

"I am told that the Corps of Engineers is entirely aware of the serious damage to Mammoth Cave that will follow the construction of any dam at Mining City. It appears to be the contention of the corps, however, that the economic loss from this effect will be slight in comparison to the downstream benefits from flood control. In this I am inclined to disagree.

"Mammoth Cave National Park is one of the Nation's most famous natural wonders, and is the outstanding tourist attraction in the State of Kentucky. It is intimately related to the large travel industry throughout Kentucky and southeastern United States. Moreover, its operation provides a substantial return to the Federal Treasury as well as to the State and county governments. To preserve its principal commodity, its tourist interest—a commodity that can be sold over and over again—it is essential that the unique scientific features of the cave be not subjected to extended, sporadic inundation which would not only be damaging to natural formation, but would also cause constant rumor and uncertainty as to its accessibility for visitors."

OPPOSES DAM STRUCTURE

"One cannot, of course, reduce to mere dollars and cents the value of such geological phenomena, or the pride shared in Mammoth Cave by Kentuckians and the Nation's citizens alike. However, I am convinced that the damage that would result from the continued flooding of Mammoth Cave would eventually prove to be a serious financial loss to Kentucky and a grave scientific and cultural loss to the Nation as a whole. This must be weighed against other economic benefits.

"The 50,000 acres, purchased at a cost of approximately $3,000,000, represents a gift, in the form of a national park, from the State of Kentucky to the people of the Nation. This department and the National Park Service are under a congressional mandate, as well as a moral obligation, to preserve such parks, 'the scenery and the natural and historic objects and wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.'

"I oppose any dam structure on Green River at Mining City, or any flood-control structure between that site and the upstream limits of Mammoth Cave National Park."

Federal Incentive Income Tax Plan

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tax proposal by Frank Wilbur Main:

A REVISED PROPOSAL FOR A FEDERAL INCENTIVE INCOME TAX PLAN

(Revised April 30, 1947, from the original proposal of April 1945 to conform with current economic problems)

(By Frank Wilbur Main)

(Frank Wilbur Main is senior partner of Main & Co., certified public accountants, with offices in New York, Houston, Harrisburg, Philadelphia, and Pittsburgh. He is past president of the American Society of Certified Public Accountants, is past president of the Pennsylvania Institute of Certified Public Accountants, and is a member of the Council of the American Institute of Accountants.)

One of the Nation's greatest needs is an income-tax program offering incentive and encouragement to individuals and to industry.

Such a program of income taxation will have as its purposes:

1. Securing of adequate revenues for the conduct of the United States Government, with a balanced budget.
2. Substantial reduction of the national debt.
3. Maximum encouragement for the maintenance of the Nation's buying.
4. Stimulation of the highest possible level of employment.
5. Encouragement of investments, particularly in new and "risk-taking" opportunities.
6. Elimination of the inequity of double taxation on the returns from investments.
7. Maintenance of the current high level of national income upon an economically sound basis.
8. More spendable income in the hands of all people, thus definitely raising the standard of living.

It is sincerely believed that the incentive income tax plan will lead to the attainment of these objectives.

The explanatory remarks following merit careful consideration.

EXEMPTIONS AND DEDUCTIONS

This plan to be effective with the following deductions and exemptions:

1. All deductions for charitable contributions, interest payments and taxes, as well as all other allowable deductions, as at present.
2. Single person, $1,000.
3. Married couple, $2,000.
4. Each dependent, $500.
5. Corporation, $2,000.

Dividend income to be exempt from taxation on the stockholder.

All taxes on undistributed profits to be eliminated.

No change is proposed in the present law affecting all income taxpayers as to gains and losses from the sale or other disposition of capital assets, allowances for depreciation and depletion, or other allowable deductions.

INCENTIVE TAX RATES

The annual income of individuals and corporations to be taxed as follows:

From gross income received from wages, sale of goods, services rendered, etc., deductions and exemptions are taken, leaving a net taxable income of—	The tax will be—	Maximum tax
Not over $2,500	15 percent	$375.00
Over $2,500 but not over $5,000	$375.00 plus 17½ percent over $2,500	812.50
Over $5,000 but not over $7,500	$812.50 plus 20 percent over $5,000	1,312.50
Over $7,500 but not over $10,000	$1,312.50 plus 22½ percent over $7,500	1,875.00
Over $10,000 but not over $12,500	$1,875.00 plus 25 percent over $10,000	2,500.00
Over $12,500 but not over $15,000	$2,500.00 plus 27½ percent over $12,500	3,187.50
Over $15,000 but not over $17,500	$3,187.50 plus 30 percent over $15,000	3,937.50
Over $17,500 but not over $20,000	$3,937.50 plus 32½ percent over $17,500	4,750.00
Over $20,000 but not over $22,500	$4,750.00 plus 35 percent over $20,000	5,625.00
Over $22,500 but not over $25,000	$5,625.00 plus 37½ percent over $22,500	6,562.50
Over $25,000 but not over $30,000	$6,562.50 plus 40 percent over $25,000	8,562.50
Over $30,000 but not over $35,000	$8,562.50 plus 42½ percent over $30,000	10,687.50
Over $35,000 but not over $40,000	$10,687.50 plus 45 percent over $35,000	12,937.50
Over $40,000 but not over $50,000	$12,937.50 plus 47½ percent over $40,000	17,687.50

All net taxable income exceeding initial $50,000 to be taxed 50 percent.

ANTICIPATED YIELD AND OTHER REVENUES

From available authentic statistics of income and from estimates of tax yields published by the Government, it is apparent that the incentive-income-tax plan will yield in the calendar year 1947 at least $18,500,000,000—assuming income payments to individuals of $165,000,000,000, and $24,000,000,000 of corporate compiled net profits (after excluding dividends received by corporations, tax exempt interest, and special credit for life insurance companies). Assuming income payments to individuals of $175,000,000,000 and the consequent increase in corporate compiled net profits, the yield will be about $21,200,000,000.

Revenues from sources other than direct taxes on individuals and corporations for the fiscal year 1947 were estimated by President Truman in his January 1947 message to Congress in the net amount of $12,365,946,000. These revenues would not be affected by the incentive-income-tax plan. Therefore, the total of all taxes and other revenues will be at least $30,800,000,000 with income payments to individuals of $165,000,000,000; and $33,500,000,000 with income payments of $175,000,000,000, assuming corporate compiled net profits as stated.

For the calendar year 1947 it is estimated that under present law there will be 46,000,000 income taxpayers and that income payments to individuals will be approximately $165,000,000,000.

With income payments to individuals of approximately $165,000,000,000 it is estimated that under the incentive-income-tax plan there will be 27,000,000 income taxpayers.

HOW IT WORKS

(Net taxable income as used in these examples represents the net income after present allowable deductions are taken, and before the exemptions indicated)

Example No. 1

MARRIED COUPLE—WITHOUT DEPENDENTS

Net taxable income	Exemption	Balance	Tax rate	Incentive income tax [1]	Tax under Knutson bill [2]	Tax under present law	Tax under 1939 law
$1,500	$2,000	0		0	$66.50	$95.00	0
2,000	2,000	0		0	133.00	190.00	0
3,000	2,000	$1,000	15 percent	$150.00	304.00	380.00	$8.00
3,500	2,000	1,500	15 percent	225.00	387.60	484.50	26.00
5,000	2,000	3,000	$375 plus 17½ percent over $2,500	462.50	638.40	798.00	80.00
8,000	2,000	6,000	$812.50 plus 20 percent over $5,000	1,012.50	1,261.60	1,577.00	248.00
10,000	2,000	8,000	$1,312.50 plus 22½ percent over $7,500	1,425.00	1,748.00	2,185.00	415.00
15,000	2,000	13,000	$2,500 plus 27½ percent over $12,500	2,637.50	3,237.60	4,047.00	924.00

Example No. 2

SINGLE PERSON—WITHOUT DEPENDENTS

$1,000	$1,000	0		0	$66.50	$95.00	0
2,000	1,000	$1,000	15 percent	$150.00	228.00	285.00	$132.00
4,000	1,000	3,000	$375 plus 17½ percent over $2,500	462.50	554.80	693.50	304.00
8,000	1,000	7,000	$812.50 plus 20 percent over $5,000	1,212.50	1,375.60	1,719.50	78.00

Example No. 3

HUSBAND, WIFE, AND TWO DEPENDENTS

$3,000	$3,000	0		0	$133.00	$190.00	0
5,000	3,000	$2,000	15 percent	$300.00	471.20	589.00	$48.00
7,500	3,000	4,500	$375 plus 17½ percent over $2,500	725.00	934.80	1,168.50	146.00
10,000	3,000	7,000	$812.50 plus 20 percent over $5,000	1,212.50	1,489.60	1,862.00	343.00
20,000	3,000	17,000	$3,187.50 plus 30 percent over $15,000	3,787.50	4,712.00	5,890.00	1,469.00
25,000	3,000	22,000	$4,750 plus 35 percent over $20,000	5,450.00	6,817.20	8,521.50	2,327.00

Example No. 4

CORPORATIONS

$25,000	$2,000	$23,000		$5,812.50	No change under Knutson bill	$5,750.00	$3,525.00
50,000	2,000	48,000		16,737.50		19,000.00	9,500.00
100,000	2,000	98,000		41,687.50		38,000.00	19,000.00
500,000	2,000	498,000		241,687.50		190,000.00	95,000.00
1,000,000	2,000	998,000		491,687.50		380,000.00	190,000.00
2,500,000	2,000	2,498,000		1,241,687.50		950,000.00	475,000.00

[1] With stockholder relieved of taxation on dividends, savings under Incentive Income Tax Plan will be further increased by the amount of taxes now paid on dividends.
[2] Passed as H. R. 1, by House of Representatives, Mar. 27, 1947.

WHAT THE INCENTIVE INCOME TAX PLAN WILL ACCOMPLISH

1. Every individual taxpayer will have more spendable income.

2. Elimination of double taxation on dividends will encourage a free flow of investment funds and thus a continuation of prosperity.

3. Income after taxes will provide reserves for anticipated or unexpected contingencies.

4. Easing of tax burden—particularly on low income groups.

5. Equal taxes on equal net taxable incomes will be paid by individuals and corporations.

6. Since penalty taxes on undistributed corporate profit will be eliminated, surplus funds may be retained for basic needs.

7. Tax revenues will remain relatively constant irrespective of salaries paid corporation officers holding stock; the higher the salary, the more the individual will be taxed—and the less the corporation will be taxed.

8. Congress can, if it desires, when making fiscal year appropriations, adjust the incentive income-tax rates so that adequate funds can be secured. Such change would entail no particular complications.

9. Taxpayers will save time and effort in preparing returns. Government audit will likewise be simplified.

10. The incentive and encouragement of this simplified tax structure will stimulate prosperity.

CORPORATE TAXATION

Under the incentive income-tax plan, corporations will pay a tax of 50 percent on all net taxable income exceeding $50,000. The ceiling of corporation taxes under the present law is 38 percent.

A large number of corporations will not have sufficient earnings to reach the 50-percent bracket.

For many corporations, this plan will eliminate vexatious questions as to officers' salaries and undistributed profits.

Elimination of double taxation of dividends will mean that most stockholders will receive a larger net return from their corporate investments than they now receive.

Elimination of double taxation of dividends will encourage corporate managements to substitute capital stock for bonds and other forms of indebtedness, with their heavy fixed charges which slow down commercial expansion, stagnate business, hasten and deepen depression.

If, as expected, the incentive income-tax plan aids in the expansion of the national economy and national income, all corporations will benefit from the enlargement and enrichment of their markets. A 50-percent maximum tax on an enlarged income will be less burdensome than a 38-percent maximum tax on shrunken earnings.

This proposal does not mention the status of tax-free municipal and State bonds, taxation of cooperatives, capital gains and losses, and other related subjects in the income-tax structure. Consideration has purposely been omitted, since they are beyond the scope of this proposal.

The pay-roll deduction pay-as-you-go principle is as adaptable to the incentive income-tax plan as to any other income-tax program.

Race Relations in North Carolina

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, June 30 (legislative day of Monday, April 21), 1947

Mr. HOEY. Mr. President, a few days ago I had inserted in the RECORD the account of a heroic act on the part of a white boy in Raleigh, N. C., who lost his life by drowning in a lake, in an unsuccessful attempt to save the life of his Negro companion. Another equally heroic act occurred last week in my own home town of Shelby, N. C., when a Negro maid daringly risked her life in a successful effort to save the life of the child in her care from drowning.

These two incidents more nearly portray the real life of the people of both races as they live side by side in North Carolina, than the race crime stories given such sensational play when they happen to occur south of the Mason and Dixon Line. There is no such race sensitivity in that State as we find manifest where the race agitators have full play. The story to which I refer was written by Mrs. Erma Drum, the accomplished columnist on the Shelby Daily Star, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Hello! I'm back again—and this time with a wonderful story of devotion and courage that will warm your heart, and make you glad you know the people it concerns.

It happened last Friday morning at the home of Bill and Hanson Lineberger on East Suttle Street, and the principals in the story are their little son, Billy, Jr., 2, and their colored maid, Sally Black.

Bill and Hanson are installing a heating system in their home and have had a huge hole dug in the backyard in which they plan to sink their oil tank. The hole is approximately 7 feet deep, 4 feet wide, and 12 feet long, and after last Thursday afternoon's heavy rainstorm it was left about half full of water. As a result, on Friday morning the Linebergers had what was practically the equivalent of a young swimming pool in their backyard.

Sally, the maid, went into the backyard to hang out some clothes, taking Billy with her to ride his tricycle while she worked. One moment he was there in the yard with her, then she turned her back to hang a piece of clothing on the line, heard a splash, and when she turned both he and the tricycle had disappeared.

Sally ran to the edge of the yawning hole and could see only the child's little feet sticking out of the water. He had landed head first and both he and the tricycle were submerged, with the exception of his feet.

The depth of the hole was much over Sally's head. She didn't know how deep the water was in it, and she couldn't swim. However, she doesn't remember thinking of any of those things. Without any thought of the danger to herself, she just jumped in and rescued Billy, saving him from drowning. She doesn't remember exactly how she got into the hole or how she got herself and Billy back out—a feat which, you must admit, took quite a bit of doing.

Once out of the hole she held Billy up by his heels and shook the water out of him. Then she determined that he was still alive and breathing, and hurried into the house to get both the child and herself out of their soaking wet clothes and warm and dry again.

When Hanson, who had been away during the morning teaching in Bible school, returned home about 11 o'clock, the excitement was over and both Billy and Sally were safe and serene again.

Hanson and Bill were already fond of Sally because she is an excellent maid. Now they are doubly attached to her because they know they owe their child's life to her, and they'll be forever grateful to her for what she did for them.

Congress and Labor Legislation

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Monday, June 30 (legislative day of Monday, April 21), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by me on the subject of Congress and labor legislation, broadcast from station WOL in Washington June 28, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I appreciate the honor of being invited by one of America's greatest progressives, Mr. LaGuardia, to talk to you on this broadcast about the Congress and labor legislation.

It was only a week ago today that I was engaged in a filibuster to prevent the Taft-Ives-Hartley bill from coming to a vote before Monday at 3 p. m. I knew that severe criticism would be heaped upon those of us who made that fight because few people would stop to find out the principle we were defending in that filibuster. We did not seek, as in the ordinary filibuster, to prevent a bill from ever coming to a vote. Rather we sought to resist the steam-roller tactics of a majority in the Senate which, on this occasion, showed no consideration whatsoever for the rights of a minority under the Senate rules. They sought to have us, under the unanimous-consent rule of the Senate, agree to vote on the President's veto message last Saturday at 5 p. m. before either the Members of the Senate or the people of this country had a chance over the week end to study the veto message and make doubly sure that they wanted the law passed. We urged out of consideration to the President, to Members of the Senate who were absent last week end, to those of us who wanted time to consider and debate the veto message and to the American people who, we thought, were entitled to the week end in order to make their views under our representative form of government known to Congress, to postpone the final vote from Saturday to Monday. What fair-minded person can really say that our request was unreasonable? Yet the Republican leadership of the Senate, in violation of the spirit and intent of the unanimous-consent rule, told us, in effect, if we didn't lie down and let their political steam roller pass over us by accepting their demand that we vote Saturday at 5 o'clock they would force us into a filibuster. I thoroughly disapprove of filibusters but I also disapprove of the destruction of minority rights by a tyrannical majority such as was attempted by the majority in the Senate last week end.

The responsibility for that filibuster rests squarely on the shoulders of those leaders of the majority who took the position that unless we agreed to their unanimous-consent request to vote Saturday at 5 o'clock, rather than on Monday at 3, we had better start talking. Their tactics were no better than, nor different from, those labor bosses who say to an employer without any collective bargaining at all, "Accept this agreement or else." Well, we didn't accept the coercive tactics of the majority in the Senate of the United States and, even though we didn't like to do it, we did start talking and before we finished, the majority accepted the very agreement to vote on Monday at 3 o'clock which I offered to them before the filibuster ever started. We gave them the licking they deserved. We protected minority rights under the unanimous-consent rule and I think also, judging from my mail, that we gave the public a much better understanding of the injustices of the Taft-Ives-Hartley bill than it had before. As I said in that filibuster, I don't approve of filibusters and I shall continue to work for a change in the Senate rules that will prevent filibusters and also for a change in the Senate rules that will prevent the majority from forcing a unanimous-consent agreement to limit debate upon the merits of an issue when a minority in good faith wants the debate to continue for a reasonable time.

When I think of that great piece of labor legislation, the Norris-LaGuardia Act, written into the law such a short time ago as March 23, 1932, by those two great liberals and friends of the legitimate rights of labor, George Norris and Mr. LaGuardia; when I think of the needed protection from union-busting practices of antilabor employers given to the workers of this country by that great friend of human rights, Senator BOB WAGNER; and, then, when I think of the unjust, unworkable, antilabor provisions of the Taft-Ives-Hartley law, I wonder if it is right to say that "time marches on." I guess it is. But the very adoption of the Taft-Ives-Hartley bill is proof that the mere passage of time does not necessarily bring progress or assure the strengthening of our freedoms.

The passage of the Taft-Ives-Hartley bill shows that we are in the trough of another wave of reaction in America. Through this full-employment bill for America's lawyers, the pattern has been laid for much legal conflict between workers and employers. Cause has been established for greater suspicion and distrust of employers on the part of workers than has existed in this country for many years. Seeds of a class-conscious economic war have been sown and the labor issue is bound to become one of the major issues of the 1948 campaign. Its political significance cannot be and should not be ignored in our democracy in which the right to vote is the most precious freedom we have because all of our other liberties depend upon how wisely we exercise the franchise.

Some labor legislation is needed in the interest of the public as well as in the best interest of workers and employers alike. Secondary boycotts, jurisdictional disputes, breaches of contract, "a sign here or else" attitude on the part of some labor leaders, and similar unfair labor practices by unions are all abuses which should be checked by fair and workable legislation. I proposed and worked for such legislation in Congress and I believe that the bill which we reported out of the Senate committee was a bill which all progressives could and should have supported.

But then the forces of reaction took control of Congress. Unsound and crippling amendments were added to the legislation on the floor of the Senate. And then when the bill went to the conference committee one emasculating procedural change after another, some 30 of them, were added to the bill, with the result that these so-called sleeper amendments have changed the Taft-

Ives-Hartley bill into a hypodermic needle to be injected into any union which seeks to awaken the workers of this country to an understanding of their legitimate rights.

The most disappointing thing about the congressional action on the Taft-Ives-Hartley bill is that so many of the men who fought for it admitted, on and off the floor of the Senate, that it has many unsound provisions in it which are going to have to be changed, but that they were voting for it because they thought it was the best compromise that could be worked out in this session of Congress. Then, too, they argued there was a great public demand for the bill. Don't be fooled by such alibis. Both of them should have been rejected, particularly by alleged progressives whose names are to be found on the roll call of those who have shackled our economy with this unworkable, trouble-making piece of legislation.

No Member of Congress has any right to vote for a piece of legislation which is so imperfect that he knows in advance of voting for it that it must be changed before it can work in fairness to all concerned.

What are some of the act's imperfections? One of the most serious is the damage which the law does to the Norris-LaGuardia Act. It throws into question once again the whole issue of labor injunctions. Almost all of the experts and authorities in the field of labor relations admit that any attempt to return to the old evils of government by injunction in the handling of labor disputes is a backward step away from the goal of friendly and cooperative employer-employee relations.

Its definition of employer-agent will make it possible for antilabor employers to return to the system of labor spies, strong-arm methods, and company stooges which made up part of the union-busting techniques used by antilabor employers before the Wagner Act, and which techniques were so clearly disclosed by the La Follette investigation conducted a few years ago.

The many grounds for litigation provided for in the act will make it possible for any employer to keep a union treasury bankrupt. The litigation procedure itself is cleverly devised in the act as an instrument for delay and delay and more delay. The employers know full well that from the standpoint of the workers time is of the essence in the settlement of a labor dispute. Union leaders in the ordinary cases simply cannot hold the confidence of their men if they cannot succeed in settling a dispute quickly and without great cost of litigation.

This act will provide a field day for lawyers but little justice for workers. It lays down many procedural and legalistically technical red-tape requirements which unions must comply with before they can even petition the National Labor Relations Board for a certification election.

We Republicans have been talking about taking the Government out of bureaucratic control of the economy. But I say, without fear of successful contradiction, that the Taft-Ives-Hartley Act contains more bureaucratic red tape in it and more Government interference with the economic life of our citizens than any other law on the statutes. I venture to guess that when those employers in the country who recognize that the prosperity of all of us is dependent upon cooperative relationships between workers and employers they will throw up their hands in despair and wish that they had never heard of the Taft-Ives-Hartley Act. True those employers who want to destroy unions in their particular businesses may get some satisfaction out of the Taft-Ives-Hartley Act, but their vindictive satisfaction will be short-lived. Once justice-loving Americans come to realize that the propaganda campaign which sold them this bill through the aid of their politicians succeeded only in selling them an unworkable legal monstrosity they will demand either its repeal or drastic revision.

It is the minority labor-hating employers of America who will attempt to make use of the union-busting procedures of the Taft-Ives-Hartley Act. It is such men who have urged the inclusion in this act of special rules of procedure and evidence to be applied only to the National Labor Relations Board as an exception to the uniform Administrative Law Procedure Act passed by the last Congress, rules which do not apply to the railroads under the Interstate Commerce Commission or to industry generally under the Federal Trade Commission or to the radio industry under its Commission.

That is the trouble with the Taft-Ives-Hartley Act. It is unfair class legislation. The voter in this country who has been criticizing so severely those of us who have fought this bill just have not taken the time to study and see through the unfair and cleverly devised legal procedures which have been slipped into this act in order to accomplish the damage to the legitimate rights of the workers of this country which will flow from the act.

Take, for example, the special rule of the act which says to the States that the national labor policy regarding interstate commerce may be entirely disregarded and superseded by the States if they desire to impose some restrictive labor policy on the same subject matter. The proponents of the bill in the debate called this a minor change. A more pointed instance of antilabor bias could hardly be found. The Congress cannot justify delegating in any respect to the State its constitutional authority over interstate commerce in a manner which is bound to produce a great lack of uniformity of labor policy in this country. That lack of uniformity itself will cause strikes. It will cause something else. It will cause unfair competitive advantages developing in those States which for a time may be able to beat down labor by way of vicious antilabor State legislation and give to employers in those States the competitive advantage of cheap and exploited labor.

Some of my friends in the Senate, particularly in the industrial States in the North and the East, should be called upon to chew that one over when explaining their votes. It cannot be reconciled with that sound principle that as to Federal jurisdiction there should be but one law with the application of equal justice to all.

Thus one can go through the Taft-Ives-Hartley law and find one unfair provision after another in it. Although I am just as critical of the Taft-Ives-Hartley law now as I was before it was passed, I want to make clear that, in my opinion, everyone in this country—labor, employer, farmer, politician, and consumer—generally should recognize that it is now the law of the land. We cannot condone violations of it. Criticisms of it, yes, should continue, because only through critical discussions of it and a continuous pointing out of its injustices and its failures can we, under our democratic system, change it. However, it is one thing to criticize the bill and work for modifications or repeal of it, but it is quite another thing to fail to enforce it, or to fail to abide by it as long as it is the law, or to fail to try to administer it efficiently and effectively. Hence I want to say to those who both approve and disapprove of the law, we owe it to our system of self-government to stand united in support of the proposition that this law should be enforced.

As I said on the floor of the Senate day before yesterday. "We cannot have government by law in this country unless we take the position that the laws shall be enforced." Those of us who disapprove of the Taft-Ives-Hartley law can best show up its weaknesses by insisting upon its strict enforcement. Those who approve of the law can best learn for themselves that such a law is administratively unworkable and unjust, also by insisting upon strict enforcement.

How Can We Strengthen the American Family?

EXTENSION OF REMARKS
OF
HON. CHAPMAN REVERCOMB
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, June 30 (legislative day of Monday, April 21), 1947

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter written by Mrs. E. Wyatt Payne, of Huntington, W. Va., on the subject How Can We Strengthen the American Family? The letter was written by Mrs. Payne in a contest conducted by America's Town Meeting of the Air, and for her splendid letter she was awarded a certificate of merit in the Town Hall's Nation-wide letter-writing contest.

I may say that Mrs. Payne was one of 62 winners in the Nation out of a total of 6,219 who participated in this contest from every State in the Union. Mrs. Payne is an outstanding citizen of the State of West Virginia. The certificate of merit awarded her is in keeping with her fine service as a leader in the civil life of our State. I want to extend to her my personal congratulations upon this award. Her achievement is a credit to the State, and the letter she has written is filled with wisdom and inspiration.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

In trying to strengthen the American family we must glance, in retrospect, at the obvious and persistent factors which have tended to weaken it. The modern age has produced—through propaganda and moral laxity—a national phobia of challenging everything, everywhere, which in the past was accepted as fundamental and sound. The attacks have touched the home, the school, and the church with deadening effect. From the beginning of time mankind has been helped onward and upward only when he believed in something and I submit that we cannot strengthen the American family unless, and until the home, the school, and the church unite in teaching and practicing respect for, faith in and allegiance to the American concept of living which, being interpreted, means freedom for spiritual, material, and individual growth under the guidance and protection of the family unit.

Against this background of gratitude for our American heritage we can logically consider a few simple—though profound—solutions to the problem in question. Obviously, the prerequisite for a stable, happy family is the concept of marriage held by the contracting parties at the altar. They must believe in the institution of marriage—its sacredness and its function as the strength and bulwark of the individual, the community and the Nation. When they so believe, the strains and stress on the marriage vow, from whatever source, only serve to rally them to its defense.

Rearing a family is really our greatest business and should be considered as such. I realize the romantic connotation is lacking here, but it will glow with radiant brilliance if we have the courage to face the facts. The family should have a working acquaintance with domestic psychology, economics, salesmanship, and the patience of Job. The latter because in the course of human events families sometimes boil over, individually and collectively. Why should

the same temperaments, irregularities, and idiosyncrasies which we meet and master in our business and social contacts completely floor us when we meet them in the family relationship? Because we do not employ the same courtesy, respect for others' opinion and rational solutions which we must employ to make the business and social relations successful.

A personal experience which has proven successful might be helpful. As our three children grew older and the school and community interests demanded more and more of their time outside the home, I realized they would soon be engulfed in the activities of a society which is overorganized to the point of physical and mental exhaustion, and that we must continue (with greater thought and devotion) the family-at-home evening, which we had followed for many years. This is not a plug; my friends will verify it. Each Thursday evening the family is in. We have dinner, group singing, discussion of current events, games, "town meeting," and refreshments. Rarely do we accept invitations on this night, because by mutual consent we are working on a great project—the preservation of the American family. We love it. It's fun.

This simple formula has succeeded because it provides a togetherness with enough varied stimuli and mutual interest to develop group understanding, affection, and family life.

We need to get back to the simple verities of living. The greatest progress the prodigal son ever made was when he decided to go back to his father, and there is a lesson here for all Americans. Material things change with passing time, but the test of character is that we recognize the spiritual values which "made and kept us a nation" and live accordingly.

Summarizing: The elixir of life needed to strengthen the American family is simply this: Let this generation of adult Americans—both parents and teachers—by precept and example—

First. Teach children to believe in God and the American concept of freedom and living.

Second. Teach them to believe in the institution of marriage as sacred—the strength and bulwark of the individual and the Nation.

Third. Practice the common courtesies with relatives and let the finesse used in business become the adjudicator when "waters are troubled" in the family.

Fourth. Provide regular, meaningful, happy home situations for the entire family.

There are many excuses and a few reasons for the disintegration of the American family, but by and large we can conquer them successfully if we challenge every attack on the home and family with common sense, courage, confidence, and consideration, knowing, as we ought to know, that "it is our God who worketh with us."

Mrs. E. Wyatt Payne.

Huntington, W. Va.

The Hall of Heroes

EXTENSION OF REMARKS

OF

HON HARLAN J. BUSHFIELD

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, June 30 (legislative day of Monday, April 21), 1947

Mr. BUSHFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a commencement-day address entitled "The Hall of Heroes," delivered at Upsala College, East Orange, N. J., on June 7, 1947, by Dr. Frank Glenn Lankard, dean of Brothers College, Drew University, Madison, N. J.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the volume, Christ and the Fine Arts, by Cynthia Pearl Maus, there is a story by an author who prefers to remain unknown that goes like this:

"Suddenly I found myself standing before a great building. There was a wide entrance, approached by a long flight of broad steps, at the top of which in the shadow of a great doorway stood a man. When I went up to him and asked, 'Will you please tell me what this building is?' he answered very graciously:

" 'This is the Hall of Heroes. Would you like to see through it?'

" 'Thank you very much,' I said and followed him in.

"When we entered I found myself in the center of a magnificent hall, around the inside of which ran marble staircases leading to the different floors. All was silent, and when my guide spoke to me, his voice was echoed along the high walls and balconies like the soft deep notes of a cathedral organ. 'Here we enshrine,' said he, 'the memories of all heroes from the least unto the greatest. Let us go in.'

"Turning, I saw opposite me an open door; and over the door was written, 'Heroes of Battle.' I think that you would be able to tell the names of a great many whom I saw there as I walked slowly down the long aisles of that great chamber. Men who had fought and won great victories, men whose defeat had been glorious because they had all their wounds in front. Leonidas, who fell at Thermopylae; Horatius, who kept the bridge; Nelson, with his armless sleeve; and Gordon, without a weapon. There, I saw, too, heroes of the World War, many of whom I had known, and I was overwhelmed with a feeling of sadness as I thought of the sacrifice of so many young lives lost in battle. I saw that the face of my guide was shadowed with sorrow, too, as we came to the end of the room and passed out into the great hall.

" 'Let us go to the next floor,' he said. 'Some day the nations of the world will learn to love each other and then "Men will beat their swords into plowshares and their spears into pruning-hooks, and nation shall not lift up sword against nation, neither shall they learn war any more.'

" 'I wish that were true today,' he said.

" 'It will surely be true some day,' he answered. 'And you can help to bring it to pass if you will.'

" 'I will do all that I can,' I promised, and my guide's face brightened as he turned to me and smiled.

"When we reached the landing at the top of the stairs, I saw before me a door over which was inscribed 'Heroes of the Lonely Way.' Here were the pioneers—men who had cut their way through the jungles of dark continents, who had scaled unconquered mountains, crossed waterless deserts, discovered the source of rivers, sailed over unknown oceans, and pushed their way along the very rim of the earth. I felt ashamed that I knew so few out of that brave multitude; but I knew Columbus and a few others, and my guide stopped me every now and then, and told me stories of deeds of courage and faith and endurance which have done more for the world than all the conquests of the sword.

"As we ascended the second flight of steps my guide pointed to an open door before us, over which was written 'Heroes of Truth.' Then he spoke as I had never heard man speak before of the glory and beauty of truth, of the conflict that is waging between truth and error, and of the certainty that truth will triumph in the end. With my heart aflame at his words I entered the room and saw the hosts who had stood bravely for the truth in places where error was powerful and had many followers. Socrates was there, with the cup of hemlock in his hand; and Luther was there, who defied the Pope as he nailed his thesis to the door; and all the noble army of martyrs was there, from Stephen to Margaret Wilson, who was tied to the stake in Solway Firth and drowned by the rising tide because she refused to deny what she believed to be true.

"I could have stayed a long time in that glorious chamber, but my guide led me on, and we came to the last staircase of all. It was broader than all the others, and was made of something which hushed every footstep into silence. On the steps were written the words 'Greater love hath no man than this, that a man lay down his life for his friends.' Over the door which opened for us into this gallery was inscribed 'Heroes of Love.' My guide did not enter this room in front of me as he had done each time before, but, standing at one side, motioned with his hand that I should pass in.

"I found that this room was the great dome crowning the building which I had seen from the outside; but it was bigger and higher than I could ever have thought. At first I imagined it was empty, but it was the marvelous light that blinded my eyes. Then, in the very center, I saw a cross, with a man crucified upon it. A moan escaped from my lips. 'Jesus!' I whispered half to myself. As I grew accustomed to the light I found that the room was not empty; indeed, it was the fullest of all; for the walls seemed to stretch away in the distance, and the dome seemed to rise into mist, and all the mighty space was filled. Slowly I began to distinguish faces: I saw David Livingstone, who gave his life for the people of Africa; I saw James Chalmers, who gave his life for the savages of New Guinea; I began to see quite plainly the multitude that cannot be numbered of the heroes of the cross. Then I caught the sound of music. It came up from the bottom of the huge building, as if every kind of hero, from the least to the greatest, was joining in one mighty chorus. It filled the room in which I stood. I heard the words at last, 'Blessing, and glory, and wisdom, and thanksgiving, and honor, and power, and might, be unto our God forever and ever. Amen.'

"I felt I could endure it no longer. I turned and left the room, and ran down the staircase with the music ringing in my ears and a great throbbing in my heart. In the hall at the foot of the staircase my guide was waiting for me. He walked with me to the great entrance, and said in the kindliest voice, 'You will be here some day?' "[1]

I dare say any one of us may find a place in the Hall of Heroes if we should come to possess certain qualities and develop certain habits of mind and heart. What are some of these qualities?

I

A lecturer of international reputation once appeared before an audience of young people and threw them back on their heels with this question: "What have you ever done for the world to justify your necks not be wrung in the next 5 minutes?" Most of these young people had little or no defense.

Some young folk act as if the world will give them something for nothing. I know a young lady whose father has given her $200 on each birthday anniversary and on Christmas Day from the time she was a baby. She is now 26 years of age. Such parental handouts can make it very easy for some undisciplined young people to get the idea that life is a gigantic Santa Claus. I beg of you not to believe that slogans, or cleverness, or even a college education will give you something for nothing.

[1] From Christ and the Fine Arts, Maus, pp. 641–643. Published by Harper & Bros., New York 16, N. Y. Used by special permission.

Do you aspire to become a writer? You will need, then, to prepare yourself in the most exacting way for the task. Do you aspire to achieve power in oral expression and become an accomplished public speaker? You might recall that Cicero shaved his head and forced himself into seclusion until he had mastered the art of oratory. And don't forget that Demosthenes, the greatest orator of the ancient world, stammered in his youth and had a weak voice. Demosthenes, with indomitable courage, according to tradition, spoke with pebbles in his mouth until the stammering disappeared, and practiced hour after hour before the pounding waves of the sea to make his voice strong.

There may be parental hand-outs in external things, but in the things of the mind and the spirit we never get something for nothing. We have been passing through a very dangerous and troubled period in our national life and we have tried strange social and economic experiments. Perhaps it is not too early to issue a call for the return to the good old-fashioned American doctrine of hard work.

II

Have you a right to expect to start in life where your parents are now? If your father drives a Packard or a Cadillac, do you have a right to expect to start with one, too? The chances are that he didn't. Some people are fond of telling the story, or variations of it, of the young chap just out of college who, when applying for his first position, inquired, "Is there a vice presidency open?" There is something laudatory about this attitude but there is a very real danger in it. In a city where I once lived, two young people got married and went to Europe on their honeymoon. While the young couple were away, their doting parents decided to surprise them by purchasing for them a beautiful home and furnishing it with all of the latest appointments. These young people were soon so bored with life that life itself was a burden. What was the trouble? It was certainly not that they had nothing to eat, or to wear, or a place to lay their heads. On the contrary, they had too much. They had so many things that they were sated—they were fed up. By their parents and their own false sense of values, these two young people had been robbed of all anticipation and the joy of realization.

It is fun to dream and plan for the future. When things come too easy there is no struggle, no planning, no anticipation, no delayed but happy realization; and life goes sour. Recently, a young chap in Miami, Fla., lost his job. He had been making a lot of money. It was a bad bump. "It's an awfully bad set-back," he said. Perhaps it was not nearly so bad as he thought. And, it was well that it happened while he was young. There are few things in life more dangerous than succeeding too fast. There are more people than we realize who are living disappointed lives for this very reason. Witness the young man who achieved an officer's rank in his country's service and who must reconcile himself to living his life as a clerk or in some other non-managerial work.

It is well to remember that your parents have been all of their lives climbing to the place where they now are and they have had all of the fun and anticipation of its accomplishment. Do not expect to start where they are now. Life just isn't built this way. And don't want it this way, for you would lose all of the thrill that comes from climbing and achieving.

III

If you would have a place in the hall of heroes, you will need some fundamental convictions by which to order your lives.

When you step into a department store and consider a dozen articles of purchase, you are aware that each article has a definite price. What determines the price? Quality, cost of production, transportation, all enter into the determination of price.

We behave in certain ways. Why? Our behavior is determined in part by custom, habit, and, to a certain degree, also by our convictions or our sense of values. We say, for example:

Honor is better than dishonor.

Honesty is better than deceit.

Happiness is better than gloom.

Chastity is better than promiscuity.

Fair play is better than poor sportsmanship.

Justice is better than injustice.

Why are the things in column left better than the things in column right? One further consideration: Will the things which we count most valuable today change altogether in the next decade? What is it that gives stability to some things so that they remain in column left century after century? It is at this very point that some fundamental convictions come into play. There are those of us who are convinced that honesty, honor, happiness, chastity, fair play, and justice remain as great stabilities century after century because they are reinforced by a universe that is structurally built this way. These qualities, we are convinced, are as much builded into the framework or structure of our universe as supports and girders are builded into a skyscraper. We are talking about nothing less than the fundamental characteristics and the ultimate behavior of the universe in which we live. We either take the position that our universe is erratic, mechanistic, and unintelligent or that it is reasonable, dependable, and friendly.

Like it or not, you have to come to terms with these fundamental convictions in life and make some commitments of your own, if you're not to be a copycat. If you choose to have any independence at all, you are forced to live your life by certain choices. You will line up, sooner or later, by choice or habit, with column left or column right and these convictions are your price-tag. They constitute your sense of values and determine what you stand for.

IV

Please allow me to set before you a modern trinity. This modern trinity consists of faith, courage, and grit.

Some people who pride themselves upon being very practical sometimes do very foolish things. They contend that they will move forward only as the facts dictate; that is, when knowledge stops, they stop. But is this really good sense? If Columbus had acted on this theory he would be sitting on the deck of the Santa Maria in Genoa's harbor yet; and if, in turn, everybody else had been equally hard-headed and practical, the Indians would still be chasing the deer and the antelope over the open spaces, and hunting buffalo on the Great Plains.

The men and women who get there first, open up new horizons, and push back the curtains of ignorance are those who have faith. For faith, in the final analysis, is a willingness to venture forth on a reasonable hypothesis. Some young people want to become lawyers, doctors, or ministers. They can have no absolute assurance guaranteed in advance that they will be successful in these careers. They can only appraise their assets, submit themselves to the rigorous training required, and then have faith that they will succeed in their chosen professions.

Some of us are not altogether satisfied with our world. It is not exactly a good world by any standard. There is still too much poverty. Wars occur all too frequently. There are too many pressure groups. Famines occur all too often. Management and labor are still too far apart. Nationalism is much too arrogant and irresponsible. But is a better world impossible? It is not impossible to men and women of faith. The future always holds something for the man who keeps faith in it.

You will need courage, too. Only 20 years after the landing of the Pilgrims at Plymouth Rock a man had pushed through the dangers and wilds of New England and had climbed to the summit of Mount Washington. This kind of courage became so characteristic of early Americans that the courage of the pioneer became proverbial.

But there is also another kind of courage. We have had in our college four desperately handicapped students. One was totally blind, but in spite of this handicap he made almost a straight "A" average. I recall that one day a group of students were standing in the foyer of the college building and bemoaning the terrible state of the weather. After awhile the blind student spoke up and said, "Oh, this isn't bad." Everyone seemed suddenly to feel ashamed and there were no more gripes against nature.

When a soldier deliberately draws fire to himself (as many of them did) so that the enemy location might become known and his buddies saved, courage has not perished from the earth. But we shall need a lot of courage of another kind. We shall need to have the courage to try again and again in the face of the most discouraging disappointments. We shall need to take up where local and international conferences have failed just because we are convinced that we must master the technique of living together in a family of nations.

Perhaps even more than courage we shall need grit. When we were children we were delighted by the fable of the tortoise and the fleet but fickle hare. Many people make a fast start, then falter and fizzle out. It takes perseverance to run life's race under the most trying circumstances and finally win. Have you come upon a dream or an ideal that for the moment means everything to you? Cultivate, then, the virtue of persistency until you become like the prophet as described by Horace Traubel: "He said: 'I see.' And they said: 'He's crazy; crucify him.' He still said: 'I see.' And they said: 'He's an extremist.' And they tolerated him. And he continued to say: 'I see.' And they said: 'He's eccentric.' And they rather liked him but smiled at him. And he stubbornly said again: 'I see.' And they said: 'There's something in what he says.' And they gave him half an ear. But he said as if he'd never said it befcre: 'I see.' And at last they were awake."

Many a man has won in life just because he would not accept defeat, in other words, by sheer grit. He lost his job but he secured another. He lost his money but he earned it back again. His friends lost faith in him but he won new friends. He lost his health but by careful living regained it. He didn't have a formal education but he pulled himself up by his own boot straps. When storm clouds gathered he always managed, somehow, to see the silver lining. He just kept on keeping on.

V

I suggest that you have an obsession. Yes; I am aware that obsessions are usually dangerous. Obsessions are akin to fixations and the psychologists tell us to beware of them. There are, however, some obsessions that are so glorious that, when they become a habit of life, they take on the proportions of magnificence. Some years ago Lloyd C. Douglas wrote a book in which his principal character made a thrilling discovery. When someone did him a favor or ministered to a special need with money, kindness, friendliness, or encouragement, he was quick to repay it. But instead of returning the favor to the one who had helped him, he passed it on to someone who really needed it. This experience was so amazingly gratifying and so compelling that it was called

the magnificent obsession, and gave the book its title.

And so I suggest that you have an obsession, but let it be a noble one. Any one of us can have a magnificent obsession. There are in our city a very kindly man and his wife who get great satisfaction from seeking out poor but deserving boys and girls and making it possible for them to have voice lessons or other educational advantages which otherwise they could never have. It is really great fun to send a kid to camp who otherwise would be forced to play in crowded and dangerous streets and spend all of his summer nights within stifling walls.

Develop an obsession but make sure it is a magnificent obsession.

VI

Be quick to give encouragement.

Recently I was driving through Morristown, N. J., where they train the seeing-eye dogs. I saw a man come up to the curb with his dog. He was perhaps 45 or 50 years of age. "Pathetic!" you say. We agree. But, in the next block there was a young man in the uniform of the United States Army being led by another faithful dog. Here was a young man standing on the threshold of life. He will need a lot of encouragement before he is through with life.

Almost anyone of us can give encouragement, and no one can begin to tell what astonishing results it may achieve. Let me illustrate what I mean. It was a beautiful afternoon in the autumn season and thousands of people had gathered in a great stadium to witness athletic games and races. The chief event of the afternoon was the 5-mile race. Eight splendid-looking young Americans came up to the starting line amid the plaudits of the crowd and, at the sound of the gun, were off on the long, grueling race. For a time they kept well together, but after several laps one of the runners began falling behind. At first no one paid any attention to him until he seemed to be well nigh out of the race. Occasionally a thoughtless person in the crowd would taunt him and call out, "You might as well drop out and give the cinder track a rest!" This taunting mood was contagious and soon there were many people laughing at him and calling out witty expressions at his expense. It was clearly evident that he was thoroughly discouraged and was rapidly falling behind. At the moment when he appeared to be hopelessly defeated, a man in the grandstand said, "It is poor sportsmanship to treat the poor fellow in this manner. He needs encouragement and I propose that we try an experiment." The next time the tired and discouraged runner came in front of the grandstand our kindly gentleman clapped his hands in applause. The runner was startled and looked up as if surprised that anyone should be interested in him. The next time, our friend was joined by several others who added their encouragement. What effect, if any, did it have on the discouraged runner? He reacted as if he were suddenly connected with a dynamo. A new courage flamed up in his breast, and renewed strength went coursing through his tired limbs as he overtook and passed one after another of his fellow contestants. Ten thousand people now were standing and cheering as the runner sped forward. And, with a phenomenal burst of speed that only moments before seemed utterly impossible, the once discouraged runner threw himself forward and finished second in the race. No one needs to point out the moral of this story; but the fact remains that without encouragement he would have been hopelessly beaten in the race.

Some of us are handicapped by physical infirmities. Some of us have bad health. Others of us have poor heredity. All of us are in need of a cheering word now and then. Giving appreciation and encouragement are not only great fun but the results are truly amazing.

VII

The law of life is give and live. It would be quite possible to respond to the multiplicity of financial appeals and finally land in the "poor house." But there is another kind of giving. It is the giving of oneself. This kind of giving is like a lighted candle. It retains its own light while giving a light to thousands of other candles.

In Palestine there are two seas. They are both fed by the Jordan River that gathers its headwaters from the rugged mountains of Lebanon and the snows of majestic Mount Hermon. The Jordan, which is known to the natives as "the descender" because of the rapidity of its fall, pours its sparkling waters into the beautiful Sea of Galilee. There are numerous little villages that dot its shores. Trees grow on the banks and birds find welcome there. The waters of the sea are teeming with fish and a familiar sight is the fisherman toiling with his nets. The Sea of Galilee is a sea of life and beauty. The Jordan flows on in its tortuous path, weaving and bending, but keeping a southerly course until it ends in the Dead Sea. The sea is well named for it is a sea of death. There are no villages dotting its shores. Trees have not attempted to grow in the saline soil. There are no fish living in its waters. Birds have no place for their natural habitation. A steaming wave of heat rises constantly from its surface. It is, in reality, a dead sea.

What is it that makes these two seas so unlike one another that one is teeming with life while the other is heavy with death? It is the same river and the same water that flows into both seas. What makes the difference? The Dead Sea receives and holds and dies. The Sea of Galilee receives and gives and lives. It is a parable of life. The law of life is give and live.

May I urge, in closing: Do not expect something for nothing. Do not expect to start where your parents are now. Hold onto some fundamental convictions by which to steer your lives. Hold before yourselves the modern trinity of faith, courage, and grit. Have a magnificent obsession. Be quick to give encouragement. And believe that the law of life is give and live.

These are some of the qualities that will give you a niche in the Hall of Heroes.

Houses and Hospitals for Paraplegia and Other Veteran Patients

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JUNE 25, 1947.

Hon. EDITH NOURSE ROGERS,
Chairman, Committee on Veterans' Affairs, House of Representatives, Washington, D. C.

DEAR MRS. ROGERS: This is in further reply to your request of June 9, 1947, for a report on H. R. 2101, Eightieth Congress, a bill to provide housing units for veterans of World War II who lost, or lost the use of, one or both legs as the result of service in the armed forces. You further requested that the report cover the variances from H. R. 2101 as contained in H. R. 3532, Eightieth Congress, A bill to enable the Veterans' Administration to provide housing units for certain disabled veterans of World War II.

The purpose of H. R. 2101 is to provide suitable housing for veterans of World War II who are entitled to compensation under the laws administered by the Veterans' Administration for the loss, or the loss of use, of one or both legs, and for the families of such veterans. The bill would authorize and direct the Administrator of Veterans' Affairs: (1) to acquire, by purchase, condemnation, or otherwise, sites for the construction of "housing projects" for such veterans and their families; (2) to provide for the construction, by contract or otherwise, of such projects, together with all necessary facilities; (3) to arrange for the sale of housing units within such projects to qualified veterans at one-third actual cost to the United States, funds expended by the Administrator to make up the remaining two-thirds; and (4) to establish a procedure under which qualified veterans would be required to submit application within 1 year from the effective date of the act and be permitted 6 years from such effective date to complete payments of total purchase. Section 2 of the bill would authorize the appropriation from time to time of such sums as may be necessary to carry out the purpose of the enactment not to exceed an aggregate in an amount which is not specified but for which a blank is indicated in the bill.

From a technical standpoint, it may be noted that the requirement of "loss, or the loss of use, of one or both legs" in H. R. 2101, does not particularize as to whether the loss or loss of use must involve the entire leg, and whether the term "legs" is broadly used to include the thigh. If further consideration is given the bill this language should be appropriately clarified to indicate precisely the extent of the loss or loss of use required. Since the bill provides for "housing projects" and the sale of "housing units within such projects" it might be construed as not authorizing the construction of individual dwellings in widely separated locations. If the intention is otherwise, the bill requires clarification in this particular.

H. R. 3532 would authorize the Administrator of Veterans' Affairs to provide suitable housing facilities for veterans of World War I and World War II suffering from spinal-cord disease or injury with paralysis of the legs and lower part of the body as a result of their service in the armed forces, provided the veteran is entitled to compensation under the laws administered by the Veterans' Administration on account of such disability. Upon application by any such veteran, the Administrator would be authorized and directed (1) to acquire by purchase, condemnation, or otherwise, a suitable site, (2) to construct or cause to be constructed thereon an appropriate dwelling, and (3) upon completion thereof, to convey to such veteran by quit-claim deed title in fee simple to such dwelling and the land upon which it is situated. Section 3 would vest in the Administrator for purposes of carrying out the enactment, the authority now or hereafter vested in him for the construction of hospitals and would make Veterans' Administration appropriations for the construction of hospitals available for the purposes of this measure.

Neither of the bills describes a standard of cost for the individual housing unit, thus rendering the definition of "suitable housing" and "appropriate dwelling" open to broad interpretation. There is a discrepancy between the title and the body of H. R. 3532, in that the title refers only to veterans of World War II whereas the body includes veterans of World War I as well as World War II.

The Veterans' Administration is not vested by law with any authority relative to veterans' housing or construction of buildings for the use of individual veterans, other than indirectly in connection with the financing of real estate purchases under the loan pro-

visions of the Servicemen's Readjustment Act of 1944, as amended. The Seventy-ninth Congress enacted several measures designed to expedite the construction of housing for veterans and to extend effective priorities to veterans in securing housing. These laws are administered by the National Housing Agency. The committee may wish to obtain the views of that agency on the pending legislation.

Both of the bills would involve a material extension of the traditional policy of the Congress in providing veterans' relief. The Congress has developed through the years a legislative program affecting disabled veterans, which at the present time consists basically of three distinct but integral parts. The first is medical care, hospitalization, and prosthetic appliances. The second is vocational training. The third is compensation. Blind and paralytic veterans and veterans suffering from amputations are paid compensation at rates which are designed to enable them to obtain the services which they require. These rates for wartime cases range from $240 to $318 monthly where the loss or loss of use of two limbs is involved. This is in sharp contrast to the normal wartime rate of $138 per month for total disability. Where there are additional complications the awards may run as high as $360 per month.

The proposals here considered are apparently based upon the view that the Government has a further obligation to veterans of the groups described because of their peculiar need for special housing facilities. With respect to this need, it is understood that primary concern has been manifested for those with spinal-cord conditions resulting in paralysis of the lower part of the body to the extent that regular or frequent use of a wheel chair must be made. In cases of this kind, if the veteran's condition permits him to reside outside the hospital, many difficulties are encountered in attempting to make use of ordinary housing, and special arrangements, such as wide doorways, ramps, and appropriately designed bathrooms, are desirable.

However, H. R. 2101 would not be limited to the wheel-chair cases and might include many veterans whose loss or loss of use of a limb would not prevent them from traveling without the aid of a wheel chair. On the other hand, H. R. 3532 is limited to the spinal-paraplegia group and would not extend to other veterans who may habitually use wheel chairs, such as some hemiplegics, severe arthritics, severe cardiac cases who do not have the cardiac reserve to walk but may sit, poliomyelitis patients who have been unable to become rehabilitated sufficiently to walk again, and those with severely crippling head wounds or severely deformed extremities.

It is believed that piecemeal legislation on this subject would be ill-advised and that if any such legislation is to be enacted it should apply as nearly as practicable to all veterans with service-connected conditions resulting in a distinctive need for special housing facilities. Therefore, if the benefit is geared to conditions necessitating the permanent use of wheel chairs, it should be available to all veterans so circumstanced, and should not single the paraplegia group out for preference.

With respect to the paraplegia cases the following factual information is submitted as bearing on the matters under consideration. There are approximately 2,400 of these service-connected spinal-cord cases from World War II and a very few of them from World War I, a majority of the World War I group having died within a period of months after their period of injury. There are approximately 1,300 of the spinal-cord-injury cases now in Veterans' Administration hospitals. Of this number, it is estimated that 600 to 700 will eventually be able to leave the hospital. However, all of those who have left the hospitals or may be expected to do so will require rehospitalization from time to time for further medical and surgical care and rehabilitative measures. It is anticipated that 500 or 600 of the most difficult cases will never be able to leave the hospitals, either because of the severity of their injuries or of their wish not to leave or their lack of interest in their own rehabilitation. These must always have available good medical and nursing care. The majority of the 1,800 who have left or will leave the hospitals will not require extensive medical care thereafter, but the majority of them will need good attendant care, whether from a member of the family or from a hired professional attendant.

While hospitalized, a complete medical rehabilitation program is prescribed for these paraplegia patients. This includes a great amount of physical therapy, for they require much hydrotherapy, massage, and heat. They are prescribed occupational therapy in order to loosen up and develop dexterity of the upper extremities as needed. The medical rehabilitation program is started as soon as possible, and includes the process of learning to move about from place to place in bed, to move from the bed to the wheel chair, to dress, and finally, in many cases, to put on braces, to crutch-walk up and down stairs, cross streets, up and down curbs, get into busses and even automobiles, and learn to drive their own cars by means of special attachments. Much of this work is taught by corrective physical rehabilitation supervisors. In addition, educational therapy and manual-arts therapy is available for these patients. Many of them have not graduated from high school, and the opportunity is given to finish their high-school subjects while in the hospital. Others are taught office management, clerical work, and educational subjects commensurate with their mental and physical capabilities. The manual-arts-therapy program has been developed to provide motivation for these patients, this being a very important factor in their rehabilitation. By means of this program the patient may go into any of several shops, such as woodworking, radio repair, typewriter repair, jewelry making, and watchmaking and repair. The latter course has been most interesting to these patients, as it provides a good income in a vocation in which they may easily engage in spite of their disability. There are over 70 of these men at the Bulova School of Watchmaking, at Woodside, Long Island, completing their course, and there will be another 25 or 30 ready to go to the school by July 1, 1947. All of these men started the course while still in the hospital; after discharge they continue at the Bulova School and are given credit for their work done in the hospital.

It will be seen from the foregoing information that a large number of the paraplegics will not be able to leave the hospitals and therefore would not require the special housing benefits which would be afforded by H. R. 2101 or H. R. 3532. Moreover, the rehabilitation program will enable many of those who leave the hospitals to supplement their disability compensation by their own earnings. An outright grant of special housing to all of the paraplegics would therefore affect some who will not need the benefits and others who might be able to contribute substantially to the acquisition thereof.

The needs of the veterans with paraplegia or other permanent conditions requiring the use of wheel chairs relate primarily to special housing facilities which are not available to them in conventional dwellings. If the Government should pay the entire cost or a major portion of the cost of such specially designed housing units, there would appear to result a discrimination against many other seriously disabled veterans who can utilize ordinary dwellings but must acquire them, if at all, at their own cost. It would seem, therefore, that the Government's obligation in these cases should not extend beyond defraying such percentage of the housing cost as may be adequate to take care of the increased expense incident to the extra facilities. This program might well be undertaken for the purpose of equalizing the opportunities of veterans in the wheel-chair group with those of other disabled veterans in obtaining houses for their own use. Such a plan would likewise harmonize with the rehabilitation program which is aimed at the maximum development of the individual's ability to supply his own wants, for though he would be assisted by the Government he would not be relieved of the responsibility for making a substantial contribution to the acquisition of a home.

While H. R. 3532 is considered too broad because it would provide for the outright gift of a house, it is noted that H. R. 2101 involves a sharing of the cost of special housing by the Government and by the veteran. However, it is believed that two-thirds of the cost, which would be the Government's contribution under that bill, would be excessive beyond the actual pro rata cost occasioned by the special design and facilities. While the Veterans' Administration is not possessed of accurate information indicating the average cost of such special-purpose houses, it is considered that a liberal and adequate amount for this purpose would be approximately 50 percent of the over-all cost. In order to ensure that the Government would not be required to bear an unreasonable part of the cost of an unnecessarily expensive dwelling, it is further believed that a stated amount should be prescribed as the maximum of the Government's obligation.

A program of the character suggested would also be more equitable because it would probably be taken advantage of only by those veterans who actually intend to retain the homes for their own use and occupancy. An outright gift of a home, such as provided by H. R. 3532, without any requirement that the veteran shall use and retain the same, would permit some veterans unable to leave the hospital and others who may have homes, to apply for the benefit with the purpose of immediately disposing thereof for their own monetary gain.

It is suggested, therefore, that consideration be given to legislation which would authorize the Government to pay 50 percent of the cost, not to exceed $10,000, of a suitably equipped housing unit for each veteran of both the peacetime and the wartime service who is entitled to compensation under laws administered by the Veterans' Administration on account of permanent disability which will require the regular or the frequent and periodical use of a wheel chair. In view of the permanent character of the benefit, it is not believed that it should be restricted to wartime veterans. Furthermore, if the veteran is to contribute half of the cost it would appear preferable that the responsibility for acquiring the housing unit should be upon the veteran so that his individual tastes may be indulged, and that the Government's obligation should be discharged under appropriate procedures by which the Government would pay the specified proportion of the cost which the veteran has incurred in his own transaction.

It is impossible to furnish a cost estimate of either H. R. 2101 or H. R. 3532 for the reasons that information is not available as to the number of potential beneficiaries and no cost limitation is described by either bill for each home and the land on which it is situated. However, as indicated above, there are approximately 2,400 World War II veterans in the spinal-cord-paraplegia group. The number of World War I veterans in this group is not known, but they are very few. The number of World War II veterans that

would be affected by H. R. 2101 by reason of the loss, or the loss of use, of one or both legs cannot be indicated because of the indefiniteness in the definition of the disability, as heretofore explained. If legislation were enacted along the lines suggested, including all wheel-chair cases entitled to compensation, the number affected would be larger than those in the paraplegia group, but no information is available to indicate how many veterans have disabilities which require the regular or frequent and periodical use of wheel chairs.

In this connection it should be noted with reference to the paraplegia group that it is estimated that the total cost of hospitalization for those in this group is between $18 and $20 per day each. However, as indicated, if these veterans were furnished houses, they would still require occasional hospitalization, the exact cost of which cannot be estimated. It is apparent, however, that there would be a material saving in hospitalization and treatment expense in any case where a veteran is able to leave the hospital and live at home.

For the foregoing reasons, the Veterans' Administration is unable to recommend favorable consideration of H. R. 2102 and H. R. 3532 in their present extensive form.

There has been insufficient time to clear this report with the Bureau of the Budget. When advice is received from that Bureau as to the relationship of these bills to the program of the President, the Committee will be advised.

Sincerely yours,

OMAR N. BRADLEY,
General, United States Army,
Administrator.

The Choice Is Between Democracy and Totalitarianism

EXTENSION OF REMARKS
OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mr. SABATH. Mr. Speaker, the motto of the American Veterans' Committee is "Citizens first!" In the cynical self-seeking of the postwar world, the hard-headed, practical idealism of the American Veterans' Committee has been a heart-warming thing, even though it has thereby earned the denunciations of the red-baiters.

In the convention which AVC held at Milwaukee the "middle-of-the-road" slate headed by Chat Paterson, whom most of us have known and liked as the legislative representative of AVC, was chairman, and AVC moved into a new position of enlightened political and economic leadership of thoughtful and civic-minded veterans who believe that service to their country in peacetime is as much a part of the job of citizenship as service in wartime.

It was, I think, typical of the AVC's aims and ideals that for a second time they should choose as their principal convention speaker a prince of the Roman Catholic Church who is beloved of all Americans, the Most Reverend Bernard J. Sheil, D. D., auxiliary bishop of Chicago, my friend, and the friend of man everywhere.

Bishop Sheil carries on, with a practical Christianity and an innate goodness which brings to mind the words of St. Paul: "Faith without works is but naught." With supreme courage and clarity, he supports his good works with an articulate philosophy which rings with the sincerity of his passionate belief in democracy and in men.

It is with pleasure and appreciation of that belief that I insert in the RECORD, under leave, the text of Bishop Sheil's address to the AVC; and I urge you, Mr. Speaker, and all the Members of the Congress, and all Americans who believe in America and value our way of life, to read and ponder his words.

I am pleased to note that he repeats what I have said so often: that our choice, not in the future, but now, is between democracy and totalitarianism; and that he denounces intemperate red-baiting, avaricious vested wealth, and communism and fascism with equal vehemence.

The text of his address follows:

ADDRESS BY THE MOST REVEREND BERNARD J. SHEIL, D. D., AUXILIARY BISHOP OF CHICAGO, DELIVERED AT THE NATIONAL CONVENTION OF THE AMERICAN VETERANS' COMMITTEE ON JUNE 20, 1947, AT MILWAUKEE, WIS.

In the life of every nation comes a moment when that nation must study once more its basic principles. It must reexamine those basic ideals which are the source of its greatness; and it must examine itself to see whether it is still following those ideals. Such a moment has arrived for the United States. It is a moment crucial in its implications not only for us but for all humanity. In the tragic war which scourged our world and in the social revolution now sweeping the earth, there is and there shall remain but one issue: Man, and the freedom and justice belonging to him. It is imperative then, that we be neither ignorant nor uncertain of what the American ideal is; for it is an ideal which, in the destiny of this Nation, was meant to be a model and a hope for the people of the world.

The ideal of America is a society of free men enjoying the fruits of justice; men free to think, to speak, to worship; men free to govern themselves without arbitrary domination by self-appointed masters; men free to live their lives without fear or oppression or want; men free from any economic strangulation which would make freedom a hollow catch-word. This is the American ideal, an ideal which is the very life-blood of a genuine and organized democratic society.

Americans have always sought freedom and justice for all men. They have sought freedom and justice, because only in such an atmosphere can the human person flourish in the manner God intended. Freedom and justice are not luxuries which only the rich and privileged can afford. They are not merely an expensive addition to fine living. They are an absolute condition of life. They are God-given rights, not something bestowed by a paternalistic government or a kindly superstate. They belong as of right to all men and to every man individually.

The key to the interpretation of American history is the persistent struggle to keep alive this ideal of freedom and justice; to vindicate it and to expand it against every force which would seek to destroy or restrict it. That struggle has never ended, and each generation of Americans must not only protect and consolidate the hard-won gains of the past; it must also move forward by making freedom and justice vital realities in every sphere of life for ever-increasing numbers of people.

DEMOCRACY VERSUS TOTALITARIANISM

To us, the possessors of this noble heritage, has fallen the high duty of preserving and expanding this freedom and justice from the growing threat of totalitarianism—the most powerful single danger to the entire concept of democracy. The choice, not of the future, but of the present, is between democracy and totalitarianism; between a social order based upon human freedom and one founded upon the idea of the state as the complete and unquestioned arbiter of human life. The successful conclusion of the war has only intensified the urgency of choosing the social order of the future. I repeat: the choice is between democracy and totalitarianism.

We Americans believe that our democracy, of all the political systems in the world, is the one which now most closely corresponds to the needs and rights of men. It is based squarely upon the deeply religious foundations of the fatherhood of God and the brotherhood of man. Its roots lie deep in the soil of Christianity, so that it is impossible to understand democracy correctly apart from its religious background. Above all, it derives its strength from the Christian belief in the absolute and unique value of the human soul, which transcends all the power and glory of the world. In our democracy, man is the foundation and the end of the state; man is the shaper, the maker, not the tool of the state. Only at our grave peril can we neglect the religious foundations of our American democracy; for without this foundation, democracy cannot remain itself. Without this foundation, freedom and justice and equality will have only a tenuous hold on the minds and wills of men.

And there are suspicions of a fading concern for freedom and justice within this Nation. Our concern for these things is fading because we are not quite sure what they are. It is strange and sad that we who possess the only decent political form of life hesitate and grope when we should be firm and decisive. For many of us, our glorious tradition is in tattered remnants. In the land of Washington, Jefferson, and Lincoln, in the land of noble avowals of devotion to freedom and justice, shameful compromises abound. There are Americans who have never understood America. And they have consistently acted against the best interests of the country. We cannot, of course, doubt their integrity; but we are justified in questioning their practical wisdom.

TAFT-HARTLEY BILL DENOUNCED

A glaring example of this unenlightened action is the Taft-Hartley bill. Without any doubt, this bill is aimed at hamstringing all unionism. The alleged interest in the freedom of the individual worker is an ironic play with words. The bill is out of line with the American tradition because it unduly restricts freedom and interferes with that justice which is every man's due. It is almost entirely punitive in nature, and as such, it will cause more ills than it is designed to cure. The satisfaction of spiteful revenge is not calculation to produce beneficial results for the Nation.

The desire to weaken unions is not shared by everyone; but it is common among powerful groups. And we must remember that it is the unions who delivered the workingmen from their bondage. It is the unions who have given justice to workingmen; for this alone, unions deserve our most fervent and devoted support. Through the unions, the working people have tasted economic justice and have enjoyed the fruits of economic freedom. All the Taft-Hartley bills in the world will not make them forget that freedom and that justice. The memory of such rights, once enjoyed, will never die.

Only in the past years have labor unions come into their own as an acknowledged and responsible social force in the United States. Yet, they have, by and large, shown

an anxiety for the welfare of the Nation that industry itself might well imitate. In their over-all concern for justice the labor unions have pointed the way to their colleagues. The unions, unquestionably, have done more than any other economic group to bring justice to ordinary men; by and large, they have been more democratic within their own ranks than have their managerial counterparts. It would be most unfortunate for the United States, if any serious harm were done to the cause of unionism now; unfortunate for the very things for which America stands: liberty, justice, and equality.

There is still much muttering about what the opponents of social progress are pleased to call Government interference. One of the reasons businessmen complain about Government interference is that for generations no government dared question the actions of business. Naturally, therefore, when legitimate and necessary Government intervention began, there was weeping and gnashing of teeth. Much of the resentment at Government intervention is in the nature of hurt surprise, like that of an undisciplined child that is suddenly made to do what he should have been doing all along. Let us not, however, carry this analogy too far. For the abuses of our industry have not been the actions of a child. They have often been heinous crimes against society.

There would never have been any Government interference if business had regulated itself; and if business had shown at least as much concern for workingmen as for profits. What they call interference is a result of their own failure to concern themselves with the well-being of the people. Recent social legislation is the result of the full, unreserved recognition that the Government has the fundamental duty to secure citizens in the peaceful enjoyment of their natural rights. This includes the fundamental right of providing for themselves and their dependents a decent livelihood by honest and efficient labor. If private industry is unable or unwilling to afford men the opportunity of honorable employment, government is bound by its very nature to employ all its resources to secure to all citizens this essential right to work. This is not a new truth, and Leo XIII gave it excellent expression when he said: "It is the first duty of every government to make sure that the laws and institutions, the general character and administration of the commonwealth, are such as to produce of themselves public well-being and private prosperity. Above all, the public administration must duly and solicitously provide for the welfare and the comfort of the working people." The people who pay the price for economic blunders are not the bland, well-tailored leaders of the business world; but unhappy men and women trembling for their jobs.

NOW THE BOURBONS REJOICE

Recent rumblings against social advances are unpleasantly reminiscent of the time when the sphere of business was an absolute; even God Himself, it seemed, could not enter. In the past several years I have detected, I fear, a carnival air among certain of the rich, as if the happy hunting days are about to return. There is rejoicing in the camp of the bourbons; and they charge, with unseemly haste, to push the sweaty people back behind the barricades. The anarchistic, communistic unions are about to be broken. Once more the worker's inalienable right to starve will stand as one of the foremost pillars of free enterprise; once more a total disregard for human dignity will be accepted as an avowed principle of commerce. Once more the almighty dollar will be elevated to the altar, to be worshiped as the one true God. Once more the devout followers of Mammon are in control of the sacred edifice of business, which can no longer be touched by morality or law. After all, business is business; we can hope for no further revelation. I have no quarrel with the rich. I will readily grant that there is nothing more pleasant than the sight of the privileged classes enjoying their privileges; but I must admit, even more readily, that there is nothing more heart-rending than the sight of the underprivileged grubbing for the basic decencies of life.

Another example of this state of mind is seen in the tax law sent to the President, and fortunately vetoed by him. With tender concern for those in the upper income brackets, our lawmakers evolved a tax reduction which adds to the average man's income the princely sum of $30 and to the rich man's income anything from $1,000 up. I do not by any means advocate "soaking" the rich; but the President was certainly right when he said this plan gave too much tax relief too soon to the wrong people.

PLEADS FOR REFUGEES

Yet another indication of our failure to live up to our ideals is the languid interest in the Stratton bill. This is the bill which would permit 400,000 displaced persons to enter the United States over a 4-year period. Probably the strongest opposition to this bill comes from our own indifference to the pitiful plight of these people. They hunger not only for food and drink, but for justice and mercy. They do not wish to return to their native lands, for reasons that are perfectly obvious. They look to the United States as to an island of light in a sea of darkness. They are ready and eager to live again, if we will just give them a chance. The opposition comes also from the professional Americans, interested, they allege, in preserving us from alien influences, although the bill expressly provides that undesirable persons will be excluded. Our racially pure patriotic groups have quite forgotten that we are all the descendants of immigrants. To them and to all who think like them, I should like to repeat these lines:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tost to me.
I lift my lamp beside the golden door."

The greatness of America has come from just such groups. Our welcome to these people would strengthen our position in the world as the leading exponent of liberty for all men.

There is another example of our waning care for justice and freedom. This is the regrettable tendency to find communistic influence in almost every proposal for legitimate social and economic improvement, and those who favor such measures are arbitrarily accused of being Communists. It is a mystery why there must be a Communist plot in these measures. We have been told that if we just let free enterprise alone big business would bring us straight into a modern garden of Eden. Those who dared to protest were immediately labeled Communists. Even now, if anyone points to the evils of modern industrial society, the smear brigade goes into immediate action.

Does a speaker have the temerity to state that anti-Semitism is un-Christian and un-American? He is a Communist. Does he dare take the part of labor? That is sufficient proof to label him a Communist. Was he against scrapping the OPA? Does he mention that the wholesale price of food products has risen 40 percent since OPA was done to death? Does he remind the propagandists of free enterprise that they promised to bring prices down if controls were removed? Does he remind them that profits and prices have spiraled dizzily while wages have not kept pace? If he does, he is labeled a Communist.

Naturally, our good social laws are positively **not** communistic; they are normal outgrowths of our Constitution. The anguished wails of the opponents of improvement serve only the communistic movement. They arouse a fear of progress which plays directly into the hands of the Communists, who thereupon appear in the public eye as the sole defenders of the common man. If the high tide of national prosperity recedes, many citizens may turn to communism, in the mistaken apprehension that the Communists are the champions of the underprivileged.

COMMUNISM IS WRONG

At the same time it would be the height of folly to think that there can be any compromise between communism and democracy. Communism is intrinsically wrong, under any form, in any possible combination of circumstances. And we detest its fruits just as we detest the fruits of fascism. Now, I do not believe in hysterical ranting or in witch hunting. But I do believe in intelligent appraisal of realities and of men. Time after time, Communists have proved themselves unworthy of the trust and respect of men of integrity. Time after time, worthy organizations have found themselves dominated by a few persistent and clever men. Time after time, these worthy organizations have lost the support of decent people because of the actions of their few Communist members. Today a growing number of true progressives are realizing that the Communist affiliation is the kiss of death. We can never forget that American Communists are the spiritual cousins and the servile lackeys of totalitarianism. And we instinctively recoil from lackeys, whether in the service of the well-to-do or their totalitarian counterparts.

These and other problems in America can be solved in freedom and justice if we act in unity. When the war ended, the unity that had joined us in wartime was revealed in its true light: a temporary partnership designed to cease when the last shot was fired. Many short-sighted Americans forget that, while war is a hard, dirty business, it is just as difficult to fashion a true peace. They have forgotten that without the complete and unselfish cooperation and guidance of America the world cannot win a real peace. And only a united America can lead the world to peace. Apparently, some of our prominent men have not learned that what happens in Timbuktu has repercussions in Toledo; that when the life and liberty of a Pole are threatened, the life and liberty of a Philadelphian are in jeopardy.

We can achieve this unity only in a common belief that man is a creature of unique dignity; that his rights are inalienable, for the very reason that they come to him from God. There is no other road to unity. But unity can make us successful in the fight for justice only if we have the right motives. We cannot be motivated by some vague sentimental affection for the common man, or by hatred of the rich. We must be motivated by solid, real concepts, by the Fatherhood of God and the brotherhood of man. These are the beginning of all human relations; they are the bed-rock foundation of enduring peace. Only when we realize that human rights are derived from God can we effectively fight unbridled social and economic exploitation. Only then do we have the right motives for granting to others that liberty and justice which we demand for ourselves.

How long do you think our present Congress would fumble if, united in this way, we demanded immediate action to provide decent housing, with only incidental regard for the hitherto sacred right of plentiful profit? Here we are, a Nation of 140,000,000 people, with a demonstrated capacity to produce war material in an unending stream; but we bog

down completely in the effort to provide adequate housing for our citizens, the majority of whom are returned veterans. The answer is greed; the greed of a few who seek to profit at the expense of the many. We see the congressional leaders of this Nation which spent billions to develop the destructive energies of atomic power hold up their hands in horror at the prospect of spending even a little money to provide low-cost housing for millions of our people. And how long do you think our cities would be fettered by racial restrictive covenants if we, the people, spoke in unity to demand that our courts cease to mock the justice they are sworn to uphold? How long do you think we would be forced to watch the disgusting spectacle of some of our Representatives dutifully fulfilling their obligations to their campaign backers in voting for legislation that "has been strenuously pressed upon" them?

AMERICA CRIES FOR ENLIGHTENED LEADERSHIP

In the practical order, we must work swiftly to effect the reign of justice and charity. And I know of no group in America today that is better equipped and better situated to accomplish this work than the veterans' groups. You of the American Veterans Committee possess an enviable opportunity for heroic achievement. The people of America are crying out for leadership; they are sick of selfish groups who think only of their own interests. They are appalled by would-be leaders who go about fomenting dissension and suspicion only to take advantage of the resulting confusion.

Gerald Vann has remarked that "we of the modern West are the only people in the whole history of the world who have refused to find an explanation of the universe in a divine mind and will. * * * And is it not worth wondering whether, perhaps, that refusal is not at the root of the chaos and misery in which we find ourselves. Without a sense of ultimate purpose, without intelligible answer to the ultimate why and whither, what else could we expect?" Because we are without this sense of purpose we have not yet provided the world leadership which God intended us to have when He so richly endowed us.

The hour is late, but we still have time. Pius XII in a recent address said that we are living in a time of panic and pessimism; and he called for a great upsurge of Christian faith and love which will sweep the world like a "mighty breath of pure air." Only a spiritual rebirth can bring about a genuine solution to our problems. Mere material remedies can never cure the evils of hatred and cynicism and greed, evils that exist only in the souls of men. The Pope calls for a fearless courage, rooted in "a love as ardent and as vast as the world." Such a love would purge our society of the hatreds which plague us and would drive away the fear which, in the words of the Pope, "* * * hides under the appearance of Christian prudence, and under this pretext remains silent when duty should require it to utter a fearless 'non licot' to the rich and powerful."

I have said that the choice for today and for tomorrow is between democracy and totalitarianism. And if there is a war in the future, it need not be a war of arms. It must be a war of ideas and of competing social systems. The domains of this conflict are no longer located in geographical areas; they are now located in the bodies and souls; in the minds and hearts and wills of men. The techniques of this new warfare then must be spiritual. The aim is not to reshape the map of the earth but to reshape the thoughts of the human; to create new objects for the aspirations of the human heart; new ideals for the human souls. The aim is to enkindle the flame of quenchless hope in lives that now know only the darkness of despair. The aim of this spiritual warfare is to teach every child of Adam that his destiny is not to grovel in the slime like beasts that perish but to walk among the stars as the sons of God.

While Congress Fiddled

EXTENSION OF REMARKS
OF
HON. THOMAS L. OWENS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mr. OWENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Joseph and Stewart Alsop:

WHILE CONGRESS FIDDLED

(By Joseph and Stewart Alsop)

Something has been quietly in progress in Chicago and Detroit which may in the end have a more profound effect on the future of the American labor movement, and indeed on American politics as a whole, than the controversial new labor act. One of the slickest maneuvers in labor history has been going on in the CIO's United Automobile Workers, the biggest CIO union. This maneuver is designed to oust Walter Reuther, anti-Communist UAW president, from the union's leadership and replace him with George Addes, dark-faced ambitious secretary-treasurer, who has consistently worked with the Communists.

If the trick succeeds, the results are entirely foreseeable. Unions representing something close to a majority of the total membership of the CIO will then have fallen under tight Communist control or deep Communist influence. The situation will be quite beyond remedy by Philip Murray, the CIO's sincere but vacillating president. And for the first time in American history a really important segment of the American labor movement will be at the beck and call of the Communist Party. In the light of this possibility, the commotion about the labor law looks pretty much like fiddling while Rome burns.

The history of the maneuver is interesting. For a long time there have been jurisdictional UAW troubles between UAW and another CIO union, the small farm-equipment workers. The farm-equipment workers are tightly held by the Communists. The political position of Grant Oakes, farm-equipment president, may be deduced from the fact that he has endorsed a subscription drive of the New York Daily Worker, a journal to which he frequently grants exclusive interviews. Nevertheless the CIO leadership, Reuther included, has repeatedly attempted to arrange a merger between the UAW and the FEW, to do away with the jurisdictional complications. The FEW has always pulled away from simple amalgamation, on instructions from the party, claiming that the union needed a "better deal."

When the FEW turned down a specific merger proposal made by the CIO's jurisdictional committee, which the UAW has accepted, a committee of the UAW was established to negotiate with a similar committee from the FEW to find acceptable terms. The UAW committee was headed by Joseph Mattson, and the other members were Arnold Attwood and George Burt. All three are Addes men. Mattson never reported any specific progress to the UAW board. In March, Reuther offered to help along negotiations. A number of meetings between the two committees were called, to take place in Reuther's office. All were canceled at the last moment by the FEW.

The regular board meeting of the UAW took place in Chicago from June 9 to June 13. On June 10 the FEW issued a statement that a proposal for a merger had been submitted to Philip Murray. Questioned on this, George Addes claimed that he knew nothing about it, and so did his men on the board. Walter Reuther announced during the meeting that he would have to leave on the last day, Friday, the 13th, for Washington at 11:15 that morning. Murray never received the proposal.

At 10 o'clock on Friday the Addes wing of the board suddenly produced a merger agreement. It transpired that this agreement had been worked out in final form in the same hotel in which Reuther was staying. But Reuther, as president of the UAW had never been told that the work was going forward. Reuther was given 15 minutes in which to read the agreement through. He immediately objected to its terms, and asked for a special meeting on the matter for the week of June 23. The Addes-controlled executive board ordered, over Reuther's objections, a referendum on the merger to be completed by July 15.

Reuther's objections were not to the merger, which he himself had attempted to promote, but to its terms. The agreement was full of "gimmicks," too complex to describe in this space, but largely designed to give the political influence of the FEW a disproportionate weight in the UAW. The real meaning of the proposed merger may best be grasped in terms of last year's victory for Reuther, which was by a slim 124-vote margin. The FEW claims a total membership of over 75,000. Its actual membership is probably less than 40,000. But even this membership would give the union 400 votes at the UAW convention next fall. It is easy to see why a union politician, quoted in Detroit's labor paper, the Wage Earner, remarked that there is "enough dynamite in the issue to blow Reuther out of and Addes into the UAW presidency."

But the dynamite is not confined to the auto workers' presidency. It would mean that the process by which Communists all over Europe have gained the whip hand over governments, by the economic power of their control over union labor, would be immeasurably advanced here. The process might be so far advanced that the vast non-Communist majority of the CIO would probably be powerless to stop it. It is further noteworthy that no one who has studied the matter believes that the Taft-Hartley Act could possibly stop it. It is a process which has elsewhere led again and again to the terrible final split between extreme left and extreme right which is the disaster of Europe. It is not too much to say that the future of the United Automobile Workers in the next few months will closely affect the future of the United States.

Oil to Russia

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mrs. BOLTON. Mr. Speaker, in accordance with the permission granted me, I am making a part of my remarks an editorial which appeared in the Cleveland Plain Dealer of June 25, 1947.

It has to do with the sending of oil to Russia about which so many of our people are disturbed. It follows:

WHY SEND OIL TO RUSSIA?

It is high time Congress undertook a full-scale investigation of the Government policies under which vast quantities of oil are being shipped to Russia when the United States is threatened with an oil shortage.

For several weeks Congressmen have been sounding the alarm that there is something peculiar about the large quantities of oil

being purchased in this country by the Soviet Government. They have pointed out that Russian tankers were loading hundreds of thousands of barrels at West Coast ports and have professed to see some similarity between this policy and that of supplying scrap iron to Japan before Pearl Harbor.

Meanwhile there have been warnings that the United States would face a shortage of fuel oil this winter and hints that the Government might be compelled to resume gasoline rationing.

Also, fears were expressed by Army and Navy aviation officials that some service planes might be grounded in the near future due to a shortage of aviation gasoline.

Yesterday three important developments brought the oil issue out in the open.

The Department of Commerce, through its office of international trade, announced the reimposition of wartime controls on the export of petroleum products.

The Standard Oil Co. of Indiana announced that sales of gasoline to dealers would be rationed in 15 midwestern States during the summer months.

Congressman ALVIN F. WEICHEL, chairman of the House Merchant Marine Committee, revealed that the tankers in which American oil is being transported to Russia originally were built for the United States Government. He would like to know how Russia got them and, if they were transferred to Russia during the war under lend-lease, why they have not been returned.

The policy of permitting shipments of oil to Russia at a time when Soviet propaganda organs are denouncing the United States in hostile terms and when our own oil supplies are in short supply appears to be another example of the right hand of the Government not knowing what its left hand is doing.

Also, it seems peculiar that the Department of Commerce controls will not become effective until next Monday, just 24 hours before the emergency law authorizing such export regulation is due to expire.

This raises the question of whether the Department is primarily interested in conserving the United States' supply of oil, or in persuading Congress to extend its wartime powers.

The Department said that 168,306 barrels of oil had been transported to Russia during the first 4 months of this year. But WEICHEL reported that 125,500 barrels of oil and 12,895 barrels of gasoline had been shipped to Russia in the past 2 weeks alone, and that three more Russian-operated but American-built tankers are loading in California ports and are due to sail before the United States embargo will go into effect.

Something smells bad here, and it is more than just the odor of oil. A thorough investigation may disclose another Teapot Dome with an international angle.

Address of Hon. George A. Dondero, of Michigan, Before the Roanoke Rotary Club

EXTENSION OF REMARKS
OF
HON. J. LINDSAY ALMOND, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. ALMOND. Mr. Speaker, "ye shall know the truth and the truth shall make you free." Until truth gains and holds mastery over the minds of men, the subtle, disrupting, infiltrating anathema of communism will continue to spread its cancerous growth to degrade, pollute, and finally destroy its only direct antithesis—democracy.

No member of this body can render a greater service to the Nation than by carrying to the people, with relentless and uncompromising conviction, the unvarnished truth anent the black and despicable horror of the essence, purpose, design, and threat of communism to our way of life.

With characteristic candor, force, eloquence, and courage such a service was rendered by the distinguished gentleman from Michigan [Mr. DONDERO] in an address delivered before the Rotary Club at Roanoke, Va., on June 26, 1947.

Under leave to extend my remarks in the RECORD, I include herewith Mr. DONDERO'S address:

THE ROAD TO SURVIVAL LEADS TO THE RIGHT

It is pleasant for me to come to Virginia and make my first speech in the Old Dominion State, the land of Washington, Jefferson, and Lee. In this State history was made and history still lives.

I would like to share with you, at least for tonight, the pride that must be yours in cherishing the heritage of your freedom-loving first settlers, who established at Jamestown not only the first permanent English settlement in America but ideals for the ages.

It is especially pleasing to me to be invited to the home city of my warm and close friend, Cliff Woodrum, your former Representative in Congress. You of Virginia, and especially of Roanoke, may well be proud to claim him as your fellow citizen. He was one of the ablest and best men in the Congress of the United States. He always defended and advanced the principles upon which the Nation was built. Our country lost a superb legislator when he voluntarily withdrew from public life.

In his place you have sent to Washington a worthy and distinguished successor in Judge LINDSAY ALMOND. We have become well acquainted, and I respect and admire him greatly. He brought with him to the Nation's Capital not only the traditions of the Old Dominion State but every mark of a gentleman and the philosophy of Jefferson; namely, keeping the Government close to the people. To be in his home town is another reason why I am happy to be in Roanoke tonight.

As long as I have been a Member of Congress, I have never known a time when Virginia needed to make any apology for its delegation in our national law-making body. On the contrary, you might well have a deep sense of pride for the type and caliber of men whom you have sent to the Nation's Capital.

A third reason is that it makes me feel like a truck driver, for it has given me an opportunity to run into so many nice people. In fact, if you were all sitting in the dining room of the First Methodist Church at Royal Oak, Mich., tonight, I would swear you were all Republicans.

What makes it most gratifying to be here is to know that I am to share the evening with an audience of splendid Americans.

In the Capital City of Washington resides an old lady who is well beyond her ninetieth birthday. Her mind and memory remain unimpaired and a rich luster still kindles her aging eyes.

More than 85 years ago, when she was but a stripling of a girl, she stood on the balcony of a hotel, recently torn down in Washington, with her father and the sixteenth President of the United States. They were his guests. The occasion was a review of young manhood marching off to war.

As the measured tread of the boys went by, the tall sad-faced man in black placed his hand on that little girl's head and said, "My child, what a world we live in today."

More than fourscore years later, in the present decade in which we now live, death and destruction rained down without mercy upon helpless and defenseless women and children. Long-established principles of justice and equity, which once guided nations and men in orderly conduct toward each other, have been swept away. Powers, heretofore unknown, have been discovered and developed, which now threaten civilization itself. Brute force rules the world.

Hatred and passion run deep and an ideology which challenges Christianity, denies God, and feeds on misery has risen to plague a distressed and distraught world. As memory brings back recollections of 1861 to that gracious old lady in 1947, we can echo the sentiment expressed to her by Lincoln and say, "What a world we live in today."

It is an anxious world and a troubled world; a world gone mad; a world that has been in the process of destroying itself and seemingly forgotten God. Sound and tested principles, on which mankind has traveled far along the road of history, are cast aside in our modern conception of living. We are prone to destroy old landmarks and tear down the truths of centuries. What we once thought of as permanent is now challenged. Yet Scripture reminds us, "Remove not the ancient landmarks which thy fathers have set" (Proverbs 22: 28).

It may seem trite to recall the admonition, "Eternal vigilance is the price of liberty," but it is my opinion that not since the founding of our Republic has liberty been so seriously threatened as it is today by the forces of darkness. The lights of freedom are going out all over the world and our own lamp is burning low.

For the first time in history an issue has been raised, which is world-wide. That issue is whether Christian civilization, as we have always known it, is to survive, or whether a foreign ideology known as communism, founded on violence, terror, and force, shall rule this earth. Our Nation has been moving to the left, and it presents a challenge to every patriotic American. There can be no compromise with communism; there is no middle ground. Communism and freedom cannot exist side by side. One or the other must die.

Nearly 20 years ago Russia gave notice, and I quote: "The world-wide nature of our program is not mere talk, but an all-embracing and blood-soaked reality. Our ultimate aim is world-wide communism."

It is the thesis that the state is god and master; that the rights and privileges of the individual must be surrendered to the state. It is another way of saying that the common man must be kept common. If that theory is embraced, we are on the road to the destruction of individual liberty, and the very foundation of the greatness of our country.

Under communism no one can own a foot of land, a news stand, or a barber shop, nor employ anyone. There is but one employer, the state. You work for it or starve. There is but one political party, one ticket, no choice. You hear, read, and see what the state permits—and no more. You cannot invite anyone to your home or apartment for you do not own any. One room is standard for a family in Russia and has been so since the Communists took over. You cannot absent yourself from work; labor cannot strike; one cannot travel without a permit or be friendly with a foreigner. There is no freedom of assembly; no freedom of speech, or religion, or of the press.

In short, there is no freedom behind the iron curtain.

There is no such thing as a trial of justice and equity as we know it in America. There is no jury trial. To steal in Russia may not be a serious crime, but to utter an opinion

against the government means a slave labor camp or the firing squad.

About 1 Russian in every 13 is in a slave labor camp. In all, there are more than 15,000,000 in such camps. No one seized by their secret police, whether guilty or innocent, has any right to protest; and only about 5 percent are ever released. They die a slow death.

Their whole government is founded on fear and terror, and its two instruments of administration are the secret police and the firing squad.

Communism calls itself "democracy," but it denies the basic principles of democracy; namely, government by the consent of the governed. Yet this insidious menace is on the march. One country after another is crushed by fear and force. Its immediate plans for the future in Europe bode ill to America.

Within a short time we may expect Russia to announce the formation of a Balkan confederation, then a central European confederation, and the invasion of Greece and Turkey. She plans to divide Italy from east to west to control the rich northern industrial and agricultural part of the country, thereby starving into submission the southern or poorer section of that country. It is reported that France has already been sufficiently infiltrated with Communists to be taken over by a telephone call.

Its heel has been planted on our shores. Communism is here among us. It is in our Government, schools, labor unions, churches, business, politics, clubs, veterans' organizations, and nearly every other activity of American life.

Every device known is used to bore from within. It stops at nothing. Deception, fraud, concealment, falsehood, subtlety, and slander are all used to obtain its objective, namely, the overthrow of our Government. It feeds on misery, unemployment, hunger, and discord. Strikes and confusion are but part of its program.

Two things actuate the motives of all of us—fear of punishment and the hope of reward. Under communism hope dies and fear is increased.

To combat communism our people must be informed how it operates, for it is a menace which threatens our very existence.

If our people who enjoy the highest living standard on earth could know more about living standards under communism; if those who have seen the free-enterprise system followed for 160 years as the greatest instrument for human advancement could know more about industry and management in the Soviet Union;

If farmers could know what the Soviet system of agriculture is like; if American labor had better working knowledge of the status of labor in Russia, especially the system of forced labor which is so common; if people who believe in God, the Christian faith, and who value a free conscience, could know how religion fares behind the iron curtain;

If those in this land who have been flirting with the idea of bringing about a change in our free representative government had a clear perception of methods and government under communism, with its planned existence and central control of education;

It would halt the march of communism as nothing else could.

LABOR

Labor is forbidden to strike. There is no legislation, but the unwritten Soviet law prohibits striking against the Government. The standard of living, wages, and output per man are much lower than in the United States. Millions toil by force and under police discipline. They receive a miserable keep for their work.

TRANSPORTATION

Russia, after 30 years of communism, produced in 1938 and 1939 but 200,000 vehicles, of which seven-eighths were trucks, and all motor vehicles in the Soviet in 1941 totaled but one million, also mostly trucks. This despite the fact that they have all the material, resources, necessary to manufacture them. In the United States in 1941 we produced 5,000,000 motor vehicles, 80 percent of which were passenger cars for private use; and in the same year we had over thirty million registered automobiles.

EDUCATION

In every phase of education in the Soviet Union, the doctrines of communism are the only ones which are or can be presented to the students. There is no such thing as free study of other forms of government. If they controlled education in the United States, that would also be our fate.

RELIGION

The Russian Government says that religion is the opiate of the people. There were 46,000 churches in Russia in 1917; only 4,200 were left in 1941. These figures speak louder than anything I can say. Communist Russia no longer permits legal marriages in the churches of Poland. The ceremony in a church is allowed, but it must be legalized before a Communist civil officer. Former Ambassador Harriman informed me but a few weeks ago that where Moscow formerly had about 1,000 churches—less than 40 now remain.

These are some of the things that touch everyday life. We would not like them in the United States; therefore it behooves all of us to be vigilant and aggressive against this insidious menace, if we desire to preserve undiminished our heritage of American freedom.

On a day in September 1787 when he signed the new Constitution of the United States, Benjamin Franklin was asked: "What kind of a government have you given us?"

"A Republic, if we can keep it," was his prompt reply.

Seventy-six years later, the same question was asked at Gettysburg in different language: "Can a nation conceived in liberty long endure?"

Now, more than four score years later, we are asking the same question. It is the great issue before us and the world today. We are engaged in a life and death struggle for the preservation of principles among men.

This Nation cannot endure half American and half Communist, and ours is the decision to make. There is no North nor South, East nor West, on that question. We survive or perish together and, in my judgment, the only road to survival leads to the right.

We must return and restore the time-tested principles on which this Nation was founded, if we hope to remain free and to progress as a great Nation. Three times since the tragic War Between the States we have demonstrated to the world that we are a united people, whenever freedom and our beloved land were threatened by a foreign foe.

Life, liberty, and the pursuit of happiness are not granted by man. They come down to us from heaven. We inherit them at birth. They have been woven into the fabric of our Government.

The flower of American manhood has died in all parts of the world that those principles might live. Upon us, the living, falls the sacred trust to preserve them.

Liberty has always provided the urge and the initiative for men and women to go forward to create benefactions for themselves, their country, and the world. It is the reason why millions in all ages have died for that precious thing, freedom. It is a moral thing and it will be defended only when every heart and hearthstone is stirred to a deeper appreciation of its value.

The rise of the United States to a degree of achievement unequalled in history resulted from the freedom, independence, and protection against the collective crowd, which our Constitution gives to each citizen. This protection released the energies of men, making it possible for them to accumulate capital, create inventions, and provide better tools than the world had ever known before. The result has been a higher standard of living, better housing, more food, and a larger portion of the material and good things of life than any people in history have ever had.

We represent about 6 percent of the world's population and occupy 7 percent of the earth's surface. In 160 years, under our American way of life, that small percentage of people, occupying that small area of the earth's surface, we have produced and possess 30 percent of the wealth of the world and 35 percent of its income. We have 80 percent of the automobiles, 60 percent of the telephones, 35 percent of the railroads, a vast majority of the radios of the world, and spend more on education that the rest of the earth combined.

We produce 60 percent of the world's goods. We have 67 percent of the world's fighting ships, 60 percent of the battle planes, 70 percent of the merchant ships, 75 percent of the transport planes, and we produce more than one-half of the world's horsepower.

Each of 34 States has more automobiles than all of Russia. Seven States have more than Great Britain. California alone has more automobiles than Great Britain, France, and Italy combined.

We have five times as many trucks as Russia and 50 percent more than the entire world; and enough paved roads. (about 1,400,000 miles) to encircle the globe 41 times, on which to operate them.

In spite of that enviable record, not surpassed nor even equalled by any other nation on earth, we have some folks in this favored land who are insane enough to believe that we should scrap or abandon our way of life, our competitive system of free enterprise, our government of freedom, and import this foreign ideology of communism. They believe that through some mysterious manner we would be a happier people, raise our standard of living, and somehow we would dwell in some kind of a Russian utopia.

It is the sheerest kind of nonsense, and it would be humorous if it were not so tragic.

If we as a people would survive and preserve the freedom we have, we must revive the fundamental principles upon which the Government was founded. To do so, we must take the road that leads to the right.

Taxation of Federal Property by States and Municipalities

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mr. KEATING. Mr. Speaker, today I have introduced a bill which attempts to remedy an inequitable situation by providing for the taxation by States, municipalities, and other political subdivisions of certain real estate held in the name of the United States or one of the Government agencies.

As the Federal Government has expanded its functions and activities, and in part as the result of wartime necessities, the title to more and more real property has been vested in the United States, thereby acquiring immunity from local taxation and throwing a corre-

spondingly greater burden upon all other taxpayers in the community affected.

According to reports which have been brought to me, not only has the administration done nothing to check this tendency and alleviate the hardship on municipalities resulting from the trend, but actually has actively contributed to the creation of an increasingly intolerable situation.

To illustrate, the Defense Plant Corporation by statute was made liable for local taxes. This provision was enacted in recognition of the fact that properties acquired for defense purposes such as factories, warehouses, dockage, wharves, and the like were to be used for purposes not ordinarily associated with governmental activities, received full local services such as police and fire protection, and should bear their proportionate share of the expenses of local government in the same way as if they were privately owned. Otherwise, the removal of these properties from the tax rolls by transfer to the Government would work an obvious injustice upon every other taxpayer in the community, resulting in higher taxes, higher rents, and increased costs of all products and services.

The corporation counsel of the city which I have the honor to represent informs me that the title to each one of these federally acquired properties, so far as he can determine, could have been taken in the name of the Defense Plant Corporation, but has in fact been taken in the name of the United States in a manifest effort to avoid this tax liability. In fact, I was even told of one instance where, apparently through error, the title was first taken in the name of the Defense Plant Corporation and then, when this fact was discovered and it became clear that taxation would ensue, a deed was drawn and recorded transferring ownership to the United States.

Here we have the spectacle of our Government, which is quick—and properly so—to crack down upon those who use all and sundry devices to avoid Federal taxation, attempting by a legalized contrivance to deprive local taxing authorities of their just dues, amounting in my community alone, I am told, to about $130,000 a year. The result is that the few in a particular locality pay for a benefit conferred upon the many throughout this country.

What possible justification can there be for a large building owned by the United States and leased for manufacturing purposes or for storage warehouse purposes to be exempt from local taxation?

The measure which I have submitted provides that the United States or the Federal agency owning such a property shall make payment to the local taxing authority of an amount equivalent to the taxes which would be levied if the property were privately owned, with the proviso, however, that if it can be shown that the property does not receive some particular local service, the cost of such service may be deducted from the amount of the payment. A statement of the sum due must be sent by the municipality to the Federal agency involved, after which payment must be made or appropriate steps taken to review any alleged erroneous determination of liability on the part of the local authorities.

As to school taxes, a special provision is included in this bill creating a Federal liability only when officers, agents, or employees of the United States reside on the Government-owned property. In that case the United States must pay to the local school taxing authorities an amount equivalent to the fair tuition charge as determined by the United States Commissioner of Education, for the pupils of school age residing on this property.

Concededly there are many, in fact most, types of uses of Federal property which probably should be excluded from such taxation. It would be a rather startling suggestion, for example, to tax post offices and courthouses, which might be said to serve peculiarly the interests of the people in a local area in the same manner as the buildings which house the administrative or governmental functions of the State, county, or city. Also Federal office buildings and installations employing and bringing to the community large numbers of people are usually the subject of vigorous competition between various localities, since they normally enhance local values, increase business, and substantially improve the appearance of the municipality. There seems to be no adequate reason why in such cases the locality which is enjoying such incidental benefits should receive the additional and unexpected windfall of payments in lieu of taxes.

In the case of Army and Navy posts, camps, and stations which ordinarily receive little, if any, local benefits or services furnished by the municipality other than educational facilities, these are separately treated in this bill. They usually provide their own fire and police protection, their own roads and sewers and they are normally located in rural or semirural areas. It would seem inequitable to require them to pay an ad valorem tax on the high valuation of their real-estate development.

It is therefore provided in this legislation that Federal office buildings, courthouses, mints, assay offices, customhouses, laboratories, experimental grounds or buildings, testing stations, jails, penitentiaries, reformatories, detention farms, hospitals, cemeteries, national parks or monuments, or Army and Navy posts, camps, garrisons, stations or yards are exempt from the provisions of this new taxing statute.

Only this week I have received a communication from Mr. Morgan Strong, executive secretary of the conference of mayors and others municipal officials of the State of New York, transmitting a resolution adopted at their annual meeting held on June 20, wherein they petitioned the Federal Government to provide substantial payments to local governments in lieu of taxes on federally owned property in municipalities.

Effort has been made to draw a bill, the equity and fairness of which will appeal to the Members of the Committee on Public Lands, before whom a study of this important problem already is under way. It is respectfully submitted that there is an urgent need to end promptly the inequities and abuses which have developed in connection with the increasing acquisition of property by the Federal Government.

Atomic Power for Peaceful Purposes

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. HAVENNER. Mr. Speaker, one of the most interesting and important topics of discussion in the United States today is the iron curtain which has thus far surrounded our post-war policy concerning the development and use of atomic power for peaceful purposes.

It is easily understood why our Government is withholding all information about the basic methods of producing atomic bombs and other military weapons in which nuclear energy may be used, and there is no complaint on that score. Until such time as satisfactory agreement is reached for international control of atomic power, the United States will continue to preserve inviolate all such scientific secrets which are in our possession.

But the question looms large as to why the American people should not be kept informed of the practical possibilities of applying atomic energy to domestic uses at the earliest possible time, and be given an opportunity to formulate a national policy for the beneficial development of this greatest scientific discovery of all time. It is recognized, of course, that the new Atomic Energy Commission has been in existence only a very short, short while. There is no disposition, on the part of those who think as I do, to criticize the distinguished Chairman of that Commission, Mr. David E. Lilienthal, and his colleagues for failing to make any premature announcements as to their long-range program.

However, there is a distinct apprehension among progressives in Congress and elsewhere that very powerful influences may be actively at work to delay as long as possible the use of atomic energy for industrial and social purposes. Great vested interests, with enormous investments in oil and coal, are confronted with the possibility of heavy financial losses if atomic energy should replace their products, to any large extent, in the production of heat and electricity. The vast electric utility companies must face great financial outlays to convert their plants for the use of this new form of energy. Other radical changes in established forms of business will be necessary. So there is more than a mere suspicion that these powerful interests do not desire to see any practical application of atomic energy to our domestic economy in the immediate future.

On the other hand there is every reason to believe that if the American people were thoroughly informed about the revolutionary improvements which atomic energy will eventually bring about in

their mode of life they would insist that there should be no deliberate delay in putting it to work. No disclosure of scientific or military secrets need be involved in speeding the day when the American economy is converted to the atomic age. Our Government should and would continue to retain and safeguard all secrets which are vital to our national security and defenses. All that the American people need to be told is how they can use atomic energy after it has been produced under Government supervision.

Our people have already been told, in vague and unsatisfactory terms, that atomic energy may be available, for every day uses, in from 20 to 50 years. But independent scientists, experienced in nuclear research, declare that we can have atomic energy to use, if we want it—millions of kilowatts of it—in 2 or 3 years In about 10 years, these scientists assert, we ought to be well on our way to an atomic standard of living They picture cities without smoke, mechanized homes with a multiplicity of conveniences which are now merely a dream, and a constant stream of production of goods without long hours and disagreeable toil for our workers

The American people are standing on the boundary of a new frontier, with possibilities so vast and limitless that they stagger the human imagination. But thus far the rank and file of the American people have been given no real opportunity to exercise their imaginations in a practical way about the uses to which the atom can be put for their welfare and happiness. In some devious psychological way they have been made to feel that it is dangerous to pry into the possibilities of using atomic energy for peaceful purposes—that it is essentially a military force which must be shrouded in secrecy until some indefinite time in the future.

If I may be permitted to employ the vernacular of the street, allow me to express the opinion that this is all "bunk." Indeed, I am convinced that it is the duty of the average American citizen to do a lot of thinking about this all-important subject right away. He should squarely face the fact that the big interests of American industry and American finance are not only uninterested in speeding up the advent of the atomic age into our every-day lives, but that those powerful interests are already doing everything they can to delay it. And if the average citizen does not get together with his peers and force the issue the big interests are going to have their way for a long time to come.

Demand for atomic energy for peaceful purposes as soon as possible may well become a paramount political issue in the immediate future.

The Northern California Association of Scientists, in a report recently prepared for the Carnegie International Peace Endownment, declares that the atom is already competitive with coal at a delivered price of $6 a ton. This is a startling statement when it is realized that most of the people of the world will never be able to buy coal at such a price again. In simple terms, it means that scientific experts in my State of California know how atomic energy can be used to produce heat today more cheaply than coal can do at current prices. This statement is a sharp contradiction of the vague and discouraging information previously given us that we must wait at least 20 years before we can hope to realize any practical benefits from the atom.

The fact that the American people are not now further along the road to the atomic age is unquestionably due more to political inertia than to scientific or technical difficulties. So it seems reasonable to conclude that active political measures will have to be employed if we do not wish to permit the atomic millenium to be postponed indefinitely. The time has come for public opinion in America to wake up on this all-important subject. If we were living under a sovereign dictatorship, the situation would be very different; but here in the American democracy public opinion can accomplish wonders. And the use of atomic energy for peaceful purposes will usher in an age of wonders for all humanity.

Up at Hanford, in the State of Washington, three huge atomic piles have been in operation for about 3 years. These piles generate as much power as Bonneville Dam, but the power is not in usable form for industrial purposes. The piles were constructed during the war exclusively for the production of plutonium for bombs. Instead of being converted into commercial power, the heat generated at Hanford is dissipated into the Columbia River through the use of a mammoth cooling system. Experts say that the task of converting this heat into steam for the generation of electricity would not have been more difficult than was the construction of the tremendous cooling plant which now makes the heat useless after it has produced plutonium. It is estimated that the amount of energy which now goes to waste at Hanford would be sufficient to satisfy the basic needs for power of a city the size of Seattle. One authority on atomic research is responsible for the assertion that if a quarter of the scientists and engineers who collaborated on the atom bomb were put to work today on nuclear power plants, the United States could have half a dozen 500,000 kilowatt units in operation by 1950.

Many serious misconceptions about atomic power are widespread in this country today, and there is sound reason to suspect that some, if not all, of them have been deliberately disseminated by the protagonists of a delayed atomic age. It is said, for instance, that atomic power plants will be dangerous and difficult to manage, and that we must develop a new generation of scientists and specialists to assure their safety. This rumor is flatly denied by nuclear scientists. They admit that the construction and maintenance of the plants will require great skill, but they assert that plants properly constructed and maintained will be as easy to operate as an automatic coal furnace.

Other widely circulated misstatements are that atomic power plants will be prohibitively expensive, that atomic energy will not reduce the present cost of power, and that the requisite raw materials are so scarce as to minimize its usefulness. In refutation of all of these alarmist reports, nuclear scientists in my home State declare that the atom will prove to be a limitless source of amazingly cheap power.

Recently all of the San Francisco daily newspapers quoted Bruce R. Prentiss, an engineer assigned by the General Electric Co. to atomic-energy problems, as saying that in 25 to 50 years it will be possible to produce all of the electric power now used in San Francisco from an annual supply of only 300 pounds of atomic material. This expert opinion disposes effectively of several of the pessimistic reports which I have recounted, but other distinguished nuclear authorities disagree emphatically with the General Electric engineer in his estimate of the time that must elapse before atomic energy can be made available for general use. They assert in effect that all that is necessary to make the atomic age a reality during the lifetime of the present generation is the will to do so.

Dr. Robert M. Hutchins, chancelor of the University of Chicago, said more than a year ago that atomic energy can bring untold blessings to humanity in the immediate future. Availability of atomic power for industrial and other economic uses, Dr. Hutchins declared, will make possible the location of important industries in communities which are remote from present sources of fuel supply. In the atomic age new industries can be created anywhere, because the cost of transporting materials from which atomic energy is produced will be unimportant.

Dr. Hutchins described the discovery of atomic energy as being as important to the biologist and the doctors as the invention of the microscope. Radio-active carbon and radio-active iodine are ready to revolutionize vital areas of medicine and biology. New methods of diagnosis and therapy, and new industries for the manufacture and distribution of materials will be created.

As Dr. Hutchins says, these are not dreams; they are realities. New industries, new communities, more leisure, better health and longer life—these are among the blessings which atomic energy puts within our grasp. It offers a higher standard of living for all the world.

The American people must not allow these blessings to be withheld from them indefinitely. The control of the time element is in their hands. It is up to them to exercise this control.

Gangster Pictures

EXTENSION OF REMARKS

OF

HON. WILLIS W. BRADLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mr. BRADLEY. Mr. Speaker, the following editorial from the Lakewood News-Times of June 19, 1947, a newspaper published in Lakewood, Long Beach, Calif., well sets forth the unfortunate effects of gangster pictures on the youth of the land. It is fortunate that

we have editors who understand so clearly that these gangster pictures are one of the elements in our increased juvenile delinquency:

An effort is being made to induce Hollywood studios to cut down on the production of gangster pictures. Juvenile authorities and others concerned with the high rate of crime involving youngsters, feel that gangster pictures contribute in some degree to lawlessness.

Even though these movies are supposed to emphasize the crime-doesn't-pay theme, they actually incite adolescents in some instances, to emulate screen gangsters.

In addition to their effect on our children, gangster films also give the citizens of other countries a very distorted view of the United States and its people. A statement made by Ingrid Bergman, who now reigns as the first lady of moviedom, illustrates the point. Said she:

"When I came to America for the first time, I thought the Americans were either millionaires or gangsters. That was what I learned from the American movies. Everything was the biggest in the world, the fastest, or the most money, or gangsters. I had my child with me. I was very worried all the time. I was sure she would be kidnapped the minute I let her out of sight.

"And then I discovered that it wasn't so—that the people here were very much like my own people in Sweden."

Miss Bergman now knows the facts. But not every moviegoer in the scores of nations to which American films are sent gets the opportunity to come here and find out the truth.

Nation Needs Teamwork

EXTENSION OF REMARKS
OF
HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I insert herein an article by Mr. Harry R. Nightingale, recently published in the Topeka Daily Capital of Topeka, Kans.:

NATION NEEDS TEAMWORK

"What shall it profit a man to gain the whole world and lose his own soul?" In a like manner, what shall it profit industry, labor, and politicians to gain temporary selfish objectives, but lose the principles of democracy and with it the highest standard of living in the world? As Abraham Lincoln so wisely said, "A house divided against itself cannot stand."

Democracy is that form of government instituted among men for the preservation of freedom, equality, justice, and humanity for all its members. Cooperation is not just a sentiment—it is an economic necessity.

Our economy is in a turmoil, occasioned by the fact that various groups, instead of working together for the general welfare of the Nation, have sought individual advantages that are detrimental to the American standard of living and are wrecking the very life of America. Our very existence as a democracy is being threatened. Some people think we should adopt some kind of an "ism." Why take chances of losing our freedom when by using reason and common sense we can preserve the system that has outdistanced all other forms of government and made us the strongest nation on earth? The road to serfdom is reflected in "isms" of any kind and we are only gambling with our future by adopting any of them.

The Nation is sick and will require the combined conscientious services of four doctors to effect a cure—Dr. Industry, Dr. Labor, Dr. Government, and Dr. Public, all working together to save the life of the patient, Uncle Sam. They must work together like "the Three Musketeers—one for all and all for one."

We as human beings have a bloodstream and when this bloodstream gets clogged our bodies cannot function normally. The bloodstream of a nation is business and in a like sense when the nation's bloodstream gets clogged the nation canpot function normally. People who are employed (regardless of what kind of work they are doing) are part of the business structure and are just as important and have equal responsibilities to business as have the people who own the business—one simply cannot get along without the other. A baseball team is a good illustration of the importance of every individual. If you were asked which player on a ball team is most important you could not give an accurate answer, because without the services of a single player the game could not be played. In the same manner of reasoning business cannot function without the cooperation of everybody. The workers need the job and industry needs the worker. If there were no such thing as business or private enterprise the country would be in the same pitiful condition as many countries in Europe and other lands. The interests of business must be safeguarded by the worker because it furnishes his living. On the other hand business must recognize its humanitarian reponsibilities to the worker and look upon him as a human being and not as a commodity. Human values are the greatest values in the world and must be reckoned on this basis.

World War III can be prevented, but only if we of the United States have the moral stamina to remain as strong and unified in the days ahead as we were in the war years just past. To be any less will be to break faith with men dead and babes unborn.

HARRY R. NIGHTINGALE.

TOPEKA.

The Fallacy of Truman's Argument Opposing Tax Reduction

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. McDONOUGH. Mr. Speaker, the most significant proposition in the President's argument opposing tax reduction "at this time" was based on the supposition that any reduction in taxes would lead to an increased tendency toward inflation. A sound economic analysis of this proposition fails to substantiate Mr. Truman's position. On the contrary, it reduces his argument to sophistry.

The ultimate effect of both inflation and taxation is essentially the same. The only notable exception being that in the case of inflation, after the Government has withdrawn goods and services from the market, a great quantity of money is placed in circulation. In the case of taxation, the Government withdraws goods and services from the market, but the quantity of money in circulation is left unchanged.

Now, let us suppose that the expression of the will of both Houses of Congress, in their attempt to relieve the taxpayers of the Nation, had not been restrained by the indiscreet use of the Presidential veto. In such an event, the quantity of goods and services that the Government could withdraw from the market would have been reduced by that amount which the tax reduction, in dollars, could command. In other words, the public would be left with more take-home pay with which to purchase the goods and services the Government would ordinarily have withdrawn from the market. The excess quantity of money left in the hands of the public would be offset by the increased quantity of goods made available for public consumption. How then can the President argue that if taxes are reduced an increased tendency toward inflation will necessarily follow? Such a conclusion must be preconceived, for logic does not bear it out.

The most that can be said, in the event of a tax reduction, is either no change in the tendency toward inflation will occur, or, if any change does manifest itself, it is more likely to decrease rather than increase the force of the inflationary spiral. In any event, a change in either direction will be negligible, and any attempt on Mr. Truman's part to appear unduly alarmed seems to be motivated by a desire to play the role of an amateur actor attempting to convince his audience that he is truly an artist.

Was Mr. Truman advised, or does he not know, that the veto power of the President was never intended to be used for political purposes, but was given to him to protect the Nation from legislation which might not be for the best interests of the general welfare of the Nation? When was tax reduction not for the general welfare of the Nation at a time when one out of each three dollars earned goes for taxes? His veto of the tax bill may have serious effects on our foreign policy.

Here is an illuminating editorial by David Lawrence on that subject:

FOREIGN POLICY MAY BE IN PERIL

(By David Lawrence)

WASHINGTON, June 13.—It's a far cry from a tax-reduction bill to the bipartisan foreign policy which it is the task of Secretary of State Marshall to carry out. But the connection between the two is so important that it is no exaggeration to say that by vetoing the tax bill, President Truman could imperil our foreign policy. Everyone who has followed these dispatches for the last several years knows that this writer has said that American economic aid to Europe was essential to the restoration of peace and to world progress. But the problem is wrapped up tightly in whether the Republican and Democratic Parties can work together in Congress to authorize such a policy.

On the horizon the clouds of discord are looming up. For several weeks the storm signals have been apparent. President Truman and Secretary of State Marshall may not be aware of it, but a break between the White House and Congress at this time will come close to wrecking the whole international economic program, which is so vital to Europe and to America.

To make any bipartisan policy succeed there must be an era of good feeling. Mr. Truman's veto of the tax bill will inaugurate an era of bad feeling. It is not the failure to benefit by the relatively small amount of money derived from the tax reductions which will bring resentment but the principles involved.

The tax rates which the country was asked to bear during wartime were high. Individuals in all income brackets gladly endured the cut in income because of wartime needs. Then came the repeal of the excess-profits taxes for corporations in order to assist in the reconversion process. The general understanding in Congress was that relief from individual income-tax rates would follow immediately after the repeal of the excess-profits taxes.

Now it begins to look as if the President is not going to keep faith but will play politics. His own party went on record in favor of tax reduction at this session of Congress but urged a different formula.

Experience in the 1920's was that the lower the tax rates the higher the receipts. This is because tax reduction is a stimulus to the turn-over of business and individual transactions. Some "left wingers" have been trying to argue recently that reduction in taxes in the 1920's caused the boom that ended in the 1929 collapse but the very thing which really caused that break is present today—a critical world situation.

A similar situation could arise today. The export trade of the United States exceeds the amounts we buy by a sum estimated at $3,000,000,000 a year. To pull the bottom out of world trade now may precipitate a depression.

There is only one way to avert it—to eliminate class warfare in the United States, stimulate business and production, and to finance the world trade that is so essential to the development of a strong Europe.

Unless the Republicans in Congress cooperate on this program, it will fail. If Mr. Truman vetoes the tax bill a partisan fight of such bitter proportions will ensue that the foreign economic program will be lost in the shuffle.

When the country elects a majority in both Houses of Congress from one political party, the President ought to pause considerably before injecting a one-man veto into the situation and starting an era of bad feeling that cannot but hurt the Nation in the long run.

Police Exposé in District of Columbia

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. BEALL. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial appearing in the Washington Post, Tuesday, June 30, 1947:

POLICE EXPOSÉ

Washingtonians have been living in a fool's paradise. So far as their personal safety and the safety of their possessions are concerned, they have been grossly misled as to dangers that confront them every day in the year. The police have concealed hundreds of crimes. We have been led to believe, through the release of official statistics, that the police have been solving an astonishingly high percentage of the robberies committed in the District. The Post's exposé of the department's secret files shows that this record was attained only by keeping out of the official statistics more than 600 "pocketed" reports of robberies over a period of 11 months.

Even more serious is the fact that the Police Department has been crippling itself by withholding information about local crimes from its own men. As fully explained by Robert Bruskin and John Singerhoff in their detailed story in the Post of yesterday, crimes on which reports have been withheld from the police teletype system become known only to a few detectives and the police of one precinct. Many citizens who have been knocked down with a blackjack or held up at the point of a gun and robbed of substantial sums of money in the last 11 months now know that their cases were never reported to the police as a whole. Nor have they been reported to the community to give an awareness of how serious its crime problem is. Neither the full power of the police themselves nor of an aroused public indignation has been utilized in the fight against crime.

What is the purpose of this dangerous concealment? Inspector Robert J. Barrett, who is scheduled to be sworn in as superintendent of police tomorrow, says the practice "just grew up over the years." At the same time he admits that "nobody has the power to hold legitimate cases." The fact that hundreds of reports of robbery were held in the precincts in the last 11 months at the behest of the Detective Bureau, which Inspector Barrett heads, may indicate only negligence and careless administration. But this system, or lack of system, could be used to conceal and shield underworld operators. The surest way to prevent the arrest of criminals is to hide the information that a crime has been committed.

It is obvious, too, that such loose reporting practices expose our law-enforcement officers to ready opportunities for corruption. If reports of robberies can be withheld from the police teletype system and from the press, thugs will not be slow in offering bribes to officers who are in a position to bring about such concealment. We do not charge that corruption has followed in the wake of concealment. But the fact that the door to it has been opened is serious enough to warrant a thorough investigation. It is well to remember that the Post's exposé has dealt only with robbery cases. Indications are that crime reports have been "pocketed" in various other categories of cases. The whole story can be exposed to the light of day only through a searching inquiry, and we think that task should be undertaken by the House or Senate District Committee, or, preferably, a joint committee representing both.

The Detective Bureau's belated effort to close as many "pocketed" cases as possible after the Post's investigation got under way is an admission of past laxity. The Inspector's statement Sunday, promising a complete check of the Detective Bureau's crime reporting methods at once and a survey of the entire department after he is sworn in as Police Superintendent, constitutes a prompt acknowledgment of the importance of accurate reports and a commendable promise to secure them. We hope that this move to set its own house in order will prove effective and that the Department will begin the new fiscal year under orders from within to report every crime of which the police acquire knowledge. But clearly that is not enough. The extent, purpose and effect of this concealment ought to be fully disclosed by an impartial body of public servants. Only in that way can the community hope to secure effective correction of this abuse of discretion and to formulate a sound judgment as to what the needs of the Department are.

What National Health Insurance Would Mean to You

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1947

Mr. CELLER. Mr. Speaker, I should like to take this opportunity to say something about a proposal that I, together with some of my distinguished colleagues in the House and Senate, are offering to provide the American people with a greater measure of health security. I refer to the National Health Insurance and Public Health Act of 1947. This proposal is embodied in my bill H. R. 3579, H. R. 3543 offered by Representative DINGELL, and S. 1320 offered by Senators WAGNER, MURRAY, PEPPER, CHAVEZ, MCGRATH, and TAYLOR.

Now I am deeply concerned as are my colleagues with this problem of medical care, of how difficult it is under ordinary circumstances for the average American family to meet the relatively heavy burden of hospital and medical costs that result from illness. For the average American family, medical care, unlike food, clothing, and the other necessities of life is not a budgetable item. Illness is unpredictable and the costs resulting therefrom are even more so. This problem, therefore, is one that I am sure deeply affects every American family. Some are fortunate in being able to take advantage of the benefits offered by voluntary health insurance plans, such as the Blue Cross, group-health plans, and others sponsored by industry, unions, fraternity organizations, and the medical societies. But these plans have not been able to provide the American people as a whole with preventive and curative services at a cost that they can easily afford. In fact little more than 3 percent of the population gets full care through such plans. And so, there is a very real and widespread need for a more adequate and fully comprehensive program—a program that will help to make our Nation a more healthy and secure one in time of peace as well as in time of war.

In a special message to the Congress on May 19, 1947, the President of the United States urged the enactment of a national health insurance program. He pointed out, and I quote:

> If the financial risk of illness is spread among all our people, no one person is overburdened. More important, if the cost is spread in this manner more persons can see their doctors, and will see them earlier. This goal can be reached only through a national medical insurance program, under which all people who are covered by an insurance fund are entitled to necessary medical, hospital, and related services.

The proposal to which I referred a moment ago is the national health insurance proposal recommended by the President. This is how it would work. Let us take the case of Mr. Sam Jones, a constituent of mine who lives in the city

of New York. He has a wife and three children and earns $45 a week. He would pay 67½ cents a week into the national health insurance fund, and his employer would put in an equal amount. When Mr. Jones or any one of his family was sick, he would call in or go to see a doctor, any doctor he chose, the same as he does today. Only he would pay nothing to the doctor. The doctor would be paid from the insurance fund to which Mr. Jones contributed. So also with a hospital, if he needed hospital care.

The national health insurance fund would be divided up among the States, and the States in turn would allocate money to each locality. The health insurance fund would pay the doctors and hospitals, through a local committee in which both doctors and people would be represented.

If Mr. Jones belonged to a voluntary health insurance plan which furnished adequate services, he could continue to be a member and receive services from the plan. The health insurance fund would pay the plan for serving him. Mr. Jones and all other self-supporting families would be able to get medical care as a right, not a charity. The very poor who cannot pay the insurance would be paid for out of local and State tax funds, with Federal aid. The doctors would not be Government employees but would be in practice as they are now, only they would not have to worry about uncollected bills.

Terminal-Leave Bonds Should Be Made Negotiable for Cash

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. McDONOUGH. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement which I made before the Subcommittee on Pay and Administration of the Armed Services Committee in favor of terminal-leave pay in cash for our veterans:

Mr. Chairman, I fully realized the need for legislation for cash payment of terminal-leave benefits to veterans early in this session when I introduced H. R. 117 which provided for terminal-leave pay in cash or in bonds which could be held or converted into cash at the discretion of the veteran.

Cash payments of terminal-leave pay will bring greater economy. Through cash payments, interest on bonds which otherwise would have been issued will be saved, and there will be some reduction in the national debt.

At the present time, rising costs of living have created additional hardship for veterans who have tried to take advantage of the various aids to their rehabilitation under the GI bill of rights. Payment of terminal-leave pay in cash will provide immediate cash for many deserving veterans who need money to buy or build homes. It will help other veterans in their business ventures. It will be a great aid to student veterans who need extra cash immediately to supplement their meager subsistence allowance.

Terminal-leave benefits have been approved for these veterans. No additional money is involved in these bills. No new benefits are provided. Cash payment of terminal-leave benefits will only make available to the veteran immediately money already granted to him for future payment.

The veteran today is establishing his place in postwar America. Today his need is greatest for every assistance which will enable him to make his own position in the future secure, whether he is establishing a home or a farm, a business, a trade, or seeking the knowledge which will enable him to enter professional, scientific, or technical fields. He is entitled to terminal-leave pay, and he is entitled to this payment now in cash.

I urge the members of this committee to act favorably on this legislation, and to send a bill to the House which will provide for cash payment of terminal-leave pay.

The Case for the Bureaucrat

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. SABATH. Mr. Speaker, I fully appreciate that during the war years the Army and Navy built up large staffs which they now would like to keep. I have always urged that nonessential Federal employees be dispensed with. But, on the other hand, I have deplored the false economy with which many valuable and experienced employees are forced out of Government service by cutting off funds or by refusing pay commensurate with the work they do, so that the very corporations which protest the most about Government expenditures are able to offer better salaries and take away the best public servants.

I can recall the names of many in recent years who, during their tenure as Government employees, were assailed and denounced as braintrusters and bureaucrats because they performed their sworn duty to uphold the laws and to save and protect the interest of the people, and who were then hired by private interests at big salaries. The economy I want is the economy of efficient operation and not the false economy of cutting out needed and useful services by blind bias.

In that connection I have read discussion of the situation which reminds us that most civilian employees of the United States Government serve faithfully in carrying out services which the people have demanded and the Congress has authorized.

Many of the Members will remember the author of this article, entitled "The Case for the Bureaucrats," appearing in Pageant for May, as a congressional employee. His name is Jack Pollack, and his background enables him to speak with authority. Under leave granted, I insert the text of the article in the RECORD.

THE CASE FOR THE BUREAUCRAT

(By Jack H. Pollack)

(EDITOR'S NOTE.—The author of this article is a former Senate committee investigator, Department of Justice, and war-agency official. He is now a contributor to the leading national magazines.)

Chances are your newspaper or radio tonight will remind you that the Federal Government is still swarming with bureaucrats. The very word grates on your nerves as you conjure up a vision of chair-warming, clock-watching parasites dreaming up new ways to make your life miserable, squander your taxes, and keep themselves feeding at the public trough.

It would be surprising if you had a different picture. For years this serio-comic figure, the bureaucrat, has been depicted and denounced by Congressmen, newspaper, magazine, and radio oracles hell-bent for economy.

Uncle Sam's pay roll does harbor some drones. So does any large public or private organization. But the vast majority of Government workers are sincere, hard-working men and women. I have never seen people work more devotedly and unselfishly than in Government service, with their chief reward the satisfaction of performing a useful public service despite below-the-belt criticism.

Politics, obviously, is behind most of the clamor against the Federal worker-scapegoat, and most of the agitation is irresponsible. A fair-minded Vermont Republican, Senator GEORGE AIKEN, recently warned that, if recent retrenchment moves do not cease, the Government will lose "some of its most capable employees." As it is, President Truman complains that he is having great difficulty in persuading competent Democrats and Republicans to work for the Government.

Government workers did not appear out of a clear sky. Federal agencies long have been created by Congress to perform various services. It takes people to carry out these services.

Back in 1789, the War, State, Treasury, and Justice Departments were established for our protection. Forty years later, the Post Office Department was set up. Today, if we recklessly lop off poorly paid postal workers, as some politicians would like to do, your mail and mine will be delivered, sorted, and collected that much slower.

All along the line, fewer Federal workers means less Federal service. Reducing Agriculture Department employees means that farmers will get less attention to their problems; cutting Commerce Department employees means that businessmen will get less help; slashing Labor Department employees means that organized and unorganized workers will suffer.

Federal agencies have been created as the need has arisen. The Federal Deposit and Insurance Corporation was established to protect your bank deposits up to $5,000. The Securities and Exchange Commission was set up to safeguard your stock investments against unscrupulous speculators. The Social Security Act was passed to give you unemployment compensation and old-age benefits.

There are countless other Federal services which you now take for granted. The Food and Drug Administration protects you from misbranded and adulterated food and drugs. The Federal Trade Commission is your watchdog against false advertising and unfair trade practices. There is even a Government agency called the Panama Canal which guards the Canal Zone.

Naturally, Federal workers in these and other agencies can be dispensed with, if we so desire. We can discharge Veterans' Administration employees and give our GI's less medical and hospital care. We can even scrap GI loans so veterans won't get into debt, as Congressman JOHN TABER wishes. We can fire employees in the United States Forest Service and risk more forest fires. We

can do without the custodians of our national parks and visit other places in the summer. We can slash the Coast Guard, United States Coast and Geodetic Service and lighthouse workers—and risk our lives at sea.

Contrary to common belief, all Government workers don't sit at desks and push pencils and pieces of paper around. They are engaged in virtually every type of work from vital scientific research to guarding prisons.

During the war a group of Agriculture Department employees in Florida had the strange task of lying on their stomachs and allowing 40,000 lice to bite them. As a result, Agriculture Department scientists developed an effective new louse powder.

Many Government employees do work which private industry would reward with far fatter salaries and many toil a lot harder in the Federal service than they would elsewhere. Indeed, many Federal employees literally have worked themselves to death, putting in long overtime hours without thought of extra pay or glory. Many have patriotically given their lives in the United States Public Health Service, the border patrol, and other lines of Federal duty.

Charles M. Hay was one such Capital casualty, during the grim Battle of the Bulge days, when the Army was desperately demanding a last-minute civilin labor draft. Acting head of the War Manpower Commission, Hay fervently believed it was unnecessary then, as did his boss, Paul McNutt, who was touring the European battlefields. For grueling weeks Hay was on Washington's hottest seat, testifying before hostile congressional committees egged on by the Army.

After a tormenting session before the House Military Affairs Committee, Hay wearily sighed, "That bunch won't give anybody a fair trial." That was the last time I ever saw overfatigued Charley Hay alive. He went home to take a nap—and moved on to a higher bar of judgment.

Joseph B. Eastman, who kept wartime America moving on trains as head of the Office of Defense Transportation, also died in the line of Federal duty. Eastman was a Washington work horse, arriving at his office 8 a. m. 7 days a week and only sneaking time out for dinner between 5:30 and 6 p. m. Back at his desk, he would toil until midnight. If he got home for Sunday dinner, he considered it a holiday. Joe Eastman gave his life to his Government, including 25 years as a member of the Interstate Commerce Commission, though repeatedly he was offered 20 times his Government salary by private industry.

But all the Government casualties aren't headliners. Most are obscure little people who unselfishly serve above and beyond the call of duty. Olive Jack, a former assistant in the Library of Congress law branch, was one. For years she toiled 14 hours a day and even part of Sunday when the Library was officially closed, just in case a Member of Congress might need some information. She once worked all night on a research job for an investigating legislator who wanted the material by morning. He thanked her, of course, but when he moved on to the Supreme Court, he forgot her, as did the others.

Though she never took time off in all her years at the Library, Olive Jack suddenly decided to do so. Her friends, worried about her failing health, were delighted. But their joy was short-lived, as was Olive Jack. Friends later found out that her "vacation" was spent at the Mayo Clinic, where she went for a grave operation.

Judges may lead tranquil lives elsewhere, but not in Washington. During the long wartime sedition trial, Judge Edward E. Eicher took a merciless heckling from public, press, and defendants. The Department of Justice made his task a thousandfold greater by trying the accused together rather than individually. Anxious not to delay the trial, conscientious Judge Eicher toiled day and night. His friends warned him to take it easy. He said he would when he got caught up. The Grim Reaper caught up with him first, on a day when he felt ill and refused to go home.

Here are some facts for critics of bureaucrats to ponder:

1. There are a million fewer Government workers today: Since VJ-day over 1,500,000 Federal employees have been released. Uncle Sam then had 3,500,000 civilian workers compared to today's less than 2,000,000.

2. All are not in Washington: Only 200,000 of those 2,000,000 now work in the Nation's Capital. About 300,000 work outside United States boundaries; the rest in the 48 States. So, if 10 Federal workers are fired, only 1 will be discharged in Washington.

3. War agency workers have virtually disappeared: War agencies have vanished faster than Congress or the administration believed possible.

4. Federal workers are fired: Though some people would like to have you think otherwise, once an individual lands on Uncle Sam's payroll, he is not there for life. President Truman reveals that during the past year the Government fired over 100,000 employees because they were idlers, tardy, immoral, subversive, or what not. This figure does not include the vast number dismissed when their war agency work stopped.

5. We must decide what Federal services we want stopped: The question is not one of arithmetic but of what present Government services we want curtailed or expanded. If Uncle Sam is to continue serving us, Washington, D. C., can never become a ghost town, no matter which party is in power. Wise planning of our Federal employment instead of irresponsible cutting and slashing ought to be our national policy. If we cripple or wipe out Government services, it may cost us taxpayers money in the long run.

Wreckage of Hiroshima Impresses Touring Editors

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an article by Mr. Ralph Donaldson of the Cleveland Plain Dealer:

WRECKAGE OF HIROSHIMA IMPRESSES TOURING EDITORS

(Article 24)

A visit to Hiroshima, the first of two Japanese cities to be blasted by the atomic bomb, was the most dramatic and impressive event of the far eastern tour of American newspaper publishers and editors.

In outward appearances the destruction is typical of that which was visited on all Japanese cities which felt the intense fury of American bombing attacks.

But the awe-inspiring thing about Hiroshima is that what happened there took place in a matter of seconds and that the great devastation and loss of life resulted from a single raid by a single plane carrying a single bomb, instead of by repeated visits of fleets of planes carrying tens of thousands of tons of bombs.

Moreover, close examination reveals many peculiar effects of the atomic blast, due to its tremendous force and heat, some of a freak nature.

One of the members of our party, stumbling through the ruins of what had been the main post office, came across a bottle which told a mute story of the effect of the atom bomb. It was about the size of a Coca-Cola bottle, but there the resemblance stopped. It had been flattened by the crushing force of the blast. In addition, the neck had been curved, so that when the bottle lay on its side, the mouth pointed nearly straight up. The heat had been so intense that the bottle was in a semimolten state when the blast flattened it, so that the glass was not even cracked or chipped.

On the railings of a bridge near the center of the town there are two ornamental stone lanterns. One had been pushed out of place about a foot to the right. The other had been nudged a similar distance to the left, leading experts to calculate that the center of the blast had been directly overhead.

A round marble ball on a Japanese tombstone had been pushed over on its side. But before it rolled back into position, bricks from the cemetery wall had been blown under it, with the result that the stone is now permanently tilted.

The bottom walls of a church had been blown completely away, leaving the top part, with the steeple intact, to settle crazily on the ruins of the foundation. Surfaces of smooth, dense marble were chipped and flaked by the heat and radioactivity, presenting a scorched appearance. Shadows, however, seemed to protect flat surfaces from radiation burns.

At the Red Cross hospital, which still bears ghastly scars of the explosion, although it is more than a mile from the center of the blast, the visiting newspapermen saw a reenactment of John Hersey's noted story of Hiroshima. It was staged by members of the original cast, including the six characters whose experiences Hersey related.

In addition to these, the British Commonwealth Occupation Forces, whose jurisdiction includes Hiroshima, and American military government officials exhibited victims of the blast who are still undergoing treatment at the Red Cross hospital.

Among them were a farmer, Taro Mitsushima, whose nose is partially gone and whose ears were burned off; and a dentist, Dr. Kiyoshi Kikukawa, whose back is almost completely covered with a large keloid, a purple-covered fibrous tissue caused by radiation burns. He was standing with his back to the explosion and put his hands over the back of his head when he saw the flash. Both hands were frightfully burned and the tendons in his wrists and arms shriveled.

All of the victims told of seeing a blinding light. Some thought it was purple, others yellow. This was followed by clouds of dust which obscured the sun. Then came fires and hurricane winds.

WHITE REFLECTS RAYS

Some people wearing white garments miraculously escaped without burns, as white cloth appeared to deflect the rays. But black cloth absorbed them, and caused deep burns underneath.

Bandages and salve had no healing effect on the burns. Many of those who were treated in this manner now are afflicted with the keloid scar-tissue growth. Frequent washing of the wounds with cold water and exposure to the air brought the best results.

A Jesuit priest, Father Peter Arrupe, cared for 60 victims of the blast at the Catholic monastery located on one of the hills surrounding Hiroshima. All but one of his patients survived, which was the best record of recoveries made in any of the temporary hospitals set up after the explosion. Father Arrupe spent 10 months at the St. Stanislaus Novitiate, 5629 State Road, Parma, in 1938 and 1939.

Father William Kleinsorge, S. J., of the Catholic mission, one of the principal characters in Hersey's book, was asked to give his opinion of the book.

"Well," he said with some hesitation, "it was historically accurate, but the way he told it, it seemed more interesting."

Father Kleinsorge said there was no particular hatred of Americans among the survivors at Hiroshima because of the atomic bomb. They took the attitude, he said, that "if we make war, we must bear the consequences."

They regarded the atom bomb as one of the consequences, to be borne philosophically and without complaint, just as other Japanese cities bore the 1,000-plane raids and showers of fire bombs.

It never occurred to the Japanese to regard the atomic bomb as an atrocity until they began to hear criticisms to that effect from American sources, Father Kleinsorge said. Then some of their agitators took up the cry.

Father Hubert Schiffer, S. J., of the Catholic Mission, said there was a question in his mind whether it was right and humane to drop bombs on civilian populations.

"But if that kind of warfare is accepted," he said, "I see no difference between one bomb of the atomic variety and 1,000 of the other kind."

All the priests, and Rev. Kiyoshi Tanimoto, the Methodist clergyman whose experiences, also were described in the Hersey book, said they did not believe the fact that the atomic bomb was dropped by a nation which professes Christianity had had a detrimental effect on the teaching of Christianity in Japan.

On the contrary, they said, there was a greater interest in Christianity among the survivors at Hiroshima than there ever had been before.

At the time the atomic bomb fell on Hiroshima its population was approximately 245,000. It has been estimated that deaths from the explosion and its after effects totaled approximately 100,000. The radiation sickness was not always fatal. Thousands who were affected by it have recovered. Most of the survivors have returned.

The city is slowly being rebuilt. Shacks and temporary structures dot the burned-out area. One enterprising Japanese is all set for the tourist trade. He has opened a store which he has named "Bookseller Atom."

Ownership of California Tidelands

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

IN RE UNITED STATES SUPREME COURT DECISION UPHOLDING FEDERAL GOVERNMENT'S CLAIM TO OWNERSHIP OF CALIFORNIA TIDELANDS: RESOLUTION URGING IMMEDIATE ADOPTION OF LEGISLATION BY CONGRESS RESTORING RIGHTS TO STATE OF CALIFORNIA AND OTHER STATES AND THEIR SUBDIVISIONS

Whereas the Supreme Court of the United States, in the case of the *United States of America* v. *State of California*, by a 6 to 2 decision, yesterday held that the ownership of lands from a point beginning at low tide and extending 3 miles to the sea, is in the Federal Government and not in the State of California; and

Whereas the decision is of far-reaching importance, not only to the State of California and to the coastal States similarly affected, but is also detrimental to the best interests of the cities of Los Angeles, Long Beach, Santa Monica, and other municipalities throughout this State and Nation, which have invested millions of dollars of public funds in the construction of ports, harbors, and other installations, some of which are located on inland navigable waters and along the seacoast within such 3-mile belt; and

Whereas the Supreme Court of the United States, in approximately 50 prior decisions, held that such lands belonged to the State or to its successors or grantees who have received title to such lands from the State and thus have full and complete title and ownership to such lands; and

Whereas House Joint Resolution 225 was adopted by the Seventy-ninth Congress, but subsequently vetoed by the President, to quiet the title of the States, their successors, and grantees to such lands lying from low tide and extending 3 miles to sea, in order to remove the cloud created by the claims of the Department of Interior; and

Whereas it is imperative to protect the interests of the State of California, the cities of Los Angeles, Long Beach, Santa Monica, and other cities in Los Angeles County, that corrective legislation be enacted similar to House Joint Resolution 225 introduced in the Seventy-ninth Congress of the United States to rectify the inequities arising out of the Supreme Court's decision, in order that there be restored to the State of California and to its subdivisions their rightful property; and

Whereas such legislation would not interfere with the paramount right of the United States to control navigation or to provide for the common defense: Now, therefore, be it

Resolved, by the Board of Supervisors of the County of Los Angeles as follows:

1. That the Congress of the United States is urged to immediately adopt at this session of Congress, legislation to correct the inequities which will follow from the Supreme Court's decision and restore to the State of California, other States and their subdivisions, property rights in accordance with the rule promulgated by the Supreme Court of the United States nearly 100 years ago that the States are the owners of all their navigable waters and the soil of the beds thereof, which rule has up to this time been consistently adhered to.

2. That the board of supervisors of the county of Los Angeles pledges its support to join in such a campaign to secure such corrective legislation at this session of Congress.

3. That County Counsel Harold W. Kennedy is directed and authorized to participate in the drafting and passage of such legislation, subject to further orders of the board of supervisors.

4. That copies of this resolution be sent to the President of the United States, Secretary of the Department of Interior, and to each Member of the congressional delegation representing the State of California, and copies released to the press.

Needed and Desirable Changes in Federal Corporate Taxation

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. JENKINS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by James D. Mooney, president and chairman of the board, Willys-Overland Motors, Inc., before the House Ways and Means Committee:

Mr. Chairman and gentlemen, my name is James D. Mooney. I am president and chairman of the board of Willys-Overland Motors, Inc., Toledo, Ohio.

At the outset, let me assure you that business executives throughout the country have a most sincere and practical appreciation of the responsibilities imposed upon this committee and upon the Congress. The Government must be financed; our public debt must be courageously managed; everything must be done to encourage industrial activity and high employment. In other words, the Government must prosper and the taxpayer must prosper. There is but one answer: production. In our way of life, that means production at a profit.

Taxes are one of the problems of industry with which I deal as an operating executive. Although I certainly do not presume to be an expert in tax theories, I have had to live intimately with the practical side of taxes for many years as a manager charged with taking capital and making a prudent return on it. Industry is subject to many different types of taxation. I shall confine myself to the practical effect on production of present tax rates on the income of corporations and on the earned income of corporations' employees.

I shall present two difficulties that managers of industry like myself face because of present tax rates. Industrial health is seriously impaired by the requirement of so high a proportion of cash outlay for taxes, while at the same time industry is handicapped in attracting outstanding men.

Today industry is faced with many problems as a result of the war. Uncertainties of war have given way to uncertainties of reconversion, and along with reconversion problems, industry is plagued by the uncertainty of the future. Shall we plan against a gloomy economic period or a golden age of industrial expansion?

CANNOT EXPECT ABLE MEN TO TAKE RESPONSIBILITIES WITHOUT INCENTIVES

To cope with these problems, industry needs well-trained, intelligent men of high caliber, capable of assuming the responsibilities of executive positions. We find great difficulty in securing such qualified men. Men properly expect an incentive in the form of an adequate return for their services. Let us take a look at what has happened to the compensations which such men receive for their services.

In 1939, a man who was head of an average family and received $20,000 per year paid a Federal income tax of $1,247, thus having a net income after taxes of $18,753. Today this same man pays a Federal income tax of $5,178, thus receiving a net income after taxes of $14,822. Another factor which must be taken into consideration when making this comparison is the cost of living. In March 1947, the cost of living index was 156.3 on a 1935–1939 base of 100. Expressing the man's actual net income in terms of 1939 dollars, we find it is only $9,483—approximately half of what it was 8 years ago.

Many men needed by vital industries reason that they can do better financially in other channels of work with fewer headaches. The operating executive is not alone in this reduction of purchasing power which has been partially caused by our high rate of taxation. In 1939, an average family man receiving an annual wage of $3,000 paid no Federal tax based on income. Today, this same man pays a Federal income tax of $228. He receives a net income of $2,772 which, when expressed in terms of 1939 dollars, is only $1,744 of real purchasing power.

DANGEROUS DRAIN UPON VITAL ASSETS OF OUR CORPORATIONS

My second point is that current taxation rates threaten corporate entities. Corporate

surpluses from 1936 to 1939 decreased about $1,600,000,000. During this period, many corporations were losing money. Others were distributing dividends larger than they earned. This condition improved somewhat in 1940, and during the succeeding 4 years, surpluses increased by over $21,000,000,000. A survey by the National Industrial Conference Board of 14 manufacturing industries indicates that in the period 1939 to 1944, surpluses had risen in a general range of from 30 to 95 percent.

This increase was before the impact of reconversion. Now that we are well along in the reconversion period, I believe that a period of expansion lies ahead. Present capital reserves will be strained to finance it. Industry is faced with real problems of long-deferred plant maintenance. The current dependence is on prewar plants which are geared to a rate from a third to a half lower than the rate in prospect. The world is hungry for goods that for a time only our country can satisfy. The shortage of venture capital may eventually be one of the principal bottlenecks in sustaining high employment. Finally, these and other pressures upon supply in certain other industries portend prices much above the prewar levels. It is evident, therefore, that there will be a considerable drain upon the assets of corporations.

The solution to many of these problems lies in the surpluses, reserves, and future retention of profit by the corporations. Upon analysis, few corporations have what may be termed a position of excess liquidity. The ratio of cash to sales has not risen. The National City Bank Monthly Letter of March 1947, has an anlysis of the balance sheets of 130 manufacturing corporations having a sales or total assets over $5,000,000 which indicates that for the period December 1940, to December 1946, the ratio of current assets to current liabilities declined. This would imply that many of the new resources accumulated during the war period are needed even now to support the current levels of business, and that in many cases, capital and cash positions are none too strong.

QUARTERLY SCRAMBLE TO MEET HUGE TAX BILL IN CASH

In view of these obstacles, the present tax program is definitely not designed to lend a helping hand to the corporation when it is most needed. In 1939, corporations were taxed at a rate of 19 percent, while today they are assessed a normal tax of 24 percent and a surtax of 14 percent, or a total of 38 percent. It should also be borne in mind that these taxes are not payable by the corporations in raw materials, notes receivable, or finished products. They are payable in cash. This means that four times a year the management of the corporation must arrange the finances of the corporation to meet the tax bill.

Many corporations have been faced with the necessity of borrowing to meet their current obligations. During 1946, bank loans for commercial, industrial, and agricultural purposes increased by over 40 percent. This borrowing to meet tax obligations not only puts another obstacle in the path of corporation progress at a time when cash resources are sorely needed, but also imposes upon the corporation a penalty for services rendered during the war period.

Another factor in the corporate tax picture is the effect of this taxation upon profits. We have become the greatest Nation on this earth through industrialization, and profit has been the incentive for encouraging industry. Unless we are to change our way of life, we must allow investors to realize a fair return on their investment. This does not mean that they should be allowed to retain an exorbitant profit, but they should be adequately compensated for their risk. No individual will continue to invest in industry and risk losing his capital if he can realize the same return from gilt-edged securities. While corporate taxes have been somewhat eased by the repeal of the excess-profits tax, the taxation rate is still sufficiently high to keep net earnings at a relatively low level.

Our present 38-percent tax rate has imposed on industry additional burdens in draining industry's cash and discouraging venture capital.

MORE TAX DOLLARS, MORE EMPLOYMENT, AND MORE BUSINESS AT LOWER TAX RATES

Many individuals have advocated continuance of high taxation rates in order to reduce the national debt and combat inflation. Let us, for a moment, take a look at this theory. In view of the rising cost of living and high taxes, management has had to increase the workers' wages in an attempt to maintain their purchasing power. This has, of course, done nothing more than increase the cost of manufactured products, which, when added to the high-tax burden imposed upon the corporations, has made it necessary for the manufacturer to raise the selling price of his product to cover increased cost.
